(10:24) at the time that he told that story in 1989 it did not exist it has since been synthesized in much smaller pieces bob described it as a stable and heavy um and what we have synthesized now does not match that description but he thinks that maybe someday we might be able to get it he thinks the fuel came from a binary star system where it was a natural abundance so he said he saw one of these craft being tested uh he did a number of experiments on the anti-gravity reactor that were pretty much amazing this thing could create its own
(10:57) gravitational field and he says the way that the aliens could get to earth they create their own gravitational field and this gravity allows them to bend space and time and instead of it propelling them forward say they're on their planet and they want to get to earth instead of propelling them toward earth it would in effect pull earth toward them it would bend space and time turn it off and it goes back to normal and you would be on earth but no time had gone by bob said that he read these briefing documents
(11:28) during the time he was out there that described it had alien autopsy photos it had information about human beings that aliens were interested in our souls and possibly harvesting our souls there was information that they had uh they they had

been a part of humanity for for centuries that they had helped uh engineer the human race that there had been biomechanical engineering going on there that they sort of had created us as a special species very disturbing information about um religious figures the nature of religion uh so it's quite
(12:04) a it's quite a pile to chew on uh yesterday you touched upon a guy named ben rich who made a famous quote could you tell us a little bit about this and also the defense contractors and might they have a fancy technology ben rich who's the engineer and head of the skunk works which is the uh the secret arm of lockheed that has designed all the black projects all the the best secret airplanes in the world the u2 the sr-71 the a12 stealth technology lockheed's did all that stuff and ben rich was overseeing all those
(12:38) projects if anyone outside of the u.s government itself any private contractor knew about recovered alien disks it would be been rich that would be where it is for a number of years ben would share little bits and pieces of information with his friends in the aviation community who also happen to be interested in ufos and some of those were guys that i got to know so he would give them tantalizing little bits of information they would ask him what do you think about ufos and he has in writing said before in letters that i got
(13:10) copies of i believe in ufos i believe in two kinds of ufos i believe in unfunded opportunities meaning black projects that have not yet been put into the budget and he believes in flying saucers from other other places on the day that the stealth plane was unveiled to the world at nellis air force base i was there i was one of the the media people who was invited to go along for that event and ben rich was standing out on the tarmac at nellis and i was able to interview him and i asked him mr rich we've heard these
(13:42) stories that maybe alien technology was incorporated into stealth and he he stopped and he kind of chuckled and smiled and he thought about it for a second he said no no just good old american technology but the fact is he's given other hints since then that maybe that's not the full story that maybe we got some help along the way he made a statement at least as reported to a group at ucla an engineering audience in which he said we now have the capability to take e.
(14:14) t home we have the ability to travel to the stars right now it's not something we have to dream up if you can dream it up we can already do it can we verify that statement well uh you know it's been reported multiple times by people by news media who were supposedly present it has been told to me by people who are in the audience that that's what he said whether or not the audio there's a recording of it i'm not quite sure but i think when you take together all the other things that ben rich has said
(14:41) over the years that in fact that is what he said there was a guy a friend of mine named jim goodall who wrote a book about stealth technology he's an aviation whiz he's a friend of john lears and he was one of the guys that would go out with lear and a group called the interceptors to area 51 to look in the sky to see whatever was flying around secret planes whatever and they got onto the ufo story jim goodall was with ben rich days before he died in the hospital and they talked about ufo interest and he confirmed yes in fact we
(15:13) do have that technology but he said it's so deep black it's so far inside the black budget it will never see the light of day that makes sense so what are the implications i mean does it really mean that star trek is real that some you know uh hidden factions of the military of the government are already flying among around among the stars at the universe meeting other civilizations i don't know that they're they're i would take it that far i i do think that i think there's a strong possibility we
(15:45) do have a secret space program and that we are flying at least among the stars or to other planets within our own uh solar system that it's a kind of program that is so far more advanced than what we see space shuttles iss that kind of stuff that it goes far beyond that there there are several indications that there really is a space program like that not the least of which is what what ben ben richard said i i don't think that there's any star trek we've got a cosmic federation that's meeting with
(16:13) other alien beings or something like that but but i don't really know i i just don't think it goes that far there's another whistle a supposed whistleblower named colonel philip corso i think you also met him who has a similar story i was the first i was the first journalist ufo journalist to interview colonel corso a friend of mine a colleague had been working with him about prisoners of war colonel corso had made dramatic seemingly unsupported statements in the past on other topics

and had been proven to be true he said that
(16:47) we americans had left behind a number of prisoners of war in both world war ii and korea and then in the vietnam conflict and that was very controversial what he said it but as history has shown us he was right well a friend of mine who was working on the story about prisoners of war was talking to colonel corso and and heard this story about the ufo information he shared it with me i met with corso now the rest of the world knows his story but back then i had a deal i was going to write his book it didn't work out that way someone
(17:19) someone else intervened but corso had said that he was stationed at the pentagon he was in a special office that dealt with foreign technology that would figure out ways to stuff that we'd acquired from russians or other places advanced technology figure out a way to get it into the private sector have them duplicate that technology and then filter it out into places where it can be used and he said that there was a drawer there was a drawer of technology from a recovered flying saucer an alien disc that we didn't quite know how
(17:50) to deal with it but eventually he said that it was his job to hand it out to bell labs and other big think tanks and they figured out how to use it how to duplicate it uh fiber optics technology he says night vision goggles a number of other things were given a boost along the way by this stuff that was recovered from a flying saucer and it's a fantastic story a lot of people don't believe it but the fact is philip corso was in that job he really did work for a general who was in that position that if there had been recovered material
(18:22) that's where it would have gone um whether or not we're ever going to be able to verify it for sure i guess we probably need to find the material itself to satisfy everyone's curiosity but philip corso had said that he had some extraordinary experiences in his life separate from his job at the pentagon that he had encounters with aliens and that um basically the story uh it coincides to a large degree with the story told by bob lazar yeah i was about to ask that do you think he's credible yeah i do i mean you know he he really i
(18:55) think the problem is that as he grew older maybe some of the stories and experiences in his life got grander with the passage of time just a matter of ego but i think he was telling the truth i think philip corso was telling the truth as he knew it there's a guy named bob bigelow can you tell us a little about him about him what his what's his role in all this bob bigelow is a great man in my estimation but he's somebody who is a an enigma in the ufo field people assume the worst about it he's a
(19:27) wealthy businessman in las vegas i think probably at one point he was worth about two billion dollars and he's had a lifelong interest in ufos because his family he and his family had seen them at a young when he was a young boy so as he became wealthy and successful he wanted to put a lot of his resources into ufo research and he has bob bigelow has spent more money on ufo research than any person in the history of the world and he's done it quietly for the most part over the years he would dish out grants to researchers
(19:57) people like linda howe stanton friedman and others hoping that his money would provide the kind of financial support that ufo researchers do not get he's given a lot of money to ufo organizations mufon and kufos i think he put a million dollars on the table at one point hoping that the three major american groups would get together that they would figure out a good way to spend the money and maybe get some answers about ufos which did not happen because of that bob was dissatisfied with how those organizations were doing their work
(20:29) he created his own and was called nids the national institute for discovery science and he put together a world-class science advisory board consisting of people who had been top-notch scientists who some of whom had worked for the cia and other government agencies or the military who had an interest in ufos while they were working for the military and who tried to get answers while they were in the inside but could not and in addition to those kind of people he put together people like jacques valet john alexander a lot of others had been
(21:02) on the periphery of these subject matters but academics with impeccable credentials that's a science advisory board the second part of dids was a component that was a rapid recovery team if you have a ufo crash if you have a a series of uh sightings if you have a series of cattle mutilations they would be able to jump on a plane take a bunch of equipment and go there to the scene to investigate boots on the ground it was a tremendous uh opportunity to gather solid information about ufo cases and incidents and
(21:36) and for a long time it worked for seven eight nine years it worked and he

collected a great deal of information he also bought databases from other researchers put it all together hoping to compile it to get to get some ultimate answers did they get answers did they draw some conclusions or i don't think so the the problems it's sort of the same problems that apply to ufology and scientists in general applied to them there's no place that they could publish the work you know there's no place there's no science journal
(22:06) that would accept uh papers about these topics even though they were written by qualified people so ultimately i don't think so and it's generated the result is it's generated so much controversy and speculation what are these guys up to they're trying to corner the market on ufo technology they're trying to build their own flying saucers and take over the world i've heard so many ridiculous stories about bigelow that he's uh in the mafia that he sells drugs that he has the bigelow tea company that he
(22:35) works for the cia all kinds of stuff because he was always reluctant to give interviews until he did an interview with me a couple of years ago about his space program he'd never been on television and there was a reason for that it's nothing mysterious is that he's a wealthy man he wanted to be able to go out and have dinner with his wife and not be pestered by people who wanted to borrow money from him or worry about his grandchildren being kidnapped for ransom things of that sort so he didn't want to go on camera that
(23:03) changed when he went in to develop his own space program but you know you you know what it's like the ufo field and the kinds of rampant rumors and speculation that takes place so all kinds of stories have been told about bob about the people who work with him when in fact all they wanted to do was the same stuff we want to do which is get information and get answers and i think he's been pilloried unfairly i do think he's a great man what he's doing now in the in the area of creating space habitat
(23:32) habitat is going to change the world what is what is it all about bob came up with an idea about 15 years ago to take over a nasa program called expandable space habitat inflatable uh spacecraft uh nasa had to had done some work on it and then abandoned it like they do with so many projects and bob said i like that idea he bought the the patent rights to it hired his own team of experts and and developed it further he has basically launched his own space program in las vegas bob bigelow reports to one person one
(24:04) person is his boss and that's his wife and he went to her about 15 years ago and he said honey i want to i want to build my own space program i want to go to the stars i want to be on the cutting edge of privatization of space commercial development of space he wanted to commit 500 million dollars of his own money to it and that's what he's done and in in the last 12 years it's an amazing development i mean he has two spacecraft up there in the sky right now he built them built his own plant hired his own team
(24:38) designed these things and then hired the russians to launch these craft up there he had a timetable of sending up bigger and bigger inflatable craft over the years until he gets to a really big one but it went so well those first two craft that he decided to skip the interim steps and go right to a big one bob bigelow next year will begin putting together his own space station and it will be larger than the iss his inflatable habitats are stronger and safer and will provide more space in space and once he has it up there
(25:13) in place he'll lease it out or even sell it to foreign governments to our government to corporations so we can do business up there and i think once private enterprise gets a foothold in space it changes everything there will be bases on the moon there will be bases on mars once the profit motive kicks in and it's not governments just putting footing the bill for this uh it it's going to be an amazing transformation and it'll happen fast and it will be an incredible return of investment making even more
(25:44) so because he's he's spent about 400 million dollars so far he got one government contract that was with nasa for 17 million dollars and they paid him to put one of his basically is to build a closet on the iss and to launch it up there so they have uh storage space on the iss as a result of that successful uh deal which was made public about a year ago bob now finds himself at the center of the future of the space program nasa has made him sort of the clearing house for all other projects and contractors so if boeing
(26:21) wants to talk to nasa about putting something private in space they have to go through bob it's an amazing spot to be in it's yeah it's an amazing position to be in it's a heck of a business move on his part because whatever happens in the

development of space now is going to have to go through bob bigelow and it drives people crazy oh my gosh that ufo cover-up guy he's in charge of he's now in charge of space what else is he up to it's like you know at skinwalker ranch people had written that
(26:47) bob bigelow has recovered a flying disc he's got secret technology he will rule the world yeah but i mean is it really only due to his uh you know uh development of an iss closet that puts him into such a powerful powerful position well i mean yeah i think that is i mean he saw an opportunity that no one else had uh realized and he had the resources to go after it and there aren't many people in the world that can write a check for 350 400 million dollars and bob did or if they could so you look at somebody
(27:20) like boeing boeing still exists on the last on the old paradigm that give me a billion dollars and i'll build something and maybe it'll work and maybe it won't the our space program the american space program is is ridiculous it's done nothing for years we don't even have a way to get to the iss we spent 100 billion dollars building it we don't have a way to get there anymore the space shuttle is shut down we have to rely on the russians who to pay them exorbitant rates to get to our own space
(27:49) station it's still less expensive than the american space shuttle starts yeah i you know nasa is a jobs program it makes mostly consists of job security you you put money in they start a program up it goes for a couple of years and then they cancel it they've done it over and over again it it is shameful and it needs private enterprise to go ahead and take take the next step because the government model does not work and bob bigelow finds himself at the cusp of uh of a brave new era of space exploration and development
(28:23) you're a journalist just to talk about the journalistic view of this you've been based in in las vegas most of your career and it's been a i guess a very very special special place for you to be because they'll be able to there's some it's an exotic place a lot of things and lots of stories going on and you've been able to cover some of these more these exotic stories in that particular place but how would you describe your career with this topic how what's been the reaction of your your
(28:50) colleagues when you've gone into this field it's been a mixed bag i mean in general because i was successful i was fairly well thought of in my profession at klas and i'd been there for 10 years before i jumped into this i think i'm able to get away with things that otherwise would not have been possible and i don't think it would be it's be hard for anybody else in in the usa to duplicate it because most reporters are in the into the business you get a new assignment every day go cover the city council meeting
(29:21) there's a bank robbery go do that i had a special niche i was able to cover stories that interested me my boss gave me that opportunity so when the ufo thing came up and area 51 is in our backyard they said go for it and they trusted me to do a good job and i've tried to approach this topic as exotic as it is like i would approach any other story you know to verify information to find credible sources of information to uh you know to back it up to get supporting materials and so because i've tried to do it that
(29:54) way they've given me a great deal of latitude it has driven my colleagues though crazy as i was saying in a presentation recently um my journalism colleagues don't like it they don't like it that it's it's so popular with the public that there's so much public interest so they belittle it they make wise cracks they poke fun at it a lot of that has been aimed at me i don't mind i'm not thin skinned it comes with the territory in my hometown i have a high profile public position so
(30:24) i'm fine with it but what bothers me is that so many people would in the journalism field would dismiss this topic outright without doing any work on it they don't do the groundwork if you were to tell me i don't believe ufos are real it's a bunch of nonsense because you've done the research you've read the books that's one thing but to say to dismiss it with the wave of your hand having done no work whatsoever that's another it goes contrary to everything that journalism is supposed to stand for
(30:53) we're supposed to investigate the unexplained not to explain the uninvestigated many years ago you stumbled across the so-called majestic 12 documents have you thoroughly investigated them as well not really i mean i've done some work on them and i've relied on people like stanton friedman i i think it's still in my gray basket mj 12 documents i tend to think that they were probably created by a government intelligence agency can you tell us about what's written in those documents mj-12 documents

(31:22) suggest that there was a secret organization majestic 12 that was put together as sort of a clearinghouse for all information about ufos crash saucers alien visitations things of that sort uh that there would be this one group that would report to the president kept keep things very hush-hush and all compartmentalized so that it didn't get out and upset the public um the makeup of mj 12 is has always been a source of some mystery uh who was on the board we we've got some guesses about who they were when
(31:54) the mj-12 documents appeared in somebody's mailbox they sort of laid it out they identified who the members of mj-12 were what the purpose was these documents suggested that we had recovered discs that there had been ongoing communications with aliens very controversial stuff a guy named stanton friedman nuclear physicist has sort of taken the lead in investigating these documents and trying to verify them he believes that they are true that they are accurate because they revealed certain things about individuals who are
(32:27) named as members of mj-12 they revealed things about those people who that had never been made public before and that in fact have been confirmed if you were to ask me i'd i'd say that probably 90 percent of ufologists american ufologists believe that those documents are not legitimate in this sense and why um there's a variety of problems with it uh you know both in in format and dates in references to things that are in the documents that were were not uh public information back then what may not have even been known
(33:03) uh terms like ebe you know that those are are mentioned in the mj-12 documents i haven't read them in a while the the how i think the the primary problem with them is how they were acquired that they showed up in the mailbox of a couple of researchers those researchers have since admitted at least one of them admitted that they made up a bunch of stuff that they worked for the air force office of special investigations and that they um they had manufactured material and fed it to ufo researchers just to see
(33:36) how it would spread even though it was false information um so why do you think a government agency would would spread this kind of information uh well one reason would be to see how it spreads to figure out how quickly you know how how things spread this is pre-internet uh when it when it spread out to see who would believe it and who wouldn't and who works with whom and i think was an exercise in intelligence it would be to see for example it might have been created to distract the russians whoever did this stuff is really good at
(34:09) it i mean they have so much information in there and it is so close to the real thing that whoever manufactured them they really knew their stuff which is why a lot of people suspect it was created as a distraction for the russians make the russians think that we've got recovered flying saucers make them worry about it because the russians have said that and then they've done the same thing now that we're talking about the russians you also undiscovered or you you you got hold of uh former kgb documents what do the russians know
(34:39) about this this is an interesting chapter in our in my life and i i did it came out of the nowhere uh in 1992 i left klaus tv i worked for a company called altamira communications and this company had its own tv studio and the idea was i would leave television to produce my own stuff i had proposed to this company that we produce a series of ufo documentaries that the research would become self-supporting that we would cover it in ways that no one had ever covered it before so we traveled the world and collected
(35:10) information we went to england and chased crop circles we went all over the united states dealing with cattle mutilations i interviewed all of the best ufo authorities in the world and collected all this data and along the way we're wondering about russia because i read an article in the new york times about lee harvey oswald's kgb file and the kgb had opened this file up and what it revealed about oswald i don't even remember what it was but i remember thinking oh my gosh if somebody could access their file
(35:39) about oswald what do they have about ufos if they are like the united states they've had their own ufo studies clearly they see these things in the sky the same as we do no one had ever got that information we always had a hint or a hope that maybe the files existed but i thought to myself well there's a window of opportunity because of glasnost perestroika maybe we could get into russia and learn more from the russians about what the americans know than we would ever learn from the americans themselves and in fact that's
(36:12) what we did i met a physicist named dr nicolai capranov who was in the united states he was touring american think tanks and nuclear facilities giving

lectures on disarmament nuclear disarmament nikolai had been a national security adviser to the russian parliament he was also a national security adviser to boris yeltsin and because of that he traveled in some really interesting circles at the end of his tour he ended up in las vegas and the united states congressman jim bilbray said you ought to meet this guy he might know something about ufos
(36:46) because bill bryan knew that we were working on a project so i went out for beers with dr capranov hey let's what do you know about ufos ah i don't know anything never heard you never hear anybody talking about it nah not really not the kgb or anything a couple more beers you know i did i did have a friend of mine in kgb who said something about ufo studies and then as we sit there a little longer you know what there's a guy at the ministry of defense who knows something about this i said nikolai would you be interested
(37:13) in working for us we set you up give you a stipend you go back to russia and work for us and he was happy to do it because he had no idea what else he would be doing with his life so for next eight months parts of 92 into 93 nikolai met with russians who were in high positions of authority my instruction to him was this very simple i don't want anyone who has ever talked to the media about ufos before i don't want to have anybody who's ever come forward with this i want you to find people who are in a position to know who
(37:47) have never talked about it and that's what he did and the the key person that he found i mean in the spring of 93 we went to moscow to meet the people that he had set up for us the key finding was a guy named colonel borisokolov colonel sakalov was from a long distinguished military family he was a highly decorated guy and he was in charge of an office within the russian ministry of defense that handled foreign technology and he was the head of what is the most extraordinary ufo study in the history of the world
(38:20) the biggest ufo study in history will never be duplicated the order went out uh let me back up there had been an incident and petro zavodsk and the russian government was concerned about it a ufo incident what the heck happened here so they started a study and colonel sokolov was in charge of it the order went out to every military unit in the vast soviet military empire every ufo sighting every ball of light every anomalous aircraft anything weird it has to be fully investigated and that information all goes to one
(38:55) central place and the place it ended up was on sokolov's desk tens of thousands of cases were reported over the years all of them reported by military witnesses officers and above and were meticulously documented witness statements photographs drawings it all went to sokolov and it was an amazing treasure trove he had never spoken about it before when i found him he's living in a in a tiny little apartment on a government pension and i asked him about it and he was very open and the stories he told me were
(39:29) absolutely fantastic and with his help we were able to acquire several hundred pages of this material what did he tell you what did they know what did they said as with united states he could colonel sokolov confirmed all of the things that we have always suspected about the american government he told us they're true that uh that ufos have been visiting the planet for a long time that they are from somewhere else that this technology can fly circles around anything that exists the russians knew that these craft are
(40:01) not americans he said you americans know that the craft are not russians that they come from somewhere else and he said it's a very simple reason why they did this study is that your stealth technology you were so far ahead of us in stealth we knew that ufos could do things that our aircraft could not if we could duplicate that technology we would be superior to you and stealth so the russians had a very practical reason for doing this study and he said 90 of these cases could probably be explained which is similar to what we ufologists
(40:32) know about it you know 90 of them can be explained it's the other 10 that are interesting and those cases were very dramatic he said there had been more than 40 incidents where russian warplanes encountered ufos they were ordered to chase them that these ufos appeared in restricted airspace the russian warplanes would chase them mostly the ufos had disappeared they just vanished so they performed some maneuver sail right out of space in an instant and nothing could be done there were three instances where russian
(41:02) warplanes the standing order was to start firing on ufos he said there are three instances where we fired on them and in two of those cases our pilots were shot down and killed so after those two pilots were killed they changed the order leave ufos alone because in in the words of russian defense minister they said ufos

seem to have their capability retaliatory capability beyond anything we have leave them alone and all the pilots were happy to go along with that order sokkalov said he showed me photographs of russian warplanes that had hit struck
(41:36) ufos the wings had been damaged he said that they had transferred a lot of their files to their russian academy of sciences to try to figure out how these things worked he introduced me to the head of the russia's star wars program this guy had on his desk he had a a desk sized laser weapon he called it the weapon of the aliens that they had developed from something related to this research he told me that this scientist dr andropov had never spoken publicly about it he had never used his real name because he'd been living in one of these soviet
(42:09) cities that wasn't found on any map working on really secret stuff and he said that the russians had built satellites up there specifically to look for ufos and he said the american government had i forget what the number is but we had satellite systems specifically designed to look for ufos coming in and out of the atmosphere he said you guys have been seeing these since the 40s and 50s or whenever you put up the first satellites and so he again was another guy who was confirming a lot of what we know what we suspect
(42:40) about the us government was real they showed me uh then i then i got to met a third guy who is an active officer uh he was a an intelligence officer who was running this the study of ufos after colonel sokolov ended i met him i mean it was a scene right out of hollywood movie i met him in an alleyway and he's got a trench coat on carrying a briefcase full of ufo secrets which we were able to obtain he told me about a study called thread 3 an ongoing ufo study and it seemed to have it collected ufo information from all over the world
(43:16) mj-12 documents things that documentaries and reports about area 51 the russians had this massive collection process putting it all together and they analyze it and reach the conclusions that there are visitors from outer space they interact with us on a regular basis as far as we know they're not a direct threat however there are cases where they have demonstrated their abilities if they wanted to threaten us they could this goes back to colonel sokolov something that he had told me about an incident in the ukraine at an
(43:49) icbm base it was one of the most dramatic cases that his office investigated it was in 1982 ufos appeared over this russian base they were seen for a period of four hours there were dozens of officers uh majors captains and above who gave witness statements there was one gigantic craft and then there were a lot of smaller craft these things were dancing around over the base they would merge together and split apart performing new maneuvers that we couldn't do and then after about four hours the mission control center for this
(44:23) russian icbm base it was taken over the control panel lit up someone something entered the launch codes to these missiles the guys are going crazy they're trying to turn it off pull the plug stop it and they couldn't the missiles were enabled they're ready to launch it would have been the beginning of world war three and then poof in an instant the ufos went away the mission control panel went back to normal and the russians were really perplexed in the days right immediately colonel sokolov gets the report he sends a team
(44:58) to investigate they couldn't find anything wrong with the control panel it had never happened before it never happened since they concluded and they even wrote it in a report that the ufos were demonstrating uh they were making a point these may be your most powerful weapon systems but they don't impress us we can control them anytime we want they were pretty upset by it so let's start to wrap it up from all of the things that you've investigated throughout the years what is your opinion on the visitors
(45:26) what do they want who are they why are they here sadly i don't think we're any closer at all to answering any of the big questions we have a lot more information we have a lot more cases we think we have a better understanding of it but the fact is we have no idea how to answer any of the big questions we don't know where they're from we don't know if they're from other planets or from other dimensions or they're time travelers we don't know we don't know what their interest is in us we've got
(45:56) some ideas about what they're interested in but ultimately we have no idea where they're from why they're here what their long-term intentions are and for it's 60 years now since the modern ufo era began and we're no closer at all to answering the big questions the fact is that the true architects of the secrecy is not just our government or your government it's the visitors they are the ones that could make the demonstration they could land on the white house law if they wanted to they

don't
(46:27) instead they give us these tiny glimpses of other realities as if they are leading us along preparing us slowly over time to to realize that the nature of reality itself is far different from what we suspect i i don't know that we're going to have any answers in my lifetime they don't seem to have any interest in making it clear to us in an instant what's going on and it's sad it's uh it's unsettling to some degree to think that i'm spending i've spent 25 30 years chasing this some
(47:01) people like stan friedman have spent longer and we are no closer to answering it and i don't know that we're ever going to get it thank you very much george knapp for coming to copenhagen and joining us here flying all the way from the u.s oh it's terrific thank you i'd like to stay longer i i hope i get the chance to come back and we both do hope that you will find the answer someday absolutely let us know absolutely thank you very much

bob lazar, 30 year's ago today + the truth about UFO's & aliens (2019) - YouTube

Transcript:
(00:01) [Music] imagine a place between shadow substance a place where the world is just thin not many pass through here they just tend to get burnt up infected you say knowledge it's corrosive like a an acid the mind can unwrap so you're going to want to keep your wits about you you got to show grit and patience they say the secret of the finder sometimes that's true you better hope that's true welcome to the world extraordinary beliefs [Music]
(01:13) of spots on the planet is located on the northeast edge of the nevada test site and is said to be where numerous top secret weapon systems have been tested over the years according to some ufo researchers it's also where the government is test flying alien spacecraft it sounds pretty far out but some las vegas residents report having seen these flying saucers a local scientist who says he worked at groom lake and saw the saucers joins us in tonight's interview he has asked that his identity be shielded sir how do we know you are who
(01:43) you say you are and that you actually have knowledge about what's going on at groom lake well i guess there's no way you could really know uh there's really no way i can prove it without revealing my identity and getting myself into more trouble than i have already exactly what's going on up there well there's several uh actually nine uh flying saucers flying discs that are out there of extraterrestrial origin and they're being test flown and uh basically just analyzed you say there's
(02:17) nine saucers how are those tests going uh as far as what as far as whether they're successful and and that sort of thing oh well some of them uh are a hundred percent intact and operate perfectly uh the other ones are being taken apart i was involved mainly in propulsion and the power source where did we get these saucers how did they come into the hands of the government i haven't the slightest idea and you have to understand the information is very compartmentalized and i was only allowed information that
(02:50) pertained particularly to what i was involved in but i mean couldn't couldn't our government have made them as opposed to getting them from some alien beings totally impossible uh the propulsion system is an uh a gravity propulsion system the power source is an antimatter reactor uh this technology does not exist at all in fact one of the reasons that i'm going forward with this information it's uh not only a crime against the american people it's a crime against the scientific community which i've been part of for some time or
(03:19) actively trying to duplicate these systems yet they are in existence now and basically in the hands of the government what would happen to you if the government learned that you were giving us this information anything could happen i don't know it's uh i haven't the slightest idea well you said uh you were referred to getting into trouble have you had some repercussions already yeah i've been threatened with uh being charged with espionage i've had my life threatened by them my wife's life
(03:48) threatened by them and i i mean i don't know where else you can go from there well we want to thank you for joining us pretty interesting stuff you've got to say thank you thank you sir well more news in just a moment now first we go to dan rather in beijing for a look ahead at the cbs evening news cbs evening news from china we'll have extensive coverage of peak ielts the live interview with the shadowy dentist drew international attention portions were broadcast by radio in six

european countries
(04:23) and in a nationally televised tv special in japan despite numerous inquiries and feelers dennis has remained anonymous until now his real name is robert lazar he says he was hired to work at an area called s4 which is a few miles south of groom lake at s4 he says are flying saucers anti-matter reactors and other working examples of technology that is seemingly beyond human capabilities ward knapp eyewitness news 8.
(04:59) [Music] [Music] when somebody understands fission infusion and the inner workings of nuclear reactions they can't not know how to make a bomb out of it and just make a nuclear reactor to make power [Music] it was like a twilight zone episode just kept getting stranger the fact that that was happening at all
(06:02) was the weirdest part look it's been 30 years and all of a sudden you raised it to this level you know this is a powerful technology fearsome technology and you just don't want everyone to have it'll become obvious how to make constructive as well as destructive devices from it it's my only guess as to why they have never released information it's kind of difficult once you release the technology to be analyzed and give it to everyone they can just run with it you really can't keep the weapon potential
(06:42) hidden you really can't look with et technology you can literally rule the world you're going to an investigative reporter at a news station and you are outing the most secret project ranked higher than the the h-bomb and you're essentially putting your face and voice on the news although you did a shadow interview first you put yourself out there that's because you were scared yeah there's no no question it's easy to joke about or laugh or remember just the good times now almost 30 years later
(07:16) but at the time yeah i was petrified this was no joking around i mean it was hard to sleep i had a people wait up at night and keep an eye out it was crazy it was crazy it absolutely destroyed my life i mean i weighed like 119 pounds or something and i was stressed out all the time it's safe to say your employers were pissed as [__] obviously they were pissed what was the fear from at that time i was really afraid of the people that worked at s4 i had no idea how far they would go how angry they were with me was made really clear
(07:52) so there were so many things that happened i mean people breaking into my house searching my car even when i went to the gym to work out and i mean i had friends with me that saw things like this happening and even they were afraid so i yeah i left in constant fear at the time this is a hard part of the story for people to understand it said they they don't really get a sense of what it was like because literally you had to be there for some of this i lived through it i know what it was like what bob was going through at that time
(08:32) they were breaking into his house and playing mind games you know they'd leave the doors open they'd leave drawers open nothing's taken they'd write things on his blackboard or erase things move things around he goes to the gym with his with his buddy and he's kind of scared so he's got an uzi in his car he comes out an hour later after working out the doors to the car are open the windows are down the glove box is open and the uzi is laying there on the front seat that wasn't a burglary that was somebody
(09:00) messing with him that stuff really happened i can remember getting calls from bob in the night just that he'd had somebody in his house messing with him i go over to see him to calm him down and he's walking around with his uzi peeking out the windows sounds paranoid uh but but as the old saying goes just because you're paranoid doesn't mean somebody isn't after you and in his case they were they were messing with them that was real it's both uh frightening and infuriating do you feel that you
(09:32) have been utilized in this mechanism of information release i think i'm doing something that somebody once done i think i have been used in that regard i think somebody maybe not all of them but some of them wanted this stuff out they wanted to see how it would fly i think that's why bob lazar was hired out there i think on many levels it does not make sense that they would put him in that job but the fact is they did he was out there and he was working on this stuff for a short period of time i think they
(10:01) probably selected him because they knew he wouldn't keep his mouth yet and that story would come out and then i did my part of it in telling it to the world i suspect that they figured i would quit uh that i would give up and i wouldn't continue it for another 25 years and still be plugging away at it but in the in the larger context i think i was probably doing something that they wanted done let's

get this story out there see if people freak out and then we can always pull it back we can discredit the guy
(10:31) i do think that there have been attempts to discredit me that uh that they've tried to make a run at me with false information if bob worked at los alamos in any kind of sensitive or classified position then it becomes reasonable to say he could have worked out at s4 uh all the stuff about his educational credentials aside if he was there i don't really care whether he went to mit or not and i think we established beyond any question that he was there i mean i interviewed people that he worked with who said he was there
(11:03) we had him in the phone book we had him in the in the newspaper i had confirmation from the company that that recruited him kirk meyer that said that yeah we hired him and they were going to give me the records and then they said no i know that the lab lied to me i know that they they thwarted my attempts to prove that he was there but he was there and one of the reasons i know he was there is because he took us in we went there on a weekend my photographer and i brian blackburn flew to los alamos and went to the lab and bob took us in
(11:34) was like a a rabbit in his burrow i mean he was taking us through buildings obviously he knew it his way around we were there he took us in i guess you know i guess there might be some other explanation for how he was able to have that access but i'd like to know what it is [Music] this is a reluctant ufo messiah the only reason he came out to talk to us again is because i bugged him about it relentlessly and he finally relented and came out but he wasn't happy about it nothing good comes from the ufo field
(12:08) for him it does nothing but cause him trouble if he had to do it over again i i suspect he wouldn't do it because it changed his life and there was a part of him that would really like to still be working on that stuff i mean is really amazing technology the most amazing technology he's ever seen the descriptions of the golf ball experiment where you throw a golf ball at this force field and it bounces off or the the this this demonstration where it freezes time it freezes a flame how the flame could still be burning
(12:44) uh without moving without consuming this this candle how does that work even if he has been led down a path and and me along with him that they have shown him glimpses of something for their own reasons running up a flagpole let's see how how the public reacts and then discredit him down the line he acknowledges that's possible and i and i've thought about it all the way along that were we were being played with but the idea that bob was a disinformation agent or part of uh a program to mislead the public is
(13:21) wrong he's not and i can say that after knowing the guy for a quarter of a century the story he told then is the story he tells now he didn't add to it he's not making it more elaborate he's not remembering new parts of it it's the same story it's consistent all the way through he's telling me something that really happened to him [Music] the mountains appear to float on dry lake beds like spaceships from another world they seem to ride on a viscous material channeled through empty space by
(13:54) heat that rises and separates it vitrifies everything it contacts like a like a green glass honey a goddamn psychedelic liquid drowning the emptiness with imaginations of imagination this desert is parked and punctuated by a thousand gaping holes created in the thousand atomic blasts that define an era what are they building in the desert north of las vegas what are they hiding where they hide [__] are they hiding i knew the date of a specific test we rented a car took my wife a few friends and drove out to this this place and turned
(14:44) the lights out and snuck into a little area and uh we all watched it what made you start showing your friends exactly where and when the test flights were going to be why did you do that start showing people the flying saucers at that time i was beginning to worry that i was going to suddenly disappear or something like that so i finally broke down and told my close friends really what my job did entail what i was doing and i knew the test flight schedule so i knew when to go out what time to go out and brought them there at that time
(15:17) and on schedule the craft came up you know did incredible maneuvers and flew around and then then landed so i wanted them to witness when i was so there'd be something backing up what i was saying and certainly witnessing the craft actually being tested was you know what turned them on you the people that you worked with at s4 what turned that administration of people against you when did it become dangerous for you why did you become dangerous i think that the start of it was the fact that they were monitoring my phone

(15:47) calls and at the time my wife was having an affair because she thought i was having an affair by disappearing at night going to this job and they were monitoring that now one of the requirements for clearance at this level is having a stable family life you can't have some you know tumultuous situation going on so they want you know just a a happy calm normal person i was beginning to move out of that category when they saw that this you know affair was taking place you know this is going to be a problem so let's not have him come into work
(16:25) anymore until this resolves itself and that's when i started bringing some friends out going well they're not asking me to come to work anymore and they're not just going to let me go with all this knowledge that they gave me so that's when i decided to show a close group of friends what was going on just in case i did suddenly disappear or something like that this is what i was doing the easy way out is to say he's a liar he's making it up it's hard to go ahead and accept the possibility that he's telling the truth
(16:59) but if i did not believe him if i thought for a moment that he was lying about it i'd be done with it i wouldn't still be supporting it 30 years later your life has been under a microscope every word you said for 30 years recorded has been under a microscope and that's that's affected you yeah of course it is it affect anybody how has it affected you in the way i talk and how much i do i'd rather not you know in a public forum i'd rather just not say anything why do you think people are so obsessed
(17:32) with every word that you say about your experiences you know working they're just looking for a way to to look for an inaccuracy and and to be able to discount the whole thing i always said this one time and said it's slightly different this time you know obviously he's making it up no that's just the first word that entered my mind you know i don't put that much thought into it what i'm saying look as as much as a lot of people hate it this stuff really happened i mean if it bothers you that's too bad i think that's just hard
(18:08) for people to accept i mean so yeah it would be look i fully understand i would feel the same way i'm not sure i would believe my story boy there's not enough evidence you know but uh i couldn't discount it either [Music] since the new york times story broke since louis came forward since those videos went public the world is now talking about ufos in a more serious vein i think that's a good thing and i think it reflects positively on bob and i hope that the world will take another look at it the fact is the people that know him
(18:48) best believe him the most i hope that one thing that comes across in your film is the real bomb once you get to know it becomes much more plausible as a story you saw alien ships yeah you worked on a gravity wave amplification system trying to figure it out right a propulsion system and a power source that's completely unknown to mankind and there's no way human beings could have made it there is no way human beings could have made it under any circumstances in any country anywhere period and for 30 years you
(19:23) you are telling us the truth you bet this [__] happened you got it you know the fact is that that raid that happened in michigan that's a very dramatic and very important development they weren't there looking for records about some customer he had a couple of years ago they were looking for 115. [Music] reality simply isn't what it used to be things are not what they see everything around us is a mental construct we create our own reality breaking that down is hard to do and once it's done there ain't no coming
(20:06) back [Music] but it's true it's true what i have seen is true i don't know about the big story where they came from what they're like and and uh but certainly these crafts came from another not not just another planet another solar system entirely extremely far away and they're here you

UFO's & area 51 - secrets of the black world" (2004) [HQ] - YouTube
https://www.youtube.com/watch?v=O9mD6BO08pE

Transcript:
(00:03) [Music] [Music] [Music] uh the time where i entered the hangar i witnessed recovered alien spacecraft that the department of naval intelligence in the united states was back engineering he was a u.s federal marshal and he was
(01:09) sent into the area to pick up a man a fugitive uh when he got to the gate it at groom lake uh he they they they let him on to make the arrest but they required an escort with him and then first they searched him and then they they assigned an

escort and and when they prepared to leave the escort handed him a a black bag he said put it in your belt here because when this if a siren sounds we pull the bag over our head and lay down on the ground face down and wait till there's an all clear he says there are things here that
(01:43) are very secret and they can't be seen so the man says well what happens if somebody looks up if if you don't stay down they said they're shot on the spot and ask questions afterwards i have uh had the opportunity over the years to interview again people who have worked at the test site at groom lake one gentleman spent 12 of his 30 years in black programs at groom lake when i asked him i said first of all i said do you believe in ufos and he looked at me with a straight face in one on one he said absolutely
(02:18) positively they do exist so can you expand upon that and he said no i can't about a year later we were talking about again activities at groom lake and i asked him i said you know can can you really let me tell me what's happening out there and he said well there's a lot of things are going on there that i won't be able to tell you until till the year 2025 but we have things in the nevada desert that would make george lucas envious we are here at one of the most mysterious places on earth behind these mountains begins the black
(02:54) world the super secret u.s navy and air force test site known as area 51 rumors stated right here to test flights with craft from another world recovered by the military take place in this film we investigate these rumors and were at the end able to observe one of those mysterious ufos by ourselves right here near the black mailbox at the desert road to groom lake this is a nevada test site the area comprises about 10 000 square miles it's bordered on the south by mercury and on the west side by highway 95
(03:38) and up here on the northwest by tonopah and across the top to crystal springs and down here to las vegas this area right here is the department of energy nuclear underground testing area with all their areas labeled there this is called the yucca strip up here is the tonopod test range where the f-117 used to fly out of and now there's other secret programs going on up there this area all across the north here is used for the red flag exercises which is the air force equivalent to the navy's top gun exercises
(04:26) they come out of nellis air force base here and fly this whole area right dead center of the test site is what is known as area 51 also known as watertown also known as the ranch at the very center is groom lake it's about 10 miles on each side and this is where most the secret activity goes on just 10 miles south of the groom lakes complex is an even more secret area this is where the saucers the discs are flown an area called s4 there's nine hangers inside the mountain and the disks are flown up the immigrant valley up in this area
(05:14) they're flown like that and this is where they can be seen from this road mailbox road which is right here it's about 14 miles from there to where you see the discs up in this area up here is the tonopod test range and one of the workers up there at this lake right here one day saw a big door open on the in the dry bed of the lake and a disc come out of there area 51 was basically a navy training base until 1955 when uh in conjunction with the cia lockheed made a secret test space out of it and the reason was to test the u2
(06:08) in 1959 60 and 61 they also tested the sr-71 out of there and it became a perfect area in which to test secret equipment and secret airplanes it was because it was so remote it was bounded on all sides by mountains and it was essentially a million miles from nowhere the security that it provided was just exactly what they needed in the after 1960 it became a area to test not only planes but equipment machinery all kinds of secret things that they had in 1972 there is according to my research a complete blackout of detailed information
(06:59) records what have you for a period of 18 months nobody knows what happens between the summer of 82 and i think it was january uh summer of a 72 in january of 74. there's absolutely no record they talk to security guards they don't know what happened there i don't know what happened there i don't really have any suspicions because the flying saucer program began project red light began it's my information in earnest at groom lake in 1960.
(07:33) they didn't attempt to fly one or two of the craft there was a major accident and the testing operation shut down for a number of years the testing operations began in earnest again i believe in 1980 81 82 around that area and the reason i say that is because the security increased drastically uh during that period and i believe that uh just south of groom lake which uh is in the northeast corner of uh of the nevada test site uh is a place called papua's lake it's a dry

lake uh there's a secret area there called s4
(08:13) and i believe that that's where they test the saucers out of uh my sources uh are varied but the primary source being bob lazar who worked on uh one of the nine saucers that were stored there conor stevens then you investigated rumors about the top secret flying sales investigation project in area 51 yes the rumors became a little more real to me in about 1978 when i discovered my first participant in the changeover of that base to a very special facility where they took up the runway and laid in underground facilities
(08:51) and special laboratories and then relayed it and recon reconstructed the base to make it look just like it did before the material that is now stored at area 51 i believe came from the roswell roswell crash in 1947 they crashed at aztec new mexico in 1948 and another crash down along the mexican border in about 1949 or 50.
(09:16) the residue was first taken to los alamos and to other areas in new mexico under the control of the atomic energy commission also see super secret facilities they were smaller and i believe that the real facility was constructed at area 51 when they modified when they changed over groom field to it was was a field on a dry lake bed when they changed it over to become a special research facility and i believe they transported the material that had been collected and held elsewhere to area 51 about that time at least much
(09:54) of it for the research projects now that that uh changeover came it began in about 1948 47 or 48 probably early 48 when they modified the field changed over the building and the facilities and put in a habitat where they could control an atmosphere for extraterrestrial guests is my supposition now and they also put in laboratories for research and it's been expanded been worked and expanded almost since that time you got confirmation from the military didn't you yes one in particular comes to mind now he's not in the military but he ran
(10:36) uh several large military research programs here in nevada very top level programs the highest classification this is a person from a very prominent nevada family uh well-known it's provable where he worked and the kinds of things that he did he he also confirms that the the alien technology has been in nevada since the early 1950s that it was it was even here before the base at groom lake was built that one of the reasons that the groom facility was built is in order to test this alien technology he told me that there was a live alien
(11:13) in custody for a number of years that they had difficulty communicating with the alien at first but eventually developed some sort of communication abilities he uh he is reluctant to talk he's worried about what will happen to his family but he has agreed to give me a videotaped deposition that would be released only after his death and i think when that comes out it will not only confirm what bob lazar had to say but shed a great deal of light on what our military what our government has known about the alien presence for the past 45 years
(11:47) including roswell las vegas nevada city of gambling city of the thousand lights and what only if you know gate to a world full of military secrets here we started our investigation into the mysteries of the black world because behind the mountains north to the glitter town begins the nevada test site nearly a state by its own surrounded by borders safer than any other border on earth since the iron curtain came down nuclear weapons are tested here the stealth fighter was hidden here a much more exotic planes are flown today
(12:38) [Music] our quest brought us to john lear one of the most successful and experienced pilots in the united states the son of the legendary airplane designer william pillier has flown in over 16 000 hours more than 160 different types of aircraft in over 50 different countries holds 17 world speed records it is the only pilot ever to hold every airman certificate issued by the federal aviation administration since the vietnam war has flown missions worldwide for the cia and other government agencies as well as many different experimental planes for
(13:21) the navy and air force other insiders have told lear about the secret ufo test flights in area 51 but in 1988 these rumors became reality for him after he met a young nuclear physicist robert lazar in the summer of 1988 i was having this house appraised and the appraiser brought along who was very the appraiser was interested in ufos and he brought along a friend of his who was a scientist former scientist at los alamos the appraiser being interested in ufos wanted the opinion of this scientist on ufos and at that time i was doing a
(14:01) lot of lecturing there was a lot of publicity about me and ufos in the summer of 88 so i met this gentleman bob lazar and he didn't believe it at all he told me that he worked at los alamos on sdi he worked he had acute clearance uh he had a number of other compartmentalized clearances he he knew a lot of secret things

he said that if there had been something like this some cover-up that he would have known about it so over the next uh three or four months we got to know bob very well he got to know us and we passed him
(14:41) various information which he checked out with the people that he knew that still worked at los alamos specifically people who had access to the classified library i told him that project grudge which the air force told us told the public was canceled in 1949 was still active he was able to determine through his friends who had access to the classified library at los alamos that it was still going on there was another thing that i had mentioned that the one of the aliens that we had captured were kept at a secret place called a yy-2 facility
(15:19) he in fact found out that there was a classified mail stop at los alamos called yy-2 now that doesn't mean it would they kept aliens there but it showed that i knew secret things that were going on there was enough evidence there that that he thought well maybe there is something to this and he wanted to find out so having uh the specialized uh highly uh educated person that he was he held two degrees master's degrees from mit and also knowing dr keller who was the father of the h-bomb he was able to send his resume to dr teller
(15:55) who then called him and uh asked him where he wanted to work dr teller proposed two places either eg g in las vegas or lawrence livermore laboratories in california bob said i want to work at area 51. he didn't tell dr teller the reason but he wanted to get as close as he could to where we thought the saucer testing was going on well during the next six weeks after that he was contacted by egng uh he was given three security interviews uh and three interviews on his uh basic knowledge they were so impressed that that
(16:33) apparently uh they went ahead and hired him the first thing that i knew is on december 6 1988 bob came up here as he usually did in the evening i was sitting here writing checks and he sat right in that seat and i said what's going on bob and he said i saw a disc today and i said i was so startled i thought i didn't hear him right i said what and he said i saw a disc today and i said theirs are ours and he said theirs and i said you went to the test site he said yeah i just got back this is the first time i went up there
(17:06) i said oh my god i said well what are you doing here i said don't jeopardize your security clearance work up there for a while and find out what's going on he said he said no he said you've taken so much flack over this thing people not believing you i'm going to tell you exactly what i saw and for the next three hours and 47 minutes he proceeded to tell me exactly what he saw on his first trip up to s4 at the nevada test site and basically it was that yes we had nine extraterrestrial vehicles he told
(17:37) me a little bit about the power plants he told me that he'd been briefed on the aliens that flew them he told me that he'd been briefed on a number of other secret things he told me that we in fact did have a secret base on the moon he told me that we in fact did have a secret base on mars uh a number of things some of which were so unbelievable it was had i not known bob to be truthful i would have been very suspect but i had known him for this period of time and i had no reason to to believe that he would tell me
(18:12) anything other but the truth well i had met ed taylor at los alamos one day i had a brief meeting and a talk i had shortly thereafter moved to las vegas and basically left the scientific community to do other work uh some time later i decided to re-enter and send applications out to several other national labs and also went to ed teller and he gave me a call and he said he might have something that i'd be interested in and suggested that i go for an interview shortly thereafter someone from egng called and told me to come down for an
(18:58) interview there they made it very clear that eg had nothing to do with it they were just using the building as a place to do the interview after a short time they said i was basically overqualified for the position but they may have something else in the future and i don't remember how much time lapsed after that but shortly thereafter they asked me to come down for another interview and they said this was involving uh i don't remember their exact wording but they led me to believe it was uh a field propulsion system
(19:32) and of course i thought it was something that in secret that we were working on uh later only did i find out that it was uh you know a back engineering program dealing with alien craft i flew out of las vegas mccarran airport and i flew to groom lake in a 737 aircraft we land at groom lake and there's a bus there that drives about 15 miles south approximately i'm i'm really not sure exactly how far uh down to a smaller dry lake bed known as papoose lake and right up against the side

of the mountain is the uh
(20:14) s4 installation and what happened to you first when you entered it how did phil receive you uh it was very military-like it was certainly not a scientific atmosphere very high security everywhere you you walked you had to have an escort an armed escort even even into the bathroom all doors lock and open with your uh with your badge and it was a very oppressive atmosphere um how many times did you spend on this atmosphere before you saw the craft for the first time uh i believe i was only there two or three day probably two days
(20:59) before i saw the how they are craft what your pressure was and your feelings when you saw it well my feelings it was very uh i should step back a minute and say that when i first saw the craft the first time it was walking into the hangar and my impression was well this explains all the ufo sightings this is just a secret military aircraft we're working on and that's the end of that it was actually the second time when i saw the craft when i got to enter it and look over it and i finally realized what was going on
(21:39) that this is an alien craft and of course this was after i read the briefings and uh that was a totally different feeling that was not a feeling of excitement it was a almost um anonymous feeling that uh a feeling as if you shouldn't even be there as very difficult to describe that it looked like if anyone's familiar with the billy myers uh sightings very astonishingly similar to that uh that craft it was a a very sleek thin looking uh flying saucer shaped craft kind of hard to describe without drawing it but kind of a typical
(22:26) flying saucer shape did you see just one type or this one perhaps there were nine total i only got to essentially work back engineer or analyze one of the craft but there was a separate hanger for each of the crafts and uh each one was essentially different uh in its visual appearance did anybody tell you over the u.
(22:57) s navy intelligence got requests from no no not at all that's uh a lot of people have speculated about it that they were either shot down or they crashed but uh the craft seem undamaged so i doubt either of those would be correct can you describe the inside of an alien craft it's very plain it's all one solid color a grayish pewter color the same color as the outside of the craft there are no sharp corners anywhere every device in the craft the seat the amplifier housings everything has a rounded corner on it almost as if it was all fashioned out of wax and then slightly
(23:39) melted so everything curved even where the ceiling meets the floor on the end everything has a curve to it very very plain very wide open very impractical use of space and there are three levels the lower level houses the amplifiers themselves that swing the three of them the center level is where you enter the craft or the seats and the amplifiers are and the uh top level is a small area and i did not have access to that so i don't know what's up there do you think the alien craft was constructed absolutely alien craft there's no
(24:17) question about it well first of all the scope of the project was to back engineer it if they were united states craft we wouldn't be going backward trying to find out how they were built if we had built them second of all the size of the equipment inside the size of the seats the materials that were in use completely alien to us pardon the pun and you know the fuel element 115 essentially non-existent all these factors together and of course the briefing information stating that they were alien craft could anybody tell you how the
(24:56) propulsion function well that was part of my job was to back engineer that and find out exactly how that operated and they had made some progress but i really don't know how long the craft was was there being analyzed if it was one year or ten years before i got there but it seems like uh only a modest amount of progress had been made the propulsion system is really an amazing setup there's two parts gravity amplifiers and the reactor that provides the power the reactor itself is a total annihilation reactor
(25:36) fueled by antimatter total annihilation is essentially the most efficient nuclear reaction that takes place of the three fission fusion and annihilation it uses a super heavy element element 115 as it would appear on the periodic chart none has yet been synthesized on earth it's my opinion that this occurs naturally in in certain star systems this element is bombarded in an extremely small accelerator the element under bombardment uh undergoes spontaneous fission and produces uh antimiter particles these are
(26:18) interacted with a gaseous matter target and by means of 100 percent efficient uh thermoelectric device is converted into electricity now 100 percent efficient uh any electric device is essentially impossible uh you know the first law

of thermodynamics says that's basically impossible there has to be waste heat and things of that sort but there's none detected in in this system that's another amazing form of technology this uh tremendous amount of power the system generates uh operates the amplifiers and also as a
(26:57) byproduct of the 115 undergoing uh this bombardment it produces a very interesting phenomena a gravity a wave as it's known to be called this gravity a wave is it travels in almost the same way microwaves travel this is essentially applied to the gravity amplifiers and by means of the electric current also provided by the reactor it's amplified and focused the amplified signal is shift shifted slightly out of phase and and by virtue of that they can repel or attract a gravitational body the craft can take off on one gravity amplifier
(27:49) there are three in this particular craft uh when it's using just one amplifier essentially pushing away from the earth it's known as omicron configuration for space travel the craft will rotate up on its side face the three gravity amplifiers at the target they'll focus down on a single point some tremendous distance away and the amplifier and the associated and the reactor the associated reactor will be run up to full power and uh they essentially pull the fabric of space distort space and time toward the craft
(28:24) so they can trim traverse a tremendous amount of distance in in virtually no time at all they're not traveling in a linear fashion they're essentially bending space since space the fabric of space essentially and gravity and time are all interlaced when you start distorting gravity you just distort time and space along with it and these are these aren't theories we've known these for a while we just have no way of controlling them but apparently the civilization has found out how um did you manage
(28:53) your people they've done several test flights in it now not out of the atmosphere uh these are short controlled low altitude flights essentially they have a prized position here so they're not going to risk taking this to a point where they could potentially lose it as you know at the gravitational pull of the earth or going too high but i witnessed several tests outside the compound and also one you know probably about a hundred feet away from the craft how did your craft behave in the flight very very quietly it it
(29:37) lifted off and it made a slight hissing sound a slight blue glow from the bottom probably due to the extreme voltage that's present on the craft after a short time that that disappeared as it rose and just gently glided and later sat down it was very uneventful but almost totally silent and can you please describe the briefing documents and the information contained in it uh it was there were an extensive amount 120 some odd briefing documents all of them very short and essentially what they were doing was just giving me an overview
(30:25) of the other aspects of the research being done on the craft and the bulk of the information all the technical information was specifically dealing with the power and propulsion system which is what i was supposed to be working on but there were documents uh basically stating that these were aliens that possessed the craft there were some autopsy reports that not very in-depth they had no reason to give me in-depth reports on that but they did have pictures and uh two pictures actually have the alien carcass with the chest cut open in a
(31:03) single organ removed and the organ itself was sectioned it seemed to from my non-medical viewpoint it seemed that this one organ performed uh many functions instead of one there were documents on metallurgical work being done on the craft and really every aspect that separate groups were working on and i'm sure they got a briefing on what my group was working on a very abbreviated one as i did on theirs and this will say where the aliens come from yeah it did mention the zeta reticuli system and how that information was extracted from
(31:47) the craft i don't know maybe there were star charts or something along those lines did they contain any information about the um history of mankind the alien involvement and the history of mankind not not really not nothing that said well this is the way things were uh there there there was mention of um um alien intervention in in the past i mean extremely long ago uh something along the lines of uh i have millions of years ago from the information that that i looked at it it seemed that uh and there again these are briefing
(32:34) documents so i can't i i can't myself ascertain whether or not these are true i can only assume it because the briefing documents i read that pertain to the propulsion system were true because i i dealt with that but they did make reference to uh contact with the earth over ten thousand years ago uh also with uh genetic alterations that ended in uh a simian being and all kinds of uh claims did you ever

meet an alien or some healing body other than in pictures no i've mentioned several times that i'd walk through an area and looked in a
(33:18) small window and saw something small there but i don't i really can't say that was an alien body a lot of people jump on that and say yeah you must have seen an alien but uh there's just as much chance that they were trying to figure out the size difference and how the the seats fit a body and you know they had made up a small mannequin or something i didn't see anything moving around alive so i i always say no i i have never seen a living alley how do you think for themselves that's very difficult to say i i really
(33:52) i really don't know i'm certainly not the most qualified as far as physics goes so i really don't know i've i approach things at a very different viewpoint uh they might have been frustrated after a long time walking down the same path and not getting anywhere and they wanted someone essentially to come out of left field and approach it from a different angle with a different viewpoint and i'm kind of known for that why did you went public with information when why why that's again a complex question it's not
(34:26) just one reason there's several stemming from from many things harassment to protect myself the fact that this information being contained is is also unfair but there are many many reasons after you went public they will try to silence you in any way oh in every way yes i was uh uh shot at while getting on the freeway here in las vegas uh friends were harassed and taken out of work that that knew me uh many things happened well he was uh he was upset about the security at the base it was an oppressive place to work he
(35:09) was upset that they didn't have better scientists and a more open kind of research that would allow them to finally get to the bottom of how this alien technology worked he thought that that information should be shared with the entire world in order to benefit the entire world at the same time he was going through some personal crises that uh that may that led to him sharing some of this information with some people that he knew once he got caught he was worried about his safety they put guns to his head they told him
(35:44) he was in a heck of a lot of trouble and i think the reason he was willing to talk to me at least what he told me in the beginning was he was trying to save his his hide he figured by going public that they wouldn't dare do something to him it seems to me that that for several months there after he was talking to me there were serious attempts to intimidate him to keep him quiet uh but he had the courage to pursue it and i think he made the right decision because i'm not sure that he would be alive today
(36:11) if he had not spoken to the television camera michael i was in las vegas television for 10 years i worked stories about political corruption organized crime illegal drugs i've never done a story anything like this when i first met bob lazar i was only tangentially interested in the ufo material i had done some talk shows about it i knew the public was interested in it but i didn't know if i was going to be able to do the story about area 51 stories about area 51 and possible alien technology there had been
(36:44) floating around for as long as i had lived in las vegas but there had never been any thorough investigation primarily because no one who had inside knowledge of the program had ever been willing to talk about it publicly until bob lazar when i met bob i i had a meeting with him and my news director we uh we asked him a lot of questions we asked him the basics of his story it obviously is a fantastic story but we decided to go forward with it because bob himself seemed so credible it it became very difficult very soon
(37:19) however because uh trying to verify bob's background proved extremely difficult it is still proving extremely difficult for example we quickly found out that the schools that he said he went to had no records that he was ever there his former employers where he said he worked had no records that he'd ever been there in particular los alamos national lab was the linchpin of his credibility we thought if we could prove that he worked at los alamos as he said it must have meant that he went to school somewhere because
(37:51) they don't just hire people off the street and if he worked at los alamos national lab on classified material it made sense that he could have been hired to work at other classified programs such as s4 papoose lake however the people of los alamos lab said they had no records that he'd ever been there they stalled on our requests for information they they wouldn't return phone calls they wouldn't answer letters it was as if they didn't want us to have the answers well eventually we came up with a lot of

(38:23) indications that bob did work there we found for example the the newspaper from los alamos that lists him as being a physicist from the lab we found the the lab laboratory telephone book that lists him as being an employee at the lab we have talked to other people at the lab who worked with him who tell us that bob did work on classified projects that he was a physicist that he was there just this week almost four years after we first started making our inquiries at los alamos we finally got someone from the lab to
(38:55) say yes bob lazar was here yes he worked at the meson facility yes that facility did some classified work it's taken a long time but now we know that bob was there we know we had a security clearance uh but we still know that there are a lot of the records that we're searching have not been produced for us we don't know why what convinced you most that bubble hazard told you the truth well i'm not 100 sure about everything that he says because as journalists we have to be somewhat skeptical but a couple of things stand out in my
(39:29) mind number one is that bob has always told the same story the story that he told me on the first day that i met him about his experiences at s4 is the same story he tells today and most importantly when bob got into some legal trouble which in in the eyes of many people means that he's completely discredited when he got into his legal trouble he told the court system the exact same thing now the the courts the interesting thing is they're trying to verify his background the probation department and they said we can't verify his
(40:00) background therefore he should go to prison well my response to it is welcome to the club you can't get any information on his background bob was facing up to 60 years in prison if he did not tell the truth about his background and the story that he told to the court is the same story that he told to me on the first day and the same story that he's telling today after you interviewed lazar on tv did you come in contact with other witnesses from area 51 several witnesses more than a dozen now in in total
(40:29) have come forward with bits and pieces of information that confirm at least parts of what bob said no one has come forward with the kind of broad knowledge that he claimed but what i have learned from these other people tends to confirm that what bob is saying is true the problem is that none of them have been willing to talk publicly they will give me bits and pieces of information privately but i'm restricted from using their names and there's some very good reasons for that there's been an obvious attempt to
(40:56) intimidate these witnesses into keeping their mouths shut the three examples come to mind one is a a former electrical engineer who worked in the television business who moved from las vegas and whom i worked with moved to another city he had told me by phone that he had seen a disc under a tarp in a building at groom lake well i tried to arrange to do an interview long distance interview with a camera crew in the city where he lives he agreed to do it as long as i blacked out his face he comes out the morning after he makes the agreement to
(41:28) uh to give me this interview there's a car sitting in front of his house two men in suits speaking into a radio he's not giving it much of a thought but they followed him to work when he gets out of work they followed him home no interview he was scared there's a woman who works in the court system here in las vegas in a very responsible position who formerly worked for a major defense contractor here in nevada she had sat in on meetings where she said the discussion between her employer and military officials
(41:57) was about wreckage from roswell which had been taken to area 51 alien wreckage she had agreed to give me this information in a private meeting that we were going to have but the day that the meeting was supposed to happen she didn't show up and i found out later she'd been visited by her former employers and they had told her she's still under oath she could be prosecuted but what's more her employers hinted that harm could come to this woman or her family if she talked to me they said we know you do a lot of traveling we'd hate for
(42:27) accidents to happen to you or your family so she will still not talk to me now three years later there was a third example this man who performed the tax returns of persons who worked at area 51 he had called me up on the phone at the tv station and told me he would meet and give me this information the next day he's visited by two men who say that they're from the secret service and they wanted to ask him about his tax returns but he said that it was his definite impression they didn't care about his
(42:57) tax returns they just wanted him to shut up and not talk about area 51. so there are a lot of people like that who have information who could confirm bob

lazar's story if they had the courage to come forward i can't really blame them for not coming forward because our government or elements of our government or representatives of our government seem to use intimidation and fear tactics to keep these people quiet the only evidence that we got is we were able to steal or otherwise obtain a piece of the fuel that powers
(43:34) the saucers it was element 115 it's a stable element and we did several experiments uh with this we also videotaped these experiments uh the experiment was to prove the high gravitational attraction the the heaviness of the element and other things we proved it to ourself unfortunately whoever is in charge of the cover-up stole it back the other thing was that on may on march 21st 1989 he asked me if i wanted to view one of the test flights this was on a tuesday and i said well sure but how are we going to see one and
(44:13) he said there's going to be a test flight tomorrow night just at sunset and i know a place where we can sneak in still be on public land and watch it i said great so i said why at sunset and he said well statistically up in that area there's the least traffic around then so i drove with bob and the real estate appraiser gene off and myself and we drove up there got there just a little bit before sunset i took my celestron telescope we took a video camera uh got out of the car and within maybe 10 or 15 minutes this disc comes
(44:51) up from behind the mountains and starts doing all these fantastic maneuvers uh it was a light a very bright light and you couldn't see the disc form but i had my celestron scope with me which is eight inches extremely powerful and after a few minutes i was able to get it right in the the finder of the celestron telescope and i saw it for myself it was a disc there was no question in my mind and i just watched it go down behind the mountains we had heard about this location and actually the ultimate the information ultimately had come from
(45:28) john lear we found out we heard about the 29.5 mile marker the famous mailbox area so we went up there our first trip was the first saturday in january of 1990 and we arrived there about 10 30 at night and while we didn't see anything on that trip it was a saturday night we found out that the active nights are monday through friday and the weekends are usually shut down but what we did find out there were several other vehicles up there three motorhomes and a couple of passenger cars and talking with those people we found
(46:02) out that they having had gone out there on numerous other occasions had seen plenty so we were determined that and we had understood from the beginning that this was going to be something where on one night you would see nothing and on the next night all hell might break loose so we were prepared for the long haul we were going to continue going out there until we should eventually see something so then upon returning back home i discovered that i could tune in the billy goodman happening out of las vegas in santa monica i could receive it so i
(46:36) started listening and almost the first night bob lazar was being interviewed by billy goodman and i in listened intensely and i discovered from lazar's interview that the best nights to go out there are wednesday nights that they pull out most of the stops on wednesday nights now the reason for that was explained that when they were preparing this facility and the operation they did a study on highway 375 the public highway through the action zone ticaboo valley and they determined from their study that there was the least traffic
(47:14) on wednesday nights on highway 375. so that's why wednesday nights were chosen for most of the action although we on and having made numerous other trips determined that almost any weeknight is effective monday through friday but wednesday's always seems to be the most prolific probably for that reason but then of course we wondered that since we were going out there on a wednesday night maybe that would perturb the formula and then of course it would shift to some other weeknd who knows so but still nevertheless it seems that
(47:46) wednesday nights still continue to dominate the with the greatest amount of activity out there so our next trip was wednesday february 28th now on our first trip i had gathered together about seven or eight friends and we caravaned out there and saw nothing of course then i started organizing the same group of friends to make this second trip but this time was in the middle of the week and lo and behold when it came close to the time to depart we found out that none of our friends could make it work weeknight so
(48:21) pearl says boy i don't think i want to go out there all alone i said oh don't be ridiculous dear i said we obtained this information off radio kveg clear in santa monica being broadcast from las vegas i said there are people all over the western states that are hearing this we have a tangential interest in ufos at this

point think of the people that have a voracious interest in the subject you're going to have people going out there from all over and i'm sure the word is spreading to other countries of the world you'll
(48:54) probably have people out there from australia and europe and all over the map to say nothing of the people from las vegas close by i said there could be scores even hundreds of people out there don't be ridiculous so we went out there we were all alone i was actually outraged well anyway we got out there and i believe we arrived around 3 30 in at the mailbox we decided to go to the little alien for dinner and we came back and got to the mailbox by about 5 30 it was beginning it was dusk and beginning to get dark
(49:31) wednesday february 28 1990 and i got out my lawn chair and suddenly at 7 30 the first craft came up and i was astounded i leaped out of my lawn chair had a camera around my neck my 35 millimeter point-and-shoot camera nikon action touch and i took a couple of shots and then we actually about every 45 minutes a craft would come up one at a time we had we saw six craft that night each one in succession and it was craft number about two or three that was was the most dramatic that is it was the one that came the closest
(50:11) and i took a photograph of it what we actually saw michael was a craft that was ellipsoidal in shape it was pulsating brightly and while we couldn't see the outline of the craft the stripped outline we saw this very brightly pulsating ellipsoid and when i snapped some shots apparently the camera with its low end optics that is we didn't have a huge magnifying lens so it didn't bring the craft in so close that would have appeared as a giant blur of light so plus it must have caught the craft in a trough of its pulse because the
(50:54) photograph captured the craft beautifully that is the outline of it so it was just a fluke of being at the right place the right time and having the right optical setup going to bloom lake area 51 what happened to you this night well on that night february the 21st 1990 i took uh accompanied a crew from nippon television network to witness the test flight of an object over groom lake which is known as area 51.
(51:38) we arrived at the site around just after sundown because according to the information given to us on that same day when we visited mr lazar at his residence he said that if you go there after sundown and stand near the mailbox area of highway 375 looking south towards groom mountains and also to the jumble hills you'll see test flight of these objects and lord behold when we arrived at the scene exactly around 6 45 or so we started seeing and we suddenly started seeing an orange yellowish light suddenly appear on top of jumbled hills
(52:31) making a motion to the right for about 15 seconds or so next exactly at 8 15 pm we had another sighting of the same object that suddenly appeared on top of jumbled hills came up above the hills and [Music] made its appearance went slightly to the right side and at that juncture in time it made a sudden dissension and a back turn which i estimated to be possibly about five thousand feet sudden dissension a back turn dissension and i have never seen anything like that in my life ever and it is definitely a testified
(53:26) of highly unusual uh objects a demonstration of technology or propulsion system so exotic right now we don't know what it was but it was being tested at that very night well i've become probably the expert on area 51 in the united states since uh february 26th of 1991 which was my first trip out to area 51 on that trip i got as close as i have ever gotten to a flying saucer it was the first time i'd ever seen a ufo actually i was traveling in a car with with my friend down the road and a very large object flashed over the car
(54:12) and then began to float probably about a mile away from us in the open desert we got out of the car ran towards the object and got within a few hundred yards of a large disc shaped object about 40 feet in diameter that looked like a saucer with a teacup on the top of it it glowed a brilliant reddish-orange color and then glowed a real bright yellow color on one occasion we thought that the object was actually going to explode because it glowed so brilliantly it would shoot up to about 200 feet in the air make a falling leaf motion back
(54:43) and forth and then go back down onto the ground this object was amazing i was so excited because i've never seen anything before like this ever in my life we got our faces burned we had a mild case of radiation poisoning after that we had fevers for three or four days of about a hundred and two hundred and three degrees which we felt was radiation poisoning and since then i've been out to the area 51 area uh probably some 40 50 times or so and have take taken quite literally hundreds of people out there we had gone to

(55:16) a place called rachel where there was supposed to have been this gathering of people one of which i had heard on the radio in los angeles and that's what seemed so intriguing we passed this large group of people in the middle of nowhere out in the desert there was a tour bus and probably 24 cars or so just in the middle of nowhere total darkness we went on by them and went into rachel we we stayed there for about 45 minutes just listening to the conversation going on and decided that the place to be was probably the group
(55:50) of people that we had passed about 15 miles back we went there and sat and began watching like it seemed everyone else was doing and then we had the first actual sighting i i looked up in the sky and i thought there was a really bright star up there and i said john is that star kind of moving and right about the same time i saw that he goes yeah i think it is and right about that time it's just like like a falling star dropped out of the sky and and and just came straight down to the right above the a mountain range
(56:22) that was about five miles away from us and and just stopped there and hovered and then and then moved around the mountains a little bit making various maneuvers that no aircraft could possibly make and uh then it just it didn't just stop and then it and it lowered itself down below the mountains out of view and that was the the first of uh many weird things we saw that night and uh the the people on the bus were there at that time they they all applauded like oh there was a sighting and uh you know it was getting late i
(56:50) was about one well it was not even quite midnight then and they uh so they all kind of applauded and said well that's there and they all got in the bus and left did you recognize any details not at that time at that time that that particular sighting was completely on the other side of this large valley that was at least 15 20 miles across at the point of where where we saw it come down and float across the valley the most dramatic thing that happened that evening was uh after every a large number of the people that had left including the tour
(57:24) bus it was down to three cars and we were sitting in the middle of these three cars and had been watching a light maneuvering uh kind of wildly out on the other side of the valley and were just intrigued as it came straight toward us as if it was singling out uh jeff and i in particular yeah from from this law immense distance away in a straight line and there was a car on the other side uh on our right side that had the dome light on and they were making sandwiches they didn't see this happen there was a car totally on the left side
(58:05) was going on they didn't see it happen they had the seats down and i think they were making out yeah and we were absolutely stunned uh i i felt absolutely awestruck as this light that we had been watching came straight toward us in just an instant it crossed that long valley and and became actually frightened because we're sitting we're sitting in a pickup truck and i'm looking right over right up like this and it's stopped and hovered practically right over us and uh and then it turned on a light
(58:39) from the from the edge of the craft and i mean and when it came over us and stopped and hovered the light seemed to be on the top of it and it revealed like a silhouette of a disc and you clearly say it was it was a disc shaped craft and it made no noise whatsoever just hovering above us you know probably maybe 100 feet you know you know in altitude above us yeah yeah and it stayed there and hovered for a few seconds more and that's when i was starting to get worried you know that something else is going to happen now that they've
(59:07) checked this out maybe they're going to land or you know i didn't know what was going to go on so i got pretty scared at that point and right about the same time i got scared uh the thing just zoomed back over the mountains and i mean you're talking about like oh was it 10 you know five five eight ten miles and within a split second it was over this mountain range and then and then stopped and then just lowered itself on the other side of the range out of sight we have to understand one fact that area
(59:37) 51 is has three tiers of security systems the outer perimeter security the inner security and also the regular military security plus automated security system we're talking about outer perimeter security area 51 is using semi-private security firms such as wackenhut corporation we call them wackenhut ss because basically it's the way they operate why can't hurt ss of course means why cannot special securities corporation of course and they are assigned to guard the outer perimeters of area 51 and they because of the status of being
(1:00:29) a semi-private status they don't wear any insignias of any kind they wear military camouflage uniforms and carry machine guns and so on they ride unmarked

four wheel blazer type vehicles and they they harass citizens who even dare to drive on any of these dirt roads south of the highway 375. we have every right to be driving on these public lands as long as we don't cross the warning side area we were harassed by dangerously maneuvering helicopter over public land on may 16 1991 a group of us all together 18 of us
(1:01:24) were in a seven car caravan just coming back on groom road after taking pictures of the warning sign area we were coming back to highway 375 but suddenly we heard a throw thunderous sound overhead as if a railroad was passing over our cars when we looked out up there was this military helicopter that appeared and came about eight five to eight feet above our cars on purpose harassing us intimidating us and for the next 15 to 16 minutes we were trying to get away from this this helicopter we were tr frantically trying to drive
(1:02:15) and go away from this area and we were buzzed by this helicopter continuously for 15 minutes in one occasion this helicopter circled around as we were driving and came front of our cars at almost low level and just scared us and continued this illegal uh maneuvering endangering our lives [Music] where is it where is it [Music] there it is here it is there it is for the next stop but here it is
(1:03:35) yeah it's flying over there i had to put the gain on just to see it am i better right right right unfortunately this isn't doing any good i think so move
(1:04:56) who's that gary come shut up i can't look what he's talking all right the ufo which yet was filmed by the japanese television crew that night was analyzed by nip and television with the help of latest state-of-the-art computers the result it's definitely no conventional aircraft [Music] foreign
(1:06:27) [Music] but also around las vegas unknown flying objects are regularly observed i took my wife to work one morning and on the way back i was looking out the windows i usually do and i carry my camera with me quite often and i saw this anomaly this ufo in the sky and so i stopped my car and pulled out and uh took some footage of it which is what you're looking at now i guess that's about it and it came on two different mornings as a matter of fact
(1:07:31) so on two different mornings i took pictures of it this was in 1991 and it was uh actually we've seen a lot of things around las vegas here it's a great area to spot ufo objects i've seen cigar-shaped ufos i've seen the regular discs and i've seen anomalies of all styles and types around here i've spent many a night all night up looking for ufo things in the sky [Applause] [Applause] one morning when i woke up i was drawing
(1:08:37) the curtains of the window and it was a cloudy day but clear and two they look just like bowler hats dull gray no windows no wheels no not just look like a bowler hat metal definitely metal there's two of them one was flying in a steady fashion and the other one it looked like the pilot was drunk because it was uh it was just flying this way and they went down behind some apartments which were only about 100 yards away from me that i was impressed with i told my wife about it and she gave me a strange look and two weeks to the day she was at the
(1:09:21) same window i saw the same things and caught me at work and she was jibbering away and i was and from then on we'd seen quite a few i spent a lot of time out in the desert with my camera and i got rather obsessed with it for a while but uh as you'll see in some of the other footage of what i've got it's quite interesting and it's definitely unexplained it happened when i was at work it was a sunday and it was close to seven o'clock and for some reason i just took my camera to the parking garage roof
(1:09:59) and started filming uh what you see here which are two remote type objects sort of dancing around and uh in a little while you'll see another craft come along underneath is a little larger and it's very stable and this guy is steadily heading north but these two which are dancing around seem to interact with it and then it goes on its way a few minutes later another craft comes along the base part of the mountain and in between that an airplane going into land at mccarran airport goes past so you get a good idea of the
(1:10:39) size and the distance and then these two objects again interact with this large craft and uh as you'll see towards the end of the tape here i follow it around to see where the craft went to and it's totally out of sight it's did you vanished more details no not really no it was just close to dusk they were just lights in the sky it slightly delta shaped i think the objects are that's how they appear anyway when i zoom in obviously the lazar ufos were just the tip of an iceberg a black world as fantastic as a fairy
(1:11:25) tale country or a far away planet yet committed researchers try to trace

down the last mystery of these super secret test flights by looking at the maps and by discussing things not only with the sheriffs but also with friends of mine i found a mountaintop in which you can actually climb to the top of the mountain and it's about an hour and a half hike or so it's about seven miles to the top of a mountain which we call morton's mountain since i was the one that first found it climb up the top of the mountain and this is where you get
(1:11:58) this spectacular view of virtually the entire base you can see this particular video was taken at night so because of the fact that we were very afraid of being caught out there still during the day because we weren't really sure whether or not we were over the military's border or not at about 6 a.m every morning they were sending helicopters out literally chasing us around if we were anywhere near their border and the evening times they would send out the security vehicles the the bronco security vehicles who would
(1:12:27) do everything from take down our license plate numbers to actually go through our cars to looking for us in the desert thinking that we were actually stepping across their border this videotape comes from our efforts literally risking our lives at that time to be able to get a good view inside this probably one of the most top secret facilities the united states has above ground specifically what you're looking at is you're looking at area 51 at night taken in the taken at around dusk you're also looking
(1:13:00) at another section of the video which was work that looks like was going on on the runway now for some reason the military was carrying out some kind of either construction operation at night now there seems to be a huge halogen lamp that's illuminating part of the field in which you'll see smaller lights which are trucks and and jeeps basically coming and going from this light you'll see on the film what we thought originally was a ship actually coming on and testing and moving around on the on the floor of the valley it didn't
(1:13:32) really move that much at night so that's why we concluded that it must have been some sort of halogen work lamp you'll see for the first time the object which is called old faithful now old faithful is called that because something appears in the sky over area 51 at 4 50 a.m virtually every thursday morning now many times this object is preceded by what in california have become known as sky quakes there is a very large object which we've witnessed out there between seven and eight hundred feet long and
(1:14:04) this object literally comes in from space traveling anywhere between mach 10 and about mach 18 flies over catalina island over southern california and then lands at area 51. this particular object that you're seeing we theorize is what's known as project senior prom which is underneath the project aurora banner and that this object is in fact an unmanned uh 132 nuclear weapon carrying nuke platform that in essence orbits the planet to be able to rain down nuclear bombs on virtually any country at the push of a button
(1:14:40) this object as it's landing you'll see it appear in the sky very dramatic footage of the first time any anything has ever been shot actually physically landing at 51 the object appears at exactly 4 50 a.m comes down in a conventional flight pattern now sometimes this object will shake back and forth violently just displaying all the characteristics of a quote conventional ufo unquote and on this particular occasion it comes all the way down in a very straight line you'll see a field around the outside
(1:15:10) of the object and when it comes down between two safety lights you'll see it actually physically land and then when it comes past a second set of safety lights the field around the ship actually blinks off and then you can see that it is some sort of unusual dart-shaped aircraft some sort of experimental aircraft because it does have wheels on it and it does appear to have a a fuselage that is comes up in a point with a light at the top and at the bottom and then comes back at the at the bottom so it is a very unusual
(1:15:39) ship and this particular ship was in fact preceded by one of the famous southern california sky quakes [Music] [Music] rachel is a small desert nest at the highway 375 which passes the black world its inhabitants are mainly workers of the test site
(1:16:43) rachel's main attraction is the little ale inn the local grill and beer bar owned by pat and joe dravis which became the main information exchange for area 51 enthusiasts from all over the world it not only exhibits ufo memorabilia it also houses a library and a large collection of newspaper articles about secret government experiments documenting that the greatest secret of our time actually is no secret anymore aviation expert and writer jim goodall was one of the first to

lifted the veil of silence i am a published author
(1:17:43) i've written for three different publications uh i have a number of articles on black programs and secret projects for jane's defense weekly for interravia for aviation week space technology i have three books right here that i have authored just on the f-117 alone that is my that is where i spend all my spare time is digging i've had my neighbors questioned i've had my mail opened i've had my phones tapped i was called up for desert shield for i mean i'm in the air national guard they held up my clearance at the
(1:18:23) pentagon they didn't deny my clearance they held it up because i asked too many questions of my government and my response was that is my job as american taxpayer it's my job to question my government whenever i feel it fit and i do and i make a lot of enemies and i i i'm referred to as that sob from minnesota i have a quite a reputation in the pentagon for being able to dig up information when no one else can what's going on in area 51 today uh based on information from first person interviews i've made over
(1:18:58) the last six or seven years there are at least eight black programs flying out of groom lake out of area 51. that does not include does not count the b2 bomber because it's not a black program it does not count the f-117 which is a virtually a white program today there are at least two very very high-speed aircraft that are have been reported for since 1982 is when we've heard the first reports of them one of them is a small aircraft it goes approximately mach 4 to mach 6 there's an aircraft that has been
(1:19:33) tracked out of the bay area tracon in oakland california by the federal aviation administration center at least eight times since 1986 flying in excess of 10 000 miles an hour going through controlled airspace and a very very large aircraft at that besides the two high-speed aircraft there is a stealth or low observable electronic warfare aircraft it's been referred to as excalibur there is an aircraft that is designed to fly very very high but very very slow and very very quiet there's been some rumblings or reports
(1:20:13) there's a flying triangle much like the canceled mcdonnell douglas general dynamics a12 of uh there was going to be an attack aircraft just recently out of lancaster california taking off from palmdale which is air force plant 42 and that's where the b1 was built the b-2 bomber is being built there the f-117 is being serviced there in the u-2 operations there has been at least three sightings of triangular-shaped aircraft being launched out of that area they made no noise and just people just happened to look up and see
(1:20:50) these things leaving the the area a relatively low altitude but again no noise have any unconventional technologies propulsion technology is involved yes i have had the opportunity over the years to interview again people who have worked at the test site edgroom lake one gentleman spent 12 of his 30 years in black programs at groom lake when i asked him i said first of all i said do you believe in ufos and he looked at me with a straight face in 101 and said absolutely positively they do exist so can you expand upon
(1:21:29) that and he said no i can't about a year later we were talking about again activities in groomed lake and i asked him i said you know can can you really let me tell me what's happening out there and he said well there's a lot of things are going on there that i won't be able to tell you until until the year 2025 but we have things in the nevada desert that would make george lucas envious another individual who was an nco an e9 which is a the highest grade you get as an enlisted man he's a chief master
(1:22:04) sergeant in the air force was a safety specialist he had three different tours of duty at groom lake on various programs now he had no connection with my my friend who worked on other other black programs we were talking i interviewed him at nellis in 1985 86 time frame and i said what's out there and again he look he looked me straight in the eye and he says we have things out there that are literally out of this world i said explain he said i can't but trust me see we have things that are that would that that are better than
(1:22:39) star trek better than than anything you can see in the movies he said are the airplanes he said i can't comment there's four levels in sight four excluding the top level the surface which is basically a hanger hangers uh with the satellite there's it's really not too much too but the levels are all operators the first second levels are all elevator where they keep the flying disc ships whatever you call it they bring it to the surface right when i was there they were trying to operate the discs but to my being unsuccessfully
(1:23:24) there's scientists there there's i mean i've personally witnessed high

white house officials being there right now i'm basically kind of scared i mean i'm on the run i don't know what everything holds for me i just want to get this time open a security guard at level two of s4 in area 51 and he described area s4 as a facility occupying at least four levels he was aware of four he worked on level two he had passed through level one he never saw level three or level four because no military people were allowed
(1:24:09) below those levels only very people with very specific clearances could go to level three and level four he described level two in considerable detail to us and he said level two consisted of nine hangar bays i guess you would call them because they were the size they would hold a small airplane and there were circular disc shaped craft in seven of the nine bays he described the floor layout he described the security posts the guard positions a an area where bodies were stored in taught large glass cylinders he
(1:24:44) described special equipment he described the monitoring equipment uh the security system to go down to levels three and four he said that they were never allowed down there only specially cleared people with very specific clearances which included at least included a plastic card with magnetic information in it a handprint and a right eye retina scan and put their eye to a little camera and if they passed they could go down if not their instructions were to arrest them immediately and have somebody from above come down
(1:25:21) and get them this is a very vast conflict big place a big place the elevators are right here [Music] there's four elevators three and four are extreme extremely security there are no sentries down in three or four and the levels of doing poor i don't know what goes on down here i heard something about it abby or eb down there i'm not too familiar with what it is but as you get off the elevators you get off and this is level two you walk in the bays are over here they're all separated by like an automatic doors
(1:26:14) that open and close each bay walk down there's five five on each side there's a hallway right there and they can each of these bays have elevators it'll bring them all the way to the top it'll bring the whole floor all the way up with a hydraulic system now as you walk down there's a lot of machinery right here which i have no recollection of what it does i believe it's i've never been in that area my job was to center a century for these three gates and up above in the level complex and sometimes i would
(1:26:54) be walking down here escorting people now over on this there's a hallway down here that breaks off which is a lot of there's a big computer system right here i believe it's a computer system i'm gonna say for sure right here is a level are seven tubes these tubes are about two feet in width they're about six feet in height stand down here they stand on end on end now as you walk in and you look at these tubes i'm just gonna draw a picture one they're all exactly the same the end uh the human the the creatures inside
(1:27:54) are completely identical there is absolutely way that i can see of identifying each and every one of them individually now there's a aluminum part right here i don't know if it's covering the genitals of them are not but the rest is filled with the solution there's a couple tanks right here i don't know if they're oxygen i don't know what they hold there's no identifying marks on them whatsoever there's no absolutely no air in the tanks it's all solution and the grays are
(1:28:38) are are just in here right here they're suspended so i imagine they're being clamped somehow some way to hold them in this complete where their feet is completely off the ground and stuff like that and under here there's about a one foot pedestal of black iron steel like uh it's really polished but it looks like a black polished anodized iron now the things inside i mean resemble what everybody sees and uh the only thing that's different about them from what i see on all the pictures is the eyes appear to be a
(1:29:37) deteriorated or they're they look like prunes they're uh like your fingers get pruned they're all shriveled up and you can't see no eye socks and there's no visible eyelids or anything like that they have a grayish like uh a grayish pigmentation it's not sk scaly or anything it's like a pigmentation there's no apparent hair on them there's little holes uh not really slits but a little hole maybe an air cart which i don't know the bodies themselves are very very thin they don't they appear not to have any
(1:30:40) breast or navel or anything like that not that i can see yeah i've done i mean i wasn't able to sit and study them in in full view for a while what they i mean i don't think i have heard talk there that i know their systems aren't like

ours but they're very thin they look very very frail what convinced you that tennessee told me the truth we we only have uh look at him in the eye and talking to him we've analyzed his voice during the narration doesn't show any signs of stress we've
(1:31:31) had we've heard rumors of some details inside from others that has never been released or published so unless they were on the inside circle and knew what was being held back most people would never know the information that he gave us most of the information that he gave us checked with other information we already had and it has checked since with other information that we have acquired since the time we interviewed him mr martin you came in contact with this action who worked at area 51 yes i was on an american television program called
(1:32:05) mysteries from beyond the other dominion and at the end of the program they gave my telephone number this gentleman contacted me through that telephone number and related to me that he was in fact a master sergeant at area 51 for over 12 years and that everything that had to be taken in and out of the base or transported from one place to another on the facility had to go across his desk of course the man had a very high level top secret clearance he gave me his name he gave me a military id number which i was able to
(1:32:35) check and his military id did in fact check out that he had worked at nellis air force base and had then worked at the area 51 facility he told me a number of very interesting things about how the facility was laid out how many levels the facility had how it was connected to other facilities and he asked me a number of questions about things that he didn't really know about just stuff that he had seen going across his desk and was curious about how certain things work so there was a an exchange of information between he
(1:33:06) and i uh it is unfortunate that he seems to have disappeared he seems to have moved with no forwarding address his telephone number no longer works i was in contact with him for quite a period of time and then the man simply vanished did he ever see an alien spaceship or anybody on many occasions he told me uh chip is what he called himself that he had in fact transported uh disc like saucers what he considered to be alien spacecraft and he remember he was not sure if they were alien or not he never saw the actual
(1:33:39) paperwork on the craft he was only responsible for transporting the objects from place to place however he did transport a number of very large 30 to 60 foot disc shaped craft he was responsible for transporting some bell-shaped objects he said when they were at rest that they were a very dull gunmetal color he did in fact witness on a number of occasions the tests of these craft because they would have to cart them out to a certain place and then they take them off and then the the objects would then fly around and he
(1:34:11) was asking me how something that looked so dead and so lifeless could then glow up the way that it did and and the metal on the ship would actually look as though it was alive as far as the alien bodies were concerned he told me that area 51 had five underground levels to it this was confirmed by three other sources that i had at the facility he also claimed that there were not only living aliens on the base that he not only saw because he was responsible for transporting them physically by jeep from one place to
(1:34:42) another but also uh that he saw a number of alien bodies in very large tanks that the tanks had a silver backing to them that they had a silver strips across the middle and the bottom of the tank they were filled with a blue liquid he said that he personally saw five different tanks that had these alien bodies in them the classic little gray bodies the three and a half to four feet tall but they also had four humanoid aliens that were uh had blondish and reddish hair um very little was unusual about them that would uh
(1:35:20) demarcate them from actual humans but he was told that these were actual alien bodies supposedly and this was his speculation now but he said that they were supposedly from the pleiades there are many underground uh alien facilities and they're all over the place uh there's also many underground u.s facilities in 1960 it became apparent to the military that if they were going to have any significant covert operations they were going to have to be underground the reason was people are extremely observant they notice
(1:35:56) everything that's going on and if there was going to be huge transportation of materials men equipment all kinds of stuff that it was going to be uh have to be underground there was a major meeting with all the major contractors the big contractors like morrison knudsen and those type of people and the meeting included the uh the highly specialized area of underground uh operations as far as

drilling down there how you move that kind of dirt and they started then basically in 1960 building all these underground
(1:36:31) facilities right now they're just all over the united states just incredible how many there are there's a network of tunnels that connects edwards air force base with the tehachapi base with tonopod test range groom lake george air force base california city china lake it's a tremendous network i have varied and many people who have told me that they exist that they have been down there i have a friend that is a hydraulic engineer on one of the tunnel boring machines it's 28 feet in diameter he works the nevada test site
(1:37:11) where the tunnels go down almost 3000 feet in addition to this i have had a number of ex-military persons uh engineers who've worked in the aerospace industry for the aerospace companies out in the antelope valley such as lockheed northrup rockwell who have related to me their knowledge of underground facilities not in all cases have they revealed what they knew about alien life forms or alien technology but they said that these underground facilities exist without a doubt okay that many aero escape space companies have these facilities
(1:38:04) that most of our air force bases our naval bases have these type of facilities underground and that ultra secret work goes on in secure underground facilities now our difficulty has been in trying to come up with the evidence that these facilities are connected with the ufo phenomena so we have had to approach this not only from the viewpoint of listening to testimony but keeping some of these facilities under surveillance so that we could take cameras up there or any means that we can to record phenomena that seem to be
(1:38:53) emanating from or associated with these facilities and that has been done and people have reported seeing classic ufo phenomena around these facilities there are four aerospace covert facilities is what we call the aerospace connection in the antelope valley and also the san joaquin valley rockwell in the san joaquin lockheed mcdonnell douglas and northrop in the antelope valleys and these operations are extremely suspicious they have a surface cover activity they call themselves rcs testing sites that stands for radar
(1:39:36) cross section and apparently they're presumed purpose is to test various aeroform designs atop pylons with radar cross section and the disturbing part is that we have found out with incontrovertible proof that there are extensive underground facilities and for example northrop we have documented to have 42 levels underground now if this is radar cross section testing which is above ground why do they need 42 levels underground also at the lockheed facility out in helendale we had an investigative reporter who saw
(1:40:23) a blueprint of the building plans for that facility that he wasn't supposed to see it showed that they had an extensive underground facility 300 feet down and when this reporter interviewed the person who was in charge of that facility they had a nice pleasant interview until at the end he told the director that he was aware of this extensive underground facility and what could he tell them about that and immediately the man's eyes grew wide and he said this interview is terminated so it's very suspicious and then of
(1:41:06) course we have other reports of people in the area who say that they have seen alien craft emanating from these facilities and terminating at these facilities and other kinds of blue beams strange lights in the sky surveillance orbs size of basketballs medicine balls that survey the area and move in ways that we don't possess that kind of technology in terms of the northern facility which is also known as the ant hill the construction the underground facility was greatly enlarged in the early 80s and what took place there was
(1:41:50) an enlargement i understand from 13 levels underground to 42 levels underground and we have reports from construction workers who actually worked on the site cement truck drivers and at one point michael cement trucks suddenly appeared on the scene five miles long pouring concrete continuously 24 hours a day seven days a week for weeks and we figure at three yards of concrete excuse me nine yards of concrete per truck close to a million yards of concrete must have been poured underground also we understand from the construction
(1:42:36) workers that three silos were constructed there three underground silos and we were bringing out the fact that saucers have been seen to just come screaming out of the facility as if they had had some travel distance underground and and yet and also craft would like helicopters would come into the facility and just disappear into the ground so we knew from construction reports and from visual reports outside the facility that something very suspicious in the way of silos was going on norio and i put together the first

(1:43:07) investigative team to actually fly over these facilities and investigate them from the air with video cameras still camera shots it was very exciting and on our first flyover of the northrop facility we spent about an hour in the air on that trip it was historic you can imagine that my heart practically jumped out of my mouth when we're flying over and the pilot unsolicited says to me by the way there are three silos down there now i had learned from my inside contacts that three silos had been constructed there
(1:43:44) and i was looking for those silos the minute we appeared over the facility i was intensely looking for three silos didn't see any and suddenly the pilot says to me but i just told you i was shocked i tried to contain my excitement and i pretended to be rather casual about it and i said i'm sorry i beg your pardon but did you say silos down there and he says oh yes he says you see those white diamonds and sure enough there were three white diamonds now this pilot you must understand we rented the plane in the antelope
(1:44:15) valley so he flies that area continuously he has students he's a pilot instructor so he's flying over there all the time he told me that on numerous occasions when he's flown over these facilities those white diamonds the white covering will be gone to reveal a deep dark hole or silo into the ground not only the black projects but deep black projects program that is taking place about 10 miles south of groom lake groom lake facility of course is a black projects program that that is technologically speaking
(1:44:58) not uh in line with higher technology technology that is present uh 10 miles south which is located on papua's lake facility that is where a new type of propulsion system is being tested on and again it's my contention that some select u.s pilots have been given instructions on maneuvering these objects we have from all types of reports and sources this established this one fact is that there is some type of pumpkin seed program this is a nickname of a new type of function system using pulse detonation system
(1:45:55) and this is known as the pumpkin seed program because these objects are they have almost like a diamond shaped uh they form to this now this is part of the black project program however what i've been investigating is more than that it's the super deep black projects program which could possibly involve technology much higher than this type of pulse per propulsion system which could be antimatter or some type of anti-matter as mr lazar has been stating the sources of our information are not only from researchers that have received a lot of
(1:46:46) infos through aerospace connection uh the we have been in touch with several persons that confirmed that black project program is ongoing at groom lake facility papoose lake facility plus other facilities such as in california the northrop uh mcdonnell douglas and lockheed all of these facilities are conducting some type of uh testing of certain type of aeroforms that resemble almost uh disc and it's possible very possible that the technology behind this could be received by from some intelligence not necessarily
(1:47:39) uh us in other words we're talking about something uh possible transfer of technology after had uh of course uh got out of service i worked for the government you know as a test uh pilot on various different uh particular aircraft while i did that particular activity the i was asked if i would mind uh working on some simulators and i thought that was a good idea good for my future so i did we uh we were then reassigned it was just not myself there were several other fellows like myself engineers that were reassigned to certain
(1:48:25) companies here in the united states on the various different simulators that were that they were making for the various new aircrafts that they were building for example you know the f-89 f-94 and f-102 and a group of others we spent uh probably close to three and a half four years just in training on simulators and uh just exactly you know how a simulator an actual simulator for these aircraft work you know and and the new designs as they came along after they thought that we were trained sufficiently then we were asked to do another project
(1:49:07) which was more or less in my field is mechanical design that was to join metal together without glue nuts you know or any adhesives so forth you know uh for aircraft purposes to then the indication was was to make the aircraft lighter okay and this this course is uh several years going on in the meantime of course security classifications were going on you know as far as we were concerned and just the individuals that were going to work on these particular projects before going to the to the actual facility where i had done
(1:49:48) this activity we developed this particular process of joining this material it took quite some time over a period of about four years and then it was

indicated to us that we'd go on a special project in new mexico which we did and it was about three or four years after we had gotten there that we found out that these were simulators for that we would be engineers on simulators for flying disks those one particular project i worked on associated with that disc was several years of course it's very time consuming
(1:50:28) in a translation of scientific data as provided to us by the grays a specific type of gray as this information was given to our scientists and various different engineers that we had no association with but they were doing what they call a copy engineering the copy engineering was a process where they had taken an item or a portion of the craft and they were disassembling it writing their procedures and identifying certain things as they took it apart and how it related to from their science our science and could
(1:51:09) we use that i spoke in a little lecture here a while back that no average pilot could fly a flying just because it was so complicated and so foreign to the individual pilot that there would be no way that he'd be able to hop in one even if they gave it to him and said here fly this consequently what we did we took their avionics and transferred into our science and our technology and use the avionics that we know of as far as aircraft is concerned the basic principles in all this as far as the av addicts was concerned
(1:51:49) was no different than a regular aircraft that we have if you understand that say for example a fighter a fighter aircraft it's it's much different than a flying disc and there were certain uh situations that we had to resolve and basically we only looked at a couple different things because the flying disc only flies in about three different positions and that is uh at 65 degrees flat horizontal and possibly vertical but it was very difficult to fly vertical the avionics that we developed for that was for the 65 degrees pitch and yaw
(1:52:35) and flat flight did you ever see this by yourself i saw a disc from a distance uh if i was describing a disc uh for you to so you'd understand what we're looking at if you did see the bob lazar poster uh very very similar this facility i've worked at is is i'd say as far as secrecy is concerned it's much tighter than possibly even nellis here and some of the other facilities you know in this country uh the the entrance and the locations and the scenario on i'd say hey guys you know here this is
(1:53:19) you know this is this is what the ship looks like it's okay that's what the ship looks like as far as entering the ship no but that was a disc how far away was it oh well i was uh say 10 or 15 feet away was flying i was standing on the ground it was just sitting on the ground on his belly what did you feel in the moment and saw it what did you what was the impression of it i had my impression was as an engineer which is great have you ever seen any aliens we were introduced to grays that were associated with the
(1:54:05) project but they were i could say that in a time that i spent maybe i've seen the grace a half a dozen times or more but uh i've no more than 10 times i think but they were on uh the reason that we saw him was actually for us to get used to being associated with him okay it's no different than say going to africa and seeing a bunch of pygmies and you know looking at those people for a while and then you know it's it's this is a little different than that but it's the same same situation where
(1:54:41) you're seeing something that's a little bit different than us sitting in this room you know talking right now with their features and their makeup and that kind of thing the conclusion that i have made from this is kind of a tentative conclusion and it's in several parts number one united states air force is interested in any foreign objects that are invading our skies they would be foolish if they did not conduct a serious investigation of what appears to be superior technology in order to do an estimate of the
(1:55:20) situation that's point number one number two is over a period of time they could have progressed quite far in the study of this technology far enough that i believe brings us around to point three and that is you recruit your best minds uh from where the aerospace industry to work on highly classified or what they call black projects in order to see if we could duplicate or develop this technology for ourselves because what every military wants is superiority and advantage over the enemy and of course this kind
(1:56:19) of technology would offer us an incredible advantage over almost any enemy at least that could be found on earth was extraterrestrial technology already used for cigarette military projects i think it's entirely possible uh the sources i have say that that's the reason that we were studying alien hardware in the first place

wreckage from roswell and other crash sites so we can figure how how it worked and have a military advantage over our adversaries could be the black manta could be the aurora could be stealth technology
(1:56:54) one of the things we learned in russia is that they were studying ufos for incorporation into their stealth program and they also studied ufos for incorporation into their sdi program so it was going on there chances are very good that it was going on here as well the piece of ufo blower or information that really sticks the closest to home was a letter from a very close friend of mine who wrote a letter to ben rich ben rich is the retired president of the lockheed advanced development company the people that brought you stealth
(1:57:29) that brought you the sr 71 the u2 ben was asked you in a letter do you believe in ufos and he wrote back to my friend yes both kelly referred to kelly johnson the founder of the skunk works and i are firm believers in ufos well this got john andrews uh very very excited so he wrote another letter back to ben said please explain please clarify you're talking we're talking about two categories of ufos both man-made and extraterrestrial and ben wrote back again on his letterhead handwritten which you know you have a copy of saying yes
(1:58:07) we know ufos do exist both man-made and extraterrestrial and we refer to them as unfunded opportunities and he underlines the ufo are these super secret test flights with recovered ufos for real do u.s government scientists really investigate extraterrestrial technology we wanted to find out the truth test the claims following bob lazar's recommendation we drove out to the black world on december 2nd 1992 together with an abc television camera crew first we waited near the black mailbox at the groom lake axis road
(1:58:54) then followed by a black unmarked fort branco of the wagon hooth special security we changed our location to the campfire hill an elevation on the roadside closer to the base it was a wednesday night and shortly after sunset at about 6 15 pm the first mysterious flying objects appeared now it's come [Music]
(2:00:19) [Applause] [Music] [Music] [Music] so
(2:01:37) [Music] [Music] [Music]
(2:04:16) [Music] [Applause] [Music] [Applause] [Music] flares aerial maneuvers or test flights
(2:06:38) of extraterrestrial spacecraft one thing is sure their flight characteristics were more than unconventional our eyewitnesses were convinced i saw well right over the horizon there um as most of us said so far i saw a light come up and over the horizon probably uh a few degrees over the horizon and it broke into uh first two lights then three lights and then it seemed to string string them all together kind of like a pearl a string of pearls or beads and there seemed to be a connection as the light jumped from one
(2:07:18) position to the next and it was kind of an orange yellow color and it seemed to be sort of swirling around at the same time it wasn't a straight directional thing it's just it's kind of like they were going like this a little bit you know the first thing that was interesting we saw along this ridge out here where a series of um of white blinking lights that seem to be uh as we look through binoculars the same light or or several lights that were moving real rapidly around the sky blinking um very unusual all right
(2:07:58) the one that seems to be attracting the most attention is the one we saw out right that direction that had a strange color and seemed to split describe that one for me yeah well it was an orangish red light that was rather intense um and it seemed to split off into different pieces at one point and uh come back together again and i think that was the most interesting aspect of that we've seen a lot of interesting things tonight what was that they saw in the skies above nevada we'll try and have some answers next
(2:08:31) a big ufo convention came to an end in las vegas last night and afterwards naturally some of the members went out in the desert to search for ufos a news crew went along too and sure enough it wasn't long before a mysterious unidentified object appeared not too surprising somewhere up there you see it because this patch of desert is right near a military test site this looked like no aircraft lights that any of these folks had ever seen this was a bonafide ufo sighting i i think it was yeah and ufo means
(2:09:00) unknown flying object and this definitely was nothing i've ever seen before was it a bird was it a plane was it the aurora the secret plane we don't know more to come i'm sure and the air force is not saying anything as usual oh fascinating you have a good weekend of course all of you good night everybody [Music] you

bob lazar, UFO presentation by jeremy kenyon lockyer corbell, (2018) - YouTube
https://www.youtube.com/watch?v=UbV8O_gMbyY

Transcript:
(00:04) [Music] jeremy corbell everybody thanks for having me back again today wow um i just got out of editing a movie come here to join you guys and had to whip together this presentation current and modern because so much of this footage i've never been able to show anybody this is the case of bob lazar who in this audience is unfamiliar with the claims of bob lazar don't be shy raise your hands i need to know cool that's going to change all right so this case is really close to my heart because it is the reason most likely that i got
(00:58) interested in ufos at all this was before i started looking into the subject it was before i even knew anything about the subject probably like most of you i heard bob lazar's claims and that's what inspired me to try to find out is he telling the truth the central question about bob lazar and his story if he's telling the truth it's huge it's game changing but there's that nagging question do you believe bob lazar so i'm not going to try to convince you one way or the other i'm going to just show you my journey in
(01:39) trying to get closer to that truth for those of you that i've never met uh i'm an investigative filmmaker self-proclaimed i make films and i investigate things i think anybody with an iphone these days can be an investigative filmmaker i eventually have to put the the film out the movie's out and i've been luckily been able to do that recently just kind of started after all these years i can put this footage out there will probably be a lot of questions after the presentation about bob lazar so i will leave some room for
(02:13) that uh for those of you that want to talk about that because it's a complex case but i have to take you all the way back to 1989 in order to start this story so again my curiosity was weaponized when i heard bob's claims he was on the radio with my mentor in journalism george knapp and i heard them talking about the propulsion system that bob said he back engineered at a sub-base of area 51 called s4 nobody had ever heard about s4 it was not a subject of conversation nobody even knew about the area that he
(02:52) was that he was claiming this was going on totally new information but the part that stuck with me was the way he described propulsion that that was my interest typically if you want to make something move forward you have to have something pushing back it's really simple but the way he described this propulsion system was completely counter-intuitive his claim was that these non-terrestrial craft these flying saucers that he saw and had a chance to try to work on one of the propulsion systems worked by generating gravity waves
(03:37) and if you can generate a gravity wave and you can distort or amplify a gravity wave you can distort space time space time and gravity there they they all operate together so if you affect one you affect the others basic physics the way that he described it the best way i can imagine it is the way exactly how he described it put a bowling ball on a mattress and push your fist down on the mattress and the bowling ball will roll towards your fist right so it's a completely different type of propulsion it's like as if
(04:12) you're falling into where you're wanting to go you're not pushing anything out so that was just crazy that was a wild concept to me his claims went everywhere what bob lazar claimed whether you believe his claims or not something that is undeniable is the effect that his words had on the world no words are weapons they're used as weapons propaganda that's how things work his words were weapons they sliced through the imagination of the american public and then the international public this was in omni magazine you might
(04:56) recognize one of the most iconic pictures of bob lazar with his geeky coke bottle glasses and uh he said that he worked on alien propulsion for the united states military but in 30 years now he has rarely made himself available he doesn't talk about it wants to get on with his life and getting to know bob there's a lot of really good reasons for that but most people that's the image in their mind that they have a bob lazar however it's a new day bob is again talking and he's talking to me and he's
(05:33) allowing me to finally put his story in documentary film form after 30 years this is a guy that has never profited off of his ufo celebrity he never sought it he

doesn't like the attention but he simply is telling a story and it's up to you whether or not you believe him he just wants to make sure at least you know his story and then it's up to you there's more to that but we have to go back all the way to how this started so i'm taking you way back the world's best known secret base i love that the reason you know
(06:15) about area 51 is because of bob lazar it's because of bob lazar george knapp and a man named john lear you probably would have found out about it anyway our government has now finally acknowledged area 51. but really the reason that it's in your mind anybody's mind why it's become a meme in their shot glasses and hot sauces is because it became this household name for secrecy for ufos and that is directly because of the reporting of george knapp on what john lear was saying and what bob lazar was saying
(06:53) so that's kind of crazy so i'm going to take you all the way back to the first time that bob lazar was ever mentioned publicly and they didn't even say his name they referenced a guy so you're going to see in this video george knapp on a little tiny show that he had that nobody watched it was at a terrible time before he was this big time investigative news reporter right and john lear is his guest john lear is the godfather of conspiracy i've known john for a long time and he came out and started telling george all this wild
(07:30) stuff and the ratings went through the roof people wanted to know is what john's saying true so this is the first time bobzar's name was was not said where he was referenced so check it out it's kind of rare footage [Music] hello and welcome once again to on the record if you joined us last week you heard some startling revelations about ufos and the government cover-up about ufos from noted ufo researcher john lear all right you uh you recently decided to take it upon yourself to try to get to the bottom of
(08:14) of this major cover-up would you say as a cover-up you went up to groom lake which you say is like a center of this ufo activity what happened is i was approached by a government theoretical physicist employed by the government who works on the saucers up at groom lake he has seen the aliens he is tired of the cover-up uh he knows what a rip-off it is of how much how many billions of dollars we're wasting on trying to develop and develop technology that's already been developed and he told me when and where to stand
(08:44) and we drove up there and we were actually there on three occasions i mean the fact that uh that the military doesn't want you around a top secret base doesn't mean there's flying saucers there uh no it doesn't except we had just seen one uh the theoretical physicist that was with us that uh told us where to stand and you know what time to look uh the next day he was told uh instead of driving to work to drive to a certain place he was debriefed with a gun in his ear and asked why you know he told this and
(09:15) told us that and well he's worked in what capacity with him up there theoretical physicist what did he do around the saucers or whatever all i can tell you is that when you find out the truth a month from now a year from now two years from now you'll look back and you'll say my god the son of a gun was right or maybe 30 years from now he must have said yeah it's so great you know you see george not talking there and you know he had never covered a ufo story he was covering mob stories because he knew some of the mob
(09:47) guys and he was you could see in his face i mean i love seeing that the first time he engages this topic with john lear you know he's skeptical real skeptical and he should be it was wild then it's wild now what's what's being claimed but but john had credibility with the news station john lear had credibility because he brought forward some photographs it's of area 51 at lake level you will never see photos like this again it was from 1977 where the security was a chain link and i told you that story yesterday how
(10:21) he snuck out the role of film it's pretty funny it's a bar story so john had credibility because he brought these photos forward and they actually identified a stealth fighter and a mig fighter russian meg that was being i guess you'd say back engineered as well so he had really brought the news station some interesting information and uh john came to george's mentor in journalism a man named ned day and he said here's all the ufo stuff there's a secret program era 51 and they're reverse engineering
(10:54) alien spacecraft and that day is like nope i would have heard about it no chance that's true john and then and then there's george knapp kind of new at the station he said hey i'll look at those documents boy did he not know that would completely alter his public identity for the rest of his life you know so what i

like about this photo you got area 51 up there and you have that little strip of tan to the right and that is papoose lake that is not a place that was known or is known as having anything happen
(11:32) there's no runway there really there should be nothing happening there especially at that time but that's where bob said he worked he did not work at area 51. he worked at what he claims was called s-4 a sub-base of area 51 about 15-17 miles south on that little tan strip there called papoose lake so that's the first thing to know is that he's claiming to not have worked at air 51 he's claiming to have worked near 51 on the same complex but i want to still focus on john here because i spent a lot
(12:08) of time with john i did film about seven years of his life i am sure that film will come out to date i put out a 20-minute short film first episode on john uh the whole series will be called immaculate deception when it gets made it's all filmed when it gets cut and put out but i'll just show you a little trailer for that because john really is what he was my gateway drug to ufology yeah you listen to john talk for a little while and you start questioning everything about the universe so i'll show you the little trailer because
(12:47) i make films so i figure they speak for me sometimes [Music] hello and welcome to a special edition of on the record in the more than five years since we've been hosting these programs no guest has inspired such a widespread and enduring audience response as has john lear son of the famed aviation pioneer and a world-class pilot in his own right as many of you may know though lear the son is best known for his research into ufos a phenomenon described by some as a worldwide hoax described by others as the most
(13:37) important issue of our time it doesn't just happen it's written the exact second that we're gonna die i have talked to the highest people and i know the truth earth is like alex and wonderful things get carriers here and carriers [Music] [Applause]
(14:55) dreamweaver 515 you certainly couldn't figure in your wildest dreams it would be the most important thing when you can't see the objective right so john lear is intimately connected to the bob lazar story and the reason he's intimately connected the babazar story is because i've talked with a lot of people that knew bob lazar before he became public about before he even worked allegedly in the program and man he would say things like i feel bad for john you know it comes from a prominent family the lear jet
(15:35) family and he believes in ufos he like felt bad for him so that was like bob's standpoint on ufos way before he ever found himself in the situation that he says he did so staying back here in 1989 bob comes forward he says i worked on reverse engineering a propulsion system he they did not succeed in reverse engineering it he said it was an impossible task it was like you know dropping a iphone out into the stone age and saying make one yeah he said it was absolutely impossible and there was such control and there was such uh
(16:18) compartmentalization in these programs he didn't even really know what he was supposed to be working on until he went a few times and in fact this is what he says he says when i when i saw the craft for the first time he said i started kind of chuckling inside because i thought that's what all those ufo nuts were seeing in the skies and thinking they were extraterrestrial they were ours you know so that was his thought when he first saw the craft that's how kind of skeptical or analytical bob was he wouldn't take anything on face value
(16:53) still doesn't you know one of the most um kind of interesting minds that i that i've met so he did a lot to try to prove to you his story he did probably more than you realize to try to prove to you his story he says i've tried to prove my story i can't under the scientific method i can't prove to you beyond a shadow of a doubt that what i'm saying is true so you're obligated not to believe me and nowadays he goes and if you don't believe me pass it on because it's caused um
(17:30) you only see it from it from a personal perspective you can only really see it from personal perspective how it has negatively influenced his life what he's been through because of telling this story which supposedly in a lot of people's mind isn't real yet there have been some real world consequences let me just get an idea from everybody's you know i'd really actually like to know how we're divided in this group you know who absolutely believes bob lazar the absolutes who's there okay
(18:05) all right who maybe maybe not fifty percent where's the fifty percent undecideds okay and then how many people absolutely lying cockamamie [__] where are you come on it's okay oh come on you're hiding don't worry i'll get you after right okay so that's that's about average um we all want to believe bob lazar how

can you not we you know how cool would that be so we all want to believe him it doesn't mean it's true but it also doesn't mean that it's false so we're kind of stuck with that a lot
(18:45) of you here believe him you raised your hand the majority of people maybe because you want to believe him we don't have all the evidence so you're inclined to believe him as you could tell from the news reports that george did george dug deep and that time period was so bizarre for the people that lived it they were followed by people george had six other witnesses that were coming off of the base to corroborate bob lazar's story or parts of bob lazar's story all six of them declined to ever talk with
(19:21) him again after they were paid a visit and told that they would be harmed and we're talking about george knapp here this time about people that do talk to him and and the stories of these people that couldn't tell their story to him afterwards it's pretty incredible but other people have come forward and things have come to light over the last 30 years and let's look at those things and let's see if they provide proof or if they take away from bob's story so babazar began to talk in 1989 and
(19:50) just to give you another little clip so you can judge for yourself if what you think he was saying back then could be true or not true here's another little clip [Music] all right well take it from the top then i mean okay well go ahead uh how you got involved with this program i had sent resumes to several national labs around the country uh i got a response from a couple of them they said we might have something in the near future you would be very interested in you know you say you work on little projects i
(20:30) said yeah i have a particle accelerator in my master bedroom and and things of that sort and uh some time went by and they called me back in they said uh there was a senior staff physicist that was leaving uh this organization and they basically interviewed me for that job i don't know many people with particle accelerators in their master bedrooms and i know a lot of nerds i'll tell you that you know and i always found that really interesting i know for a fact that bob lazar is highly intelligent so he's got that
(21:08) going for him and that's nice i can tell for sure that he's smart but i too was skeptical i was probably like most you that raised your hand i was like yes i believe because i want to it makes sense but that's about all that we had until you really speak with someone you can easily uh just dismiss them if you're just talking about a name you don't know them you don't know their family you don't know what they've been through you can't even imagine begin to imagine none of us can
(21:44) so we're all stuck with that because bob really doesn't make himself available to get to know him so i was skeptical and i don't know i i talked with george and george obviously encouraged me to talk with bob and i'm like well yeah who wouldn't want to talk with bob of course i want to talk to him so george made a point you gotta talk with bob and you gotta tell the story and you gotta do it yourself to really get to the bottom of it he's like but you gotta be the luckiest guy on the planet
(22:12) for that to happen and he kind of explains that to me here you have to cover the story of bob lazar and the only way to do that is to talk to bob i don't know if it'll talk to you or not but you need to try well it was it's all going to be circumstance for you is the moment that you approach him the mood that he's in what else is going on in his life at the time you might hit the jackpot and get him at exactly the right time and the the universe is aligned and he's willing to talk about it but you'd have to be awfully lucky
(22:42) because in general bob doesn't like to talk about it i think he's very happy in his life he's happy to have left the ufo stuff behind he misses his friends he misses john lear he misses gene huff maybe even me some extent but he doesn't miss the ufo topic and he doesn't miss talking about it because ultimately it's disturbing these are disturbing issues they go to the heart of who we are as people as human beings the nature of reality itself is this a computer simulation are we all the product of an alien video game
(23:18) or some multi-dimensional movie drive-in movie theater production or something big questions disturbing answers and bob has never been comfortable in talking about never so that was about as encouraging as he can get you're never gonna get him you have to be the luckiest guy on the planet he doesn't like to talk about it because it's disturbing it messed up his life it's disturbing to everybody good luck right uh i'm pretty damn lucky and the first time that i actually met bob like any of you really

(23:59) interested i was like okay i want to ask him these questions directly and i want to look him in the eye and i want to see how he responds i happen to have a camera you know and he happened to let me turn it on and it had been a long time since he let somebody turn the camera on right so i thought oh man this is amazing let me see what he has to say so i'll show you a little clip of that first time i didn't know bob at that time i didn't know him he was not a friend of mine he's just i accidentally got to be in the same
(24:33) place as him and had the camera and got to ask him questions and i wanted to give the public just a glimpse so i put this out it's it's in a free 20-minute documentary just a few minutes of bob so you could kind of be updated this was a few years ago but he talked about it in a different way and that's what i found so interesting it wasn't the bob lazar that i saw in all those videos from 25 years ago it was five years ago when i filmed this it was a different bob you know it's like something had changed
(25:07) and you'll see the way he talks about it so i'm going to show you that little clip just so you get a update up until five years ago you know look you can nitpick anything you know to the point where you find inconsistencies and then you can add those inconsistencies up and say you know what this can't be true but the thing is you can do that with factual events and this was a factual event where i mean where the project is now where the parts are now you know this is all 20 years ago so i know there are alien craft here from another
(25:45) planet i now i saw other ones but i was inside one i know it was not made on earth i know it was made with materials that we cannot fabricate we cannot duplicate and we've never been able to i know it uses a power source that's so advanced that we could only dream of something along those lines and the energy density on it is phenomenal it's nothing that i would ever expect to see um i know that you know this is done in the highest levels of security and you know that they use all kinds of methods to keep it quiet from
(26:21) disinformation to uh i mean some exotic ways of just hiding things like i said the installation itself was buried in the side of a mountain and you know uh i also know that there's lots of nonsense information that has gone around and whether it was started by the navy or military or whoever is at the absolute bottom you know of the project uh and i truly suspect that be the case because look disinformation is the most powerful you know way to distort facts you just throw a bunch of useless stuff out there
(26:59) and you know they just take the real facts along with the nonsense and bundle it together and say well this is just impossible and you know there your security is maintained but uh i also know that at some point they've examined or had bodies of alien creatures somewhere so i know that stuff for a fact and that's the bottom line pretty cool to hear him talk about it 25 years after he said it the first time just so i get an idea who hasn't seen that footage of mine anybody hasn't seen it okay so
(27:36) you're seeing it for the first time today i'm i'm glad i mean isn't that cool aren't you stoked on that it's like man you know it's like elvis meets bigfoot you can never find a marie's dad you know there's always a rumor he's dead and all of a sudden i got him on camera i have proof bob lazar exists and not only that but he's not backing down he's doubling down he hasn't changed his story he's telling you now the same thing he was telling you then i i find that
(28:06) really interesting and it's different when you can see someone has aged and they're a little bit more confident they're not like a geeky 20 year old kid now there's the geeky adult but they've changed and so that little bit of footage was the first step the first taste i got of [__] this i'm going to find out the truth i want to do my best because this story is too big it's too important and look i've already got him once on camera maybe down the line five years later i might be able to do some more filming
(28:37) with him right and really i'm doing this to bring it to you because you're seeing it just like i'm seeing it you now have three more minutes in which to judge bob lazar by right and that's all i was trying to do was get more data into the stream so we can make a more educated opinion on if his story is true or not the crux of his story is about a place called s4 site four this is a place that nobody had ever heard of there is not one mention in the public realm not even private circles i had no one around that time had ever even
(29:16) heard about it yet things were different back then and george knapp called nellis air force base and they admitted that they had an s4 if not multiple s4s wouldn't tell them what they did there now they just completely deny it right we

thought but george got confirmation there was an s4 so bob somehow knew things he somehow knew that on wednesdays at 8 00 pm over this tiny little lake bed that's not even part of area 51 that there would be a test flight of something that looks identical to a flying saucer
(29:53) and he took people out there on a variety of occasions and they filmed it right how did he know that that's probably a real guarded secret wouldn't you think you know the existence of a of a secret little sub base of area 51 figuring out everybody would know that so i'm already kind of intrigued that he knew things that really he shouldn't know if he didn't work out there s4 is kind of the key and i'll show you little clips about that you've brought s4 into the forefront it's been confirmed to you
(30:21) directly from the base maybe 25 25 years ago yeah s4 has been confirmed to me directly twice one from an employee of e g and g security was daunting and then somebody else who's confirmed to me as for that that's exactly how it looks the story though is that there was a facility like that at pappoos there is a facility like that at papua's flying discs not this ufo term that's created to make it ambiguous flying discs saucers that were piloted by non-humans they were not ours and this was confirmed by both of
(31:02) my sources that this technology is not ours bob lazar's story was confirmed to me by those two same sources one saying that when he was working in secret capacity at white sands in 1989 that it was common knowledge at the base about bob's story and i said well what was the believability with the general believability and he said everybody knew that what was going on out there were with these types of projects and they've all believed bob's story and were they following it as it's unfolding in 1989 that was the
(31:41) impression that i got was that it was big news if you ever see it if it's soundless noiseless it's hovering anti-gravity or appearing to be the way it is not ours i said not ours like america and he says not ours like humans so 20 is about 25 years after bob's story and i started digging into it and started pulling up and calling up a bunch of the people who have advised my work in nanotechnology and aerospace stuff and in investigations in general the highest ranking military individual i've ever met has been someone that has
(32:17) advised my work for a while was in position to know and i've had multiple confirmations that bob lazar is telling the truth and that s4 as he described it existed exactly like he described it and for the purpose that he described it so i've got all these independent personal confirmations that there's a a grain of truth to bob lazar's story it was driving me crazy so i sat down with george and went through with him showed him he knows who some of you know the people that advise my work are he's satisfied with it i'm satisfied
(32:48) with it so we're getting you know direct testimony from people not for public consumption not for me to go on radio shows and talk about it not to put them in movies but just to inform my work people that care about me and my work too so it really started to intrigue me because now all of a sudden it's not just one person saying this thing but 25 years later i'm getting independent personal confirmation of the facilities bob said he worked at that wasn't happening 25 years ago so that was pretty cool
(33:20) everybody's focused on area 51 we know the great things that were achieved at area 51 it's a shell game it's a slide of hand we're talking about s4 right and we're talking about the acknowledgement of a secret base called s4 that has special projects there extraterrestrial projects well i i got confirmation from nellis air force base i called their public information offices back in 1989 we're working on this do you have a place called s4 on the nellis range and they said yes can you tell me where it is no do you
(33:56) have more than one yes can you tell me what goes on there no it's classified so we know an s4 exists we know classified work goes on there we know that they're not going to tell us any more about it no one had talked about a place called s4 in public before bob lazar there's no printed records of it it didn't appear in a newspaper story he's the one that told it how did he know how did he know that those test flights were going to take place three weeks in a row there'd been no news stories not in
(34:25) in ufo circles about test flights of something that looks like a flying saucer over papua's lake that happened three weeks in a row they took people out there i've interviewed all the witnesses who were there and they've got it on videotape how did he know well maybe somebody told them you how ridiculous that is maybe somebody told him but it's important that bob didn't go to mit how ridiculous

is that here's videotape of a flying saucer flying over a secret base the government has never
(34:55) acknowledged and the important point of this is bob didn't go to mit it's ridiculous how about the main you're sort of losing burying the headline the headline is flying saucers at a secret base there they are on video and we're quibbling about whether he has a degree or not george knapp calls up nellis air force base do you have an s4 and they say yes yeah we hadn't gone with our ufo stories they weren't on the only thing that had been on the air was john lear on on the record and then this dennis interview the
(35:30) interview with dennis so i wasn't quite the ufo guy that i am now and um and actually the guy i talked to the public information officer at nellis is somebody that i knew we called and you said does s4 exist i could try i mean i could certainly ask them whether they'd still answer or not i don't know you'll recall 25 years ago they would answer questions about ufos you know they they might keep you on the phone long enough to figure out if you're crazy or not but at least they talk to you about it they don't talk to
(35:59) you at all they won't have that conversation with you whether they'd answer that s4 question or not i don't know we could try we're calling nellis air force base a public affairs office and that's who i called 25 years ago we'll see if they will confirm for us that they have an s4 out there or where i suspect we're gonna have trouble but we'll give it a try hi my name is george knapp i work with channel 8 news and i had a question i'm not sure if you can answer it or who might be able to answer it i'm trying to
(36:38) figure out if there is a if you can confirm that there is somewhere in the nellis range a place called s4 at designated s4 a facility yes [Music] okay [Laughter] hi airman my name is george knapp with channel 8. um i was calling to see if and i don't know if you can tell me this or not but whether you have something on the nellis range called s4 a site or a facility or a location designated s4 called s4 yep uh i have no idea um i can try to get an answer for you um that that'd be awesome i don't have
(37:44) to contact see maybe red flag but um yeah let me write down some more information but what's a good contact number for you uh this number here george knapp right so you're looking for a zone on the range called s4 yeah i'll just let you know that i've been told uh some years ago that there was there is a place called s4 they wouldn't tell me where it was but in fact you might have more than one like s4 meaning site four right what about site 4 are you looking into what's significant i i want to know what if it
(38:23) exists uh we had been told that there had been classified work going on out there uh one one version of the story is that there was a facility near papua's dry lake that was called s4 there's another version of the story that you've got a place at tonopah test range and i just didn't know if you can confirm one way or another okay anytime there's no deadline i will try to get in contact with somebody at the range and see if they're familiar with an s4 and whether or not the information is
(38:57) releasable or because i've never heard of it personally but we'll find out i appreciate it airmen thank you very much thank you have a good one bye bye yeah so um you know it's just kind of interesting he already confirmed it decades ago we were just wondering what the climate of the situation was now and i could like tell you this story but it's much more fun to show it to you i make films anyway right so i can talk about it but showing you how these things go there's a little bit of humor in it
(39:25) so we waited for a call back and we weren't very hopeful we didn't think they were gonna call us back back in the day uh george knew the the public affairs guy this time we don't know who we're talking with the kid didn't even sound like he knew much of the base you know so we don't know what kind of information we're to get they called right back and left a message that's this it was the next morning yesterday you called to get nellis air force base to confirm s-4 is a physical location the one by
(39:54) the papoose lake bed is the one we're interested in and they and you've called before back before a lot of this was secret and you got direct confirmation yes that facility exists we can't tell you anything more about it so we get a guy on there yesterday and he's like i have to go ask people that would know and you get a voicemail back the same day right it was yesterday and let's hear what the voicemail is hey sorry are you doing it from nellis air force base i'm calling to um get you the information you requested
(40:26) earlier today um i spoke with the nevada assessment training range

headquarters and they let me know that um on none of their uh maps in possession um have a location that depicts s4 or uh site four as a designation um so that's what i can tell you right now uh so if you have further questions be sure to let me know when you get a chance uh other than that have a good day so a couple things um one is that 25 years ago they did confirm not only they have one and they had more than one s4 they wouldn't tell me where it was
(41:03) they wouldn't tell me what goes on there but they said it is a real place and i've got that from other people who worked out there not just lazar secondly it was the parsing of the language is what i thought was interesting we talked to the people at the range and they don't find it on any map well it's not going to be on any map it wouldn't be on any map even if it was even if existed and so just saying that it it's not on any map is not the same as saying it doesn't exist it's a very specific kind of truth
(41:32) it's a new day and age dealing with public information officers and not only for the air force but every federal agency is that they are where you go for information and you never get to speak unless you get their permission you never get to speak beyond that it's like fishing as a journalist you want to see where the level of secrecy is and why s4 is important is because s4 is linked to all of these special projects that we've been looking into dealing with the extraterrestrial presence yeah being able to confirm that
(42:01) there really was an s4 which is where bob lazar said he worked goes a long way toward establishing that his story was true because it had never appeared in any newspaper it wasn't on any map that's what he claimed so when nellis told me yeah we've got an s4 but we're not going to tell you where it is that was a really big deal i i you know i don't necessarily think they're lying to me maybe they this guy doesn't know maybe they don't call it s4 anymore maybe after all that stuff with
(42:25) lazar came out they changed the name uh who knows but i just thought it was really interesting that the parsing of the language to say we don't see it on any map yes that's just a fun little look into one of the ways that we can go about getting nothing from our government about these facilities um but you know it's kind of funny and you do learn a lot along the way it is interesting the way questions are answered or sometimes very telling and the guy was kind of chuckling actually when he had you know said we don't have any
(42:59) you know maps with that designation on it yeah he knew it was a bs answer to get around having to answer so basically there's a lot of controversy but what is the proof when it comes to lazar's claims after all this time you know what stands the test of time i'm not going to go over every finite detail on what people think is or is not true about the lazar story there are you know a few interesting things um this is just a copy of it but one of the things i went through was this box of archives and photographs and you know bob would just
(43:35) i could pull any box out of his garage and he did not you know have anything to hide he's just like go for it look through it all you know but this was like a pay stub he got people say well why is it for so little and it's because he's just getting started with a job and they pay so little at the beginning it's not that much money even this has been hyper analyzed and people are trying to see is it real because the name of the department is different than what's you know that's an older department so
(44:01) there's all these tiny little things that people like to go through and try to see does it add up but none of it adds up to is bob telling the truth or not um like his schooling bob has always claimed that he went to mit and that he went to um you know he got a you know degree from mit and there's no way to prove that bob's not a offer in proof we can't find proof okay so let's let's just say he lied let's just pretend he lie i don't by the way that's not my position i'm just saying
(44:33) let's just say he lied let's say he was homeschooled and just had no education okay well does that change the fact that he worked in scientific capacity at los alamos no that's established fact and i'll tell you why it's established back now i actually made sure it was established back but the point is we can go back to when he was a baby okay and he's like is that going to change is this true about this story about what he's telling us now and so that that's kind of what i'm interested in i i
(45:09) really don't care if he was homeschooled by gnomes i like care if he worked at los alamos how did bob walk george knapp through one of the most secret and lockdown facilities in america at los alamos going into the maison facility with cameras how did that happen it's it's like people try to belittle the story because they're afraid of the implications maybe let's stick to what we know bob tried

creating recreating what the badge looked like so that other people could recognize it maybe and then people say oh you made a fake
(45:45) badge yeah i made a replica so you would you're welcome so you would know what it looked like i mean just all these crazy stories i see tape up there on the right by his yeah he made a badge replica so you could see what it looks like he also did diagrams and drawings of um you know these are like on napkins he's like famous for napkins i have like a stack of napkins from bob okay so this is like one of the first drawings he did back in the day of where the the saucer out of the nine that he claimed he saw the one that he
(46:18) dubbed the sports model that's where it was and uh he you know he kind of drew it out so people could see what it looked like from what he's telling um these are drawings i don't know if people have really seen some of these but um he saw a bunch of different shaped ufos but from a distance so he saw there were nine but some of them we called that one the jello mold the one below that the top hat he called that one the light bulb he doesn't even remember it now he's like oh yeah that was weird that one was weird
(46:45) shaped but they were all kind of like down this corridor you know he only got to see the one little known parts of his story very elaborate one time you know in that section where he goes i was inside one he's talking about a ufo it goes i was inside of one and i said well bob what did that was that cool you know that's gotta be really cool right and he goes now it felt ominous he goes it was so weird first of all everything is gunmetal gray there's not any other color everything is rounded there's no
(47:21) corner or edge it was like an injection mold because it felt ominous because i stepped in and the seats weren't for grown men they weren't for normal grown men human size right they were small and he says that was the moment when i realized this is weird we ain't in kansas no more toto you know something's weird here it kind of dawned on him and i think kind of the light display that came up with the alien writing probably sunk that right in at one point they were operating on a little piece on the ground
(47:57) and this display came up where side of the craft that he was inside to look at a very specific part of the propulsion system there was this rounded window part and it just went transparent but not like even glass you know it's just clear so he doesn't know if it was there or not there but on that was very strange writing you know to us we don't know what kind of writing it was but he tried to kind of show what it looked like it kind of looked like amoebas you know he didn't know in like eyes but it was
(48:25) like that's kind of a replica of what he saw have you guys seen that before so there's all these details to a story that are just not well known because we get the bullet points okay another thing that he avoids talking about because it's so bizarre but he read all of these briefing documents that was one of the times he went out there was they just had him read through all these documents and he wasn't sure if it was like a test or a joke he doesn't really know what's going on but he flipped through pages and saw
(48:56) photographs and he tried to draw one thing that he saw on the left which was an autopsy page of a being and he doesn't like to talk about it he actually drew this though from memory and i love it he goes that's all i know you'll have to make up the rest because he said that's what everybody does they just insert [__] you know he's like that's what i know that's what it looked like you know to the best of my ability so he read all these documents he goes i don't know if they were true it's like
(49:25) you reading a piece of paper do you know that's true he goes i didn't have my hands on that so i don't know that's true but there were tons of things that he read in these documents bizarre things back to how the hell did bob know okay this drawing on the right that was done by bob right after one of his visits to the base when he happened to see on the bus a strange airplane they said worked on like a methane fuel and he said it sounded like it was tearing open the sky turns out we now know he drew the back
(50:00) of the aurora which is still a very secret plane that was being tested out at error 51 at the time he was out there how did bob know how did he know it worked on methane propulsion how did he draw the back of it correctly if he was never there again it's really annoying isn't it because all these things are kicking you in the ass like uh i want to believe you but i want to know the truth i'm starting to believe you so then i found someone willing to speak with me after 25 years from los alamos after all these years

(50:35) everybody's making jokes that bob was the janitor at los alamos he never worked there okay he's in the phone book i've talked to a bunch of individuals that were that knew him from working with him there but i couldn't go public with it finally i found a brave individual who was willing to talk to me on the record about working with bob lazar at los alamos in scientific capacity being in briefings classified briefings which by the way the janitors are not invited to the highly technical classified
(51:07) briefings with bob lazar and his name was dr robert krangel i have all of his documents all of his paperwork from all the contracts that he did during that time period at multitude of bases including los alamos during that time dr kringle's telling the truth i can prove it what was your impression of what bob was doing at los alamos in the 80s i didn't know what he was up to any more than he knew what i was up to but you did know that he was a physicist yes and that was very clear to you that he was a physicist at los alamos and not
(51:39) again like the janitor right so he worked there and he went on record with me and says of course remember bob bob was the jet car guy he was a rock star he looks like mick jagger how can you not remember bob i remember bob bob was cool as [__] and yeah yeah he worked at los alamos big deal i'm like big deal to who it's a big deal man and he goes why and i'm like because he's got a bigger story and everybody says a good link to that is did he work at los alamos because if he worked at los alamos there is a possible
(52:08) um reason he could have been picked up to work on a highly classified project through eg g to go to the test site and work on this non-terrestrial stuff and dr ring was like okay whatever so i got him on record the guy's a really funny guy really smart and next thing you know i publish it next day i should have warned him he starts getting inundated by calls by stan freeman just inundated you know i mean god you know i love stan stan and i i i like him uh we totally disagree because stan's wrong so yeah so he attacked dr krangel on the
(52:49) phone trying to belittle what dr krangle said he goes jeremy what did you do i this guy keeps calling me all i did was tell you a little thing and he won't leave me alone i'm like yeah he's looking to try to discredit you because he's invested in it not being true about bob lazar i said just tell him what you told me tell them the truth so anyway you know any way you get around it here's a physicist worked at los alamos inside of capacity was in security briefings with bob lazar make of that
(53:15) what you will now for my most exciting part of this story this is the thing that really gets me has everybody heard of element 115 okay so you've heard about that because of bob lazar there's no other reason you would have heard about that back in 1989 very obscure element that we theorized you know we might be able to you know create a few atoms of one day element 115 is a huge part of bob's story because it's a very specific part he said that we had he was told 500 pounds of element 115.
(53:53) in fact if you remember his story that was the fuel source for the gravity wave amplifier and this sounded like total science fiction and everybody said oh it's very unscientific what bob's saying all he said was that there was an element that was yet to be fabricated by humans that is super heavy and has this potentiality to create as a fuel source for these saucers and it runs off of that well it's a you know it's pretty wild because we can't fabricate at that time we couldn't for at all
(54:28) but to this day and actually we will never be able to and there's reasons why we cannot fabricate stabilized element 115 in any significant quantity now the argument that people make about element 115 is that okay you're right okay we fabricated some we have a few atoms of it sure but it's completely unstable just milliseconds and it's gone well bob always said well he recently said he goes yeah that's true he goes but there is an isotope or isotopic combination that will stabilize it just because we
(55:00) haven't found it it doesn't mean it doesn't exist so i called up some physicists at ucla at berkeley a couple in russia and i started asking them they're they're specialists in isotopes and they're specialists and elements one of them was very familiar with 115 across the board none of them wanted to talk about ufos that was made very clear to me this is not about ufos is it nope it's about element 115 okay cool totally unwilling to talk about this on the record consensus they all said yeah we
(55:36) absolutely cannot rule out a stabilized form of element 115 there is probably an isotopic combination because it is theorized that as you move into that realm it it becomes stabilized for a long duration of period um we can't rule that out so it is not pseudoscience to say that's a possibility and i'm like oh that's

interesting because i know some like physicists who are like that's pseudoscience you know what lazar is saying well apparently that's not the common thought it's not so i don't know why people like
(56:07) scream that all the time so it is within possibility that that is true now a sensitive part of the story is that uh lazar described this very specific way in which this element 115 was machined at los alamos for use in the saucers the guys machining the 115 at los alamos didn't know what it was it would be shipped to them something called la 1000 that's what they would ship back and forth and that was the 115.
(56:46) bob alleged that at one point he got some element 115 out of the lab out of los alamos yeah can you imagine now that's problematic why did bob claim that whether it's true or not we'll get to that why did he claim that well if his story is true he was in serious danger that is precisely why he went on the news with george knapp in fact i wish i could have seen this i wish i could have filmed this the last second when george is about to reveal bob's identity to the public on the news bob and george start wrestling over the
(57:31) tape they're in the news station about to go live to air and he's like doesn't want george to air this tape he is scared shitless what's going to happen when people recognize his face and george is like dude you're already out we tried to protect you by putting you kind of out there under your boss's name not a smart choice bob dennis that caused some problems but so if his story's true he's being threatened what is the one thing that could prove his well there are a few things could prove
(57:59) his story i actually believe bob could prove his story i don't think he wants to i think he wants you to know the story but he doesn't want you to know for sure he's telling the truth that might cause problems for him but let's just say it's true the one thing that would save his ass his trump card would be having element 115 stash somewhere right making sure somebody knows where it is dude that's proof positive so if we're deciding to believe his story right now wow that that's a twist right there and
(58:31) he and he did claim it not saying anything out of line but you notice he hasn't talked about it 20-something year probably 25 years hasn't even mentioned it because it was a sensitive topic you might have heard that he was once raided in new mexico by a multi-agency raid they were looking for something and uh that is a story he doesn't like to bring up because it traumatized his life can you imagine so you're at home right you have your wife and your animals and all this stuff and your house is just [__] raided
(59:04) and they're looking for something which you don't have right okay so i'm going to show you this this is not element 115 okay this is just aerogel just say that first okay but this is a piece of aerogel before anybody knew what aerogel was that they used to package around the la-1000 which is element 115 this is actually a piece from the 115 which may or may not have come out of the lab it's turned yellow over time right but this is a piece from that packaging material which is so funny because nobody knew what aerogel was back then
(59:44) in 1989 so they thought it was extraterrestrial they're like oh man it comes with a 115 it must be alien you know they had no idea turns out you guys ever seen it aerogel it's like lightest smoke it's amazing it's like insulation or something it's light as smoke and it's just this little clear it doesn't even feel like you're holding it it's really strange anyway so this was part of the actual packaging from the la 1000 and you know look this is bob's story in a nutshell
(1:00:12) he's the element 115 the flying saucers the government secrecy coming forward because he was scared for his life and annoyed at all of the um secrecy and it's really kind of sad actually what what happened like how he kind of why he decided to do it i don't know he would do it again i don't know he'd come out again you know i think he would have loved to continue working on those projects if he worked on him right i think he would have loved to continue it i got to bring back to one thing that
(1:00:41) that george has said to me and i showed you the other day which is it's the duty of journalists and scientists to investigate the unexplained not explain the uninvestigated what does that simply mean it's just we need to look at the things we don't know not try to explain them as if we know them and so i've got a couple more clips for you that i think you'll find interesting the idea that bob was a disinformation agent or part of a program to mislead the public is wrong he's not and i can say that
(1:01:15) after knowing the guy for a quarter of a century the story he told then is

the story he tells now he didn't add to it he's not making it more elaborate he's not remembering new parts of it it's the same story it's consistent all the way through so that's you know impactful when somebody kind of tells the same story over 30 years there's some merit to that you know it's not changing one thing we know for sure is real is the impact that lazar has had on ufology and the world and i love the
(1:01:48) way george says it i just think of the things that in the 25 years since bob came forward with the story there are those who it drives them crazy that he gets attention that he is obviously is a phony he didn't go to mit he made this stuff up i'm sorry but they lost uh bob one you look at how far that story has traveled when you've got president clinton on on jimmy kimmel talking about area 51 and aliens and then a week or so later president obama says hey by the way at an event for shirley maclean he
(1:02:22) mentions area 51 and i'm the first president to say it in public you know look at what has happened since bob came forward the government has acknowledged there is a place called area 51 for a long time they they denied it they pretended that that the base that everyone could see didn't exist we know that there is a place called s4 they confirmed it to me nellis air force base told me that there was one we know that there is something called element 115 um they've synthesized it it's not exactly
(1:02:52) as bob described it but as he says there are different isotopes you can make different kinds of um different versions of it and eventually we might be able to make one that's more stable uh scientists who the scientists who made it talk to bob they called him the ones that synthesized it the first time were in contact with bob asking him questions about 115.
(1:03:15) the area 51 meme has gone everywhere it's in the da vinci code it's in national treasure it's in independence day it's in the x-files the books the tv shows it is part of our culture all over the world our baseball team is named the 50 ones we've got the extraterrestrial highway on a table on the other side of this room is 50 or 60 products uh that are being sold product lines different kinds of trinkets and and collectibles from area 51 bob did that that's from bob that's from bob lazar
(1:03:48) that's why this story caught on that's why it went uh worldwide it is now part of our shared collective experience and knowledge and it's not going away so it must drive his detractors crazy who those people who think he's phony because they lost and bob won aldous huxley said the facts do not cease to exist merely because they're ignored okay so you're pretty thoroughly up to date now in the bob lazar story you know we could go into finite detail about any of the specific claims or what arguments people have
(1:04:28) for or against i'm pretty well versed in it at this point i pretty much know and have interviewed and talked with everybody involved from the beginning but also haven't covered new stuff and so that's what my film we'll be showing you it's coming out december hell or high water like that's my deadline so it's it's coming out december so this story has really just begun and i i'm gonna take you in the movie through some areas of bob's life which nobody has ever really been able to see i've been able
(1:05:00) to verify some things that have been big question marks for 30 years bob's life was not traditional i mean he was kind of an outlaw he was he's a weirdo man and then he had this like jet car right just blowing fire he still builds jet bikes by the way he built me a flame thrower i live really remotely in the desert so it's totally safe dry lake bed besides maybe blowing myself up but he still likes to to do and make these incredible things so he had a multitude of jet cars still has this jet bike he takes around
(1:05:33) still draws on napkins and uh you know still looks like the same guy it's kind of an interesting photo right that's from one of our filmings different glasses same dude i have yeah okay i'll play it i have just like a one minute clip and one minute clip of just audio so you can hear maybe why bob is deciding to allow me to bring his story forward again i think it's important because you understand why it's happening so you can just listen to this one the biggest roadblock to understanding is the
(1:06:11) ability to dismiss someone because you don't see them as human as a person so what pisses you off i mean disinformation and lies and attacks that have no basis in reality i mean you can disagree with me and say hey i don't believe that that's fine i haven't presented you with enough information i i understand that i'd probably be in your position but don't fabricate stuff but there's some important

information that needs to be released and everybody needs to understand the truth to it and not distorted
(1:06:45) versions of it you really need to pay attention to what i'm saying because i have better things to do than come up with this i'm not interested in doing this i don't like being in the public eye i don't have money for doing this and quite frankly i could make up a better lie but i have no motivation to lie this hasn't this hasn't helped me out it said something that it's information that i'm releasing and that's it not an ordinary life that's one thing i would like i don't like living in a james bond
(1:07:18) movie i like watching james bond movies yeah i mean one of the most striking things about bob as a person is he does not waste his time on [__] you know it's like he could make up a better lie would he no i i asked my wife one time i said what do you think of bob you know because she thinks i'm crazy you know what do you think of all this you know she's like yeah he just doesn't seem somebody that would like waste his time with stuff like that and i'm like yeah for 30 years wouldn't waste his time
(1:07:46) now when was 30 seconds of his life um so that was you know that's the kind of impression you get from him i have one more piece of audio and you can kind of see why he's probably letting this happen now people have been trying to minimize who you are people have been trying to trivialize who you are people have been trying to twist your story based on absolutely absurd things that's got to wear on people to a point you got to set certain things straight it's time to pull things out by the roots
(1:08:13) just to get things reset and get people familiar with the story and who i am and this is what's true the divergence has increased just over time i'm trying to tell you exactly the way things were and what i was exposed to you think there's something more secret than that that the flying saucers are a cover-up for some of this stuff just sounds crazy to me and i i understand i'm biased because i'm behind my eyes and see everything but this is this is crazy [__] yes i think it gets kind of annoying you
(1:08:48) know getting trolled and you know by people and you know oh you're such a liar why are you holding all this information like holding holding what back i've told you everything so i think that uh people inserting fantasy and fiction and their own opinions altering and distorting his story is precisely why he's letting this happen now you're going to hear a story again and then i'll have some updates as i was able to uncover some pretty interesting stuff so to kind of conclude this part on bob
(1:09:17) because you're really going to see it in my film um i i do have an exciting announcement which is nobody has seen this yet this is a little uh maybe two minute trailer with some new footage we get to hear from bob very very recently and of course i've done tons of filming but you got to wait for my film but i can show you this little piece they're using it can film festival to get the movie out to market which is pretty neat so first time ever just a little clip to again update how much information you have on
(1:09:49) bob lazar exciting nothing good comes from the urbovia this is a reluctant ufo messiah he changed his life this week we've heard the contention of ufo researchers that there's a secret government within our government well there's several uh actually nine flying saucers flying discs that are out there of extraterrestrial origin the live interview with the shadowy dentist drew international attention portions were broadcast by radio in six european countries and in a nationally televised tv special in japan
(1:10:31) despite numerous inquiries and feelers dennis has remained anonymous until now his real name is robert lazar he says he was hired to work at an area called s4 which is a few miles south of groom lake at s4 he says are flying saucers anti-matter reactors and other working examples of technology that is seemingly beyond human capabilities i did not believe that this should be a security matter some of it but just the concept that there's definite proof we even have articles from another world another system you just can't not tell everyone
(1:11:13) [Music] it was like a twilight zone episode just kept getting stranger the fact that that was happening at all was the weirdest part look it's been 30 years and all of a sudden you raised it to this level you know this is a powerful technology fearsome technology and you just don't want everyone to have it'll become obvious how to make constructive as well as destructive devices from it it's my only guess as to why they have never released information it's kind of difficult once you release the technology to be

(1:12:03) analyzed and give it to everyone they can just run with it you really can't keep the weapon potential hidden you really can't look with et technology you can literally rule the world well i am telling the truth i i've tried to prove that what's going on up there could be the most important event in history you're talking about contact physical physical contact and proof from another another system another planet and other intelligence that's got to be the biggest event in history period and it's real
(1:12:42) and it's real and it's there [Music] i'm so excited for this film to come out i'm so excited to actually make the film i still have so much to do you have to edit the whole thing but this is the story that i've always wanted to tell you know since i first started looking into the idea of ufos i want to know like you is bob telling the truth because if he is if any of that is true it is game-changing and i gotta tell you through my movie process we're closer to the truth than ever before but
(1:13:25) you're gonna have to decide for yourself because somebody telling you something is not as good but there'll be a lot coming out in that i'm so excited to be able to bring that to you because like just as a fan of this i would love to see the movie myself so all of my work for those of you that haven't met never seen my work before you can spend weeks at extraordinarybeliefs.
(1:13:47) com um but there are tons of videos and clips and everything from my films investigations and reports i hope you enjoy it you know i make it so that everybody can just watch it for free that's the point you know the films are what i do now for a living which is great hopefully that works out um but everything is on that website for you to just go to enjoy and experience again i'm not trying to tell you to believe or not believe or i'm just trying to provide you a little bit more information hopefully those two clips of footage one
(1:14:18) i know nobody's seen before give you a little bit more insight and the movie will provide even more than that because it is a very important story [Music]

UFOs & area 51 - the george knapp / bob lazar / connection - MUFON UFO symposium (2016) - YouTube
https://www.youtube.com/watch?v=_lOOWGbLocM

Transcript:
(00:02) [Music] [Music] two [Music] [Music]
(01:05) my name is jan harzan i'm the executive director for mufon we are a scientific research organization that basically collects citing reports from the public and then goes and investigates them our mission statement as an organization is the scientific study of ufos for the benefit of humanity and we have three primary goals we investigate ufo reports we promote research into the ufo subject and we educate the public on our findings mufon is really more just left of center where we try to take a scientific approach by collecting the data first
(01:41) off and then reviewing the data investigating the data and making sure that what we're seeing is actually something that's truly an unknown we have three thousand members worldwide many scientists physicists phd's metallurgists biologists all the way down to just the average citizen who really wants to get involved some of those have chosen to become field investigators and they go through our field investigative training courses they become part of the team in their state or country where they reside and they
(02:08) actually get engaged in going out and meeting this phenomena head on we receive about 500 to a thousand reports per month from around the world field investigators will take the case generally review it try to come up with a hypothesis checking star charts we'll go put an investigation in place to determine what exactly happened we've recently formed a science review board and that board is made up of scientists from around the united states and around the world to review some of our more significant cases and try to render an
(02:39) opinion on them what we'd like to do is be more outbound more outspoken in terms of the really true ufo cases so mufon is moving forward with this approach and we'll be publishing papers in these different areas to allow the general public and even the scientific community to be able to be challenged by what we're finding that's the strength of mufon as an organization is being really the truth seekers of the ufo [Music] field [Music] it is my pleasure right now to introduce our keynote speaker

(03:43) he is a 24 time emmy winner a mark twain edward r morrow and peabody award winner two times he's the anchor of cbs klas tv in las vegas and more importantly he's the host of coast to coast twice a month and he's our keynote speaker tonight he will speak on area 51. this is a very significant event you think about breaking the story 25 years ago it's almost like breaking the roswell story because nobody knew about area 51.
(04:19) so our keynote speaker tonight who's going to tell you about some unheard details and updates on area 51 is george knapp i'll i'll uh tell you right at the outset this gets better and funnier the more you drink so feel free to visit your bartender back there and and to tip generously um i am very pleased to be back at mufon especially here in new jersey john didn't mention this i'm very pleased to be back here but john didn't mention it in the introduction but i was born about 25 miles from here south of here in
(05:02) woodbury new jersey and not only do i still have family here i mean i still have family here they're up in front i don't know how they got this front table but well done so let's get to it and have a little bit of fun i mean i have been covering this story for 25 years so it's a lot to cram in a lot of good stories a lot of colorful characters a couple of videos or two and you might have to give me the hook here to get me to stop because there's a lot of material to cover the story we are here to review tonight
(05:34) has traveled all over the world many times and i know it sounds preposterous on its face that the idea that some slightly off-kilter nerdish guy in glasses could be hired into classified programs even though his educational credentials are practically non-existent his work history is sketchy he's been discredited and dismissed by people he worked with and worked for there's no way that this guy would ever be allowed access to top secret materials if we want to roll number one no way he'd see classified files no way
(06:10) let alone that he would blow the whistle on some of the deepest darkest secrets of all time but of course we do know that edward snowden really did work for the cia and the nsa even though he had no college degrees he dropped out of high school he dropped out of the military he was working as a security guard right before he was hired by the cia and then later worked for private contractors for the nsa and was able to access the most sensitive information in the u s government which he subsequently leaked tonight i'm
(06:41) here to talk about another slightly nerdish guy in glasses a whistleblower named bob lazar is it fair to compare the two of these guys tonight i'll take you step by step through this story to see if this comparison is valid uh both men work on classified projects for spooky agencies both presumably were not qualified to be in those positions their personal lives were spotty their educational credentials questionable both were very bright guys whose lack of formal credentials was not an impediment to getting them work in places that
(07:17) seemingly should be off limits i think uh bob lazar's story the one you're about to hear now demonstrates that those three letter agencies that are probably represented here in in one of these tables um we'll hire almost anyone if it means there's a better chance of getting the job done uh it that's the reason for example that cia came to my hometown las vegas in the early 1960s to hire the mafia to kill fidel castro it's why the cia and dea have made deals with drug cartels it's why we've
(07:53) had on the government payroll scumbag dictators like saddam hussein and manuel noriega it's why journalists and entertainers and others have been recruited over the decades to work for these agencies they do what they need to do to get the job done and they will make a deal with the devil if it means getting the job done and doing it well it's now 25 years since i got sucked into the world of area 51 and flying saucers and bob lazar and i was i was pretty sure back in may of 1989 that this could be a somewhat explosive story that it might
(08:31) make some waves for a while i had no idea that i'd still be talking about it a quarter of a century later that it would travel all over the world i was pretty sure was going to make some changes in bob lazar's life maybe save his life which is one of the reasons he came forward and i guessed it was going to cause a little bit of a hubbub at the base itself that's the place with no name it's the place with many names um and we'll go over some of them but i had no idea was going to change my life in
(09:02) in the ways that it has and i mean it has i'm here after all since the theme of this mufon symposium this year is ufos and the media i thought we'd explore together how this story spread out how it became a transcendent meme the way in

which the story spread i think would by its be by itself something that intelligence agencies would want to study or sociologists or academics who look into media issues information theory i mean it has been astonishing at least from my end and i've had a pretty good seat
(09:38) uh i'll just tell you a little bit about myself and how i got into it i started as a journalist in las vegas back in 1981 mostly in television but some in print and as john mentioned radio over the years i've covered pretty much every story you would expect somebody a journalist in las vegas to cover a lot of organized crime a lot of mob stories uh political corruption we've got our share out there sex scandals celebrity goofballs environmental catastrophes drought the foreclosure crisis drug dealers gun runners murders bikers
(10:10) fires stick-ups pot farmers crack peddlers scams rip-offs scumbags boneheads and butch cassidy and the sundance kid [Applause] and you know along the way i've broken some pretty good stories i got a couple of awards here and there and in my hometown i was considered a fairly good reporter mainstream guy that is until 1989 when i went completely off the rails and started covering ufos i am sure that this is true for many of you i in my town i'm the ufo guy and i'll bet in your town most of you are the ufo guy or ufo gal
(10:45) in your families somebody sees a flying saucer on television oh go tell crazy uncle bob about that ufo story we're all the ufo guys uh you know i mean as with many of you and this my fellow speakers who are here uh not a day goes by when i don't get calls from iceland or ecuador or an email from all points in between about some ufo sighting or flying saucer event everywhere i go in las vegas i get stopped to talk about ufos i'm in the grocery store shopping they stop and want to talk to me i'm in the
(11:17) in a restaurant i can't tell how many times i'm sitting there at a booth and somebody will just slide on in while i'm eating and start talking about ufos i've had people stop me at the urinal i'm at the urinal hey man i'm a little busy here i'm not making that up and it's uh they will ask me do you really believe that ufo stuff is that for for real are you on the level and they don't care whether i believe it or not what they want is they want to tell me their ufo story what they saw
(11:49) uh the the level of interest in this stuff is amazing for some reason you know um my colleagues in the media are not okay with this they can't quite get her head around the fact that the public is so interested in the subject matter it drives them crazy the public is who they whom they serve is deeply interested in the topic and can't get enough of it that is not the case for journalists and i don't really get it i mean it's a great subject potentially the biggest story in the history of the world
(12:18) even if it weren't true even if it was all a mass hallucination that's one hell of a news story because it's been going on for so long and besides i hate to admit it but it's a heck of a lot of fun to cover this stuff and chase it around the world but to my colleagues the folks here in this room you're ufo buffs you're ufo believers those are code words that journalists use to put ufo folks sort of in their place it's a tool that they use and though those who don't believe they're skeptics
(12:48) they're scientists you're buffs and believers well i don't know about you but i never thought of myself as a buff or believer i don't think of myself as a ufo reporter i'm a reporter who happens to be interested in ufos there's a difference and i think it's a legitimate news story and as i said it's driven my colleagues in media just right up the wall uh 25 years ago you know it i don't think they realized how how far this the interest spread and when they saw me getting so much attention in las
(13:18) vegas and the ratings spike that come along with these ufo stories it really pissed them off when that story about bob lazar broke oh my gosh that in general people my colleagues in the media think that's the year i went nuts i had broken other stories but and i'd i'd been careful about them and i tried to be careful in the same way with this story but they didn't see it that way i can't tell you how many times i have been pilloried by radio morning djs as soon as they run out of belch barf and fart jokes in the morning
(13:51) they would take on ufos my friends at nevada's largest newspaper the review journal have had a lot of fun at my expense i've been featured in several editorial cartoons i remember the first one i saw had me with a butterfly net my ass looked as big as a wheelbarrow and i was chasing a flying saucer the second one they had it was called the marshmallow head chronicles was the title and it showed a couple of

extraterrestrial hitmen had come to earth and they had their ray guns they were pointed at a couple of gasoline pumps at
(14:22) a gas station and the line was of course they are earth men but which one is george knapp i think they were making fun of my stout frame or something um there was a series i did some years ago about alien abductions and some of the weird uh medical procedures that happen that are reported by abductees and the newspaper had a headline they called it kidnapped by aliens very funny and uh because i had described some of the procedures they dubbed me a grand moa in the church of cosmic proctology there was a there was a media critic who
(14:58) wrote a weekly weekly column and he wrote one time he said people are rushing at home at night to see george knapp's ufo reports not because they're interested in flying saucers but because they want to be there to quote see it when george does the big crack up on screen will he go bull goose looney his eyes going buggy and rolling free in their sockets will he crash and burn before our very eyes that's a that's a quote now it's funny stuff and i figure you know it kind of comes with the territory
(15:26) i'm a public figure in las vegas i'm not thin skinned i'm okay with it because i know the public is okay with it i don't write news stories for other reporters i don't care what they think i write it for our listeners our viewers and the public the part that bothers me is that so few of my colleagues did any work at all on the subject before they decided to write it all off and and me with it before they joked and tittered or made wise cracks about elvis and bigfoot and tin foil hats they certainly never spent hundreds of
(15:56) hours sitting out there in the dark outside of area 51 sitting in the dust in the desert waiting for something to happen trying to dodge security patrols trying to keep from getting arrested or buzzed by helicopters they haven't read the books or the documents or interviewed the witnesses none of that stuff that you would do on any other story and it drives me crazy and i'm sure many of you feel the same way they see all of us in this room as nuts and while i think that that is totally unfair and generally inaccurate
(16:26) we all know that sometimes it isn't uh the fact is and you know it's true the subject does tend to attract a lot of people who whose elevator doesn't go all the way to the top and and they they make it a lot harder on all the rest of us for the past two weeks i've been getting these cell phone messages and emails from this lady who has been imploring me to get a protective order to fly her to nevada because former cia director admiral james woolsey is tormenting her with mind control beam weapons
(17:00) that have forced her to have all kinds of sexual activity with asian men that she doesn't know now i'm not making this up she figures if i uh if i have a lot of ufo connections at the government maybe i can help her out and get the admiral to back off when i was first in this field i had this lady who kept calling me up after she saw the bob lazar stories i have got to talk to you i've got some really important information all right fine she shows up at the station she's wearing the skimpy halter top and
(17:32) holding a kid who i later learned was her alien love child and and she within five minutes of me meeting her she's telling me the most intimate details about her sex life because it was while performing a certain act out on her front porch that she looked up and saw her first ufo eventually i'm not making up one bit of this eventually they beamed her up on board the ship they had her in sort of a beauty queen lineup and they told her to put on a bathing suit and then she said they they told her to get breast
(18:04) implants and this is the one part of the story i could believe because there was ample physical evidence staring me in the face uh i have been pestered by i've been pestered by this millionaire who is a transsexual abductee add that combination up by a guy who says he's the twin brother of jesus christ who's coming back he says the aliens are bringing them back and boy are they mad i had a guy i had a guy who flew from australia he told me he used the last money he had to fly to australia from australia to me
(18:41) because he wanted me to use my juice at area 51 to get the aliens to stop abducting him and it's a sad story but that was true um i have received all kinds of letters from alleged aliens who say they're watching me i've got alleged aliens sending me songs and poems that they've written i got people who've made death threats and issued warnings to me from people who pretend to be government agents i've had people say that i'm a government agent myself you know it kind of comes with the

(19:12) territory and as some of you may know if you know about ufos or have an interest in ufos suddenly that makes you an expert in every other weird thing that might come up um beelzebub you got a problem with demons i get calls about it you had an out-of-body experience can't get back in uh you can call george about it well so major media folks when it comes to the ufo story and area 51 in particular um has taken a pass and so be it it's their loss the story about area 51 got out anyway and i remember in the beginning
(19:51) a man everybody made fun of it and made fun of me and but eventually as we'll talk about the whole world beat a path to area 51's door i mean as john mentioned in the introduction nobody had heard of area 51 25 years ago but they certainly know about it now it is an oxymoron of the highest order the world's best known secret base can you be both i guess so a place famous for being so secretive that for decades the government pretended it wasn't there even though we can see satellite photos that show it's there you can look over
(20:25) the hill and see it's there no it's not you're imagining it a place where constitutional protections do not apply where environmental laws are exempted where you can be shot just for editoring area 51 the box the ranch the watertown strip dreamland you have to the base began in 1955 a location where the u2 was first tested they sent out a news release i've got it with me a copy of the news release that went to media and said we're building a little facility it's temporary be gone before you know it and
(21:02) here it is you know more than half a century later it's still out there in a remote part of nevada 100 miles north of las vegas few people outside of our state other than those who worked there or lived in the perimeter had ever heard of it and then that changed in 1987 when a guy named john lear walked in the tv station at that time i produced a little public affairs show called on the record and it's one of those shows that airs at six o'clock in the morning on a weekend you interview a county commissioner or
(21:32) city councilman and nobody watches it and lear came into the tv station to talk to my boss a guy named ned day my friend and mentor who was sort of the premier muckraker of his era investigative reporter mob fighter mob buster and lear had credibility with ned day for one simple reason john whatever you think of him now and a friend of mine by the way jeremy corbell who's here is making a film about john he has some crazy ideas wild stuff regardless of that at the time john had a lot of credibility with us for a
(22:06) simple reason that he had helped us break a really important story the existence of the f-117 fighter john and fellow aviation watcher jim goodall would go out there with binoculars and cameras in the desert and they had acquired enough information about the self-fighter that they gave the story to ned he broke it it went national it went national so big that the fbi hauled ned in and quizzed him about where he got the information anyway so at the time john had credibility with us his father had invented the lear jet
(22:37) john had run for the state senate uh he wasn't quite as far out on the fringe as he is now um so he brought in this pile of ufo documents and dropped him on ned's desk and he said you got to take a look at this ned this is the next big story and ned said i don't want anything to do with that i don't believe it it can be true if it were true i'd already know about it and so he wouldn't do the story i was eavesdropping at the time i said let me take a look at that stuff and he dropped the pile of documents on
(23:06) my desk i read it i thought well that would might be an interesting subject something change of pace for this show on the record so i had john on and all of a sudden my phone started ringing with people who want to know hey what was the deal on that ufo guy you're going to have more on that and i had them on again and i had him on a third time and each time the response got bigger and i'm wondering what the heck is going on here i didn't understand the way in which this touched the pulse of the public
(23:32) but it did and so i started reading up on it and then that third show john had hinted to me that he knew somebody who had just been hired at area 51 or as it turns out a place called s4 so may 1989 we have this shadowy silhouette interview with a guy named dennis not his real name and it was just sort of circumstance that it happened we had i was anchoring the five o'clock news at the time um and our regular scheduled guest bailed on us i called lear and said hey we need to fill in do you think your saucer guy
(24:08) would do an interview and sure enough he did and it was you saw some of the footage there a little bit of the preparation for that interview outside and after

this thing ran everything was different for me for bob lazar and for area 51 let's roll a piece of this tape number two i don't know sometimes i really do regret it regard it and almost i i almost feel like apologizing to him saying that you know i'm sorry i let things out can i have my job back 25 years after he was forever transformed into bob the ufo guy
(24:41) bob lazar says he regrets ever talking about flying saucers or a secret base in the nevada desert or any of the things that made his name known all over the world there isn't a day i i don't get emails and you know i try and get this across to him look i don't even want to talk about it anymore you know well i don't believe the story great pass it around you know i really don't want you to because it makes life difficult for me a quarter century ago not many people outside of nevada had ever heard of area 51
(25:11) the mysterious base 100 miles north of las vegas a place the government said didn't exist it was the location of choice for all manner of black projects spy planes that were kept secret from the public and that's my driveway that's bob that's gene huff and bob's wife tracy and chris and we're just waiting there for five o'clock to roll around former c.i.
(25:37) a pilot john lear remembers the day that area 51 became a household name this is home video he shot as a klas news truck prepared to broadcast a live interview from lear's home lazar was understandably nervous yeah he was nervous because he was putting it all out on the line there and here he was going to you know reveal all this secret that he'd signed you know that he was going to never tell anybody it's not only a crime against the american people in the interview lazar's face was hidden and he used a pseudonym dennis which was the first name of his boss out
(26:12) in the desert well there's several actually nine flying saucers bazar claimed he worked intermittently at a location called s4 south of groom lake the main facility of area 51 he said the hangars had been built into the site of a mountain disguised as desert and inside were a set of nine flying saucers months later he revealed his identity to the world and said the technology he'd worked on was from somewhere else that it was being taken apart to figure out how it worked so that's the basic story he said that
(26:48) he was hired by a company called eg g which is in fact the company that has always run uh area 51 since the beginning that it was done on behalf of the us navy that he worked at a place called s4 south of groom lake uh a place called papua's dry lake bed he said these ships basically are have an anti-matter reactor the fuel is something called element 115 which at the time that bob said it didn't exist it does now uh in a form that i'll talk about a little bit later uh he said that it could create basically
(27:18) it was able to create its own gravitational field which means it bends space and time and um it actually could travel in no time at all from far away worlds just by pointing this gravity amplifier at this location and i know it's preposterous it's outrageous it's ridiculous who in the world could believe such tripe coming from a guy who has a really sketchy background like bob turns out quite a few people believed it because the story exploded like a hydrogen bomb it launched thousands of product lines uh it made
(27:55) untold numbers of media appearances the meme was on the loose i'll show you in this video roll this one number three and the coup de grace area 51. you could have just handed me a piece of the ufo from area 51. there's never been any spacecraft there's no area 51. there's no recovered spaceship oh excuse me mr president that's not entirely accurate it would probably take an indiana jone-sized warehouse to stash all the pop culture references to area 51 the oh so secret facility the place that
(28:31) did not officially exist for decades is the rock star of military bases literally there's a rock band named area 51 and another named element 115 which is supposedly the fuel for flying saucers there's an area 51 video game an area 51 bar what better way to unwind after a long day than a glass of groom lake red wine from the ailey inn maybe spend a few minutes staring at the paintings you picked up at the area 51 art show while perhaps listening to the bob lazar music video the story that bob lazar told 25 years
(29:09) ago has gone around the world many times over when you get yourself in position and in the quarter century since then the world has beaten a path to area 51's door every major news organization in the world has written stories the base has inspired documentaries and tv dramas dozens of books have been written fiction and nonfiction hundreds of news articles many of them critical of lazar and

skeptical about his background his tale launched a thousand product lines every trinket you can imagine along with assorted businesses
(29:43) a aaa baseball team and the world's only extraterrestrial highway running right past the entrance to groomed lake president obama recently made a point to publicly acknowledging area 51. what's really going on at area 51. and former president bill clinton told jimmy kimmel he'd looked into those stories about space healing so first i had people go look at the records on area 51 to make sure there was no alien down there even the kardashians have made a trek out into the desert that's a security guard look how that
(30:14) that uh you know that story moved throughout the internet so quickly and not just the internet but but news in itself like was in the first 48 hours after the broadcast it was in japan back in las vegas for a visit lazar recalls why he came forward in the first place he had traveled to the s4 base only a handful of times but began to get scared i began to get worried in that while they've given me all this classified information they're not calling me anymore they won't take my phone calls and in the
(30:46) meantime apparently they're deciding what to do with me for a variety of personal reasons lazar couldn't keep the story to himself he shared his tale with john lear and gene huff they and a few others made treks out to the outskirts of s4 because lazar said he'd learned when the test flights of the saucer would take place three weeks in a row a glowing object appeared over the mountain look how bright it's kidding look at it now and just a few minutes ago we saw one of the government extraterrestrial ufos the time when bob
(31:18) said there would be a test there was a strange light jumping around in the sky above the location where he said it would be at the time and date he said it would be you know here the craft took off when i said it was taking off from past the the mountain range which was papoose lake s4 south of area 51 you know in a restricted area so it's not like anyone was out there with a model plane or anything and uh you know flew around in incredible maneuvers and impressed everybody to the point where we got scared and got
(31:47) behind a a car fearing the thing was going to explode but um really how do you explain that right right now so many products i i don't have time to list them all i mean they have regular tours there now for a while it was just catches catch cam but they have regular tours that go out a couple times a week i did a story on the air a couple of weeks ago about one uh driver wasn't paying attention blew right past the signs and was in a big bit of trouble there in a big hurry um they have an area 51 brothel a legal brothel
(32:20) which works with the bob lazar story if you think about it they have an area 51 blow up love doll i don't know what sick dog needs that one i was thinking to myself man i wish i had copyrighted this thing long back in 1989 i'd be calling in doing this by skype from my island of kawaii or something you know i was thrilled when i saw president clinton speak about ufos it was kind of cool that president obama said that you'll notice he was he made the comment about area 51 first time a sitting president has
(32:52) acknowledged the base while he was honoring shirley mclean but when i saw that the kardashians had visited area 51 i thought oh man it's jump the shark that's it for the base you saw at the end of that video the clip of the original footage of this saucer test flight that lazar and john lear and gene huff and others had witnessed not once not twice they went out three times in a row lazar knew when the test flights were going to take place he knew where the test flights were going to take place officially to this day there is no base
(33:23) at papoose lake there's nothing at papua's lake now in fact there is no s4 anymore we'll talk about that a little bit later there's nothing there but a dry lake bed so how did he know you know it's one of the points that we'll come back to let's uh roll number four here i'll show you a freeze frame of this this video somebody had done some enhancement of this there's a whole video but i couldn't get to play earlier but that's that's sort of a close-up of that that craft that they saw and they saw
(33:50) three weeks in a row over the years dozens of other people have taken similar images out there sombrero shaped things orbs and balls of light flying erratically some of these clearly are misidentifications of classified projects i get that and some of them are just wishful thinking i get that too but it sure seems like something that looks like flying saucers has been out there and for a long time i don't think it's there anymore but it looks like a classic ufo uh i don't know if you saw the announcement last year the cia

(34:22) announced area 51 is real thank you cia for acknowledging that hoopty friggin do we knew it was real you can see it's real people have been out there they've taken photos they've been arrested even though it was removed from maps in the 1970s we've known it's been out there a long time at the same time the cia acknowledged hey area 51 is real we're coming clean with you they said by the way the reason people have been having these stories about flying saucers out there is because you're misidentifying things
(34:54) that we're flying u2s and sr-71s i don't even know where to start with that it's similar to a an earlier cia release that tried to explain away all ufos you remember all those ufos you were seeing in the 50s and 60s those were ours they sent out a tweet to that effect a couple of weeks ago that was us they said very funny except for the fact it's total i mean u-2s and sr-71s don't look like flying saucers not from any angle they don't stop on a dime they don't land in corn fields or in backyards they
(35:26) don't fly straight up or straight down they don't do any of that stuff more importantly the stories about saucers in the nevada desert didn't come from people outside the base seeing things in the sky they came from people inside the base who leaked the information out and not just bob lazar which brings us back to him i'm not going to try to convince you that bob's story is true i can't i wouldn't even try it's up to you i think most people have made up their mind one way or another there's not many
(35:58) of us that are still on the fence um i do want to share with you two thoughts on this though one is my belief that it's kind of a moot point anyway because the area 51 story has kind of taken on a life of its own whether we like it or not bob lazar or not it's kind of permanently etched into the public consciousness for good or bad uh it's kind of like a it's independent of lazar it's kind of like a being that is suddenly self-aware there was that tour group i mentioned in late may that guy who
(36:30) blew through the the uh the sign we have video of the whole thing that's why it became a news story and i i was going through it logging the tape and the guy is telling stuff about area 51 i just i'm shaking my head he said oh yeah this is generally where the mother ships come down they're there all the time and then the men in black patrol this area and you got to watch out for them and then there's it's 60 floors underground and all this stuff that's just completely made up i don't even want to i didn't want to
(36:58) try to correct it i don't even know where to start this is a beast that is out of control in some ways the second it's a it's a monster i mean the second point i want to make is that how we pursued this story as journalists you know people think well you must have just done this for ratings that's not how stuff works that's not how we work and this is a not a lark of a decision something that we made lightly as a ratings ploy it did get ratings and that was good but this was uh we we thought about it and
(37:30) argued about it we knew what was at risk not only my reputation but the reputation of our our entire news department our news entity so we tread lightly we were careful we covered our bases i spent eight months putting together those stories about bob and and tried to investigate every angle find every supporting bit of material that i could and there was quite a bit of it i know it looks preposterous on its face and if you were to tell somebody this story without any of the backup material they'd laugh at you but i'm not laughing
(38:04) uh my friend and colleague stan friedman is not here tonight and i regret that because he and i have had some spirited conversations about this over the years stan has i give him credit for doing the legwork on the bob lazar story but unfortunately because he's so far out in front on it he takes a lot of crap from people who are religiously believe in this thing and can't understand why he's cooperating with the evil secret government to keep it a secret but stan took it on he followed up bob's credential claimed credentials he
(38:33) found out that contrary to what bob had said he did not have any records at mit or caltech and i applaud stan for that i give him kudos for doing the work like edward snowden though the only college that bob had was junior college and he didn't finish both of those guys didn't finish so is that case closed for lazar that he lied about his college credentials he's a liar so he can't believe anything that he said well i i would make the case that i give stan credit for doing some of the leg work but the fact is in the very
(39:07) first story that we aired about bob lazar i said he made these claims and we can't prove it there's no one at those schools who remembers them and i'll just tell

you i the first time i ever spoke to mufon it was 24 years ago when i was invited to speak about this for the first time i said i don't believe bob lazar did go to those schools and it's really simple he doesn't if you know how it was when you were in college you had to take certain electives that have nothing to do with your major
(39:36) interest can you imagine bob lazar sitting through english lit because i can't i mean i could see him taking science classes electronics and engineering but to take the kind of courses you would need to get a degree there's no way i don't think he went to school yet i'm not ready to sort of toss that toss him out sort of the baby with the with the bathwater i never believed necessarily that he went to school for me the key question was always did he work at los alamos national lab because that was part of his claim i
(40:06) worked at no solomon's national lab as a physicist i said well that should be easy enough to check out i called the lab they said we've never heard of them so bob you're not helping me here we dug up a front page newspaper of the los alamos monitor that showed him on a front page story pictures of him with a jet car he'd created and it listed him as a as a los alamos physicist that wasn't good enough the lab said we still don't have any records then i found a phone book with his name in it and they said we still don't have
(40:35) his uh any records on him i pursued this for three years i've got a stack of letters this big between me and los alamos lab and they still were denying it i finally got onto a company called kirk meyer which is a head hunter company they recruit technical and scientific people and get them jobs at places like los alamos lab and they said sure we've got records on bob lazar yeah we got him a job at los alamos you bet and then i said can i get the records yeah no problem thus started a one year back and forth with
(41:05) that company they had promised the records yeah we're going to send them to you and they never did and then they denied ever having them and the same thing with the lab they finally after three years they coughed up an id number for bob yeah he was here but he was in non-classified work i interviewed five people that worked with him at los alamos who said he was in classified stuff and more importantly i went there he took me in with my cameraman on a weekend and it wasn't like he had never been there before
(41:35) it was like a rabbit going through his own burrow he knew all these buildings the ins and out these buildings he waved at the security guy at the front gate we waved at people inside the buildings he took me in to see this gigantic particle accelerator one of the biggest in the world we took video of it i used him in those reports i think he worked there and it seems to me that if he worked at los alamos national lab on classified projects which is what his co-worker said he did it is conceivable he could be hired to
(42:02) work out in the desert in nevada whether he's got a college degree or not so i applaud those who do the work and say he never had a college degree but for me that doesn't end the story and if bob lied about his college credentials would he be the first person to exaggerate his education to get a really cool job because i don't think so there were other witnesses who came forward and i'll talk a little bit about them the the part that's really hard to convey about those that time is just how weird it was and
(42:39) it's one of those kind of things where if you weren't there it's it's really hard to get it but man i'm telling you it was strange after we broke that story i mean bob had death threats and he would call me up at night and i'd go over to his house and he was pacing around there'd been a break-in he's pacing her with an uzi they would break into his they would break into his house and just move things around he'd come home and the doors are open there'd be things that he had on his
(43:05) blackboard that were erased he had a particle accelerator with a piece of element 115 pointed at it they would move that stuff around he went to the gym with a friend of his he was carrying a gun because he was paranoid he and his friend go in they leave the gun in the glove box of the car they come out the doors both doors to the car are open the glove box is open the gun's laying on the front seat it said people were messing with them and they were messing with me and i know they followed me around for a while
(43:33) because two of the guys who did it told me about it years later after they had quit working for this security company our phones were tapped which you know that really ticks me off i guess we're all used to it now because the nsa has all of us tabs certainly everybody in this room um yeah it's too bad that we got used to it but in those days i weren't used to it i had six different people after we broke the story with bob my phone is ringing off the hook people questions about ufos but

occasionally a couple of people who
(44:08) had information and wanted to tell me their part of the story six people who offered on the phone to give me interviews even if i blacked out their face were visited one right after another there was a tax guy who had done tax forms for a lot of the guys who worked at nellis air force base high-ranking uh officers who had told him on an out-of-town trip about some recovered wreckage from a flying saucer that was out of here 851 just swore him to secrecy so he told me about it his name was roy byram and after he made it agreed to do an
(44:40) interview with me the very next day he gets visited by two guys who said they're from the secret service and would they had heard that he'd been making death threats against the president and did he know he could go to prison for that he thought that was related to our phone call i had a lady who a cop introduced me to her she worked in our clark county court system she's still there i think and she had been previously been a secretary for a defense contractor at the test site called holmes and narver major defense
(45:08) contractor and she said it on a meeting she said with uh defense officials air force officials and the and this contractor she was the sex stenographer and in this meeting she said that they talked about a recovered disc an alien crap and after they finished they they not only uh took the notes away from her they took the ribbon out of the typewriter it was an old-fashioned typewriter in those days and swore her to secrecy the cop hooked me up with her i talked to her on the phone she agreed to do an interview if i
(45:38) blocked out her face very next day she gets a visit by these two guys who flashed a badge at her they said look you're still subject to your security clearance and uh i don't know how to say this they said we know you and your daughter do a lot of traveling back and forth las vegas to l.a let's just put it this way there's a lot of desert out there and bad things can happen it was this is serious i'm not making this up it's uh she she was scared to death 15 almost 20 years later i figured i'll
(46:06) reach out to her again see if she would be willing to talk about it now she's still scared wouldn't do it i had an electrical engineer who used to work at my tv station who moved to seattle who had worked at area 51 and had seen a saucer shaped craft under a tarp in a in a building out there and he agreed to tell me about it and the next day after that phone call where he agreed to do a silhouette interview there's two guys sitting in a car outside of his house and their crew cuts talking into a radio they
(46:35) follow him to work when he gets out of work they followed him home you know somebody was listening he was intimidated and i don't blame him and it happened a lot listening the phones following us around break-ins it was a really weird time and if you weren't there it's really hard to convey it as i mentioned a lot of other witnesses came forward i'm not going to go through all of them but they're a couple of key ones that that i want to touch on one was a he was a spotter at the nevada test site his
(47:02) name was glenn pace and in the days of the above ground testing program he was one of the only guys on the test site that was allowed to have binoculars and he worked for a physicist named otto krauss he said and they would sit in a place called area 15 which is above the area looking down on papoose lake and he said they used to see these saucers buzzing around papoose lake flying around down there in the 1960s maybe into the 70s i can't remember the exact date told me that story there was another guy who i first told mufon about it the second
(47:35) time i was here to talk about area 51 it might have been 20 years ago a guy i had stalked basically i had figured out that he was in a position to know this stuff based on his employment record and i would go to these public events where he would show up and sort of ingratiate myself he was from a prominent nevada family and eventually he invited me to his home and he said you want to see my scrapbooks yeah great good he's showing me these books this atomic test and this guy and that and then he stops and he closes the book
(48:09) and he goes this is not what you want to talk about is it i said no no it is not and his wife walked in oh don't tell him that stuff but he did and over the course of the next two years he told me a lot and as i reported some years ago to this group he told me that they had an alien out there that they'd captured that they had several craft they had been at a place called indian springs which is now creech air force base and it was moved later to area 51 when that base was created he said that they had it alive uh he had
(48:40) kidded me i had i couldn't take notes i couldn't write anything down i'd

have to leave these meetings and then write furiously after the meetings everything i could remember but he had told me at the time that this being looked just like a politician of the day and it turns out he was talking about ross perot a little little tiny jug-eared alien anyway i i made a deal because this guy was a prominent family i knew other people in his family he had told them the same story and we made a deal where he was going to make a
(49:11) video tape and give it to me after his passing still alive uh but uh he's complicated matters because he was told after about two years of us talking he said i got to stop i was told to stop uh who told you well my former employers told me to stop and then the last time i saw him he added a little twist to the story was no longer aliens he was leading me in another direction well imagine my surprise when a book comes out called area 51 by a lady named annie jacobson and you read that it's a great history about area 51 that
(49:44) it has a chapter at the end that just it's a really good book and good history about u2 sr 71 all that stuff and at the end it has an interview with this old guy who tells a wacky and wild story about how all those ufo stories it was the roswell saucer was really something that the russians sent over created with nazi technology and the aliens inside this thing these things were actually jewish prisoners of war concentration camp survivors and that was the story this guy told and annie put it in her book and it largely
(50:19) it made the the rest of the book irrelevant and it made poke a lot of fun at area 51 and the whole story made it all less serious it's the same guy i and i'm not going to identify who he is because i made a promise that i wouldn't but it's the same guy who had changed his story which is troubling um over the years all kinds of people have come out of the woodwork to tell what they know about area 51 and a lot of them just made it up there was a guy named bill cooper who wrote a book called behold a pale horse
(50:51) it should be called behold a pail of horseshit because um we just just made this stuff up there was another guy named dan burrish dan crane he used to be now in the beginning he was kind of an interesting guy and i thought he might be on to something but in the last few 10 years or so i've realized that it's a game he's got a merry little band of pranksters it's like a dungeons and dragons they pretend that they're superheroes to save the world and it's all made up i've had people tell these stories about all the milk
(51:22) carton kids that's where they go they disappear and they're taking area 51 they make alien hybrids out of them in these huge bubbling vats um false flag operations we didn't go to the moon because it was all staged out there in area 51. look that place is pretty interesting you don't have to make up anything about it back to bob again i don't it doesn't matter whether you believe them or not but people who want to write him off because he doesn't have college credentials have to also
(51:52) come up with an explanation for how he knew stuff how did he know about those those tests some people said well maybe somebody told him maybe he was uh you know a janitor out there really i mean keep you i mean can we keep our eye on the ball here a guy just told us that we're flying saucers it turns out they were accurate we've got it on video and you're going to say i'm not going to believe the story because he doesn't have a degree from mit i think we're missing the important point there he also knew about something
(52:19) called the ofi the office of federal investigation he said he thought he had been investigated by the fbi and it turns out it wasn't he said well it turns out it's something called ofi i said there's no such thing what are you talking about ofi well there really is an ofi office of federal investigation does background checks for people who work at the test site i didn't know that but it's true he gave me the name of a guy named mike thigpen who was an agent for the ofi and sure enough there really is a mike
(52:46) fig ben and i tracked him down he wouldn't talk to me how did bob know how did he pass a polygraph test not fail not sort of pass it past it on all the major points that he says in his story how did he do it papoose lake there's nothing there if you look at satellite photos though at least the old ones you can see there's a road that leads down there let's roll the video the next little piece of video it's just freeze frames there's a guy named jerry freeman he's an archaeologist and
(53:17) he had an interest in the 49ers who had come across nevada on their way to california so he had a really great that's him if you want to just freeze that for a second if you can jerry in the 1990s had a hairbrained idea to walk across the test site which he did he sneaked in from the west side heading east which is pretty

smart because nobody would think anyone's crazy enough to walk across that hell hole by themselves he walked at night and hid during the day and walked all the way across it all the way to papoose lake
(53:48) where he found some inscriptions and rocks that the 49ers had left and he took photos and he told a story while he's out there hiding in the desert at night trying to avoid being caught he's sitting there in the middle of nowhere and a door opened up a door of light in the middle of nowhere and people came in and out and then it closed and it was gone what the heck is that if you only had one person to tell that story i suppose you'd have to take it with a grain of salt but there's more than one there's a guy
(54:20) named jim goodall i mentioned him earlier as a colleague of john lears he's part of a group called the interceptors they used to go out to area 51 and area 52 the tonal paw test range and take pictures of advanced uh airplanes he's not a ufo guy he's written a couple of books about stealth technology he has great sources in the aerospace industry he met bob lazar prior to bob going to work at s4 and as he related to me bob had told them i hate ufos i feel sorry for john lear it's goofy it's crazy i don't believe it
(54:52) unless i can hold it in my hand and see it and of course after bob went to work out there his story changed after goodall hears this story from the czar he starts asking his contacts and he has a lot of them about what might be going on at papua's lake let's roll number six did you ever get any information about a facility at papua's like the one he described i have a friend of mine he's a retired senior master sergeant he was early on in the f-117 program and they had full they their badge area restricted area badge he can go
(55:32) anywhere in the nevada test site up to it including area 51. so they had a humvee and they drove around the the uh was it groom range yeah grim range and they're on papoose lake there's there isn't there's anybody around and all of a sudden they're surrounded by guys in black uh uniforms one with their hands on their weapons wanting to know who they were what are you doing here and my buddy said we're just we have some we have some downtime we're just exploring the area he said you turn around and you leave
(56:10) and don't come back they just kind of popped up out of nowhere he doesn't know where they came from he didn't see any vehicles all of a sudden they were there and he left because there was three or four guys with them they left what do you make of that that there might be something at papua's or was or well according to bob that's where that's where the uh the nine hangarettes are in this you know camouflage on the side of the mountain um one other little tidbit of information that i'll share with you
(56:43) um about sources uh it comes from jeremy corbella a friend of mine i mentioned who's shooting some video tonight and who's been working on that project with john lear he's also the guy that did the video on stephen bassett's citizen disclosure hearings in washington and and he also interviewed with linda hal's help a guy known as anonymous an old guy who did an interview with his face on camera didn't use his real name this came out last year talking about area 51 and eisenhower's plans to invade the place and take it
(57:11) over i have this guy in my gray basket but as part of that work jeremy has been traveling some really interesting places and has developed some pretty interesting high-level military contacts and he was at my house and told me about a couple of them and i said well just go ahead and record it so we'll play seven and then we'll about wrap up everybody's focused on area 51 we know the great things that were achieved at area 51.
(57:40) it's a shell game it's a slide of hand we're talking about s4 right it's been confirmed to you directly from the base maybe 25 25 years ago yeah s4 has been confirmed to me directly twice one from an employee of e g and g security was daunting and then somebody else who's confirmed to me s4 that's exactly how it looks the story though is that there was a facility like that at papoose there is a facility like that at papua's flying discs not this ufo term that's created to make it ambiguous flying discs saucers
(58:22) that were piloted by non-humans they were not ours and this was confirmed by both of my sources that this technology is not ours bob lazar's story was confirmed to me by those two same sources one saying that when he was working in secret capacity at white sands in 1989 that it was common knowledge at the base about bob's story and i said well what was the believability with the general believability and he said everybody knew that what was going on out there were with these types of projects and they've all believed bob's story and

(59:03) were they following it as it's unfolding in 1989 that was the impression that i got was that it was big news if you ever see it it is not ours i said not ours like america and he says not ours like humans while jeremy was uh there we were curious um because i 25 years ago when i started this stuff i called nellis air force base and i said do you have a place called s4 they said just second hold on yes we do i said do you have more than one they said yes we do i say can you tell me what goes on there they said classified work
(59:41) what kind we can't tell you this is their public information office yes we have an s4 yes it's real they confirmed it how lazar knew about it i don't know so when jeremy was most recently in las vegas we called him again i just was curious what they would say let me get back to you on that and they called back and left the message and said and they was really careful how they parsed this language you said we called the range people they can't find it on any maps which of course it was never on a map to
(1:00:08) begin with which is i just thought it was really interesting the language they used to describe it one last person i'll tell you about and then we'll end this with bob uh and this guy's name is ben rich and if you know anything about the aerospace industry you know lockheed skunk works they developed the u2 the sr-71 the greatest airplanes ever built the a-12 the f-117 uh ben rich before he died he'd expressed to close friends and interest in ufos and he said ufos are real both kinds ufos from out there and unfunded
(1:00:41) opportunities and before he died on his deathbed he told jim goodall and a couple of other people in i think he even had it in a in l.a in a public uh meeting he said we already have the means to travel among the stars but these technologies are locked up in black projects and it would take an act of god to ever get them out to benefit humanity anything you can imagine we already know how to do it we have the technology to take e.
(1:01:10) t home no it won't take someone's lifetime to do it there was an error in the equations we know what it is we have the capability to travel to the stars and we won't get there using chemical propulsion ben rich was screaming in loud and big bloody letters and handwriting on the wall that we have some kind of technology that is way beyond anything you can imagine ben rich is like the father of area 51.
(1:01:32) those are his babies out there and for him to say that before he died i give a lot of credence to it so many crazy stories uh about that base so many crazy stories about bob lazar um bob is running a meth lab bob's running a string of hookers in south america he's dead there's a lot of i get that about once a month it's no wonder he's tried to leave this all behind he only did this interviews with me because i've been bending his arm for a year i tried to get him to come here he said maybe and then he i couldn't get
(1:02:05) him to answer the answer the phone after that but i wanted to end with bob talking about his life what it's like today why he wants nothing to do with this anymore we could roll number eight but that drives him crazy i mean you need to answer this now i need an answer how much how many times do you get that you know in a week still after all i get you i get it there isn't a day i i don't get emails and you know i try and get this across to him like i don't even want to talk about it anymore you know well i don't believe the story
(1:02:36) great pass it around you know i really don't want you to because it makes life difficult for me i'm trying to do serious research i'm you know i've got contract with governments and other companies for r d work and aside from you know other scientific interests and i want this divorced look if i went and did everything i can to prove my story and reached a tipping point for where people like stanton friedman and you know people along those lines said you know what this is beginning to look factual
(1:03:11) do you know how that would annihilate me that would destroy my business it would make it impossible for me to operate and you know i'd have a continuous flow of questions annoying people i'm sure offers to do things that i am not the least bit interested in there's got to be part of you somewhere in there even though it would be counterproductive there's got to be part of you that wishes god damn it i know what happened it's true no look i know what happened is true there's no doubt period there's there's no delusion and
(1:03:44) there are some things i can say that that will bolter the case and i'm not going to um it's going to stay that way i do regret at this point bringing anything forward look at the time i'm in my early 20s i went you know what this is a crime against the american people this is just bs and everybody deserves to know what's going on you know and 25 years goes by you get a little older and your priorities

change and you know what they told me is this is a security matter and really what's the public going to do
(1:04:23) about this you know how reactionary they are it's there's a bunch of different reasons this is being kept quiet nothing that they bother telling me but the bottom line is they're right the bulk of the people are complete morons and i'm sorry maybe they are right and this really should just be just be information that's handled out on a on a need to know basis to some people where it would benefit them he didn't mean that about here that the folks here bob's a bob's a smart guy and i don't
(1:04:59) care if he went to mit or not um he's a smart guy a lot of it's self-taught but i brought some other stuff we'll have to show it another time i want to wrap up but about element 115 about the gravity amplifier and he he talks in technical terms if you folks are technical i'm not you could appreciate it better than i can um it's an interesting story and as i said i don't think we're ever going to have an answer they're never going to open up the saucer the hanger doors and say there's the flying
(1:05:24) saucers come on in and kick the tires or anything like that i don't think they're ever going to admit it i think probably if there were something like this out there at s4 or area 51 it's long gone because too many people have been out there over the years looking for it not only tens of thousands of people but every major news organization in the world congressional investigators there's a lot of attention focused on area 51.
(1:05:47) i've heard a lot of people say bob must have been working with him well it's possible but i'm telling you it's not conscious he wasn't consciously working for him it could be that he was the perfect guy for this job let's pick somebody who's smart who's technically capable who thinks a little bit different because we're not getting anywhere we need new input but we want to pick somebody who could be discredited if we need to let's pick somebody who will we know will leak the story well
(1:06:13) they picked the right guy there if you know bob you know he has a pension for hookers and machine guns and explosives and uh and jet cars and he has a pirate flag on his house and he's an interesting character and i would think he'd be the kind of guy who you could size up as he'll never keep this secret we'll run it up the flagpole we'll see what how the public reacts and then we'll yank it out from under him and discredit him and that's sort of how it's played out um jacques valet once told me he said i'm
(1:06:41) going to be really disappointed if the answer to the ufo mystery is merely people from other planets coming here and flying saucers suggesting that the ultimate mystery is something much larger much grander and i've sort of moved on in my thinking over the 25 years since this all started that i think he's right is that you know i i was focused on flying saucers ufos and still am but i think it's probably just a small part of a much bigger mystery one that goes right to the heart of the nature of reality
(1:07:14) itself i learned that sort of from the skinwalker ranch stuff which we'll talk about some other time just that something is sort of playing with us it seems to be some kind of a really steep learning curve and we're only in the beginning of it i get the feeling that we only understand a tiny sliver and that the true nature is still kind of withheld from us maybe it's beyond the ability of our tiny brains to ever figure it out but we have to try you know it's i'll end with this as a saying that i've had
(1:07:43) before is that it's the duty of journalists and scientists to investigate the unexplained not to explain the uninvestigated thank you very much [Music] [Music] [Music] you

bob lazar, conspiracy, rare australian documentary, (1997) - YouTube
https://www.youtube.com/watch?v=8h5CWwcZTzM

Transcript:
(00:05) [Music] what is a conspiracy a conspiracy is a group of people secretly working together for an evil purpose this century everything from assassinations to political coups and alien abductions even the price of oil have been linked to conspiracies the question is are conspiracies true are the facts being suppressed or is it all just paranoia on our part amongst all the innuendo about media suppression

and government cover-ups it's obvious to some that hidden forces constantly manipulate our lives whether we realize it or not
(00:49) conspiracies affect us all and they continue to flourish because they remain unsolved to investigate the truth we need to look through the maze of unanswered questions and uncover the secrets of what we call conspiracies one of the most notorious conspiracies of this century claims that the earth has been contacted by alien beings and that the governments of the world kept the truth hidden from us over the last 40 years an impressive volume of information has accumulated as evidence that the u.s government has alien
(01:21) spacecraft stored in vast bunkers beneath the nevada desert a neon city in the dead heart of the nevada desert a city whose lights have long sheltered visitors from the harsh and hidden realities of its barren locality secreted in the hills and sand dunes 140 miles north of las vegas is a military zone known amongst investigators as area 51.
(01:57) [Music] we definitely have a base here that the government won't talk about a large air force base on the shore of groom dry lake very large hangers large satellite dishes probably the longest runway in the world security here is certainly intense on the inner perimeter you have who knows what sort of sensors on the outer perimeter you have what we call the camo dude say wear camouflage fatigues with no insignia they drive white jeep cherokees with no government markings very sinister force it's a paramilitary force
(02:30) essentially patrolling both their military area and the public lands adjoining [Music] inventor william lear is one of the world's most decorated aviators his revelations were instrumental in exposing the covert activities at area 51 [Music] i think they used it as a underground area to hide recovered discs as early as 1948 or 49 they're here uh they have an agenda and there's not the slightest thing we can do about it area 51 is no doubt part of the larger cia slash military infrastructure which permeates
(03:23) the entire globe at least 35 separate different craft we were being visited by at least 10 different species of aliens [Music] mayor 18 is the granddaddy of ufo conspiracy stories john lear is an interesting man with an interesting background associations with various intelligence agencies and i owe him a debt of gratitude because he did help me when i initially began my ufo research he was at the scene of a ufo crash what's what's his name john lear came to the station with a pile of ufo documents and was trying to interest our managing
(04:02) editor in doing a story about ufos established an intensive program of ridicule against anyone who said they saw flying saucers airline captain john litter sex the government has known was the foundation on which the cover-up was placed clear hinted that he knew someone who had intimate knowledge of the saucer program and so i kept bugging him to allow us to to meet this person which turned out to be bob lazar in 1989 bob lazar a nuclear physicist came forward with a fantastic story he claimed he had worked on recovered
(04:34) alien craft at a top secret government facility it's kind of a long story how i became employed at that facility south of 51 it's called s4 i was originally employed at los alamos national labs in new mexico while at los alamos labs i ran into dr edward teller edward teller was essentially the father of the hydrogen bomb because he who came up with the uh original concept fusion device i send a resume out to him he put in a good word for me and uh i was granted an interview he came over here after one or
(05:09) two of them he would say john they said that you're just interested in being my friend to get information on the f-117 i said no that's true and that's not true i'm just interested in ufos well we had to sign an agreement essentially relieving us of our constitutional rights usually if you're employed by someone it's very clear as to who's in charge the way things were set up here i don't know i know on my pay stub it was from the department of naval intelligence in december 1988
(05:37) bob came in the evening sat down in that chair i was writing out bills and he says john i saw a disc today and i said what and he said i saw a disc today and i said there is her ours and he said theirs i said you saw a flying slide do you go up to the test site and he said yeah i just got back i said then what are you doing here and i said they obviously followed you why don't you find out what's going on and then tell us close range what i witnessed craft approximately 52 feet diameter 15 feet high it's quite an unbelievable sight to see
(06:11) something that size lift completely silently later on i was allowed inside the craft to see how the reactor was placed and how the gravity amplifiers were configured inside there that was phenomenal this feeling entering the seats inside

the craft were much smaller than a human could use it was it was obvious that this was a you know not meant for people to fly in there was only one vehicle that i worked on though there were nine total and different states of repair or disrepair we really don't know how the fuel was
(06:44) manufactured we just know that it was in the craft and we were actively trying to find out what reaction it was undergoing to produce the energy to drive the craft i remember a particular evening in january bob came in his eyes were bright he said john you will never know what it's like to see your first alien i said you're kidding it could have been a [__] no couldn't have been a doll no that was it he was absolutely positive what i did see was what i believe to be autopsy photos it's uh a creature and its chest was could open
(07:25) in a tea fashion the skin peeled back there were also photos of one single large organ that was removed that was also cut up and being weighed whether or not they're absolutely authentic i can't say i can only assume because i was working on a craft that that i know to be of alien in nature that the other material that came along with it was probably authentic also i had the test flight schedule for what was going on down at s4 i said well you know how can we see it he said i know we can a place where we can drive in and
(08:00) we know sooner got out of the motor home when this thing came up behind the mountain from that distance it was just a light but when i got the celestron 8 focused in on it it was the flying saucer and just a few minutes ago we saw one of the government uh extraterrestrial ufos fly over there we've all watched it for about seven or eight minutes we're going to uh stay here for another couple hours here to see if we can show you folks uh an actual uh extraterrestrial flying saucer being flown by the government they perform
(08:30) maneuvers that were not aerodynamically possible with any other craft and the fact that it it glowed which happened to be a byproduct of how the craft operates we're looking at a craft that was traveling huge distances both the left and the right instantaneously because we got away with it that night it kind of became a habit more or less to keep going out there and on one night we got caught we had geiger counters film video cameras still cameras everything i started setting up the telescope and about that time
(09:03) the broncos come up and said you know what are you guys doing here the following day i was taken in for debriefing and threatened and uh really that's when the falling out more or less started with me and the people at s4 the day just ended the notes were taken and other people were brought in and you know i left wondering exactly what was going to happen 20 miles from area 51 along highway 375 in the small town of rachel locals have noted mysterious and disturbing events for years people gathered here to discuss the
(09:39) sightings that they had in most places you can't talk about that kind of thing you can't find a place to go that big around and kind of the color maybe of a flashlight but a long streak as it came out i saw a uh a yellowish white bright light rise up from the hill back over in this direction skyward uh hang motionless for two or three minutes then slowly start to descend between 89 and let's say 94 every time i came out i saw somebody do a circle and it would go straight up then it would drop and go left or right
(10:11) well i'll tell you i covered organized crime here in this city for a number of years i have dealt with a lot of mob witnesses who told me that they were afraid of being bumped off by the mob people are more afraid of our government than they are of organized crime uh they're worried they're going to get killed i was constantly followed my friends were harassed shot at when he got his tire shot out on the freeway this was the first place he came and he said i'm going to turn myself in i said relax you know just you know
(10:45) stay here for a while the news director and i went up to uh to john lear's home and met lazar we interviewed him for a period of several hours and were convinced this is a really interesting story hello and welcome to a special edition of on the record groom lake nevada is one of the most secretive spots on the planet it's located on the northeast edge of the nevada test site and is said to be where numerous top secret weapon systems have been tested over the years according to some ufo researchers it's
(11:12) also where the government is test flying alien spacecraft well there's nine flying saucers of extraterrestrial origin that are out there the propulsion system is an uh a gravity propulsion system the power source is an antimatter reactor this technology does not exist at all what about aliens any of those up there groom lake i really want to steer away from that right now the first interview i did on tv

wasn't silhouette everyone knew what i looked like at s4 but i didn't want to push back too much i
(11:42) just wanted to say hey leave me alone and uh it was hands off after that no one had followed me and it it had the desired effect everything stopped immediately most of my documents as far as my past history vanished and that was not a natural occurrence further harassment by the authorities brought bob lazar to court facing minor charges of pandering the judge found it almost impossible to determine his identity that shows that he worked for the united states department of naval intelligence i also note that he is in fact listed in
(12:20) the los alamos national laboratory telephone directory it's obvious that it's very difficult to get information on mr lazar from government sources enormously we can't verify his education background the claims for a master's degree from mit and caltech simply cannot prove it he can't come up with uh any diplomas can't come up with any professors who can't come up with any classmates who would verify me a non-person something where i could improve my background so anything i said you know really wouldn't be uh
(12:52) listened to however i have been able to verify a lot of things about his background that makes sense we know he worked at los alamos lab he knew about the existence of a place called s4 well i confirmed with the government there really is a place called s4 i had never heard about it before they say it exists they just won't tell me where it is our story broke in 89 the ufo watchers swarmed around this area and they discovered two hills one of them is called white sides mountain it's the mountain with the
(13:19) white sides in the distance and the other one discovered more recently was freedom ridge both these hills offered a clear view across the valley of the space that doesn't exist which created a lot of embarrassment within the past year the government seized an additional 4 000 acres of land around groom lake the land on which people would peer down on the base i have interviewed now more than two dozen people who worked at that facility who all tell me bits and pieces of the same story that story being we've seen
(13:50) these disc shaped craft some of them have just seen these things sitting in a hangar some of them have seen them in flight but clearly that many people telling you that they've seen something over and over again over all that time period suggests that something really is going on out there and there are a number of uh photographs that have taken been taken out there of odd objects in the sky disc shaped objects there are videos that were taken out there by by people who are out in the desert looking to see
(14:16) what they can see about two miles from the military border now on public land i used to map these sensors uh record their locations using the radio and then if you want to sneak around all you have to do is simply uh pull the power plug and you're free to to pass by and then after you've passed by you put the power plug back on these cables here are connected to magnetic cylinders buried beside the road on either side and they'll show you them follow this cable under here there you have the uh the sensor unit
(14:47) this detects any big piece of metal going by there are uh live guards on the top of various of these hills that are always there 24 hours a day their only job is to watch the desert the saucers are in fact gone from area 51 because too many people are out there in the desert looking for it no i'm quite sure that testing stopped years ago i doubt very much that the base is even any longer there the remnants of it might be one of the earliest locations to be suggested as a possible storage place is the facility at pine
(15:17) gap in australia and because of the top secret facilities that are already there where where would i put them i put them in the south pacific cover up probably started for pretty good reasons back in the late 1940s when the modern ufo era began it's likely that our country really didn't know what was going on we didn't know where these things were from uh what they were here for what they wanted from us and there probably really was a danger that there might be an outbreak of panic if the public were told
(15:44) that these things are from somewhere else but so many lies have been told over the years since then that i think that uh that once the cover-up is exposed if in fact that ever happens that some of these military people would go to jail the government is in a holding status quo they're just waiting for whatever the aliens are going to do we know that lear was intimately connected with the cia people connected with the cia tend to stay connected with the cia from the government people that i know they say the next five years is going to

(16:20) be very interesting the government wants people to be confused about area 51. the government wants to think these dancing lights are are ufos as opposed to advanced weapons systems they don't want us to have a an in-depth knowledge about their strikeforce capabilities [Music] the cia has been a factor in the downfall of many foreign governments most people however are shocked to discover how bigger player the cia has been in the politics of allied nations in late 1975 a security crisis existed in australia the prime minister gough whitlam hinted
(17:03) he would no longer allow the cia to operate the top secret communications base known as pine gap by 1pm on november the 11th 1975 the government was out of power and some would argue the cia was back in control well may we say god save the queen of course nothing [Music] it's taken 18 months to assemble pine gap from pre-fabricated buildings now no airplane can fly closer than two and a half miles to the base the secrecy is total since we agreed in december 1966
(18:05) the americans could build it pine gap near alice springs has been the center of speculation on the cia's activities here officially it's an experimental space station pine gap was to be a joint facility run by the defense departments of australia and the united states stallings and another senior cia man victor marquetti drafted the pine gap treaty laying out the ground rules for cooperation between the two governments officially this executive agreement between the australian and u.
(18:34) s governments stated that all surveillance information gathered at pine gap would be shared equally there's no doubt whatsoever about it was set up by the cia for espionage and that remains what it's about liberal party leader robert menzies led the longest-serving government in australia's history the world needs the united states of america the world needs the united states of america strong links between australia and the us have been formed allowing for a proliferation of top secret bases all that is about to change
(19:15) the prime minister of australia for 23 years would you trust your international affairs again to the men who gave you vietnam it's a choice between the past and the future it's time for a new government when the women government was elected in 1972 there was considerable concern in washington both raised the question of the american military installations in australia with particular reference to the secrecy uh surrounding them could you indicate the policy your government will take on these questions there now need be no secrecy because uh
(19:58) mr barnard and i can find out whatever we're wanting christopher john boyce is serving 42 years in a state penitentiary for counter-espionage at the age of 24 he was caught selling secrets gathered at pine gap to the russians while working as a cipher clerk at trw communications an alleged front for the cia they were going to cut the australians out of the existing information that was coming down but in many cases it was a screw the aussies type project didn't take very long for the whitlam government to get itself offside with
(20:33) the nixon administration i have concluded that the time has come for action i objected to the american bombing of hanoi undefended open bombing cannon i complained about that the american ambassador at the time was sent to tell whitlam that they objected very strongly to [Applause] moving in them in we were deeply concerned they were frightened of the small degree of independence being displayed by the labour government the labour government was regarded as a security risk by the united states and the united states at an official
(21:20) level would have done everything they could to have it removed you don't see the jewels of counterintelligence being placed in jeopardy by a party that was seeking a new way for australia early in 1973 whitlam demanded from aces the australian secret intelligence service the names of operatives and where they were actually carrying out their operations and he was told that there were operatives in chile working under the cia involved in the destabilization of the allende government and he immediately informed them to cease that particular
(21:57) operation they didn't and at least two of our operatives were there in september 73 when that bloody coup took place at toppled salvadorendo enter marshall green the new american ambassador to canberra a senior career diplomat he will be involved in at least three crews most notably the one in indonesia marshall greene actually stated that if the australian government did to in any way take the power away from us multinationals and use the phrase we would move in the world despite warnings from his colleagues about kur's allegiance to certain u.s
(22:48) intelligence organizations john kerr was president of law asia which is a cia funded organisation in the pacific when i first saw him way back in 1944 or 45 he was part of an intelligence organization in the army then the lease for the

renewal of pine gap was due on the 9th of december and large sections of the labor party wanted to close it down because they were not happy with having a foreign base of that type in this country mr whitler made a number of comments in parliament telling the australian public what the pine gap base was about and
(23:35) made various comments about richard stallings who set up the pine gap base and part of the u.s intelligence community actually lived in doug anthony's house in canberra but i've had no associations with cia money in australia as anthony has in october whitlam sat the head of asis and this was followed by the sacking of baba who was the head of asia it's a tender plant that needs nourishment some of the major secrets that deal with the world i was once in were given to the australian children [Applause]
(24:29) well shackley has got a long history of involvement overthrowing other countries governments are attempting to do so and shaklee was an organizer of the bay of pigs invasion for cuba shackley was involved in vietnam shaklee was clearly an interested party what was happening in australia [Music] [Applause] would be more reliable the hell out of canberra
(25:42) the 11th of november is a very interesting day certainly much more than john curgona remembrance day coming back and discussing government midland was to address parliament and he was going to blow the lid on the cia operatives in australia he was meant to give that speech in the afternoon the 11th of november 1975.
(26:05) unfortunately 1pm came along before he could do the speech and he was in may dismissed year has been dissolved and the proclamation which you have just heard read by the governor general's official secretary was counter-signed malcolm fraser malcolm had just come back from government house he just said uh i want you to come in and see me straight away he said the government general's dismissed the government i said i'll be right in in the most tumultuous day in australian political history the prime minister has been sacked the
(26:43) opposition leader has been asked to form a caretaker government and both houses of parliament have been dissolved 1975 was a watershed period in australian history i think to a great extent we were pretty naive you know we knew about um interference in other countries but we hadn't experienced quite the same degree of it firsthand and i think we're unprepared for it [Music] but in a much more muted sophisticated and subtle form the parallels between the kennedy assassination and the whitlam dismissal are staggering really they're both
(27:29) populist leaders well respected and liked by the people of the country both threatened the cia in one way or another kennedy threatened to scatter two wins after the bay of pig's fiasco whitlam threatened to close the bases with them with true troops kennedy threatened to withdraw troops that military mindset joins the chiefs of staff and the cia and in doing so they had to hit back so kennedy was shot in dallas you don't need an assassination down here in australia you just need to have the governor general in your pocket
(28:00) and same same outcome at the end of the game did the cia orchestrate the downfall of an allied government what is certain is that the cia is still present in australia and still very active [Music] by the car and the combustion engine despite a hundred years of progress we are still driving vehicles which are essentially the same as when they first appeared the reason according to some is due to a secret pact between big business and big government to stop new ideas being developed despite threats to their lives
(28:32) inventors and renegade scientists persist in their search for that ultimate free energy machine that will revolutionize technology i had the aristotle analysis foundation come to me and say we could send a bomb in here and blow you to bits the people are threatening you cutting off your support putting your multi-millionaire backer in a mental institution turning off your radio station intimidating your companies into into bankruptcy then it's time to go [Music] well free energy threatens the people in power
(29:08) because they are in power because of monopolies on what term fossil fuels coal gas so the basic power structure of society is threatened anybody that has the two odds in their head can see the environmental effects of burning things and what they're doing to the world and collectively over this planet we're eating ourselves to death and so we need some energy from some place which doesn't depend on burning things up right now we have the entrenched energy monopolies and cartels you know we have opec and we have the
(29:48) seven sister oil companies to control all the oil and energy but what people have to understand is that the people who run the energy business in this world which is the biggest business on the planet turning over four to five trillion

dollars a year it's bigger than guns and drugs it's bigger than defense they control the newspapers they control the governments but these companies are so big that they regulate the government which regulates them it's not free nothing is free but cheap and efficient
(30:22) energy exchange is a viable concept now i say that everything in this universe is free energy it's been dreamed of for hundreds of years that somewhere someplace as tesla said man will hook his machinery to the very wheel work which drives the universe itself the history of science is the history of the suppression of great inventions a few classic stories nikola tesla nikola tesla is regarded as the founding father of free energy his astounding developments in the generation of alternating electrical current
(30:59) is still being used today his most notorious project involved the transmission of wireless electricity into the atmosphere which allowed for unlimited power to be freely accessed by everyone when his financial backer jp morgan realized that this power system could not be meted all funding was immediately withdrawn tesla's electrical broadcast towers were dismantled and through morgan's many close connections with the media and government tesla's career was destroyed in 1977 bruce de palma unveiled the
(31:32) first prototype of the end machine an electrical generator which uses rotating magnets to generate up to five times more power than it takes to drive it i know about the fact that the japanese government and the indian government have ongoing projects to produce end machines for domestic power my partner is paramahamsatawari who is the director of the nuclear power corporation of india which operates all the nuclear plants in india in late 70s i learned from bruce de palma that he had carried out certain crucial experiments
(32:12) by rotating electromagnets tawari tested a prototype based on de palma's end machine under laboratory conditions the results were deemed too impressive causing disbelief and suspicion among conservative government officials and the power consortiums that backed the project tawari was forced to abandon the project completely [Music] it's a major breakthrough that will no doubt make motorists happy and as rock robinson explains the pentagon is also showing lots of interest in this project u.s inventor stan myers released his
(32:46) water-powered car engine in 1988 the pentagon flew on the thinner colonel in last week to look at meyer's invention there's talk of possibly using it in the star wars defense program and to run army things myers found it virtually impossible to secure financial backing after certain pentagon officials paid him a visit a number of similar inventions were developed and tested all around the world my best friend was killed over this matter there's a chap here about 10 minutes away from here driving he has been running his car on
(33:22) water since 1986 with the government's permission provided that he keeps his mouth shut and with regular intervals using his own words they keep warning him to keep his mouth shut one of our [Music] colleagues who have been running car on the water for the 10 years period now he reckons that he's 26 times more powerful than petrol [Music] if you invent a better mousetrap you know the world may be to pass to your door if you invent a free energy machine there'll be a path beat to your door but you don't want those people there
(34:02) one of the pivotal people that i encountered early in my uh career was edgar mitchell the astronaut edgar j mitchell an apollo mission astronaut founded the neurotics institute in southern california the institute's charter was supposedly to develop alternative energy systems by attracting inventors from all over the country mitchell became extremely interested in de palma's end machine he made de palma a poultry offer to buy out the invention which department naturally refused he said to me that if i ever tried
(34:37) anything on my own in california i would get my head blown off so i was scared to death the cia operates through various very innocent looking fronts to find out what people are thinking and and what they're inventing now what's more innocent than the denying institute founded on transcendental principles to help new age inventors bring free energy into the world and that situation still exists in the united states today where a person really understands what's going on just can't get their idea
(35:11) out because the alternative science and medical fields have been co-opted by the intelligence services and he converted this little engine to run on water this is many many years ago and he used it for several years and somehow the news got out and one day he got visitors and he was told to dump the engine or else three weeks later a man was dead and the coroner's finding was that he fell off the back of a

train he was drunk now it happened that he didn't drink even dr townsend t brown the electrophobic research
(35:45) scientist uh has on his 16 millimeter film of his lab test which we've got here he has guys with the black suits and black hats come into the place you can see where the legends come from i mean these guys come in and they they look like you know bad bart to black man i mean it's just it's classic and these things do happen [Music] there is no progressive science in a world where every scientific idea is evaluated for its military potential power our energy and control of energy equals power in the new world order that
(36:22) is emerging if you control the energy the way we get around when we get electricity away we have our tvs and video cameras and stuff if you do the control of the energy then you've got control of the people [Music] each conspiracy leads to another and eventually they all lead to one grand global conspiracy orchestrated by an ominous network called the new world order the new world order is this long-term scheme that originates from the uh higher concentrations of money on this planet the elitist the aristocracy the royalty is bringing
(37:00) all uh control together in a single governing body so that the economy politics and the social order are more easily manipulated this establishment we may consider is the new world order is moving towards a wonderful world government and how is that occurring in some countries we may see it in other countries we may see political parties breaking down these things may just seem like the course of history really being structured and orchestrated by the strings of the new world order it's [Music] [Music] the new world order is very closely
(37:51) linked in with the international banking cartels and those groups now are manipulating national governments through debt it's very clear that there's a dozen or thirteen family dynasties that collectively control the usa and the banking cartels that forms the four banking entities in the world today these banking families have been doing this the rockefeller interests are one of the prime groups that control some of the biggest banking organizations in the world and through that certainly they are major players in
(38:39) controlling the u.s federal reserve and the government of the united states toes the line to the federal reserve because it is privately owned and it pulls the purse strings [Music] i saw the gulf war as an exercise in terror it was a staging of a war which would shock the world when the new world war was declared the enforcement agency for the new world order is very clearly and inarguably the united nations what george bush was saying to the world with the golf war was that we united states control united because he he was the head of the cia
(39:49) and he is fundamentally a texas oil minion he represents the oil injury [Music] they want to know all about you as an individual well don't take that pencil there is absolutely a connection between the intelligence agencies of most nations and the new world order the orders they get given in many cases are absolutely despicable and some of the worst of it is in the area of chemical and biological warfare experimentation mind control assassination manipulation of foreign governments things where america has become what
(40:25) ronald reagan referred to as the evil empire anybody who has an interest in civil liberties should be in grave fear of the new world order because what george orwell wrote in his book 1984 was just foreshadowing what he recognized would happen if we just let this scam run unchecked [Music] globally strung together harnessed together to make us accept the fact that this is the ultimate way the globe be controlled leading events is a strategy to control the globe nobody knows that's the nature of conspiracies there's no end to them as each piece of
(41:21) information is gathered we simply discover a bigger puzzle what is evident is that there are no simple answers maybe there is something common to all conspiracies that can be discovered by further exploration all we need to do then is ask the right [Music] questions

dreamland - features unauthorized footage of area 51 (1996) [HQ] (digiview entertainment) - YouTube

Transcript:
(00:23) [Music] have ufos crashed on earth have we made alien contact is the us government covering up a massive ufo conspiracy behind me is one of the most secret military bases in the world deep in the heart of the nevada desert the groom lake

test site also known as area 51 or dreamland has been home to u.s stealth projects since the second world war however in recent years a more disturbing story has emerged and that is that the government is back
(01:28) engineering recovered alien spacecraft tonight based on evidence given to us by top military personnel engineers and scientists we can exclusively reveal the ufo technology that's been developed behind me it's a story the us government has tried to cover up for half a century the truth behind dreamland i am convinced based on my research and the individuals whom i've had contact in the u.
(01:59) s intelligence community that the u.s government does indeed have craft that meet the description of many of the ufo reports the whole aim of the project was to take these craft or the one in particular that i was working on and try and duplicate its systems and subsystems with earthly materials i'm convinced beyond doubt that we have recovered aircraft alien vehicles that we have made contact with aliens that we are communicating with them in some way or form and that we have vehicles and bodies in preservation i was uh at at that
(02:36) moment standing on the deck of the radar van it was nighttime and uh i was looking up in the sky because there were saucers up there were there any alien bodies recovered no bodies there were four live feeling good guys four live extraterrestrials four alive feeling good extraterrestrial type individuals yes they are here whoever they are wherever they came from whatever they're doing um other intelligences are messing around on our planet i think that too many people's butts are on the line with this that they lied to
(03:15) us too long that that a lot of people have stolen legitimate national security money to keep this cover-up going that they have perpetuated disinformation schemes on the american public probably on the british public the air force knows that there was a crash saucer there were alien bodies recovered that there have been aircraft that have gone up to chase ufos and have not come back they know that we're dealing with the biggest story of the millennium set on a remote dry lake bed 80 miles outside las vegas
(03:49) area 51 is just one part of the massive nellis air force base which is roughly the same size as switzerland it was commissioned by president truman in the 1950s as a top secret location to develop and test america's new generation of post-war aircraft in the technology fever of the 1950s the base soon became home to the most exotic flying craft of its day [Music] more recently it is where the f-117 stealth aircraft was developed and tests flown [Music] this is an area that has been known but
(04:53) officially denied for many decades we go back quite a ways into the 40s and 50s with the development of the u2 spy plane the sr-71 all of our super-secret aircraft have been developed and test flown out in this particular area the a12 from its inception through its retirement was operated out of only two locations area 51 at groom lake was its original home the first aircraft was delivered there in january of 62 and the last airplane left on june 21st 1968 the u.
(05:32) s air force denies that area 51 exists despite footage of the base and russian satellite photos that we have obtained which clearly show hangers and a huge runway stretching across the lake bed in the face of constant denials of its existence the base has expanded since the 50s with several passenger jets now landing every day carrying hundreds of workers to the base with this level of personnel the few buildings that can be observed above the ground are merely the cover for a large underground facility security at the base is unprecedented and secrecy is paramount
(06:16) since the late 50s the military has sequestered hundreds of thousands of acres of land that had joined the base the exclusion zone around area 51 now stretches to 26 miles [Music] the secret status of the base is very very well preserved and even if people are talking about the operation of the u2s back in the 1950s 40 years ago they're still not allowed to identify the base by by name or by location all they can say is it is a remote facility this place is an old anachronism from the cold war this is a place that that harkens back to the old
(07:00) days and because the military is continuing to treat it as a top-secret facility it doesn't exist it attracts attention and actually everyone wants to know what goes on here there is no question that the facility is there and the government has said very little in the past about it that it has the right to test things like the u2 like the sr-71 like the stealth aircraft people forget the stealth aircraft over 10 million dollars spent on developing it and more than a decade before its existence was even announced
(07:34) that's what you do out at groom lake now the real question i suppose is are

there any flying saucers out there we took to the skies to see the base for ourselves flying at an altitude of 10 000 feet we edged within one mile of the restricted zone having made contact with the tower we soon found out how seriously area 51 guards its airspace [Music] we're just curious if there is there any activity today at the groom lake area [Music] approach controller now is just getting a little
(08:36) concerned that we're getting close now we've just been buzzed by two f-16 fighters they've passed our bow at about 800 to a thousand miles an hour these guys aren't messing around they don't want us to be here but there's another one just gone by the foul there they're either trying to get us out of the area quickly or force us to land there goes another one well that was really close right off the right side i'd say that was within a mile mile and a half oh you can see them boy that that was a major moment
(09:06) and they have a t-cass on board so they definitely had radar contact with us that was really close [Music] in 1989 one man blew the lid of dreamland his name was bob lazar and he claimed to have worked at the groom lake site back engineering recovered alien spacecraft the base is against the side of a mountain or small mountain big hill there are nine hangar doors and the hangar doors are not just shiny metal out in the desert they are painted or sprayed with a sand texture to them and from what i can ascertain to prevent satellites from photographing
(09:49) the installation so they look like the mountain range it was pretty effective from what i could see on the first occasion when i drove out there all the hangar doors were closed but at close range you could tell that there were doors and they would open we drove around the left side of the installation and there was the main entrance in there and went through some gates and the security check and went inside and it seemed like a typical government building the work that i did basically entailed back engineering the power and
(10:29) propulsion system and i opted to start with the uh the power the the reactor that that ran the craft with the clearance that i had that was known as majestic clearance there were only 22 people at s4 with that clearance to work on the craft [Music] the location he worked on at area 51 was called s4 and was housed on papoose dry lake bed a short drive from groom lake when i was brought in by bus normally we had gone around to the left side of the installation and entered the door there and for the first time one of the hangar
(11:10) doors the one on the end was open the bus drove up and we stopped there and cleared his day and the hangar taking up almost all the hangar was the disc uh looked like something right out of a science fiction movie and we stopped got out and for the first time i was led in through that door and as i walked in there i thought well this is the new advanced aircraft we've been working on and this is why people keep seeing flying saucers because it's ours and we've just been testing it probably for all these years
(11:46) and when i walked alongside it i ran my hand on it i say it it's metal because it was cold so i just uh assume it was a some sort of metal and in fact by the hatch that was taken off there was an opening there and it had a little backwards american flag stuck on it so i was positive it was something we had manufactured i was allowed in the craft on one occasion to see the placement of these systems in case it was important to their operation so i was of course escorted in the craft and it was obviously made to be piloted by something smaller than
(12:28) the average human being very cramped in there [Music] there was a sub-level where a little collapsing floor member opened and i could stick my head in her upper torso down underneath with a flashlight to see how the gravity amplifiers hung upside down uh looked around the placement of the three seats about one-third to one-fourth the size of a normal human see at one point that one point when i was in the craft one of the archways became transparent there were some technicians working on something else that i had no knowledge
(13:16) of so and also something began to scroll up on the screen so it might have been possible that the skin of the craft whether under you know electrical influence or something else could at times become either transparent to look outside or be used as some sort of video screen it was that was pretty amazing when i went outside and looked at it it looked as if it was just a plain piece of metal again [Music] a lot of people say well it must have been exciting to go on there and i always say it wasn't it was a very ominous feeling
(14:02) it um you really had the because it's so i know it sounds silly but it it it's so unearthly in there [Music] nothing had a sharp edge to it it it was this it

was if the seats the amplifiers that were in there everything as if it was made out of wax and heated for just a little bit and then cooled off everything had a smooth curve to it even where the chair met the floor with was blended into it it was if the entire craft was injection molded no one let alone bob lazar have been able to verify any of his academic or professional
(14:45) credentials in 1990 he was convicted of pandering and declared bankrupt in court he simply described his occupation as a self-employed photo processor is lazara fraud did he work at s4 or was he set up by the military to release certain information about the base the notion that he would make a great patsy and he's the perfect scientist to work on such a project is interesting science fiction in the first place we have no reason to say he's a scientist no diplomas no papers no memberships nothing in the second place
(15:22) i worked on a security for 14 years people take security far more seriously than that one of the strange statements he's made there are only 22 people working on this thing well you get more than that working on devising a new mousetrap for the government anyway that makes no sense and you know it has all the trimmings his story of a walter mitty story somebody in his imagination was you know stronger brighter faster than anybody else i did a variety of research relative to bob lazar actually met him i obtained a copy of his
(16:00) uh what they call a w-2 form which is one of the irs documents associated with with pay his particular form indicated that he worked for the u.s department of naval intelligence my investigation of this document and the claims that bob lazar made followed a very strict path of sound research i contacted the u.
(16:27) s department of naval intelligence and indeed verified that they were likely responsible for presenting that w-2 i investigated the issue with the internal revenue service they informed me the exact words were it appears to be legit that it was a genuine document it was not something that had been fabricated there were a variety of numbers contract numbers and so forth issued on the document which i was able to research again finding that these were highly classified numbers in fact internal revenue service ran into a brick wall when it came to
(17:07) trying to track down uh the actual employer associated with it with the document he gave me uh uh information about his background educational background and employment background i started with uh with his claim to have worked at los alamos lab i figured well that's a good starting point if he worked at los alamos it's pretty likely that he had an education somewhere they don't just hire people off the street and if he worked at los alamos especially on classified projects it's at least reasonable to assume he
(17:34) could have been hired somewhere else in nevada to work on similar projects we went to los alamos and got nothing even close to cooperation they wouldn't respond to our phone calls they say we have no information on bob lazar there's nothing in the files i said are you sure now no nothing in the files i showed him uh the the phone book entry that bob had kept that said uh he was there i showed him the newspaper article that that showed that he was there are you certain that you don't have a bob lazar well
(18:03) maybe we had a bob lazar here's an id number but he didn't work for us he worked for someone else basically los alamos lab tried to thwart me at every step we're completely uncooperative and trying to get information about bob and i found that to be the case at every step of the way and trying to verify his background i'm the one that couldn't find any records or anything i mean i'm the one that brought that up because i was the first one to run into that initially i couldn't find couldn't get a
(18:30) hold of my birth certificate either and that was one of the things that concerned me is they might be trying to make me essentially a non-person i think it's most likely that bob lazar was indeed set up to be the conduit for certain information relating to this extraterrestrial project on one occasion in the desert bob lazar saw a flying disc being tested i was brought into the hangar for one of the short duration tests and the craft was already outside on the lake bed and lifts it off silently and was drifted around for a bit and
(19:17) set back down and that was uh pretty much of a marvelous sight it's a huge thing it it's like seeing a house lift off the ground quietly it's just you you can't imagine the energy involved to do that and not to make any noise at all there was some audio communication with the craft and so i i can only assume that there were humans on board and somehow they had managed to squeeze themselves into those little seats or put something in there to sit on and obviously they knew how to operate whatever controls there was or fabricate

(19:49) their own or retrofit it with something the apollo space missions of the 1960s stirred america into a space fever but as the country's finest astronauts hurtled skywards in conventional rockets did the president know of the existence of sources and propulsion systems that were literally out of this world [Music] [Music] dr edgar mitchell of the apollo 14 mission and the sixth man to walk on the moon has carried out extensive investigations of the alleged saucer crashes as well as the question of alien contact
(20:48) he met lazar in 1991 i tend to believe that his basic story is true that he was to expose to what he thought were alien craft and attempts to engineer and back engineer i think that his explanation of what's going on and his theory that he's utilizing is probably not on target what i think is credible is the fact that he was there the roswell incident in 1947 that there was a cover-up that that was a valid incident and that there has been an active investigation program reverse engineering program and cover-up
(21:32) associated with that since that time [Music] after working at s4 for several months and in clear violation of his top secret clearance bob lazar decided to tell his closest friend jean huff about his work at the base [Music] my reaction was to without pressing him against his will find out more get him to tell me anything i could and it wasn't disbelief uh i i think i was actually motivated to further read i started investigating investigating other books on ufos and other researchers information to see if anyone knew
(22:15) anything and needless to say they didn't know what bothered me one month later in march 1989 bob lazar went one step further he decided to take his friends to the desert and show them a flying disc test [Music] i remembered most of the days and times of testing so i believe it was eight or nine o'clock on a wednesday night somewhere in march 89 i believe we went out with gene huff my ex-wife and john lear shortly after the flight time that i had recorded white light came up off the ground and hovered and then we do began doing
(23:06) radical step maneuvers and darting from one side of the sky to the other doing some impossible flight characteristics but at times the craft had glowed tremendously bright where we thought being miles and miles away we thought there was something wrong and the craft was going to explode so much so that we all got behind the car [Music] it actually came closer it came down the mountain range toward us to where we could actually see it was elliptically shaped uh it looked like something that it's it's strange to
(23:41) explain it looks like an explosion that starts to explode and stops and doesn't explode and dissipate that's how bright the light is your brain interprets it as an explosion about to happen on his third visit with his friends to observe the discs at night bob lazar was arrested he was taken to an unknown location for interrogation and never returned to area 51 they threatened my wife they threatened to kill my wife they said they'd stop at nothing they said they thought they made that very clear they couldn't believe that i
(24:14) had taken anyone out there to show them that much less left with information like the flight test data and wanted to know what else i had said who else i had told specifically security agents from the ofi the office of federal investigation had been witnessed doing random security checks at his house there was almost no question in anyone's mind anyone in in bob's immediate life who who talked with him on the telephone that his phone was tapped i mean strange things would have it on bob's phone and really continue to this day
(24:48) dennis mariani who was my supervisor called and all he said was do you have any idea we're going to do to you now and that was the end of the phone call they were they were crazy they really were they were completely out of control when you go to work out at those locations you sign away your constitutional rights you sign a piece of paper saying if you violate your security agreement and you discuss programs that you're working on without a trial without right of appeal you're going to go to leavenworth federal penitentiary
(25:21) for 20 years that's a real big incentive to keep your mouth shut we had an engineer who worked at this tv station who before he was here had worked at area 51 and had seen one of these craft under a tarp walked into a place he probably shouldn't have been i arranged to do an interview with him he lives in another city in another state he agreed reluctantly as long as i would block out his face well we make the arrangements on the phone the interview is supposed to happen the next day he gets up goes to work there are two men
(25:49) in a car outside of his house talking into a radio they follow him to work when he gets out of work they follow him home no interview i mean it happened again

and again and again same scenario it has been very difficult to talk about this it's almost like every time i relate the story it gets a little easier but when i first started talking about it it was like my mouth didn't even want to form the words and the sound didn't even want to come out of my throat so i can only guess from that that there
(26:20) was a very strong suggestion given to me not to talk about this not to remember it and if i did remember it not to ever talk about it to anyone this man is a 71 year old mechanical engineer who like bob lazar claims to have worked at area 51. he started working there in the 1950s on a flying disc simulator built to train u.
(26:44) s pilots he said he's been given permission to talk to us about certain specific aspects of his work but asked us not to reveal his identity we received the disc uh from extraterrestrials this particular one that i had had to uh to work on or we did work on was from the kingman crash and that was later on taken to a nevada test site where at the time i didn't know were there any alien bodies recovered nobody's there were four live feeling good guys four life extraterrestrials four alive feeling good extraterrestrial type
(27:29) individuals yes and where were those four extraterrestrials taken initially they were taken to new mexico and then several months later they were taken to the nevada nevada site one of the things i worked on was a flying disc simulator to train pilots to to fly this strange uh strange-looking craft designed for humans to fly not for any extraterrestrial supply [Music] his most fantastical claim was that he worked at area 51 with an alien code named j-rod for 16 years on this simulator project j-rod is a grey alien about five foot
(28:19) four his role was only as a as a translator scientific translator that was all if we wanted to put something in the place of what they had he had to agree with it i would have a question you know and i would bring it up in my mind i just how i wanted to present it with him and he'd already know that i had this question and he would already have the answer for me and if he responded it would be in my voice and you wouldn't even open your lips it is possible that he and a few thousand others are working on a
(28:57) project either here or elsewhere it's just a few thousand other greys few thousand other greys like himself the nearest town terraria 51 is rachel population 150 and home to the most famous bar and grill in nevada the little alien the local residents have seen their highway truck stop turned into the ufo and et center of america tourists flocked to rachel to scan the skies in the hope of having a sighting for all the hype the sightings of bizarre lights in the sky do continue local resident chuck clark has had many unexplainable sightings the
(29:43) most remarkable sighting that i've had in the last three years took place two years ago february february of 93. i watched a glowing object ascend vertically from the area south of area 51 where s4 would be located hang motionless in the air for about 10 minutes and then slowly start to descend all of this while i thought i was watching a illumination footer that was launched from a mortar tube i can hear jets in the background i'll zoom back a little bit this is looking straight over steve medlen's ranch right here off 375
(30:26) highway that's right over the peaks once it got down to the ridge line however uh it was in front of the hill that had that he'd come up from behind the hill was about 12 and a half miles from my position it came down to a few feet above the ground at the base of the hill hovered momentarily which is still consistent with what a floor might do in calm air but then suddenly it shot off westward covered 4.
(30:57) 8 miles in one to one and a half seconds and stopped cold also about 30 feet off the ground hovered just long enough for me to get it focused in my binoculars for maybe two seconds and then it vanished right in place [Music] we've seen video of craft that were luminous that would move across the sky as if it was uh skipping a stone across water or sort of a sewing machine effect what we see across the screen are a series of lights of dashes of light as the object moves from point a to point b and a rather strange warping occurs that's very difficult to unravel
(31:36) until you go frame by frame and you begin to see what is actually occurring therefore we are seeing what you might call a shadow effect of the propulsion mechanism at work [Music] i've spoken to several people who've seen ufos or disc shaped craft out there an attorney who lives here in town who has seen one who saw one land outside the boundaries of area 51.
(32:09) i've spoken to a very high level managerial type who worked for a defense contractor out there for a number of years from a very respectable reputable family

his credentials are beyond question but he doesn't want his name or face used and he has seen them many times there were a variety of craft that were all essentially generically uh sort of canister shaped i guess you would say they were predominantly disc shaped or rounded like uh one of those chinese lanterns or something or other they appear to be colorful uh at least they
(32:41) were multi-colored in addition to the lights that seemed to be able to take on uh the light of the background they could camouflage themselves somewhat in the sky by absorbing the blue light from the sky and clouds what are these lights in the sky and are they indeed flying saucers we asked us navy physicist and ufo expert dr bruce mcabee to examine the footage basically what you see are lights lighted objects doing things way off in the distance you don't really see any structured craft uh some of the video material very small
(33:26) amount that i've seen seems to show lights doing strange things like hovering and then moving suddenly to another location maybe moving slowly and jumping around a little bit i've included that they aren't ours [Music] that means they belong to somebody else and you know they're not made here on earth basically so they must be coming from the outside how they get here you know who in quotes they belong to i don't know you know extraterrestrials is a reasonable proposal all the arguments that have
(33:56) been put forth and it couldn't be people from another star system in the galaxy or whatever because they can't get here from there those arguments are not physically correct because we could get there given enough time and money and desire to do it however it's clear that these other intelligences whatever they are are far beyond us in terms of technology [Music] now what i'm going to show you is a computer enhanced version of what you just saw and we're just going to look at the one portion where
(34:33) the ufo was appearing in the left-hand corner going to the right and then coming back again that's all we're going to see we're going to see it repeated over and over again this part of the frame has been chopped out of the full frame so i'll just let it run and it goes back and forth and back and forth repeating if we stop it and here's the shadow and here's the ufo so basically we have a triangle with one side and two angles that we know and that result is i can calculate the ufo position
(35:01) in three dimensional space right turns out to be about seven thousand feet away from the camera so having analyzed it what we seem to have here bruce is a genuine ufo yes there is an object out there seven thousand feet away it wasn't one of ours it's about 30 feet in size a genuine ufo [Music] [Music] the security at area 51 is formidable the entire perimeter is surrounded by motion detectors and cameras arm guards patrol in jeeps and helicopter gunships are deployed to warn off anyone who challenges the
(36:02) borders we headed out deep into the desert over 80 miles outside las vegas traveling down the recently renamed extraterrestrial highway we'd come to see america's most secret base for ourselves the only approach to the base is a dusty 10 mile track called groom lake road anyone approaching the border can clearly be seen for miles and as we've been warned our every move was being monitored by the security patrols and cameras on the hilltops this is as far as you can come to go to the groom lake base it actually says on these signs that use
(36:49) of deadly force is authorized there are security patrols all over these hills they've been watching us for the best part of the last hour the motion sensors security cameras and if i did walk over this line i'd be immediately arrested taken to the guard house and interrogated for anything up to a week as soon as you step over the line past this sign you lose all rights what's amazing to me glenn is that the entrance here so unassuming they've got this rickety sign saying use of deadly force authorized but you literally could if
(37:29) you didn't know what you were doing you just carry on straight into the base that's the idea you don't encounter any people here if you went into the guard house that's there about a quarter mile in you'd be arrested immediately because you've already passed those signs they don't want to answer any questions so they don't put any people in vulnerable positions and as you come off the highway up there the extraterrestrial highway there's no sign saying groom lake there's nothing is there no i put up a
(37:53) secret base sign up there occasionally secret base this way but it doesn't stay up for very long and on foot or in car this is as close as you can get to groom lake isn't it this is physically as close as you can get unfortunately you can't see anything from here at all how far are we actually away from from the base we're about 13 miles uh north northeast of the base right now right and if we continued up

this road if we drove into the base now past the signs we'd be arrested if you drove beyond
(38:19) here 20 feet you'd be intercepted as knight fell and determined to see the secret facility we headed for tickaboo peak which overlooks the base seven thousand feet above the desert at our base camp i talked to glenn campbell who founded the area 51 research center in rachel and who produces the groom lake desert rat newsletter he gave up a successful career in computers to devote his life to uncovering the truths of dreamland this is a large facility as big as the state of connecticut it's got lots of unknown unexplored areas
(38:57) that you could store anything you want area 51 is only the best known secret base of a vast complex they could house a lot of different things we don't know about it but there's actually no fencing is that yet they know when you cross that line it's simply marked by orange posts every few hundred feet uh there's a it's easy to wander across this line but as soon as you do they're going to detect you and they'll be right on you this is a very harsh military border it's not a place for
(39:26) tourists they have military has never said there are no ufos it's never directly denied any of the area 51 stories it would have been so simple when these claims came out these papoose late claims for the military to simply say look we have nothing there they could take a few reporters to this area and show them nothing there the military hasn't done it the military is stonewalled it has remained silent and that's the most damning thing that they can do at 3am we started our final ascent of ticaboo we needed to reach the summit before
(39:59) daybreak in order to see the base lit up for its nighttime test flights even at night the roar of the jet shattered the silence of the desert as we reach the summit under a cloak of darkness area 51 could clearly be seen its runway lights glowing in the distance after trekking for several hours we finally set up camp here some 7 000 feet up and since the crack of dawn we've been watching non-existent flights ferrying non-existent personnel to this non-existent base tikiboo peak is the last safe vantage point where you
(40:48) can clearly see dreamland but how long before this too is claimed by the military the groom lake mystery continues we followed the personnel flight out of the secret base and they've landed here at mccarran airport just outside las vegas there are apparently over a dozen flights every day ferrying the personnel in and out of america's most secret base i was called at a random time the operator would say mr lazar it's now 4 15 a.
(41:36) m we expect you to be at mccarran airport at 4 45 your plane will be leaving at such and such time i'd drive there check in board the plane and the plane would fly out to groom lake as the groom lake workers headed off in their cars we tried to enter the terminal who could you point me to at the base who could give me some information okay what i want to tell you right now you're trespassing on private property so we thought that was the point you're trespassing on private property you're inside our gate
(42:14) and i'm going to advise you right now to leave the premises immediately okay is this going to be to do that immediately this is private property you're trespassing leave the premises it seems like they're getting information is it is it government property or is it just private no comment you're trespassing is there anyone you can point us to to give us any details as we were ejected from the airport yet another janet flight left for groom lakes let's take that left turn to 1500 our investigations have revealed that a
(43:07) private company is working with the us military at area 51. we believe this is the company eg and g special projects it's worked for the last 50 years on top secret and sensitive projects with the us government and it's said to control the janet flights that take the workers to the base as well as all the security and technical support for the back engineering of alien spacecraft i did not work for eg directly i was just interviewed in one of their facilities at mccarran airport a short time later i was called back in
(43:41) for this new job at s4 and they had explained to me that it dealt with some sort of field propulsion system and i was just under the assumption that this is an advanced type of aircraft that's being worked on and uh i was excited about the position definitely the private property okay so they actually cut your camera off does it have any connection with the groom lake basically actually i'm just i'm actually to leave the property does this company have any connection with the flights that leave mccarran
(44:09) [Music] eg g has been the central civilian contractor for groom lake

basically since the beginning they're the people who military folks come and go other contractors come and go eg has had the contract since the very beginning so if anyone were to know what's going on out there it'd be eg g they're not talking we phoned eg g to clarify what their role is at the base but they would only confirm that the company is working on several classified department of defense contracts at various remote locations in nevada
(44:47) they would not comment on the exact nature of the work but did state that it was connected with emp electromagnetic propulsion if recovered alien craft are buried deep beneath the nevada desert then the power to release this information to the public lies deep inside the corridors of washington as an intelligence insider said to me the problem isn't obtaining the information it's handling the truth are these alien craft above groom lake or are they man-made have the u.
(45:30) s military developed the technology to build flying discs join us next time on dreamland there's a great deal of legitimacy to this ufo phenomenon to the issue of alien intelligence this is something that's not at all new to the u.s military there's programs that they're working on today that are 50 years ahead of anything that you and i can even conceive of [Music] the black project teams are operating without oversight from official committees from congress if you will i find that exceedingly distressing frightening the ultimate big brother scenario
(46:10) everything is being run by the et's so far beyond us in terms of technology that uh i don't think we would have a chance i don't think we've yet scratched the surface on what's happening out there with regard to flying saucers there are variety activities some of which are classified throughout what is often called the air force's nellis range complex the range is used for the testing of technologies and systems and training for operations critical to the effectiveness of u.
(46:48) s military forces and the security of the united states there is operating location near groom dry lake some specific activities and operations conducted on the nellis range both past and present remain classified and cannot be discussed [Music] [Applause] [Music] [Music] previously on dreamland have ufos crashed on earth have we made
(47:54) alien contact is the us government covering up a massive ufo conspiracy behind me is one of the most secret military bases in the world deep in the heart of the nevada desert the groom lake test site also known as area 51 or dreamland has been home to u.s stealth projects since the second world war however in recent years a more disturbing story has emerged and that is that the government is back engineering recovered alien spacecraft it's a story the us government has tried to cover up for half a century the truth behind dreamland
(48:35) i am convinced based on my research and the individuals whom i've had contact in the u.s intelligence community that the u.s government does indeed have craft that meet the description of many of the ufo reports the whole aim of the project was to take these craft or the one in particular that i was working on and try and duplicate its systems and subsystems with earthly materials i'm convinced beyond doubt that we have recovered aircraft alien vehicles that we have made contact with aliens that we are
(49:12) communicating with them in some way or form and that we have vehicles and bodies in preservation they are here whoever they are wherever they came from whatever they're doing um other intelligences are messing around on our planet i think that too many people's butts are on the line with this that they lied to us too long that that a lot of people have stolen legitimate national security money to keep this cover-up going that they have perpetuated disinformation schemes on the american public probably on the british public the air
(49:44) force knows that there was a crash saucer there were alien bodies recovered that there have been aircraft that have gone up to chase ufos and have not come back they know that we're dealing with the biggest story of the millennium [Music] [Applause] [Music] [Music] [Music] [Music] [Applause] [Music] based on the evidence of former workers
(51:02) and the unexplainable lights in the sky there is little doubt that area 51 seen here in the distance does house flying craft that are literally out of this world if recovered alien spacecraft and bodies have been taken to this remote location since the 1950s could a secret of this size be kept under wraps for so long and if so who's keeping it we're dealing with a cosmic watergate that means that some few people within the government's united states canada britain and undoubtedly other countries have known since july 1947
(51:40) when at least two crashed flying saucers and several alien bodies were recovered in new mexico that indeed some ufos are extraterrestrial spacecraft since

project blue book closed down in 1969 there was no official interest in this subject that seemed to say the least a trifle strange when documents that have come out under the freedom of information act in america show the contrary show that organizations like the cia and the nsa are actually very heavily involved in ufo research there's a relatively small number of
(52:14) people within the intelligence military intelligence and scientific and technical intelligence community who are aware of what's going on and an even smaller group who are actually organizing top secret research into this phenomenon whenever we'd have a crash the staff people would tell the public information officer use story number 38 in the book and he would he would release details according to a standard procedure for that kind of a story and they never told the truth because that was always the classified information the
(52:53) government is fighting tooth and nail it will not reveal any kind of information about that base and as a result workers people who helped win the cold war who dedicated their lives to these secret programs who kept their mouths shut for all these years are dying because of exposure to toxic materials that the government refuses to acknowledge exist out there because they refuse to acknowledge the base itself if it is already explained there's nothing exciting why can't people talk about it presenting cosmic journey
(53:29) one of the most revealing glimpses of just what the pentagon knew about the existence of crash sources and alien contact came in 1989 with the development of a top secret project codenamed cosmic journey cosmic journey is a new experience in live entertainment a new concept and a new dimension this is something that no one should miss and i guarantee you that millions and millions of people throughout the world will remember this for the rest of their life its aim was to display to the public by way of a traveling exhibition
(54:09) the crashed craft and preserved alien bodies that the government had in its possession the pentagon enlisted the help of bob eksler a nasa mission specialist in robotics who was also a respected ufo researcher at a series of meetings in washington in 1989 military officials set out their plans to explore they were devising a variety of kiosks to show the history of the ufo sightings ufos associated with the space program and of course aliens associated with commonly with the abduction phenomena i was shown a photographic rendition
(54:50) that involved an actual what appeared to be some form of an alien creature typical to the uh gray aliens that have been referred to popularly in the publications in the press the creature was encased in uh sort of a glass coffin-like structure that uh was being preserved there was a lot of apparatus tanks and so forth probably some form of a cryogenic tank to preserve the the body from decay as part of his indoctrination program excellent was flown out to an offshore norad tracking facility traveling in unmarked black helicopters they headed
(55:35) out 20 miles off the coast of florida landing on what looked like an oil rig as we got into this facility we descended to an area that i would describe as sort of a mezzanine area looking out over a control room this was obviously a norad tracking facility uh there was a huge screen it represented an area of the southeast quadrant of the united states then there were a series of lights that were floating along sort of like the top of this grid area there were five of them in all were labeled by the way on the screen as
(56:18) ascs and i heard someone make reference to alternative spacecraft the craft went down into this grid into this vortex area and then dispersed and no one seemed to be concerned at all presenting cosmic journey an experiential entertainment concept of kenneth failed productions cosmetics i've not since been contacted by anyone associated with the cosmic journey there have been since the publication of the book revealing the uh the project itself there have been a number of plausible denials by uh members associated with the project and
(57:07) of course uh categorical denials on uh anything related to the more intrinsic alien issues [Music] the only official ufo investigation that the united states will admit to was project blue book it was set up by president truman in 1952 after a rash of ufo sightings over sensitive military areas was it a genuine attempt to investigate ufos or just a smoke screen to keep an increasingly anxious congress and public at bay the public was told everything's under control sign grudge blue book that is the organization that's doing the ufo thing
(57:55) we have access to the finest scientists there was a whole bunch of malarkey that went along with that it was set up as a public information office to answer the questions on the ufo phenomena for the public and their case information their files were sent down from upstairs from where my office was my desk was usually cases that

could be explained away and those were used as sample cases in dealing with the public the anything classified above confidential stayed upstairs and even went higher and never got into the came into the
(58:28) preview of blue book at all [Music] i don't think it was a genuine investigation in that the really sensitive reports were filtered out by a more important group than project blue book we have obtained copies of project blue book documents there are literally hundreds of reports of ufo sightings and eyewitness accounts from both civilians and military personnel many that were unexplainable project blue book is still some 40 years later the most important body of evidence admitted by the u.
(59:05) s authorities that we have made contact with extraterrestrials [Music] the investigation was closed down suddenly in 1969 no reason was given blue book was the cover organization that's the one you heard about that's the only one ever mentioned and as recently as last year an air force letter to a senator said blue book was it and when we closed it we got out of the business in reality all these other groups concerned with monitoring the skies we're continuing to look at militarily important cases a light in the sky means nothing but if
(59:46) one goes buzzing down the runway at a strategic air command base where nuclear weapons are stored which has happened and we've got some records on that that's of concern we can say that the recent sightings are in no way connected with any secret development by any agency of the united states you can go and look through the project blue book records and find numerous sightings which have been quote explained and you go and look at the explanation and you find the explanation does not fit the description
(1:00:28) by the witness or witnesses that's evidence that the air force was trying to get rid of the problem by explaining it away at all costs the evidence seems to suggest that the united states government is still investigating ufos the question is who's in charge both the nsa fbi and the cia deny any responsibility because all information regarding extraterrestrials is handled as sci sensitive compartmentalized information even the president of the united states in the white house behind me may not know the whole story
(1:01:06) who's in charge is it the president is it the air force i'm convinced that we still have an analog with majestic 12. a group of outstanding people intelligence community primarily and some technological people are running the show presidents come and go the intelligence agencies go on forever [Music] to the best of my knowledge there is no official ufo investigation unit operated by the united states government however unofficially the records show that the defense intelligence agency through its defence attache system has a
(1:01:45) remit to report on ufo incidents worldwide and that's easily provable despite the fact that the dia maintains they have no interest at all in the subject i tried during my three-year tour of duty to establish contact with an opposite number in the united states i made repeated attempts to do that but consistently drew a blank i was told that since project blue book closed down in 1969 there was no official interest in this subject [Music] i didn't work for the us government i work for a satellite government of this country
(1:02:34) as far as the senate concerned i think there was only one left and that was bob dole and as far as the presidents are concerned the only presidents that i feel that i met at the facilities back in the 50s and 60s were nixon and bush we contacted former president george bush to ask him what he knew about the existence of recovered alien craft and the developments out at area 51 we received a fax response unfortunately we are not able to provide answers to the questions that you send president bush's policy of long-standing
(1:03:13) is not to comment on or engage in speculation about alleged classified programs of any kind a close confidant of george bush and a man well acquainted with area 51 was admiral bob inman his credentials are impeccable he was director of both naval intelligence and the national security agency as well as deputy director of the defense intelligence agency and the cia in a telephone conversation with bob xla in 1989 he referred to recovered vehicles becoming available for research do you uh anticipate that any of the
(1:03:57) recovered vehicles would never be uh become available for uh technological research outside of the uh military circles again i honestly don't know ten years ago the answer would have been no whether his time has evolved they're beginning to become more open on it is a possibility he knew from an official standpoint uh that these vehicles these objects existed that they were in military us military custody and that there were scientific projects associated with those i believe it is the

first revelation by anyone in a
(1:04:40) high enough level capacity within the u.s government especially within the intelligence community to in effect acknowledge that we are indeed involved that ufos are real that they were developed by non-human intelligence and that somehow or another we have acquired possession of that technology inman does not say much there is no reference there's no mention of ufos spacecraft anything like that the conversation centers on recovered vehicles technology and so forth but admiral inman was aware of the subject matter and we know
(1:05:26) from his executive assistant tom king that there was to be no public discussion of these matters the matters that had been discussed between exler and inman because of national secrecy laws that you not quote him or use his name in any manner without his prior approval [Music] inman retired from government service in 1982 to become president of science applications international corporation of san diego interestingly one of the company's primary areas of research is into gravitational propulsion systems the same method of propulsion of flying
(1:06:06) discs that bob lazar worked on at area 51. jane's defense weekly the popular military defense publication published an article about s-a-i-c and there's a post-script to the article that anyone who believes in the science of anti-gravity to be too arcane too esoteric even for the u.s air force should consider the electric propulsion study undertaken by saic for the astronautics laboratory which is now part of the phillips lab the study's primary objective was to outline physical methods to test theories of inductive coupling between
(1:06:46) electromagnetic and gravitational forces to determine the feasibility of such methods as they apply to space propulsion and in simplified terms an anti-gravity propulsion system it remains for some the ultimate quantum leap well it's possible one because i saw the equipment that would do it and two it is theory that would work gravity distorts time and like i said that's not a theory we know that to be true and if you're bending space and time along with it when you wind back up in that place you're there between the ticks of a
(1:07:25) [Music] clock we called admiral inman to find out what he knows about area 51 and why his company is developing this gravity propulsion system let me get right to the point that you're after yep i had occasion in several different jobs to ask the question was there any credible evidence when i was the vice director at the defense intelligence agency the national security agency the central intelligence agency i inquired at each of the three places at different times do you have any credible evidence that would support the existence of
(1:08:09) ufo or you know and the answer was always no james wrote an article in which it mentioned science applications international um and it referred to some of the development it was working on as the ultimate quantum leap exotic shall we say gravity propulsion systems what exactly are those and what are they used for flying craft i'm pausing because i want to make sure i don't overstate the case right we're on a little sensitive ground here there have been over the years i thought some of the early allegations of activity out in nevada 15
(1:08:53) years ago could well have been reflection of the prototype testing of some of the stealth vehicles some are clearly scientific phenomena some of it again will be so something as simple as weather balloons right that break loose that get lost and go drifting but there probably is some of it that is directly related to testing of late 20th century early 21st century military technology related partly to reconnaissance in some cases and others to you know attack aircraft [Music] [Applause] [Music] this is the nellis air force base one of
(1:09:56) the top military installations in america it's split into four main areas the toner part and nevada test sites where america's top secret nuclear tests take place as well as the nellis bombing range where the latest jets and bombers are put through their paces it's also home to area 51 so if there are flying saucers being tested over the desert then the personnel at nellis definitely know about it we were contacted by a former radar operator at nellis who confirmed that she had witnessed a classified flying disc
(1:10:31) test out in the test range she left the air force in 1985 and is too frightened to reveal her true identity the flying disc test took place at night in the desert a few miles from the base i was at that moment standing on the deck of the radar van it was night time and i was looking up in the sky because there were saucers up there there were 10 to 15 saucers and they were glowing orange on the bottom the one that was closest to me i could see in pretty good detail was standing with a group of people of whom i did not know any of them
(1:11:16) and they did not appear to know each other so it seemed like we were all

very isolated no one was talking to anyone um it was very frightening because what your what i was seeing was definitely something that was very highly classified and there was a couple of people talking inside the radar van who i assumed were officers but no one was wearing any rank insignia and no one was wearing any name tags the maneuvers that they executed were very sophisticated [Music] so my guess is that they were being piloted by aliens who knew exactly what maneuvers
(1:12:00) they could do as part of the test she was taken to what she believes was area 51. we were taken to a medical facility that was very sophisticated someone came and took me into an examining room and they had me lay down on a stainless steel table and someone came in through the door walked around the table up beside the right side of my head saying in a real deadpan monotone voice stay calm stay calm stay calm when he got up by the side of my head he had had a hypodermic needle hidden in his hand he brought it up and it went
(1:12:45) straight into my the right side of my neck and whatever chemical it was went straight to the brain it has taken her over 10 years to come forward with this information it has been very difficult to talk about this it's almost like every time i relate the story it gets a little easier but when i first started talking about it it was like my mouth didn't even want to form the words and the sound didn't even want to come out of my throat [Music] so i can only guess from that that there is a very strong
(1:13:18) suggestion given to me not to talk about this not to remember it and if i did remember it not to ever talk about it to anyone as recently as 10 years ago this lockheed a-12 which flew out of groom lake was still one of the us air force's most top secret military aircraft if you'd seen it in the skies at night you may be forgiven for thinking you've just seen a ufo so how many of the hundreds of thousands of ufo sightings every year are nothing more than military aircraft and is the great secret of groom lake
(1:14:03) just a 21st century descendant of this airplane [Music] the original test pilot was loose shock the first time he saw it i mean he he rubbed his eyes he turned around walked back out of the production hangar at lockheed and walked back in because he did not believe his eyes you know the initially they were going to call it el salvador instead of cygnus uh for the simple reason in spanish that means the savior or jesus christ like everybody everybody who saw the airplane could not believe what they were seeing it was a buck rogers airplane
(1:14:40) this airplane was built designed almost 40 years ago 40 years before that the hottest thing flying was a saverski p35 40 years before that it was a balloon so the technology technology has not stood still so it's a very good possibility that we are looking at man-made transportation for the 21st century the united states air force alone in 1997 according to the latest budget request will spend more than 11 billion on research development and production of secret weapon systems of one kind or another that's considerably more than
(1:15:27) the entire research and production expenditure of any other military in the world i am very distressed that the black project teams are operating without oversight from official committees from congress if you will from public oversight with black budgets that no one knows where it's going or what it's being used for i find that exceedingly distressing frightening the ultimate big brother scenario i think the a good part of the reason for keeping everything classified is because this is an awesome weapon
(1:16:07) now you think the amount of energy that this system can put out weapon system if you want to look at it as that and it obviously had some weapon potential just think about being able to deploy something like that virtually instantaneously anywhere in the world you know you have a conflict in the middle east how long does it take you to get an aircraft carry over there well it takes a long time here's an awesome weapon power that flies that can move somewhere virtually instantaneously and you know pound an enemy virtually into
(1:16:36) dust yeah that's something to keep awfully secret at you know at any price because that's something you can almost conquer the entire planet with i'm convinced that human beings are building disc shaped craft in fact it was reported that by 1960 the u.s military had already developed a disc that could operate silently man-made flying saucers are indeed real this is the avro car which was launched in total secrecy in 1955 less than 10 years after alien sources were allegedly recovered from roswell new mexico
(1:17:18) a cia memorandum in 1955 stated that the avro car was based on research developed by german scientists in world war ii we have obtained the only film ever taken of the first top secret test flights in canada in 1960 why was the military

test flying saucer-shaped flying craft in the 1950s when project bluebook denied they existed was it a cover to hide the real alien sources being tested out at area 51 like project blue book the avro car was scrapped suddenly in the late 60s after millions of dollars were spent no reason was given
(1:17:59) [Music] more recently the lockheed skunk works in palmdale california unveiled project darkstar an unmanned aerial reconnaissance vehicle seen in hangars or in the skies it is a ufo i think it's time that you get a look at the newest star in the world of airborne reconnaissance ladies and gentlemen i present darkstar [Music] dark star is a very unusual looking aircraft it has a saucer shaped body and a pair of very long slender wings attached to the back like many stealth aircraft including the b2 its appearance varies drastically
(1:18:49) according to what angle you see it from if for example you see the aircraft kind of edgeways on you might well think that this was something totally foreign totally unlike any conventional aircraft and certainly much more like what people are described as flying saucers i think it's quite possible that some of the things that are being developed in the united states today are of such a revolutionary nature uh and still very secret that when they are seen from time to time as things inevitably do get seen when
(1:19:21) they're tested that they could be mistaken for what people think are ufos [Music] at any given time of course the technology that we have is five or ten years more advanced than the technology that is on public display but these sorts of things do not fly over the heads of bewildered members of the public they fly exclusively in very clearly defined ranges and danger areas so the sorts of things that are being reported as ufos will not be ours in september of 1947 the air force wrote to j edgar hoover a letter saying we checked all of our
(1:20:01) research projects etc you know this would be not just the air force but the navy and the army everybody and we have nothing that could create these flying disc sightings a big ufo convention came to an end in las vegas last night and afterwards naturally some of the members went out in the desert to search for ufos a news crew went along too and sure enough it wasn't long before a mysterious unidentified object appeared not too surprising somewhere up there you see it because this patch of desert is right near a military test site
(1:20:30) this looked like no aircraft lights that any of these folks had ever seen was it a bird was it a plane was it the aurora the secret plane we don't know more to come i'm sure and the air force is not saying anything as usual [Applause] [Music] [Music] if ufos are man-made craft how do you explain the tens of thousands of cases of reported alien abductions every year in 1975 seven loggers were heading home after a day in the forest to show low arizona and came across a bright light in the trees in the distance
(1:21:23) driving closer they could clearly make out the shape of a flying saucer which was lighting up the forest around them mike rogers and travis walton were in the truck stop mike it had lighted spots on it and and was basically metallic had a metallic framework my first feeling was that it looked rather beautiful but at that time it wasn't making any noise and it wasn't moving it was just quietly perched there in the air [Music] oh my god when it started to move the sound got real powerful and i i jumped for cover and i got down behind
(1:22:12) this log and the guys were yelling to get away from there and they were swearing and everything and i was getting you know pretty scared myself and i made up my mind to make a run for it and when i raised up wham something hit me a beam of energy a bolt of lightning but it wasn't like lightning it was like straight sided like i'd like a deliberate beam of energy but it was so powerful it created like an explosion that lifted him off his feet and blew him backwards and here's travis flying back through
(1:22:39) the air uh just he landed some distance from where he'd been standing landed flat on his back and as he's going through the air his arms outstretched he he looked lifeless at the time like the concussion of it had already killed him or knocked him out or something well i could hear the sounds of movement around me and i uh i had trouble focusing my eyes at first i saw there was light above me and the ceiling was very close i could feel i was laying on top of some hard raised surface but when i finally got where i could
(1:23:19) focus my eyes and i and i saw these creatures standing over me i just flipped out i just instantly became hysterical i started screaming i was definitely not in a hospital and can you describe what these aliens look like well they were basically humanoid you know two arms two legs like that but they uh had very large heads hair no hair huge eyes sort of a pale grayish white skin and they were wearing

coveralls of kind of a brownish uh coverall after spending what travis remembers to be an hour or two inside the craft
(1:24:09) the aliens put a mask over his face and he awoke in the middle of the road with the craft above him he'd been missing for five days what do you say to people who who say you know these seven loggers in the woods have just made this whole story out i mean you know seven people uh are see the same thing they stick by their stories for for over two decades you know ever all of us have taken polygraph tests every theory the skeptics come up with is just absurd and easily proven so well i spent a day with travis and mike
(1:24:47) rogers he passed the lie detector test their story is consistent there were five other people there after all who saw part of these events unfold to also pass the lie detector test uh his story is consistent it's never changed in a court of law that would make the case [Music] i found his story uh profoundly convincing this is the saratov air base 200 miles outside moscow behind these barbed wire fences is the russian equivalent to area 51.
(1:25:36) if you thought only the u.s government had flying disc technology then you'd be wrong the russians have been working on a secret project codenamed tarielka since the second world war security here is unprecedented and this perimeter fence is as close as we've been able to get to the base we did secure some footage of the flying disc in the hangar the code name for the project is a keep and it has been designed for humans to fly we asked the scientist in charge of the project what propulsion system the
(1:26:12) craft uses but he would not divulge what he called classified information what is clear is that tarielka is aimed at the commercial market not the military the russian engineers here at saratov see this as an alternative to aeroplane transport in the 21st century where the production and design expertise came to build the teriyaka no one is saying but surely it's more than just the coincidence that the base here at saratov is so similar to area 51 both in location and security and as in the u.
(1:26:51) s the tarielka project was started in the 1940s just after the alleged saucer crash in roswell new mexico i'm pretty sure that the russians have those craft we were told directly by a leading russian scientist who had worked hands-on worked on these things that both the united states and the ussr had had acquired information from captured nazi scientists and had built craft like these they knew that we had them we knew that they had them the story i got from the russians before is that these same scientists who felt
(1:27:23) that there was an alien connection stalin himself i was told believed in this alien connection that these things came from somewhere else now i think because of the political changes and the political uncertainties in that country even these scientists are are backing off from that position well we're not quite sure if these are alien anymore uh they're they're not certain that the kremlin needs any kind of a ufo expose right now the teriyoka will be on display at trade shows around the world in a few years
(1:27:50) time sold off to the highest bidder the fact that mankind may be transported in flying discs in the early part of the 21st century is a startling transition from science fiction into science fact [Music] have alien sources crashed on earth and have we back engineered these craft to develop our own 21st century flying discs the answer however improbable is yes area 51 does exist and we have eyewitness accounts from at least two former workers at the base who confirmed the existence of alien spacecraft the truth seems to be out there but will
(1:28:34) they ever admit it it's likely to be a very long time before we discover what is actually being done out of groom lake now if you look at the intelligence community particularly they seem to wait to anything from 15 to 20 years or more after something has been retired before they acknowledge its existence therefore if things are operational now we may not see them for another 30 40 years what also happens at that point is that things remain secret so long that the people who originally decided they should be classified are
(1:29:14) retired or quite possibly dead and it becomes almost impossible to declassify a program at that point because nobody knows quite why the secret is being protected the air force headquarters files up through 1955. 9 800 feet of material that's a thousand four door filing cabinets when i went to ask for stuff out of these files only 10 of the boxes i was interested in had been classification review and in those boxes there were withdrawal sheets all over the place so secrets can be kept they are being kept one way that they're being kept as
(1:29:53) the naivete the people who think if this was going on i would know about

it the ego was a powerful weapon they have to know that it has to come out it has to be part of their program that it will come out we just don't know what the agenda what the time frame is i think it's very reasonable let's say if contact were made in the 1950s i think it's very reasonable of the government to say let's keep it secret for 40 or 50 or 60 years so we can study it so we can reproduce the craft so we can understand what it
(1:30:27) is we're dealing with and release it to the society slowly perhaps that's what they're doing now do you think the secret will be out in a few years time i'm saying because i've got permission i'll turn my papers over to you in 2002 and then you'll know who i am it's my impression that eventually there will be a weight of evidence so massive that society will admit that they are here and at which point the government will have to admit that they've known a lot more than they've said
(1:31:03) all along and this isn't just the us government you know this is virtually every government in the world in 1979 the seti program was set up to search the far reaches of space for intelligent life it would seem that we now have an answer the real reason for the cover-up is likely to be far more sinister than mere secret technology [Music] we have to consider that the aliens themselves may be controlling the cover-up especially if they don't really want us to know what they're doing here even if there is some communication between
(1:31:44) the government and them everything is being run by the ets of so far beyond us in terms of technology that i don't think we would have a chance they the officials in charge of this information are going to look rather impotent were it known that there are extraterrestrials invading our airspace against whom we have inadequate defense [Music] we have investigated dreamland for over a year whilst we didn't see any flying discs or alien bodies we did see lights in the sky which could not have been aeroplanes military or otherwise
(1:32:44) we have proved beyond a shadow of a doubt that area 51 and a large underground base out at groom lake does exist we've seen the workers fly in and out of the facility and talked to alleged former workers at area 51 about their back engineering of recovered alien spacecraft we've seen actual footage of man-made flying discs both american and russian and there are warehouses across america housing files like these full of ufo reports and alien abductions is this body of evidence just a figment of someone's
(1:33:21) imagination i think not as we move closer to millennium mankind will have to face up to the startling reality that we may not be alone and that a select group of us government officials have known about this for some time [Music] i occasionally think how quickly our differences worldwide would vanish if we were facing an alien threat from outside this world and yet i ask you is not an alien force already among us [Music] [Music] [Music]

secret UFO base area 51 (1996) [sci-fi HD] - YouTube
https://www.youtube.com/watch?v=o5tdsn4WHY8

Transcript:
(00:03) [Music] in 1989 a man called bob lazar walked into a las vegas tv station and gave a remarkable interview he said that he'd worked out in the nevada desert at a top secret facility known as area 51. he said he worked on a highly classified project reverse engineering recovered alien spacecraft his story was a worldwide sensation and area 51 became a household name synonymous with ufos secret projects and little green men and yet neither the u.
(00:57) s government nor its military have ever denied his claims and they still don't officially confirm that area 51 exists despite satellite photos proving it does [Music] many dismiss bob lazar as a fantasist and yet others see him as a whistleblower exposing a government cover-up of ufos and alien contact i am convinced based on my research and the individuals whom i've had contact in the u.
(01:43) s intelligence community that the u.s government does indeed have craft that meet the description of many of the ufo reports [Music] my personal opinion uh based on comments i've gotten from the deputy director for science and technology at cia would seem to indicate that bob was perhaps an unwitting participant in a program designed to introduce someone with a technical background to some elements of the ufo research projects going on out at the test site [Music] i have no doubts that lazar actually was in a place where top secret investigations

(02:45) were going on i'm not sure about all the details that have emerged from his account but he certainly gives me the impression that he was actually there do i believe bob lazar my answer that is yes and hexagon is going on eight years that i've known him his story has never changed he wasn't in it for the publicity he was surely wasn't it for the money he lost everything he had i believe he's since totally sincere as far as i can tell he's a bright guy who tells a great tale and who's told it
(03:28) often to people who have not checked on him to accept the notion that while the government wiped his slate clean basically i think he had an experience i think he saw some things that shocked him was subject to some conditions and experiences that were very unnerving to him and very profound he said you would love to see what's what's out there because it's like beyond science fiction he said and i wish i could talk to you about it but i can't and that's as close as he ever got to telling me anything that happened out
(04:06) there you'll find many people who have seen these discs question is where do they come from bob lazar may be one of the few people who can tell us that they're from somewhere else i've no doubt that there's a relatively small number of people within the intelligence military intelligence and scientific and technical intelligence community who are aware of what's going on and an even smaller group who are actually organizing top secret research into this [Music] phenomenon there's been an operating air base out
(04:59) at the location known as area 51 since the 1950s when it was home to the cia's top secret sr-71 blackbird spy plane then in the 1970s it became the test flight center for the f-117 stealth fighter and the b-2 stealth bomber it's fairly public knowledge that we have a super secret facility uh in the mountains in northern nevada referred to as groom lake area 51 of the nellis air force base test range it's also been referred to as as dreamland this is an area that has been known but officially denied for many decades
(05:57) all of our super secret aircraft have been developed and test flown out in this particular area so it only makes sense that if you have something as sophisticated as a flying saucer and the related technology to that that would certainly be one of the prime locations you'd want to go what you see is an ordinary looking air force base it's nothing to write home about but because the government won't talk about it everyone wants to see it the military has never said there are no ufos it's never directly denied any of
(06:34) the area 51 stories it would have been so simple when these claims came out these proposed late claims for the military to simply say look we have nothing there they could take a few reporters to this area and show them nothing there the military hasn't done it the military is stonewalled it has remained silent and that's the most damning thing that they can do area 51 to this day is not acknowledged that is to say the air force does not admit that it exists this status has been maintained very carefully particularly in the last few
(07:07) years the puzzle is that the base has clearly been very active for quite a while and you can see that there are about uh 700 to a thousand people traveling from las vegas every day so essentially the bulk of what has gone on there in the last 10 years has not emerged from the black this airplane was the program was terminated the airplanes were put in mothballs for 20 years before they admitted the existence of the aircraft there's programs that they're working on today that are 50 years ahead of anything that
(07:45) you and i can even conceive of and that we may never they'll may never see the light of day would you say it's america's most top secret military base as far as a as far as an operational test facility is probably the most secret test facility in the free world yes so there is no question that the facility is there that the government has said very little in the past about it now the real question i suppose is are there any flying saucers out there no one had associated flying saucers with area 51 until bob lazar's interview hit
(08:29) television screens around the world he said that he worked at an underground facility called s4 the top secret project was co-named galileo they would call it a specific time for instance the operator would say mr lazar it's now 4 15 am we expect you to be at mccarran airport at 4 45 your plane will be leaving at such and such time i'd drive there check in board the plane and the plane would fly out to groom lake it would land there i'd get off the plane and wait and there would be a bus to take me and whoever else is going
(09:14) to uh s4 papoose lake which is about 15 miles south of there and then i would check in at s4 tell me about how you felt on your very first trip out the

first trip out there was uh it was actually very exciting because it seemed so cloak and dagger to me especially after i got in the bus with the blacked out windows i i kind of thought that was neat drove out to the site and then it was checked in guards walking around with guns and i i was sure what i was working on was going to be pretty fascinating he says that within a few days of
(09:57) working out at s4 he was shown an actual flying disc in one of the hangars when i was brought in by bus and for the first time one of the hangar doors the one on the end was open the bus drove up and we stopped there and cleared his day in the hanger taking up almost all the hangar was the disc looked like something right out of a science fiction movie and as i walked in there i thought well this is the new advanced aircraft we've been working on and this is why people keep seeing flying saucers because it's ours and we've just been testing it
(10:43) probably for all these years and what what color and size was it it was a dull stainless steel pewter gray very unimpressive color wise about 52.8 feet in diameter and about 16 feet high so was it actually a recovered craft that you were working on or was it one that scientists had built as a mock-up of a recover crowd well whether it was recovered given or what it was not built as a mock-up it was an it was an alien craft built on another world there was absolutely no doubt about that the tsar claims that he was one of only
(11:28) 22 people who had something called majestic clearance to work on the craft itself [Music] the whole aim of the project was to take these craft or the one in particular that i was working on and try and duplicate its systems and subsystems with earthly materials the work that i did basically entailed back engineering the power and propulsion system and i opted to start with the uh the power the the reactor that that ran the craft [Music] i knew immediately if his credentials could be verified if even part of his story could be
(12:23) verified it'd be one tremendous expose george knapp was a long-standing tv reporter he'd heard enough of the ufo rumors over the years to appreciate how big a scoop this could be if lazar was telling the truth he gave me uh information about his background educational background and employment background i started with with his claim to have worked at los alamos lab we went to los alamos and got nothing even close to cooperation they wouldn't respond to our phone calls they say we have no information on bob
(13:01) lazar there's nothing in the files i said are you sure now no nothing in the files i showed him the the phone book entry that bob had kept that said he was there i showed him the newspaper article that that showed that he was there basically los alamos lab tried to thwart me at every step or completely uncooperative and trying to get information about bob and i found that to be the case at every step of the way and trying to verify his background thursday 12 30 7 p.
(13:34) m nasa mission specialist bob xla had heard about area 51 and groom lake when he worked on the apollo and space shuttle projects he was intrigued by lazar's claims and started to investigate his name uh i did a variety of research uh relative to bob lazar actually met him i obtained a copy of his what they call a w-2 form which is one of the irs documents associated with with pay his particular form indicated that he worked for the u.
(14:09) s department of naval intelligence they informed me that it was a genuine document it was not something that had been fabricated there were a variety of numbers contract numbers and so forth issued on the document which i was able to research again finding that these were highly classified numbers in fact internal revenue service ran into a brick wall when it came to trying to track down uh the actual employer associated with it with the document and then again with the social security administration we found that bob lazar's
(14:47) records had in fact been been bleached clean there was nothing there in spite of the fact that the document uh clearly indicated that uh social security taxes had been taken out of his pay not everyone whose research bob lazar believes his claims stanton friedman is one of the most respected authors in the ufo field today he's a former nuclear physicist with top secret clearance and has many friends and contacts in the black project world i've looked at considerable depth into bob lazar's claims both about himself
(15:38) and about propulsion system those are fairly elaborate claims i've talked to the schools that he claims to have received degrees from i've checked on his high school record i talked to los alamos library he was supposedly a scientist and so forth i have come up totally empty now when a guy lies like that you get very wary and you know it has all the trimmings his story of a walter mitty story somebody in his imagination was you know stronger brighter faster than anybody else [Music] i

don't doubt that he did some work at
(16:17) los alamos and other places he's clever he drives a jet-powered car fixes radiation detectors so he may have performed some service but i can find no reason to think that he worked out there on a flying saucer i mean i had to wonder whether this guy was making this stuff up but then i see the phone book and i see the newspaper article and i talked to people who worked with bob at the lab and who said in fact that he did work on classified projects yet no one can find any records of his background the people that i worked with colleagues
(16:52) the people i went to school with obviously knew i was there and people at los alamos i was friends with and people that worked under me and alongside him he knew i was there and you know cooperate was going on but you know officially it's very difficult to get information for the people in charge [Music] to further prove his claims lazar agreed to take a polygraph test which he passed the thing that uh is interesting about polygraph is that if you're embellishing or if you don't completely believe what you're saying
(17:26) it is very very easy to detect all it really will tell you is that the individual believes with a hundred percent conviction that what he's reporting is exactly as he recalls and as he believes it to be and that clearly was the case with bob lazar now could his perception have been a bit askew yes that's possible but he clearly wasn't lying i think bob is even open to the possibility that perhaps he had been used in some sort of misinformation or disinformation campaign i mean look at him he has a pirate flag
(18:01) floating on his house he races jet cars he likes uh fast women he likes guns um he's technically capable so in that sense he may be perfect for this kind of a program technically capable scientifically knowledgeable and yet completely discreditable at a moment's notice if you wanted to uh test public reaction to a story about area 51 and then suddenly discredited afterwards bob may have been the most qualified person in the country [Music] the tsar says that on one occasion he was escorted into the flying disc that he saw in the
(18:45) hangar to analyze its propulsion system [Music] it was obviously made to be piloted by something smaller than the average human being very cramped in there what were the size of these seats that were in there the seats were very small i'd say about one third to one-fourth the size of a normal human seed a lot of people a lot of people say well it must have been exciting to go in there and i always say it wasn't it was a very ominous feeling it um i know it sounds silly but it it it's so unearthly in there
(19:29) you have spoken to someone who's actually seen um a ufo under a tarpaulin at error 51. i have i've spoken to several people who've seen ufos or disc shaped craft out there there was a there was a woman who was a secretary for a major defense contractor at the nevada test site who worked on nuclear programs who told me that she had sat in on on conversations between military and civilian contractors at which the roswell case had been discussed at which it had been discussed taking some roswell material
(20:00) to area 51 the level of secrecy during those meetings was great afterward they'd take the the ribbons out of the typewriters she was typing on she was ready to tell me about this and i had this conversation with her on the phone the next day after this conversation takes place she's visited by two men who say that they work for the company she used to work for reminding her that she is still under a security oath told her we know that you do a lot of traveling back and forth a lot of long drives between las vegas and la
(20:28) we'd hate for something to happen to you or your family no interview i mean it happened again and again and again same scenario lazar says that in addition to being shown inside the disc he actually saw it take off from the lake bed i was brought into the hangar for one of the short duration tests and the craft was already outside on the lake bed and that was uh pretty much of a marvelous sight it's a huge thing it i it's like seeing a house lift off the ground you can't imagine the energy involved to
(21:12) do that because of the extremely high energy output and the fact that the outside of the craft does is used as a conductor that does ionize the air and the crafts do as a byproduct of this glow at night much like a fluorescent tube will light up so you know bright strange jumping lights in the sky that does explain that would you categorically say there is no way that that humans could have built the craft that you saw absolutely i will categorically deny that well i don't know how exactly should i put that i guess i can just
(22:14) say it straight out there is there is no way that any government on this

earth could produce that craft period and i defy anyone to argue that point one of the big questions that's hung over this whole story is whether lazar saw a man-made flying disc and not an alien spacecraft a lot of these crafts which are being developed in secrecy in in the united states are tested at night and one can imagine that seeing through kind of half closed eyes something like an f117 stealth fighter or a b2 bomber side on or fronton would look remarkably
(23:03) like say a flying source or a ufo you see an f-117 or you see tacit blue or you see a b2 particularly if you see it from some fairly unusual angle you're going to have a very hard time relating that to conventional aircraft some of these things can look very strange indeed so you know an unusual but decidedly terrestrial aircraft can certainly present the appearance of a disk from many angles [Music]
(24:25) i think for anyone who's who's been out into the western united states and seeing the kind of place it is and let their imaginations run right a bit it is possible to imagine in these vast test areas technologies which are highly exotic highly uh revolutionary and would change the way we feel about science today however to say that that is alien science derived from beyond this world i think is something which is just it is unbelievable it's too much to to absorb do you think that some of the truth certainly lies out there
(25:19) in the middle of the nevada desert at groom lake i would expect that some of the truth may very well lie out in the desert near groom lake it's the right place for some of it to be it's isolated it's under control it's high security i don't think we've yet scratched the surface on what's happening out there with regard to flying saucers according to lazar the craft that they were secretly testing out in the desert at night used an exotic anti-gravity propulsion system the reactor itself was an incredibly
(26:08) advanced system this is uh was an anti-matter reactor this is something we could only dream of having something like without huge amounts of power that rival several nuclear power plants running at capacity what happens is a great gravity distortion is created and you're essentially bending space toward the craft the craft becomes part of that space and then when the reactors or when the gravity amplifiers are shut down the craft is essentially where it was focused it's a very difficult thing to grasp it happens virtually
(26:41) instantaneously because of the fact that gravity distorts time and if you're bending space and time along with it when you wind back up in that place you're there between the ticks of the clock looking at nighttime video films out in the test site area we've seen video of craft that were luminous that would move across the sky as if it was skipping a stone across water or sort of a sewing machine effect what we see across the screen are a series of lights of dashes of light as the object moves from point a to
(27:29) point b therefore we are seeing what you might call a shadow effect of the propulsion mechanism at work [Music] bob lazar is not the only person who's come forward and claimed to have worked out at the base on flying discs former u.s marines test pilot bill ooh house worked out at groom lake and other top secret locations for more than 40 years working for the pentagon and civilian contractors on a variety of highly classified projects including he says a flying disc recovered from a crash in kingman arizona in may 1953 he said that he'd been
(28:19) cleared to do this interview and to discuss certain information but asked us not to show his face [Music] what we're actually working on out there one of the things i worked on was a flying disc simulator it was designed in new mexico by a separate staff that built it in parallel with the actual craft that they were had intended to fly the purpose of the simulator was to train pilots to uh to fly this strange uh strange looking craft the simulator was a 10 meter round disc the skin was made of boron composite material
(29:15) not unlike that you see on the f-117 how did you know how to build the simulator there essentially there weren't any plans the plans were generated as we constructed it and it was there was a process there that took quite a while for for us to even understand the concept way back in the 50s says that lazar did work at area 51.
(29:43) i think bob is saying exactly what he knows and i know a little bit about bob from a different standpoint than a lot of people knowing what's been written about him but bob lazar is not lying as far as his place and position and the activity he was involved with at the time although some of it you know he couldn't recall but there's a lot of reasons why bob was hired number one you know here's the thing take a guy like bob sent him out there you know somebody said you know aliens blah blah blah blah

(30:33) you know all of a sudden you're thinking about nine alien crafts you know they may have not been nine alien crafts do you believe that the government has recovered alien spacecraft i have no doubts whatsoever that the united states has actually recovered a number of extraterrestrial vehicles and what do they do with them i think that since 1947 there have been efforts to try and duplicate the technology what is referred to as reverse engineering and i don't know how far they've got but some reports indicate that we've actually been test
(31:19) flying within a limited area actual alien vehicles or terrestrial vehicles united states vehicles which have been made using alien technology could these not just be military aircraft well i think it's quite possible some of them are military aircraft i've heard from very reliable sources including a leading specialist on unmanned aerial vehicles that we have developed some disc shaped platforms for aerial reconnaissance some quite small maybe some larger which are being utilized by the americans and have been built by the
(32:00) americans that's the 63-8900 crossing downfield thank you sir was it a hard secret to keep it was a virtually impossible secret to keep but i did play by the rules and it caused a lot of problems it caused problems in my family life i mean imagine being married at the time and you know you get a call you know perhaps at night and a strange voice on the phone okay you disappear you can't tell your wife who it was on the phone where you're going and you come back you know sometime early in the morning i what is she gonna think
(32:47) unaware of where he was going every day and being absent from home for long periods bob's relationship with his wife had deteriorated badly this was seen as a potential security risk out of the base my wife was having an affair with someone else so they viewed that as a potential emotional instability and they no longer wanted me coming out until things were cleared up either for you know it to break up or heal or whatever but they uh that's what to put the brakes on everything there and did they then stop
(33:24) calling you did you get very frustrated about that yeah then i began to wonder boy now they've given me all this information and everything's come to a dead stop what's going on and that's when i began to be concerned and then that's when i began i said you know it's now it's becoming important that some other people know what was going on as the silence turned from days to weeks he finally decided to tell his wife and closest friends just what he'd been doing were you aware of the security
(33:57) implications i was quite aware of what could happen but i was also aware that these guys would go to any extent to keep their secret and certainly not have someone that was on the inside running around and i didn't think it was beyond them at all to make me disappear whether i mean who knows i know it sounds more like a movie but i didn't think it was beyond their capability to kill me just to stop the uh the word from getting out bob knew the test flight schedule for the discs and took his wife his best friend gene
(34:32) huff and another friend john lear out to the desert near the base on a wednesday night in march 1989 [Applause] [Applause] overhead 300 miles so it could be anywhere yeah yeah well that sounds military to me yeah yeah i bet you that's that's what this is oh you see that oh yeah what was that did you see that light just come on over there i was looking right at it let me check it out right above it was a meteor too no there's a steady light no the steady light just came out no this one right over the range here
(35:32) it wasn't there and then i was looking right there and it blinked on very bright that's brighter than a scar huh doesn't look like landing lights oh interesting yeah yeah he's coming at us what did you see when you're out there shortly after the flight time that i had recorded um uh white light came up well not a white light it was actually more of an amber light uh came up off the ground and hovered and then we do began doing radical step maneuvers and darting from one side of the sky to the other
(36:25) doing some impossible flight characteristics do you think what you saw over the desert that night was an alien spacecraft could i identify it as an et craft without bob's health no it would have been a and you know like i said an olympically shaped saucer doing you know uh just doing moves that we're not capable of but i could not say that no this wasn't some advanced earth technology that would be a ufo it's not blinking it's not conforming to any sort of faa lighting regulations and there you're looking at it
(37:07) that's like a typical ufo if it was red it would be real typical because that's what most people report there's red lights like that that are solid colored i

don't think that's landing lights because it's curved already and we're still looking at it looks like he's curving back here he comes that is a typical military ufo there you go this small group went back to see two more wednesday night flight tests but on the third trip they were spotted caught and arrested one was taken to indian springs air force base and
(37:52) interrogated that interrogation was about as intense as you can possibly get right stopping short of shooting me in the head what were they saying to you everything up to and including that you know we can absolutely kill you right now and there'd be no one looking for you at all and i mean they they uh everything they threatened my wife they threatened to kill my wife they they stopped they said they'd stop but nothing they said they thought they made that very clear they couldn't believe that i had taken anyone out there to show them
(38:25) that much less left with information like the flight test data and i wanted to know what else i had said who else i had told specifically they were they were crazy they really were they were completely out of control after this interrogation at indian springs air force base bob says that he was put under constant surveillance by security personnel his phones were tapped his movements were monitored and he often found his car followed by military helicopters worried about what might happen to him and angry about how he was being treated
(39:10) he decided to hit back and approached a local tv station about an interview i thought if i did an interview in silhouette it would be kind of pushing back a bit or say you guys stop and not saying too much but just saying enough just to to let them know that i'm pushing back a bit and then lay off or you know it's going to get worse it was really the only thing i could do did you get any calls with the military or from former workers to say what the hell are you doing right after the interview aired dennis
(39:48) mariani who was my supervisor called and all he said was do you have any idea what we're going to do to you now and that was the end of the phone call that was the last well really second to last communication i had with him and um you know then i decided well you know that's it and really just said everything that i had seen and done and just wanted to divorce the entire [Music] situation [Music] [Music] even now more than 20 years later the
(40:54) jury is still out on bob lazar and his claims about his workout at groom lake it's a fascinating story which he's stuck to for more than two decades and although many dismiss it as pure fantasy the fact is that some of his credentials did check out in addition his former employers and even the tax authorities were caught covering up and refusing to release information on him why would they do that unless there was something to hide one thing is for certain if he is telling the truth then we're all in for some shocking
(41:36) revelations in the decades to come is the government ever going to say you know we've been lying to you for 40 or 50 years not a chance i believe they'd stage an event that is much more like what they do they'll take a big cargo plane or c-130 or something take one of the old discs that they've uh you know analyzed time and time again or and finished with go up to a high altitude and push it out the back and then go fly away and say oh look the first disc is crashed you know here's a flying saucer i mean i i can almost
(42:08) guarantee that's that's the route they'd take something on their radars on the other certainly there are a lot of questions about bob's background that have not been satisfactorily answered but there's too much that bob knows i think that couldn't be explained any other way he knows about the layout of the base he knew about people who were involved in security checks he knew when and where the test flights were going to take place because he took people out there three weeks in a row and they videotaped the tests
(42:38) how did he know this stuff if he in fact did not have some kind of inside knowledge do you think he'd make a good uh conduit of information i mean essentially a patsy yes i do i think it's quite likely that lazar was set up perhaps to knowing that he would give out this this information it's likely to be a very long time before we discover what is actually being done out of groom lake now they seem to wait anything from 15 to 20 years or more after something has been retired before they acknowledge its existence
(43:22) this airplane was built designed almost 40 years ago forty years before that the hottest thing flying was a saversky p35 three years before that it was a balloon so the technology technology has not stood still so it's a very good possibility that we are looking at man-made transportation for the 21st century uh it's it's been so hopelessly polluted that i i'm not sure where we will ever get to the bottom

of the story and that's sad i suspect that whatever was out there discs alien or not had now been moved to some
(44:00) other location and we may never find him again there might have been reason 40 years ago to believe that people couldn't handle the idea of alien visitation i don't think that's true anymore i think we're far more sophisticated now do you regret having screwed up at s4 and taking your friends there and blowing your security cover because you could still be working on ufos today uh yes and no yes at times i'd like to be able to go back in time and and played along with the game and not have done anything and and perhaps to
(44:43) this day still be working on him because i did feel privileged and it was fascinating work once you can get around all the uh you know oppressive military security uh and you know maybe we would have stumbled on something and yeah it would have been fascinating i thought ufos were pretty much a figment of someone's imagination i didn't believe in them i wasn't interested in them of course i'm not even interested in them now but i certainly do believe in them now you

bob lazar, Q&A at the international UFO congress, february, 21st (21-02-2015) - YouTube
https://www.youtube.com/watch?v=SSXTlpnCCvo

Transcript:
(00:01) [Music] oh contrary to what contrary to what bob is worried about we're going to have some fun here today geez he was just here like 1990 it was like yesterday yeah uh i thought maybe we'd start with a couple of questions sort of that let you get to know bob a little bit um so they they played one of the great super bowls of all time last month which of the teams did you like really we're going to do sports questions i don't even know who plays that's right you don't uh tomorrow tomorrow is the oscar
(00:51) broadcast who would you think is the best picture now yeah i have no idea because you don't watch a lot of movies right yeah breaking bad or sopranos which of those series did you like best yeah yeah you're just not on my channel because you live what i'm trying to convey is you live in bob world right right what do you do tell them what you do now i know i live in a scientific bubble that's just about it i mean you know it's uh my my work is my life whether i'm working or having fun it's
(01:23) pretty much the same thing so it's i don't know i pretty much do the same thing where you live and what you do your business i unfortunately live in michigan and i'm glad to be here yeah i would really like to be back here but um yeah the business is united nuclear scientific we sell uh and build lots of uh scientific equipment and supplies apply it to schools universities the government you know everybody we also do contract work we do r d work design construct prototype gadgets weird things for different
(01:58) companies if they have a problem or something they're trying to solve they'll come to me and just say make this work and you know so we do but the bulk of it is really just selling scientific equipment and supplies and you know trying to bring that back back when i was a kid you know used to be able to go into a uh hobby store and buy chemicals and have a chemistry set now if you see any glassware in somebody's house you just think they're cooking up meth or something like that so you know we try to change the tide and
(02:27) bring back hands-on stuff into you know the current generation that's one of the stories told about you right that you had a meth lab among others oh yeah that's true yeah i forgot about that um do you have any government uh contracts we do government contracts um you see where that could go people aha he's working for the government they're paying them off he did his job spread this information now he's he's working for the government you're not working with the government no i don't work for the government but
(02:57) you know if there's contracts i bid on it and you know every faction of the government doesn't know what the other one's doing it's it's a complete mess i want to give them an idea you know the question is raised you're not a scientist what kind of scientist are you and i haven't been to your house in michigan but the last time i visited you it was in new mexico and there was something built in the house the building right behind your home it was as i recall a 30-foot particle accelerator
(03:26) yeah you built it yeah what did you do with that what do you what do you do

with your home particle accelerator that's 30 feet long well at the time um you know working on an efficient way of storing hydrogen for you know automotive use so it can be used as a fuel and some of the most efficient hydrides materials that absorb hydrogen like a water like water like a sponge absorbs water were restricted because they are used in thermonuclear hydrogen bombs and so you couldn't purchase these materials but there was kind of a
(04:04) loophole in the law where you could make them so i had to make a particle accelerator to make the material to use and run tests on so that's what that was all about you moved to michigan in part because you thought that you were going to have some help from state government with the system right the hydrogen system yeah kind of i mean a lot of things changed i mean we moved to partly because of you know family reasons out there and just to get a change from the southwest which i regret and uh um you know yeah there was a a lot of at
(04:37) the time there were a lot of unemployed auto workers and we thought you know we can hire those but you know a lot of things happen the recession happened and also at the same not the same time but around 2008 or something the uh chinese who at the time were making a lot of the rare earth elements because they did it cheaply and the us mines had shut down years beforehand uh decided boy now that you know we pretty much control the market on it we're going to go ahead and crank up the price you know 10 or 100 times what it
(05:09) was and it really made what we were doing impossible to do profitably so you know you you your business is science related you sell scientific equipment you build things like a particle accelerator and jet car engines and things of that sort but i i think if you heard me talking earlier you'd have to agree with a lot of people that you don't fit the mold as a typical scientist i mean you're not a member of any science organizations are you no no no you write papers you submit papers to i mean not not typically not
(05:38) in the not in the normal sense i mean you know the when i first went to los alamos what was really annoying to me was that the boy that the typical pompous self-righteous scientist you know and they would come into town and uh you know interact with the ordinary people and you know use terminology that was over their head just to get them to say well what do you mean by that and they chest would puff up and that you know it boosts their ego and it really annoyed me so you know when i worked there i relabeled some
(06:10) you know important equipment whirly gig or something along those lines and it you know it really pissed them off and um you know it was really just uh but to make a long story short you know i was the new guy coming from the west into the you know hardcore scientific field and it uh you know really i was able to run circles around these guys because they they followed a set path and did a set amount of things their their support teams were were very limited and weren't engaged in them because they had no idea what was
(06:42) going on they never took the time to you know bring these guys in but um i don't know i just looked at a looked at things from a different point of view and i simplified things so explaining technical matters on a simple level and i do that a lot and people say well boy you don't talk like a scientist yeah i'm trying to make everyone understand you know but um and and it works you know if you if you talk on a a simple basic level everyone is going to understand what you're talking about it's easy to talk
(07:13) over everybody's head but all that does is make you look like an idiot you know when i first met bob uh i remember going to his house and there was a a skull and crossbones flag flying over his house at the time he had this giant jet car parked in the in this in the driveway he had these videos that he shared with me that we used in others reports where it's a lot of machine guns he had a lot of really interest the kinds of interests that you don't associate with scientists i mean you heard my comparison to edward
(07:42) snowden i hope it didn't make you uncomfortable but i mean he's it's sort of the same vein there was a guy who had no academic credentials he didn't make it through high school he took online hacking classes he worked as a security guard the next time they hear from him he's working he becomes a computer expert for cia and nsa it sort of fits the mole he doesn't fit the mold in the same sense that you don't no but if it's the new mold you know he doesn't fit the old mold just as what we're we're used to seeing
(08:10) but i don't need a degree no no no they're looking for i think they learned a long time ago that they were missing a lot of creative people and people that would think outside the box and if you really want to move forward that's where it

is especially with computers oh yeah no no doubt yeah that's right let's get to flying saucers um you got hired through eg to work for the u.
(08:33) s navy yeah you remember day one first day out there you know first day out where stay out at the at the facility well the first first day the first day was going to you know area 51 proper and signing all the agreements and doing all that stuff signed agreements what kind of greatness did you say it was really paperwork and going over you know exactly what i was going to be doing and it was a lot of security stuff i mean they were questioning you know my family where we had moved it was you know boring nothing they had investigated they'd been around
(09:06) talking to everybody you knew yeah yeah clearly and because i already had previous security clearance um you know it made it a little earlier as opposed to somebody starting from scratch which typically takes like 13 months from what i understand to do a top secret or civilian queue clearance did you have the clearance that you needed to work there when you started working there or did that no no no no i just had a convenient starting point where you know they didn't have to go back to the day i was born and
(09:31) you know verify that they go okay well he had clearance here and we can go from there so you get on the plane in las vegas janet plane yeah right fly up there they put you on a bus with the blacked out windows oh yeah when we were going s4 right yes so that you don't take you landed groom like that at 51 and then sign some papers yeah if you want to make it a short version yeah right um you had told me the story that they started showing me these briefing books that sort of laid out the general story was that it at groom
(10:01) or was that that was at s4 no that material would never get north of the people who say i never heard any of this stuff there is no flying saucer stuff at 51. no that's uh like 51 is uh it's a there's lots of people working there it'd be hard when i worked at s4 again i have no idea how it is today but you know back in my day at s4 there were 22 people that had clearance and knowledge of the et material et crabs that was it we were given the list we knew the names on the list that was it i still know that
(10:36) the names on that list today and those are that some of the things that i never say anything to you about because yeah why is what well exactly there has to be some stuff i keep to myself because you know how many times people said yeah hey i worked out there with bob and so on and so forth really who are you what'd you do and whatever and it's only the stuff i said i'm waiting for the guy that says hey yeah i worked out with you and here's some of the other people on the list or we did this or is that so
(11:04) it's if i don't keep that stuff there's nothing i have to verify if some other guy comes up to me you see it all the time though don't you i mean imagine you get emails all the time or or you read stories or you hear claims on if you watched television you'd hear it that is uh about people who claim they've been out there and obviously they're making it up well i mean the most recent was this uh bushman i think it was like yeah like the cia guy or something like that was it was the anonymous guy who had he was
(11:33) dying or he died yeah and a lot of people asked me hey do you know and i he was apparently very supportive of me and uh but i never heard of him and what am i going to say i i've never heard of the guy and never seen him back to day one you're you're at groom you take a bus to escort a papoose yeah it was an old bluebird school buzz but navy blue how did you know it was called s4 did you read that on something that was just what they said that's what they called it did you ever see it written down on that
(12:06) yeah and and it's an s and a four or s-4 or s-f-o-u-r or no it's a new numerical form okay and so you get to s4 and you see what describe what you saw well the first time i went we went around it's kind of hard to describe there's a little mountain or rise whatever that that ends and the first time i have to admit i didn't notice it that we just drove around and i thought it was just a flat part of the mountain at the very end is an entrance a flat wall with doors and that's where we parked we went in
(12:43) and that's the first time i went into the facility at all that's where i was taken to the medical facility that's where i was given the briefings initially and it was it was until the second time that i was taken down there that we stopped in the middle because the side that i thought was flat was actually hanger doors that were you know really cleverly blended into the side of the look like desert yeah yeah great job when you're inside can you see all the hanger doors or you can only see all all nine of them

(13:19) or whatever it is that from outside what do you mean when you're if you're inside looking in one hanger can you see all the way down see all of them see more or is there separated yeah there's there's inside each hangar bay there's you know if there's the big door that goes to outside inside on the sides i guess i could use the white board there's um oh what the hell okay [Applause] all right this is gonna be a tough one okay so you can't see it i can't see it all right is that making any sense so there's uh
(14:14) the doors here where this is you know papoose lake the main doors here roll up however inside there are regular doors and on one occasion these doors were all open and when i came into the came in through here on the first uh well i think it was the first time they showed me well there's the craft in here um these doors were yeah these doors were all open and you could see that there were different craft in each case so those are the doors i'm talking about let's talk about the worldly gigs or whatever you want to call this so
(14:51) talk about the first time you saw one of them the first time i saw one of them was the second time i came in the end the last bay door was open that was the sport model that was sitting in there we pulled up we stopped instead of going around in the front normal entrance we went in through you know the big bay door you before you who had seen these posters you described that were on the walls yeah yeah they're here posters described but yeah they went through the trouble of actually making uh a picture of the
(15:28) sport model that was lifting obviously off of papoose lake because you can see the the background there and it just said they're here and it was it was like a commercial poster i mean they looked like they were lithographed i mean they must have been printed on site they wouldn't have done that out there but somebody's idea of a joke yeah it was good to see that that level of i don't know lightheartedness out there first day you get a look at the sport model what are you thinking to yourself oh my god what are you thinking no it
(15:55) was flying saucer did not alien flying saucer did not enter my mind it was it was exactly the opposite that uh well this explains all the ufo sightings that you know we have some field propulsion technology it has to be in this you know shape or form you know flying saucer type and this is what people have been seeing for a long time thinking that they're alien craft and it made perfect sense to me it's like great i'm i'd really like to be part of this project advanced propulsion this is dynamite so i was excited to be
(16:25) part of it in fact when we went by it um and i think i'd even mentioned to you it had a little american flag stuck on it and i dragged my hand across it and you know it felt like get cold so i just assumed it was metal and got yelled at immediately you know don't keep your hands at your side walk forward all right you're thinking to yourself oh man i'm i am part of the coolest inside history because we've got flying saucers that we'd made and we're playing a joke on everybody or like no i wasn't really
(16:53) playing a joke it was that you know this is cool technology and by at any time we feel like we can probably just take over the world america you know and that was that attitude so at what point do you realize we didn't make it how did you learn that is that the briefing books well yeah the briefing books just did not make any sense we started into you know that uh that actually you know predated seeing that and i i really don't know that the briefing books covered a little bit about a lot of topics and it
(17:26) it dealt with uh you know analysis of it was all about engineering material analysis of metal you know power systems and the way things were even even the way things were laid out within the craft and um again it really had me confused going is it it was so far beyond what i was expecting is this this is this some kind of test or is this actual material so it just you know i thumb through everything and went okay and just went on it from there but it really didn't hit me until i went in i was introduced to my working partner who was
(18:06) barry castillo or whatever i pronounced his last name and the way they worked there was everything was very compartmentalized so everybody had a buddy to work with and that is the only person you can talk and converse with and bounce ideas off of you can't talk to anybody else in any other group you can't you know even if we go sit and there's a bunch of other people around you can only talk to the guy you know your buddy they called him so anyway so he was my buddy and um when i the first day we went in there he
(18:38) was excited to show me everything and it seems like he had been alone for too long he was uh you know he was you know really excited that i was there and um i

was kind of picking up on his enthusiasm going well he said boy you are gonna just die when you see this and you know and um you know one of the first things he did was you know fire up one of the the reactor that had been taken out of the crowd that story um the reactor is a it's a small device it's probably you know just roughly a foot square with
(19:14) a half a hemisphere on it um half a hemisphere i'm sorry um anyway so there's really nothing there the the top comes off and there's like a little tower on it um it doesn't draw it oh this is my eraser here did you see the drawing in the back no all these guys can't that's not fair don't screen was anything about the this in the briefing books about how this worked you did read about this before you guys there's very little about this essentially you know for size comparison half a
(20:18) basketball on a plate that was probably not a whole lot of moving parts nothing no nothing i mean it's just incredibly simple there was there was nothing there that could that could do anything for and it was too small to hold any large power source right so what'd they show you anyway the the top came off and uh he put the top on and then he said go ahead and and grab the sphere and as my hands approached it i couldn't touch it which was uh fantastic and if you ever played with magnets i'm sure everybody has
(20:50) you take two like pulls of a magnet and you can kind of feel that balance it was exactly exactly like that but it was my hands they weren't magnetic and he says you're feeling a artificially produced gravitational field and that really floored me and you know that i began to run through in my mind how can this be a joke or faked or there's just there's no way and um that that's the first time that it was kind of a domino effect than what i had read in the briefings and going these guys aren't kidding this is
(21:27) unbelievable let's go back to briefings for a second and then we'll come back and you can tell us a little bit more on how this operated in the briefing books you see the craft described and then you get into some more exotic stuff that you really you had to wonder are they messing with your head alien stuff yeah there was it was a one and only um briefing whatever you want to call it uh or an overview of the it was split the the entire program that was split into individual projects and um you know each had an overview
(22:00) of each project and each group got an overview of all the other projects in case there was some connection to what they were doing but it was clear they didn't want everybody to know everything and although the military loves doing that it it really really screws up trying to move forward and and too compartmentalized it's insane but they really enjoy that but um anyway the only thing that dealt with any kind of you know biological yeah it's essentially what you'd call them there was just a view of
(22:42) of a creature and like closest estimation i can give you is a gray because it had a head with a large eyes but uh what they were focusing on was a t-cut in the chest and it was one large organ and the comments were about how um it functioned as a a liver a lungs a heart as if all organs had grown together or evolved together where it was just uh i don't know when all purpose internal organs yeah i guess i don't really have a analogy for it but um that was it and they were and the uh accompanying photographs were
(23:20) that was the um that organ removed it was sectioned it was showing the different chambers there were indications of it there were the weights of the different pieces that they removed so i again i don't know where the thing came from you know where that this was just a briefing of something else but it was uh you know there's nothing in the briefing book that says this comes from explanation and you're wondering yourself are they messing with us right are they messing with me are they testing right i mean
(23:47) well it really didn't it it really didn't hit me at the time uh it seems they wanted me up to speed really fast to where they were skipping too many places to make me feel comfortable um you know at the time i didn't realize that everybody got these and you know the people that dealt with the biological connotations of everything were getting metallurgy reports and again it was just in case there was some connection you know you could kind of raise your hand and say wait you know this thing might relate to
(24:19) us in some way did barry or anybody else tell you why they wanted to get you up to speed so fast were there some urgency there or were they just tired of not making progress or what was it that was never really clear i know there was some accident prior to me being hired and um you replaced somebody who yeah i replaced somebody somebody was was killed and it was playing with the reactor and you know

they said well we're going to be working on the reactor well you know um but so yeah there was obviously a lot of caution being taken
(24:50) but i from what barry said and what dennis said who is my immediate supervisor was that you know they were trying to make leaps and bounds way too fast and you know i was certainly not planning on doing anything like that especially hearing the news were you thinking yourself i shouldn't be here why they got me here yeah yeah yeah please there's a billion people they could have hired you know that i thought would have been uh you know a better choice for that but um they were they really wanted somebody it seems like they were
(25:23) stuck and they wanted somebody coming from left field with just new ideas just get us out of the rut and just move something forward yeah well they get the right guy the mayor i feel like i don't know um if that's the way to do it let's go back to talk about the reactor so he showed you with this experiment in your hands you could feel it's a force field and how they faked that if they were faking it is amazing no i don't think you can then you saw some other stuff the golf ball yeah demonstration tell me that story
(25:50) tell us well that wasn't really supposed to be a demonstration but um well in some way it was and you know once i said that's that's unreal this is a gravitational field and you can see that you know it's extremely strong by it and it tapers off and you know it's following the inverse square law which is you know uh the gravity radiation uh the the inverse square laws essentially you know uh the uh amount of energy dissipates really quickly as distance increases so um you know it that was immediately
(26:29) noticeable to me and he said well check this out and you know he had a golf ball and he you know winged it at the thing and it bounced off the field coming nowhere close to the the reactor and you know we have those ceilings suspended ceiling tiles in there and it knocked it out of place and you know he flipped out and said you know you know dennis is going to be back in here to jump up on there we're trying to arrange stuff and you know fix the thing and he's knocking the reactor around and going oh man it's my
(27:02) first day you know don't screw everything up so and i'm taking the dust off the thing and but the second we finished you know dennis walks inside and is how things going she's great you know so yeah so it was uh something it's day one you've read this interesting briefings you don't know quite what's going on you do see this technology it's damned amazing what is your job what do they tell you you're supposed to do the the bottom job is not to figure out how this thing works or you know let us know what this meant
(27:36) is just can we make another one of these so just let us know if you can can we duplicate it can we duplicate it like it it doesn't have to be exact but find out how this thing works if we need to make something that's bigger or do it just but we want more of these things and just do it right now so that was it and the answer is can we i mean can we no no no no no no we're just not not even in the same ballpark is it because of materials or we just don't understand yeah it's it's both look this is like dropping off
(28:12) an iphone in the wagon train days and say we're gonna need more of these you know [Applause] did you uh did you ask anybody hey where do we get these where did these come from no i i really there was so much other stuff that was flooding my brain that was just amazing and uh you know i was so excited to be there i didn't care where the thing came from it's you know it was beginning to trickle into my mind boy this is maybe what you know flying saucer crashed in south africa or something we got it and
(28:50) we're taking it apart this is great you eventually saw all of them or you saw glimpses well when i looked through the doors i could see as far as you could tell they looked they didn't look like they'd been in a crash right well there's one one there's one and i mentioned this to along to you a long time ago and i i never added this one thing which tell that now there was one like i said that had been shot with a projectile um and i know for a fact it came out of the water that's all i know you know what for a
(29:22) fact because that's what you were told yeah that occasionally a it's hard to judge from distances you know like from here to the exit sign how big is that but i'm guessing it was what uh maybe a nine inch diameter hole the sport model no dents no scrapes no it looked like it came right out of the showroom and it looked like the billy meyer beam ship yeah from the pictures i've seen of the billy myer one which you know looked fake to me but no there it is i'm sure the billy meyer people are

(29:54) happy about that but i mean you you know there's a lot of people don't take that case seriously and um it's either the most amazing coincidence incidents in coincidence on the face of the earth or something really did happen to that guy billy meyer so the sport model you called it you had names for all of them yeah yeah give me some other names well there's one that looked like the top hat and one was obviously a jello mold and i you know but it was they were just silly names because we were talking about them and you know
(30:21) they're talking about bird six and i'm like what's that is that the jello looking thing you know so i gave them my names and they stuck with them like they did in los alamos um so the sport model you got to know that one pretty well though you got to see yeah it's the only one i i can say i hands on i touched i walked in you know that i can say for all the other ones could have been holographic projections to fool me but um this is the only one i know is real before we talk about the test uh one other thing about the reactor and
(30:50) i want you to use this example to sort of explain how it worked you had told me a story about uh a candle and and yeah flame that was basically frozen tell me that story and why it gives us an indication of how this thing operated what power it had well when we had you know after the golf ball incident there was the benches we had set up the reactor was not the only thing in the craft the reactor sits in the center on the level underneath there are well i should say the reactor surrounded by the reactor there are three gravity
(31:27) amplifiers as they were called directly under those there are emitters which are um oh probably like 55 gallon drums there are three of them they hang directly under the emitters and apparently the way the device works excuse me is reactor supplies the base gravitational wave and power to the amplifiers which channel it down to the emitters which propel the craft so in addition to the reactor that was out of the craft one of the emitters was also on the bench now i don't know which craft this came out of it was not out of the
(32:07) sport model but they had the reactor operating and the emitter and barry had taken a candle and put it about well i'd say about two feet from the end of the emitter and lit the candle and he fired up the reactor and he said go check out the candle and the flame was there but it wasn't moving it was like a picture of it it was just frozen and now that makes you think of a lot of things oh boy if it's we know gravity and time are interrelated and you know one is essentially the other and fine if gravity
(32:48) if it stopped or slowed time down there how are photons still being emitted so we can see the light it should just go black um you know there a lot of things made absolutely no sense whatsoever with the science we're familiar with but um this is these were just things he was showing me as a demonstration that uh you know um you know properties and what it's doing that are just so far beyond what we even know what's going on and this had nothing to do with the work i mean we're uh we're just supposed to make another one
(33:25) of these things somehow so you know so help us understand what this technology means how advanced it is you know it becomes obvious at some point it's from somewhere else we didn't make it because we're taking it apart to figure out how it works like a machine that makes gravity is the most important thing that mankind could probably create look we have electromagnets that make magnetic fields you know we can make electric fields we you know with van de graaff generators and you know god knows what else but you
(33:57) know to make a gravitational field is like the the last piece of a missing pie because when you can our right now the only thing that makes gravity as far as we know is mass you just need a bunch of stuff and it's a property of mass that it just magically pulls in things you know we observe gravity we see what it does but we really don't know what it what it is we can throw some equations together and say well it works like this but we really don't know what's behind it but if you can make a machine that on demand makes gravity
(34:30) you know all the stuff we write science fiction about stops becoming science fiction that afternoon in force fields become a reality you can shift time i mean everything becomes possible it's uh it's it's the most important thing and here is an operating machine sitting in front of us that makes gravity and do we really want to be able to make one of those things i mean you could make impenetrable fields you can do have propulsion that uh is mind-boggling as the crabs operate it would be the ultimate weapon
(35:07) well not just the ultimate weapon but it would really be the ultimate thing it would it would catapult mankind forward and what really sucks is the military is

in control of this i should i neglected to mention this during my presentation but bob and i have talked about before guy named ben rich who jim goodall knows and interviewed several times ben rich was the head of the skunk works which was the they operated things at groom lake and uh and had been there to develop the u2 and sr-71 and stealth if anybody would know about advanced
(35:48) technology it's him and kelly johnson so um a lot of people have speculated whether ben rich and those guys had incorporated alien technology into some of the advanced airframes that we've got and i even had a chance to ask him on the day that the stealth was unveiled out there at nellis whether any alien stuff was in there he said no but other people have talked to him jan harzan who's here from mufon heard a speech that ben rich gave at ucla and which he basically said we now have the technology to take e.t
(36:17) home we had the calculations slightly wrong but we can do anything you can imagine we can travel to the stars but he said the technology is locked up in black but black budgets and black programs and we'll never see the light of day what do you think about that sort of like the same thing you're saying yeah that sounds exactly like what i'm saying you know i hope that's not the case but i mean how do you pry it out of there it's it's it really there should be a lot more people working on this a lot more
(36:48) people well that that's sort of what why you became disenchanted with it but we'll come back to that let's talk about the sport model a little bit you got to see it fly you got to see a test yeah once well once close up um barry and i were in the lab we were working dennis came in and he said there's a test flight going on bob why don't you come out here barry you can tag along too um and that's when we came in you know side door into the hangar um the craft was already out onto the dry lake bed in front of or the
(37:26) lake bed proper but it was out in front of the uh door and probably about two minutes after i got there the craft just began to silently lift off the ground and there was a guy between where i was standing and the door that had a small desk and there was some sort of transmitter on it and he was just on a microphone talking apparently to somebody in the craft and at the time that again immediately set up a red flag in my mind going that's not supposed to work either there is a craft being powered and surrounded by
(38:06) an intense gravitational field how are the radio waves getting into this thing just it just didn't make sense but again very few things did there and i didn't have much of an opportunity to connect all the dots but um it lifted off the ground silently there was an obvious high voltage corona discharge it was beginning to get a little late but you could see the purple blue glow but as soon as it lifted off you know six ten feet that dissipated and it just moved around and sat back down where it was but it wasn't
(38:39) it doesn't sound like much but it was incredibly impressive there wasn't there wasn't a sound other than a little hiss when it first took off but you know it's a big device it moved around and uh and sat down and i mean i was just i was beaming it was so cool you didn't get it didn't fly off to venus or anything and people no no no no this this is their this is their prized catch here i mean they no one is going out there and taking it out of the atmosphere and risking it i mean it was a big deal
(39:11) um you know like i don't know if they knew how to get it into that mode but um you know like the test flight data that i saw they even uh were very careful on what days to take it above the mountain range where traffic was at low at its lowest in the surrounding area so they were very concerned about who could see what and you know how much they risked the thing moving around but it was it was quite a prized possession of theirs so you saw a reactor up close and you saw the craft inside not only the test but you got in
(39:44) it yeah later on later on it was uh again you know we have to look at at everything we're trying to figure out how uh this device works from nothing so uh and it's technology you know we can barely grasp so uh you know obviously the placement orientation of the components and sub-components might be critical to the operation of it so i was let in uh one time there were several other technicians in there doing their own thing i don't know what they were working on but we wanted to see where the reactor was
(40:19) how it you know how it was positioned um you know where the amplifiers were and this is when you know i described to you there was uh access to a lower level to where the uh emitters were which was a a small hexagon shaped area that had a what i thought was a really creative collapsible doorway and i guess the only analogy is if

you take oh you know a six pack of beer that comes in bottles and you take out the little divider there it's if you stand it up by itself it's really strong it'll hold a lot of weight but
(41:00) you can easily collapse it flat by the side this is essentially a metal version of that and it was in a hexagon shape with a little hole and you can walk on it but you can just put your finger in the hole and pop it and the whole thing snaps over to where you have a you know hole you can kind of stick your head upside down and which is what i did i just leaned in there and they wanted me to see how the specifically how the arms that held the emitters connected to the bottoms of the amplifiers and those in themselves were fantastic
(41:33) technology describe the interior what it looks like it's very very bland if i uh again was to give you an analogy i would say it was if you put all these components in there pretended everything was made out of wax heat it up for a bit and let it cool off there was never a sharp angle anywhere anytime something sat somewhere perpendicular to it it had a radius of curvature to it everything had a smooth curve everywhere it was all one color um was it all one piece it it looks like it was one giant injected molded
(42:10) thing but there was not there was not a seam there was not a rivet there was not a fastener it was just all there any buttons any no place to put in the key no and there's no wiring [Music] you mentioned about i'll use the term furniture because you've got a lot we both got a lot of grief yeah furniture yeah well that was because i was you this was i think the first interview on tv and i was well i was frightened for a couple of reasons first of all i wasn't supposed to be saying anything and the fact that it was on tv
(42:44) and i didn't know what kind of big mistake this was and um so you asked me what was inside or described and i was trying to work think of the word seats and i couldn't in a million years get that out of my mind and all i could say is there's furniture in there and i know it sounded ridiculous and everybody said well that guy can't be a scientist he doesn't even know what the word seed isn't you know it's just stress does that to you it was the size of it though this small yeah it was yeah well yeah that's
(43:14) that's that's quite a critical point everything was very small it looked like uh well maybe that's where the it popped into my mind because i was thinking of uh you know the children's you know furniture set or tea sets you get for little kids that have you know the little molded chairs and little tiny but that's exactly what it looked like it looked like a little furniture set for for kids so um and obviously it was uncomfortable to walk around and when you first come in the side you have to hunch over the only
(43:42) place you can stand up comfortably is you know right by the reactor in the side so whatever built or used the thing was obviously smaller than than my stature i'll come back to the term the kid so somebody did the test somebody was in it they must have figured out a little bit of how it operates yeah obviously and in the sport model the one that i went in they removed one of the uh amplifiers which was really shocking to me um none now the reactor and emitter all those were in that one so these must that must have come from another craft
(44:20) which made me at least partially to believe that these all may have the same power systems in them which you know really makes you think that's so the one you had in the lab that you were working with yeah the components had to come from somewhere that was in the in the sport model yeah but wasn't the smart models so at uh you know you can extrapolate and say yeah it's kind of like a chevy they all have the same kind of engine and they're different uh but i don't know it's all conjecture
(44:54) let's talk about the fuel so big um it's an interesting part of the story and a bone of contention for a lot of folks element 115. how did you know it was 115 describe its properties describe its property right what does it do what what why is it so miraculous well i it let me put it this way the uh we weren't given the task to say you know analyze the fuel find out what it is and you know they just again the thing was and there was a lot of push to it was to what is that and do we have any and um you know that's that's it and
(45:30) these guys really do talk and think like that it's just you know what did you guys do today we just looked at this the other day but um you know i mean we if you remove the top of the reactor there's a little tower in there with a cap and there's a triangular piece of fuel in there what we call the fuel because if you put that in everything starts to work we analyzed what was there now somehow again we didn't have access to all the information but somehow los alamos had something to do

with either keeping or storing the fuel
(46:10) now it's we did all kinds of tests on it not just us we had a center all that equipment isn't there we don't have you know all kinds of interesting spectrographs but um we had it tested and we just wanted to see where this was on the periodic chart what kind of peaks we get off of it and you know maybe it's just you know a unique fuel maybe it's just some you know blend of a nuclear material but when it became obvious that this isn't even on our usable periodic chart you know that's that's essentially where
(46:43) we stopped you know and said we weren't going to analyze the material and see if we could make it we just wanted to know if it was something that we could possibly use and it wasn't you told me that we couldn't make it why why couldn't we make it well just like any heavy element or super heavy element more specifically um you know the only naturally occurring heavy elements uh uranium i mean as soon as you get anything heavier than that you know a larger number of protons you have to make artificially and that's
(47:14) that's a difficult job because you either like to make plutonium which are country loves you know you have to take you know other materials put them in a reactor let it run for a couple years and then you can in the case of plutonium you can chemically separate out you know the small quantity of that now even heavier elements you have there's more difficulty obtaining um you know extremely heavy ones like 110 you i mean you have to make that on an atom by atom basis an accelerator where you're you know
(47:47) slamming accelerating single atoms or beams of other atoms uh you know near the speed of light smacking them together and it doesn't make a usable quantity i mean you may get the interaction you want and it flies off and hits a detector you know in a fraction of the speed of light you go that was 115.
(48:08) and you know that's when they say well you know we synthesize once that's what it is it's not like a cup pops out and we've we've got some you know it's uh it's just uh you know a particle comes flying out and we go well at these angles at this magnetic moment at that speed it will be 115 and if you get a peek at that you know boom it comes off it's a little display on a thing and right we we made 115 but you know to actually make usable quantities forget it would take you know the entire reese's or the resources of a country
(48:38) forever you know to get a gram or so how much was up there well they say there was 500 pounds of the material now was that recovered in a craft was that separate they certainly didn't synthesize it but you know where it came from i i have no idea but but again los alamos had something to do with it because they they renamed it la 1000 i know there are shipments back and forth there but i i think it had to be from what i understand it had to the if you assume a cylinder of this material it has to be machined into a cone
(49:16) and that cone sliced well it has to be stacked first like a bunch of quarters stacked on top of one another then machined into a cone and then sliced to be usable in the reactor now all of that had to do with the metallurgical guys and we weren't even allowed to know why but i knew that was necessary for whatever it's worth reactor doesn't work without 115.
(49:40) did you ever do an experiment to try some other kind of fuel no no i mean i mean quite honestly we really didn't know what was going on there i mean we had a basic idea of at least we thought again we just had a report to what was going on so it's not like you can ever say you know we really don't know we've been working on this two weeks you better come up with something so it's uh you know like we think it's a we think it's an accelerator and you know we we've identified that that's
(50:09) you know 114 115 160 it looks like it's 115 it's an element and you have to explain this stuff to guys that absolutely have minimal scientific background and just try that when you're dealing with stuff that's not even you know from the earth so how does it work i mean yeah how does it work um what you learn you get a piece of it a triangle it's in the and and how does it function really you just put the i wish i had that model that yeah it's in my car show me is it really okay um you you just put the the fuel in there
(50:47) you there's a there's a little cap that sits on top and then as soon as you put yet nothing happens but as soon as you put the lid on it turns on there's no on switch yeah it's just it's like it attains resonance or something it just is on which makes you wonder how does it work in the craft because no one's taken the lid off because in the craft it sits on the ground and there's a conduit that sits over it and goes to the top of the craft so but it's not clear how anything works in the
(51:16) craft and it generates gravity oh yeah yeah it generates its own graph

artificial gravitational field and that lifts the craft off the ground we've had conversations uh in private about how this accounts for some ufo cases i mean it it in effect achieves invisibility in a sense you could be saying right yeah absolutely yeah because light it will bend it around there and i'm sorry i didn't leave that i left out that pretty important observation when the craft was up i mean you could walk underneath and look straight up and you can't see
(51:55) the craft until you step to the side and it becomes visible again it's quite it's quite amazing you know so it well it bends it bends light just like uh you know you could see on a hot roadway in the summer time how how heat would affect that coming off of uh you know but here you're you're in a much more controlled situation and the way the shape of the gravitational field the artificial field around the craft if you look at that and then we're able to stand at different vantage points you can just look around it now this
(52:32) isn't something new we know this from you know looking at far away stars uh if they call it gravitational lensing where a star might be over here but because we're looking around another star it bends light and you know but here again here is an artificial source a machine that does this and that's everything but yeah like i said all the science fiction things become reality there's your invisibility cloak there's your you know impenetrable force field here's your field propulsion system and
(53:03) you know here's you're even beginning to tamper with you know potential time travel it occurs to you hey this could work not only in space but underwater maybe that's why the navy's interested in running the program i mean it's odd isn't it that it's a u.s navy running the program out there you know that never occurred to me no i know i swear to this i never even thought about that thing operating underwater i wonder how just fine though i guess i i don't know i don't i mean
(53:32) yeah i don't understand why i wouldn't but um they'd be interesting to see what the water does you had said i remember it i could barely get my pointy little head around it when we were first talking about this but that uh if somebody had one of these and were out in space and wanted to come to earth in essence they're not propelling themselves toward earth it works differently right yeah yeah in fact the two modes that the craft operated on are they labeled delta and omicron configuration delta meaning
(54:05) using all three uh amplifiers and omicron obviously meaning just one and the way the craft would work is let me get rid of my reactor here now i'm going draw a really bad flying saucer all right so normally the um you would have the three amplifiers hanging or the three emitters hanging down in omicron mode a single one would slings swing sideways and you would have the other two sitting like that now what happens is the two that are facing straight down essentially
(55:11) act like a pedestal where they just keep the craft steady the one swung out to the side um creates a gravitational distortion off the edge and these th in in overcurrent configuration these things really fly unstable there they do not look like uh in any sort of high-tech uh technology it to give you an example if you put a bowling ball in the middle of your bed and two feet away you take your fist and you push it down the bowling ball rolls towards it that's exactly how the craft operates it focuses the single emitter
(55:51) and creates a gravity distortion essentially a divot and space time and the craft rolls forward you know in the distortion so that's basically how the thing moves around so and this is opposed to our conventional uh propulsion whether using uh you know a jet a rocket a propeller we always take something and accelerate it out the back using the action reaction principle and you know push forward and these guys are doing it exactly opposite they're creating a distortion in front and you know tucking towards it uh when element 115
(56:27) of course when you're talking about this stuff it did not exist we're still years away from it but you you had told me in that first interview look uh we believe that there was an island of stability somewhere 115 116 somewhere in there uh and and you know maybe someday we'll be able to make it it didn't exist then but they've made it since tiny little piece as you said when that news comes out people say some people said aha bob was right other people say aha bob was wrong because this isn't 115 at all it doesn't
(56:54) behave anything like what you said there's not 500 pounds of it that's for sure so there's not 500 pounds i mean like they had up there we couldn't make 500 pounds of it no no obviously not and well look i mean you're talking about physical quantities and also you know atom quantities from fabricating it but um yeah i mean it is the the island of stability isn't something that we came up with i mean that's

been theorized since probably the 50s that it you know it just looks like in the uh
(57:26) you know physical makeup or just the geometric stacking i guess of protons and neutrons it's certain combinations they're stable and other combinations they're not well it you know it looks like further up in the periodic chart if we haven't ever had anything with 115 protons or something in that range it looks like that might become stable and you know that was actually in our minds when we're trying to identify as that boy this thing is off the charts you know is it are we looking at the
(57:54) island of stability and um i'm beginning to get lost here well where are we going with this the 114 that was synthesized oh yeah so the 115 again you know i think they what did they whack together uh calcium and uh i don't know bismuth or something like that but they did they did a unique collision and accelerators and they made yeah a few atoms of it and they went this is you know 115 and it decayed now obviously this is a stable material but um a different isotope yeah it's like i said there's uh
(58:27) you know we have hydrogen that's uh you know one on the periodic chart just like 115 is 115. it has one proton 115 has 115 protons well there's hydrogen which is protium which we're all familiar with hydrogen gas it's flammable it's stable it doesn't you know decay but there's you know two other isotopes of hydrogen there's still hydrogen it's still element one and you know one we call deuterium has two protons it's uh it's also stable um but it's different it's heavier and
(58:59) there's another one called tritium which is radioactive and it decays about a half-life about 12 and a half years again they're different isotopes they have different numbers of neutrons they have same amount of protons so it's the same thing no doubt 115 has god knows how many isotopes um we know at least one is stable there's probably you know several that are unstable and you know again if they keep playing around with it and i don't see why they wouldn't i'm sure they're going to find a stable
(59:32) isotope and the whole idea of anti-gravity propulsion i we've heard it from scientists that guy does lazar doesn't know what he's talking about that's impossible it violates this it violates that you've heard that you've dealt with it i mean yeah tom was one of the guys that say it violates this you would have said that before yeah yeah you would have said things about ufo people this can't be i mean you were pretty dismissive about which is the way i shouldn't be you know and i i give
(1:00:00) a lot of people you know crap about that too because you know look if you're gonna if you're gonna work in a scientific field you're gonna be a scientist and you know in any capacity the most important thing is to keep an open mind because uh you know look back in time they said you know 30 miles an hour is the fastest a human body can possibly take and that was written as a scientific fact i mean that's what science just believed in and they all agreed on it and you know how many other things are we
(1:00:28) you know they said this is the way it is you you cannot do that you know you have to keep an open mind like flying saucers i used to laugh at john lear and have a good time of it i still do but that's a different story but uh you know but um i have to give him credit you know he was talking about you know they have flying saucers up at the area 51 really john you know just to be an adult now but um you know there's a lot and as far as the technology yeah it violates a lot of what we know which concerns me because some of the
(1:01:04) things we know are laws and the reason we call them laws and not theories is because they've been verified time and time again you know with experimental proof and you know that's supposed to be cast in stone so you don't want to see anything that violates the law do you see any aliens up there i know several of the people who submitted questions wanted to ask about aliens i mean the only you did see you know this this came from yeah now the diagram you want to we call that seeing an alien the only other time and
(1:01:37) i know it's because this one incident i told that one time i was being let in and dragged my hand across the craft we went in that door there's a corner to the right and you immediately turn to go to the labs well as you turn to the right there's a door and it has a small you know window on it that has the little wires running through it i peeked in there as we turn the corner and that's when i saw i i told you this before there were two guys there and a little tiny thing that they were looking down at
(1:02:12) you know and and i just walked by told to keep my eyes forward and you know i i think i told gene that and a couple other people and i said well you

probably saw well not the gene said that but you know what you probably saw an alien or whatever i don't think that was the case i i think even to this day i think they they had a little doll or something because they were trying to find out you know whatever size creature would fit in the craft and you know you recognize the term the kids did you ever hear the term the kids
(1:02:40) yeah and that's referring to the creatures that ran the craft so they called them the kids wherever these craft came from but you never got an answer how we got them no that was just incidental talking that you know had nothing to do with me you know you've heard all the stuff over the years they of those who don't believe your story they believe you're either making it up or it's disinformation that you're working for them out there that's spreading the story so you're making it up no no
(1:03:12) no really no i'm sorry that's way too much for me to handle um no really i don't and i know look a lot of people are into you know ufo stuff and i just kind of exploded onto the scene and said hey i don't follow ufos i don't follow reports i don't know who's researching what i don't know the names of people involved and um but on the other hand you know i know people make their living doing this sort of thing and um you know if i just pop in one day and say hey this happened to me i did this and this
(1:03:47) and this but you know i'm i'm out i'm not part of this i can understand how that can interfere with their you know income stream or their belief system or whatever and they need to attack me but like i'm saying this what i said happened absolutely happened period that's it you know i've been speaking about you for a long time a couple times a year i'll go explain the story from my perspective and and defend you because it deserves to be defended and i believe the story as as it's been told
(1:04:29) but you know you go out there and you hear all kinds of of crazy theories about uh what you're doing and who you work for and everything and and um there are those who have a lot of trouble with it i can understand that look if the tables were reversed i honestly could not say i would believe my story look there's not enough i can't provide enough information and so in some cases won't to you know to back up my story and um you know if the tables are reversed i i have to take that other side and go
(1:05:02) look unless you can you know provide more proof it's i just can't say that you know i'm behind it and i i have to agree with that so why do things go south for you it seems like the a scientist's dream to work on a program like this why in the world would you walk away from that or tell anybody else about it do you were you picked because they figured you would tell somebody about it no i mean that that doesn't make any sense um i mean well what happened was i mean it was kind of more of a personal nature
(1:05:34) between my wife and i at that time now it's not like i had a nine-to-five job and they said you know come out at these hours it was it was really a sketchy setup that they would call me the place at eg by the airport what what was that it was on sunset road over yeah man i think it was called something i can't remember anyway they would call me and say you know it's now 8 45 by 9 15 we expect you to be you know at the building and and board the craft and you know the airplane not the guy yeah so um and it would be
(1:06:14) at a moment's notice like that well and i was so really thrilled to be part of this project um i was keeping with the whole program like i couldn't talk to my wife you know i said look i'm working at at the test site there it's on i said it's on secret and nuclear stuff you know and that's it um but again i get calls in the middle of the night she can't hear who they are and i said i gotta go it's work you have to go to work at eight o'clock at night you may not be back you know
(1:06:45) until the middle of the night or the morning i said yeah that's just the way it goes and that happens you know time and time again and you know if the phone picks up and you know my wife picks it up they hang up you know and um you know until so then they call back i pick up the phone yeah it's bob here and um yeah okay two hours i'll be there well after a while that seems like something else and maybe not after a while but pretty quick and um you know i mean it's something i could laugh at now
(1:07:17) but it it was not funny then and um you know i um i kept with the program never said anything to her and um you know she thought i was having an affair and you know as time went on going back and forth she she really didn't have a job or anything to do so i started since i was making money from here now i got her flying lessons down at mccarran airport and to give her something you know to do and uh

anyway she started having an affair with the flight instructor so um you know i had no knowledge of this but you know part of the requirements of
(1:08:04) the project and the security requirements really were to have my phone monitored now i'm going back and forth to work and now they are listening to this affair progress on the phone that i know nothing about and you know one of the things one of the main things is that you be you know mentally and physically stable and uh they're really concerned about that so it reached a point one day where they didn't call and they were kind of in a quandary at that point going they you know what are we going to do
(1:08:42) with lazar we got to see either this you know affair fizzles out or they break up or whatever so you know that i just stopped coming and i stopped getting calls i called dennis i don't get return calls and you know days are going by and you know now tracy's going back and forth and flying and doing stuff she's busy all the time because you know she's got a boyfriend and you know i'm beginning to get now i'm beginning to get really concerned i mean these guys are so over the top with security and you know we want to know
(1:09:14) everybody that knows this material we want to know where they are 24 hours a day so on and so forth they're not even calling me what's going on and so i started getting concerned and it reached a point where i don't know where the breaking point was but i i think it i i'm pretty sure it was gene huff the first you know guy that you know i talked to and um [Music] and said you know kind of spilled my gut say look this is what i've been doing out there and you know told tracy too and um hey let's go see him yeah well i
(1:09:48) i had i also had i know we're skipping over lots of stuff but i had um there were you know charts of the test flight days and which days that they were going to go over the mountain and do that what they call high performance test so those days statistically on that highway they went by the lowest number of travelers was on a wednesday night so wednesday night i think eight o'clock was like the test night so i thought i knew how long they were going to be in there i know all that stuff just from memory so
(1:10:18) i told these guys i said this is going to be an unbelievable story but this is what i've been doing you know i can go out there and show you guys but i'm starting to get concerned that they don't like me anymore for some reason and i'm just gonna like disappear um so i just want somebody else to see what i had done in case i'm just gone one day and at least you guys have a story and so we go out there take everybody and uh well you know the story we go out it's yeah eight o'clock everything happens like i said and um
(1:10:50) you know it lands and then uh you know now it finally hits tracy oh my god he wasn't having an affair and so you know she breaks off the affair reason you know and it it is just a giant mess it's embarrassing yeah but i mean it is the human side of the story that yeah but the other human side as i alluded to it in my talk is that there's stuff that happened to you in that period after after they caught you the third time they went out they got caught and so they want to talk to you and they're very upset dennis in particular
(1:11:25) the guy oh yeah yeah so they want to talk to you and and then a whole series of really bad things start happening share with us a little bit about what that period was like because it's hard to it's hard to convey it and that it was really going on but it was real yeah it was um the uh well i guess it started when we got caught you know when we got caught that time um i i can't quite remember which time that happened but you know we had we had gone out again with the test flight data two times and been there on wednesday
(1:12:02) nights and gene huff and we had an ever increasing amount of people that we began to trust to go out there and uh which is getting really ridiculous i think we even brought a motor home out there and we're parked out on the road because nothing uh no you know once you start getting away with something you get a little cocky and thinking boy they can't see us so we're out there and you know gene and i kind of joke around sometimes and say stupid stuff you know pretending that someone's out there listening
(1:12:36) so we're sitting out there on the dirt road the test flight time is coming up we're sitting leaning on the front of the car and you know i it's gene says something to the effect is well i hope they out there they don't realize that we've got those other 150 you know team members out back with you know automatic weapons and everything and they're getting ready to storm the base and i said they can't possibly know about all those guys you know and so right after we said that not now it's

(1:13:05) pitch black it's you can't see your hand in front of your face not 50 feet in front of us you saw a little green thing fall on the ground and roll to us and they're about saying they're what and as it turned out there were a whole bunch of guys standing there in the dark watching us through night vision scopes and after i said that a guy dropped one and it rolled over to us so they uh they turn on you know turn on the lights okay everybody come with us and you know that i told the story about the break in the
(1:13:38) car i mean they i remember going to your house after a break in and you had the uzi out you're ready to shoot somebody and then the break-in at the car at the gym that stuff really happened it was really going on oh yeah that was with mario the guy um yeah he was a truck driver now he um was going to uh you know we were just working out at a local gym near us and i was at that this is at the probably the highest paranoia stage and i had a you know an uzi in the the front and you know mario and i got to the place and i said okay
(1:14:14) it's loaded here we're safe to go outside and we open the car doors we close them and we may even make a joke about it we lock the doors we try and open them okay okay the car is secure we go in there and you know joking you think we'll be safe for half an hour and yeah i think we can do it and we you know we come walking out there's all the doors the trunks open the oozies laying out there my wallet you know and we just looked at each other this is impossible you know but uh yeah that that happened mario tells that
(1:14:43) story probably every day you uh at some point you decided to talk to me you know we did that interview in silhouette i can't quite remember why what that oh how that happened there was just too much going on but yeah i know at some point i that was really again uh lear was making a a big deal he started naming off the people that he knew that suddenly disappeared and he said you know unless you talk to this guy george knapp you know and if you go out on the air they'll you know they'll be afraid to talk to you i
(1:15:12) said john they're not afraid to do anything you know it's but uh i called you anyway or he did and then it kind of hits the fan they're really mad at him and and then that's when a lot of really bad stuff started happening and then we we decided to record an interview just for safekeeping in case something happened to him so it was a couple of hours on tape and i under the condition that i wouldn't use that until bob said okay it was eight months eight months until we got the okay and i worked on him every day to talk
(1:15:41) him into allowing me to use it and tell the story assuming he was still alive and on the day that we were ready to broadcast that it was part six of a nine part report bob suddenly changes his mind and grabs the videotape because you were gonna say who i was yeah yeah we're getting ready to identify him we're 10 minutes from going on the air he's we're wrestling over the tape he did as a ufo profiteer and messiah coming forward and making up stories he was a very reluctant witness i can tell you
(1:16:11) um you regret it i mean we heard a little bit of it at times you you certainly regret it because it's you know yeah it has it um not it's not good this is not no i mean that's what's kind of entertaining to me people you know they come oh you made up some story i bet you're making all kinds of money on there where does where i want my gut but um no i and i you know to be honest i did have i did have the opportunity i mean new line studios in columbia you know when they heard all this i mean
(1:16:45) the president of columbia pictures came down and yeah yeah you were there right yeah and um yeah you say we're doing this and you know and they started giving me screenplays and like no you know um you know it was the james bond movie they had me running over the tops of cars it's like look either tell the story how it happened or just or leave me out and just make up a ufo story but you you can't it has to be exactly what happened and so it was just constantly everything being turned down it's like you know what
(1:17:17) we're not doing it i mentioned before about me going out and doing presentations about you and one of the things i always said is that look bob doesn't show up at ufo events he's not cashing in on it there's nothing wrong with those who do if you can make some money at it more power to you because it fuels the research but um you've never done that before that's not the case anymore why did you decide to come here well i really didn't you know i you are here yeah i know i'm i'm here
(1:17:48) but um now i know a lot of people mentioned you know 20 look there's this big ui and i've never been to a ufo convention i mean i thought they were like star trek conventions people walking around with antennas and stuff but um you know i

didn't want to be have any part of that and um you know what uh the people that arranged this and you and no this is a class thing just come down there's 25 years once in your life just say something and i you know well everything i've said has already been said either on the internet and
(1:18:19) why would anyone even care to just hear it again so i finally just said okay fine just to stop you from hassling me [Applause] velvet go away um but it it really didn't end there and that was just a moment of weakness and then about you know about a and one of the reasons why it was because it was like two or three months away so i just yeah february fine whatever you want to do and then and then um anyway a few weeks went by and it kind of hit me that one day that date's going to come around and i you know so i i was more than that
(1:19:08) maybe it was uh you know three or four weeks or something like that so anyway i i called them back here and i said no you know i'm really thinking about not not doing that and i'm i'm sorry and you know i told my wife and george and you know and i really didn't realize there were this many people that were interested and you know they said you can't back out you know we've been advertising there's going to be a lot of people here and you know it's and i said you've got 15 or 50 speakers or something it's just
(1:19:38) one less that's going to be here but um seriously you don't recognize you don't understand that people are so interested in seeing you and hearing from you it doesn't register well not no but i i appreciate that i do but um i mean and that you know they made that clear aside from the fact that they'd sue me if i didn't so you know i said in a nice way yeah so i i i i will go so i am here well the fact that you said that you would do it because i keep pestering you i take that as no i know also i did you know i i i did
(1:20:12) give him my word i do it and it's not like i'm you know it's too bad cool and then i told you it'd be great it'd be cool well no problem um you know when you look at you heard my the presentation about how far this story has traveled how many industries and businesses it has launched the extraterrestrial highway that's from you um las vegas 51 51s baseball team yeah they feel boy people jumped capitalizing on it really really quickly it's amazing when you see area 51 mentioned in movies and some tom
(1:20:42) hanks movie or you know independence day or something it's it's overwhelming yeah i guess it's uh it's hard for me to grasp you know it's almost um it's i don't know how to describe it so this the experience here so far has been pretty good for you might you do it again or might you open up a little bit or oh but there's nothing else that's the whole story you know glass told me you got a list of names that you haven't given me yet no i mean look i believe me i could really make it easy to verify a
(1:21:18) bunch of things and i do not want to do that at all i really would prefer people don't buy the story because it makes like my day-to-day life is has nothing to do with ufos and being the ufo guy is a big problem it's hard to get contracts and be you know taken seriously and i you know i don't want the last thing i want is you know a movie coming out or something like that it would be a catastrophe well it'd be a great movie if they made it right well i don't know you know it was amazing a year or so a couple
(1:21:50) years ago the there's the story about this russian spy that was killed by use of polonium and so oh yeah they called me right national network people want to do a story let's see who where can we get polonium and they'll find online oh here's a guy who sells it it's bob lazar yeah they are at the house this the first day but um do you get stopped i mean do you you know you got people stop you on the road i know you get emails and phone calls well emails you know people asking you know questions that um you know that
(1:22:23) really aren't up on you know the topic at all i said you know has anyone tried to you know duplicate one of these the crafts well you know that was the whole aim of the project there and but um you know they're just hearing that there's a guy that might have worked on flying saucers and you know this is his email address but by the way i'm not on facebook there's these guys that pretend to be me and i keep getting these emails hey thanks for friending me on facebook on what are you talking about so
(1:22:52) well it's i think this is our time we're up i've been asking questions from the submitted by folks including in this and uh you know i think that people are just uh excited to hear it directly from you tell the story and again i i certainly understand why people would have a hard time believing it but i do it's true i do too yeah it really is it really is it really happened yeah yeah exactly

that way [Applause] thank you [Applause] i want to thank you uh thank you all for coming hope you enjoyed the conversation
(1:23:29) with bob and uh maybe i can pester him into doing this again sometime i don't thank you very much'

bob lazar, official Q&A area 51 & flying saucers (2018) - YouTube
https://www.youtube.com/watch?v=GqWKZNOBOvc

Transcript:
(00:01) [Music] i have questions right now from around the world people are messaging me instagram twitter bob lazar if you do that right now in the audience i'm going to ask a few questions from [Applause] because twitter is always the one interviewing everybody so i want to take a second to interview george on something
(01:03) uh you know for almost 30 years now um you know george been standing up and saying hey i believe bob's story but he's never really told everybody some of the things why so 30 years ago and to this day you believe bob's story can you just tell me a couple reasons what you did at the beginning for bob to earn your trust first of all did you notice i had brown hair back then i think the fact that it's turned white is a lot to do with bob lazar i don't know might be my wife on i have something to
(01:40) do with that too you know uh our hope for the film that what jeremy set out to do was sort of to let the world know a little bit about bob because once you get to know him uh the the im improbable premise becomes more probable um and and i was never able to do that in our stories we were always arguing about what school he went to and what he did at los alamos and and what has happened since then and all the picky little crap that ufologists and the debunkers want to want to deal with and i never got to really tell about bob
(02:15) other than his crazy interesting interest his jet car and blowing stuff up um but it but it it's what won me over i think back then is just getting to know uh what kind of a guy he was and that you know at ufology and i think most of the people are here who are familiar with that field you know what it's like for uh the phonies the people who come up with these crazy stories they always have to keep adding to it to keep themselves in the limelight you know so uh one day they saw a flying saucer the next day they got to say they were
(02:48) abducted the next day they had sex with female aliens the next day they got a wife on mars the next day they're trying time traveling to mars and they always have to keep adding stuff up bob wasn't like that he told the same story to jeremy in this film that he told me 29 years ago and i think that that had a lot to do with uh him having credibility for me if he you know jumped any conclusions he just stuck with the stuff he he knew or had personal experience with and it impressed me that he didn't necessarily
(03:25) believe in himself i mean he was skeptical about the things that he read the reports he couldn't quite figure out why he was allowed to see this stuff um he we have entertained the idea that maybe they had an idea in mind that he might leak it that it was a false flag or run it up the flagpole and see how the public reacts and then pull the rug out from under it know that he's not a liar he doesn't make stuff up and this story has been really consistent and then the other part that's really hard to
(04:00) explain i don't need to dominate the whole conversation you're up to it but uh we had a hard time conveying was all the weird stuff that happened to mostly to bob but also to others of us in his circle in those days while we were trying to work on verifying the story and building the case um you know a lot of really strange and unpleasant things happen you heard the story that he told about his tire being shot out as a warning but there were all kinds of other really weird things break-ins at his house where they just
(04:29) move things around right things on the board break-ins to his car just gamesmanship to let them know that they were around and then for me as i'm interviewing people who had experiences out there uh two dozen different people who had worked at area 51 or group lake over the years people who agreed by phone to give me information one after another were visited by agents who told them to keep their mouths shut shut up six people right in a row you know today we take it for granted that our phones are are tapped that it all goes into some
(05:05) gigantic database in utah monitored by the nsa back then you know i took

umbrage at it when i realized that somebody was listening to my phone but it happened again and again people who offered to give me information that would buttress the story that it was told by bob were visited by agents who told them to shut up or else one of those ladies worked for the clark county court system and they had these two guys came to her she'd been a secretary and over had a stenographer in these meetings with a defense contractor which they
(05:36) discovered discussed crashed saucers and they came to her and said uh look you're still under your security oath we know that you travel back and forth to uh los angeles to see your daughter and then she comes here it's a big desert out there it'd be a shame if something had bad happen and she was scared to death and 10 years later i went back to her thinking maybe she'll talk to me now she won't she wouldn't so those things were real the things that happened to bob were real the things that happened to all of us in
(06:05) that circle were real somebody was really messing with them threatening him and it's because his story was true and i don't know if you figured out the the mystery of what was in the beginning of jeremy's film with the phones that was a raid that happened that wasn't 30 years ago that was a year ago anyway i didn't i didn't uh i wanted to show that for the first time george yeah i wanted to show you guys that you know for the first time that that was real that did happen i experienced it and
(06:39) uh that was shocking because i didn't set out in the movie that something like that was going to happen so i kind of i'm starting to understand a little bit you can think whatever you want that happened so really bob george and i are sitting here and the thing is you've never needed a defender you've never needed somebody to talk for you and people have said that and the thing is you've never needed it you just didn't think it was worth your while but you have a receptive audience here of people that whether they believe it
(07:09) or not they're willing to hear your story and i think this is a different era and a new time and i feel that now come here so i'm gonna shut the [__] up and let bob talk a little bit but i do have some specific questions but from all this experience of me dragging into this world premiere and um do you have anything you want to say before i start asking any questions no just go for the questions all right i got uh one from my buddy dan in a in a clip from and this is my fault as a filmmaker i didn't clarify you can't clarify
(07:52) everything uh dan in a clip from modern day he says he never saw an alien but in the clip from 1989 he references seeing cadavers that was both the clips were in my movie can he explain yeah that that was in the briefings there was uh we were given two or three page briefings of all the other projects going on and everything was compartmentalized so we had uh you know we dealt with power and propulsion and there was another group that dealt with metallurgy there was another group that dealt with any biological uh entities that in any way we just had
(08:35) little briefings between the groups so we kind of knew if there were any connections and that was part of the biological entity briefing so they had a vivisection uh drawing of a creature that wasn't drawing was an actual photograph and it was the only thing it showed was there was a single organ in its body as if the heart lungs liver everything had grown together into a single organ and they had cut that apart and we're looking at the different chambers inside and that's pretty much literally that
(09:08) all i got to see from that but that was kind of fascinating in itself and uh i mean you know that's that's why i think people just kind of take that for granted you're saying and oh everybody slip up on words so you said drawing first bob drew me a picture of the you know the alien cadaver thing or is it so that's another thing i noticed you know get on the air even with george you've been friends for so long bob is so like worried that you're gonna when he's talking he says the wrong
(09:35) words just listen for what he says you know don't just try to pick apart the words i think that's so important uh i feel like it's a new kind of day but but georgia i know you also kind of hate having the camera on you and you love that scene i did where you're in your house and there's awards behind you you hated that thing but uh i'll never do that again yeah i am forever banned as being a filmmaker with you guys by the way did you ever like the movie i love these i mean they're so random i
(10:10) don't even know where to start um they're you know well one of my friends actually asked me does bob lazar smell like science experiments anyway do you believe undercover agents are in the room at this very moment if so what would you like to say to them hi so is it true also george that one of the people tasked with

following you during that time period actually admitted and proved to you that they were the ones following you that is true um there were these we one of the places we used to hang out was a watering hole
(10:47) uh called the smoke and we would meet there with the uh to sort of strategize and figure out where to go next and there were a couple of other people in that small group and uh when the guy who was one of the ones who had followed us around he met me there this is years later and told me that it had been his job to follow us there and he got to like the bar so years later he was still going back that's great so i got they're coming in fast and furious you guys on all forms of my phone i see one right here erica
(11:21) uh you wanted to know uh question for bob how close to duplicating the alien propulsion system did you achieve oh we didn't that's that's just about it i mean we we couldn't even duplicate the material that i mean even the casing material we didn't really even understand what was going on it's one of those things where we can see what's happening and be proficient at using it but uh there wasn't a single thing we could duplicate at all at least at the time when i was there i have no idea where they are at
(11:58) this point okay um what breakthrough i can't really understand but it's my eyes uh what breakthroughs did you come to within any of the research that you did there were there any breakthrough did you experience any breakthrough expand the question did you have any breakthroughs when you were working at s4 on alien spacecraft bob did you have breakthroughs well any time you you were able to decipher something it was a breakthrough i mean when we determined the fuel was a super heavy element that was a breakthrough
(12:33) when we finally figured out how the reactor and the amplifier worked together that was a breakthrough when we finally figured out how to shut the reactor off that was a breakthrough but i mean every single thing was amazing to us it's like uh you know having a couple little children playing with advanced materials it's just all you know it's pretty much all luck i guess you know i'm going to put this down for a second some of the things i know that you probably want to know because it was news to me and talking with george all
(13:03) these years and talking with bob as well bob would say things and it would kind of hit me like i didn't know that if i've been researching this and i don't know it i'm sure you don't you said something to me recently you said look i don't know for sure 100 percent that the physics i described and how it was is the way it worked it was like magic i was telling you to the best of my ability to what i think we got to so right but people people don't know that so basically what i want you to explain to
(13:34) them like you explained to me is you're kind of given your best shot of what you how you think it worked but you're not positive about it no there's no way to verify it a hundred percent you know in the situation we were in we just really were able to observe and then come up with a pretty much educated guess as far as what's going on but that's the best we could do at that time our friend mark says how fast does the super heavy element decay like you know how fast does element 115 i guess decay
(14:07) well the 115 we have the isotope we had the isotope the power of the craft does not decay that's a stable element the element 115 that we synthesized recently was a few years ago that does decay very quickly and uh any element can have a whole host of isotopes and those isotopes can have various half-lives or be stable so the isotope of the 115 that's used in the craft is stable and does not decay a funny little story um you know when gravity was admitted that it was a wave for sure i call bob i'm like vindication man they
(14:45) said gravity is a wave and he goes yeah well you know i had a 50 50 chance if you think about it charlie i was like okay okay and then additionally you know like bob you know they they fabricated some atoms of element 115 and it's so cool it's so hard to impress bob lazar about ufos it drives me freaking crazy i just had to say that um i don't know man i just hope that you guys through the movie that you get a chance a little bit to to get to know bob and he's not happy being up here like he's doing me a favor and it's not
(15:26) because he doesn't want to answer your questions he's tried he tried a twitter account for like a few months um i don't know it's just uh you're kind of done or i don't know you you talk to yourself ma'am [Laughter] you're uncomfortable admit it yeah no no i have social anxiety so this is like this is horrific to me there will be a boss right bob you are courageous great hey guys give mama's our hands [Applause] it's a different day maybe maybe with bob and um

(16:29) i mean again you know bob's never been one he's not a shrinking violet you know bob can uh defend himself he's a jet car guy the bravo guy the shotgun guy you know he's living crazy he's lived a wild life but um i don't know i guess bob at everything that you did whether people decide to believe your story or not believe your story a lot of times that's because they either don't have the information or they do but whatever whether they believe it or not is there a message to you can't see anything here but i
(16:58) mean you know eight hundred and something people down here eight hundred and something people sold out from around the world every country to me the messages i'm getting thank you for supporting my work thank you for supporting george was holding the microphone trying for 25 years against all odds and and bob and stuff but that you want to tell this audience right now just what's what's important about destroyer whether they believe it or not what do you want them to take away when they leave this auditorium
(17:40) really i always say what's the most important really i understand it's an incredible story and i myself would have a really tough time believing it as i said in the film but uh the events that were portrayed occurred just like they were shown and um you know quite frankly i prefer people don't believe it because then i don't get asked questions and don't get bothered at all but uh you know for those of you that can see through that it uh all i want to tell you is that that's really the way things happened and
(18:12) that's pretty much it the sport model okay i'm going to take one yellow question like that no more no no more zero zero more shut your mouth zero more no yellow you're about to be kicked out by me personally no more out loud question i think it's really interesting i had a guy he's an aviation writer and he has a very sophisticated you know uh website about all this and he said one of the things that's killing me is i don't know how lazar came up with the sport model because it is from an aviation
(18:44) standpoint it is so perfect the system you described it's genius and i was on the phone and i'm like well maybe you didn't make it up right so tell us a little bit about the sport model before we jump off stage here just tell us a little bit about what was most impressive to you about the sport model about the science of it about what you got to see inside of it what did it feel like to walk inside a flying saucer it was really more ominous than um interesting at the time and everything is exactly one color
(19:18) it's all a dark pewter gray there is no sharp angle anywhere everything has a radius of curvature to it as if somebody built this thing at a wax and then let it melt a little bit and then let it cool off it's a very unusual i mean it feels unusual just to be in there but even the most simple things inside are and pardon the pump are completely alien the little doors that snap open um are made of little hexagons i mean it's hard to go through everything that pops into my mind right now but um it's difficult really to say but there's
(20:02) nothing that it's it's it's like going into a room where nothing looks familiar at all not even the room itself so it's uh was really something i'll never forget small furniture too well yeah that's that's a good point too but even that's unfamiliar why would you have something you know a seat that's half its normal size so it was really uh it's a shocking thing well i just want to say you know uh thanks for including me guys because this has been a ride i mean earning george's trust and him telling
(20:35) me you're never going to get bob on camera go ahead good luck kid you know that was awesome thanks for the encouragement um but thanks bob just so you know it's very clear bob did not ask me to make a movie he's getting zero from this movie he he actually gave to a science charity the last time we did a screening um the things you think are just [__] wrong and go ahead and and you know take that angle if you want or you can hear the the story and you can with your rational mind with your skeptical mind
(21:08) but with at least a part of your mind opening to the story you can hear it and i'm not you know even as a journalist at some point you've got to take a stand right i don't know what's the ethics in germany i got to take a stand your friend dave navarro was here he had called it he calls himself a hopeful skeptic okay he hopes that this is true he wants to believe like the poster from the x-files but he still uses his mind skepticism is a healthy thing in this kind of a field yeah you have to just
(21:36) buy it you're skeptical of your own story in some ways and some of the things that you said understandably so it should be you know but but it doesn't mean

having a closed mind there's going to be a storm of information that comes out over the next um probably six months what you saw is a glimpse it's just a glimpse into bob's life it's a glimpse into the work that george knapp has tirelessly done for 30 years into this story slowly i'm going to be releasing clips and little pieces and just you know
(22:06) let's get the information out there you saw the bulk of it but the conversation has started now if if you liked the movie if you thought it was good tell people that is the whole thing let people know because that's how we spread the movie and that's why we spread the information thank you that that's what i got to say what final words final words well we live in interesting times i mean back when this started in 1989 bob was kind of an outlier you know it was telling a story that a lot of the world wasn't ready to hear
(22:39) in the last 12 months things have changed dramatically you know uh that new york times story in december of last year the ttsa lou elizondo coming forward the those videos released by the pentagon suddenly people in my line of work are doing ufo stories and they're taking it seriously and they don't start off with uh funny jokes and put downs and and maybe the the pages turn maybe we are really are in a new era and that an era when bob's story can be viewed in a much more positive way without all the nitpicky [__]
(23:24) yeah well i mean i don't have a lot to say other than uh i know a lot of people came from great distances to be here and i i really do appreciate that i appreciate all the support that i've gotten and um really thank you thank you and really thanks for coming out here and watching jeremy's movie [Music] the fact that they actually talked about it and bob was willing to talk about element 115 and then his house got raided after that conversation uh that kind of blew me away i loved it jeremy's worked
(24:12) extremely hard couldn't be happy for him more happy for him and bob and everyone involved uh the 115 lm115 i have questions a lot [Music] [Music] this story is extraordinary especially if it's true and it all started in the desert just north of las vegas a local scientist who worked at groom lake said to be where top secret weapon systems have been tested over the years he has asked that his identity be shielded exactly what's going on up there what's going on up there could be the most important event in history
(25:06) [Music] physical contact and proof from another another system another planet and other intelligence what would happen to you if the government learned that you were giving us this information he just wanted to stay alive maybe this has been kept from us for a good reason sir how do we know you are who you say you are my name's bob lazar i'm known for working at a classified base and reverse engineered alien spacecraft i have no motivation to lie the science and the technology can change us we've always looked in the skies for

(00:02) [Music] imagine a place between shadow substance a place where the world is just thin not many pass through here they just tend to get burnt up infected you say knowledge it's corrosive like a an acid the mind can unwrap so you're going to want to keep your wits about you you got to show grit and patience [Music] they say the secret of the finder sometimes that's true you better hope that's true welcome to the world extraordinary [Music] beliefs mcminnville yes yes i haven't outlived my welcome here thank
(01:07) you again for having me guys what an incredible really exciting weekend just as a fan and i'm very excited bob lazar is here we did it man we flipped the script thanks to bob for deciding to tell you his story again we will have a live q a there are specific things we'll go over you haven't heard before we're going to get very specific today but write really thoughtful questions you know not manifestos questions right yes questions and then we'll do our best to to answer them enjoy the film we'll be
(01:48) right up here on stage after and thank you guys this story is extraordinary especially if it's true and it all started in the desert just north of las vegas a local scientist who worked at groom lake said to be where top secret weapon systems

have been tested over the years he has asked that his identity be shielded exactly what's going on up there what's going on up there could be the most important event in history [Music] physical contact and proof from another another system another planet and other
(02:21) intelligence what would happen to you if the government learned that you were giving us this information [Music] he just wanted to stay alive maybe this has been kept from us for a good reason sir how do we know you are who you say you are my name's bob lazar i'm known for working at a classified base and reverse engineered alien spacecraft i have no motivation to lie the science and the technology can change us we've always looked to the skies for answers instead of looking into ourselves thank you bob for letting me make the
(03:23) movie this story spans as you know 30 years so thanks for watching the movie let's jump directly into it it's been said by george many times that bob lazar is a reluctant ufo messiah i want to hear when you were going to be put on the news and you were nervous about your well-being how george knapp had the tape and you said okay let's do it and the second he's putting in that tape there was a wrestling match you did not want your name and face out there so each of you i want to hear your side on
(03:55) stage before we start the agreement was that we could film all of this back in the 80s and that at any time if i change my mind george guaranteed me we'll just pull it that's it there's no problem so we did film all of it and things started to get tense and i began to get worried as time went on and it finally came to the day where it was going to be aired on the five o'clock news if i recall and you know kind of near the last minute but not the last minute you know i decided you know what let's not do it i'm not
(04:36) going to go public with this and uh george just said no we're doing it and uh so i tried to grab the tape from george and i think that that's about all i remember i don't know where it went after that well i wouldn't call it a wrestling match it was more of a tussle and i won um yeah uh but just context of that is that uh 30 years ago this week this wednesday marked 30 years since the dentist interviewed the anonymous interview and it's the synchronicity of it with the anniversary for this uh
(05:13) festival and the 30th anniversary of that event that changed our lives and the life of area 51 itself is amazing it's almost like it's scripted but uh we did that interview with with bob as dennis i had not met him it was a last-minute thing you know it was somebody had canceled i'd been hearing about bob from john lear for a long time somebody had canceled for our five o'clock news and we um said called lear hey can your flying saucer guy that area 51 guy can he do an interview i had no idea what was
(05:43) going on in bob's life at the time that he'd ran into some trouble with his employers and was afraid for his life and was surprised when they said yes we put the five o'clock interview on this story comes spelling out all of our jaws were dropping the general manager comes running in is that real the news director calls me in is that for real the phone's ringing off the hook all hell's breaking loose we don't know if it was real but we decided to find out and so the next weekend we go to lear's house to meet
(06:14) lazar my news director and i bob we're going to put him through his paces we're going to ask him a bunch of questions about his background figure out if we believe his story and we left that meeting on holy crap this sounds like it's true and if it is it's the biggest story we're ever going to cover it was also the riskiest story we were ever going to cover because our reputations were on the line individually as journalists we could be ridiculed it could damage the reputation of the station so we're
(06:41) going to take our time and check this out i had to talk bob it took me another month to talk bob into getting a safety interview going on camera not to be aired just to have it in case something happened to him because there was a lot of strange stuff going on at the time threats that were being made to him we were all being followed around our phones were tapped it was a very tense time and it's hard to convey to people 30 years later how real it was but it was real we lived through it what was going on so we had that first interview that was
(07:10) our safety interview and i promised i wouldn't air it that was just in case bob got bumped off or something and also as a measure protection to let people know that we've already got the interview you don't need to kill them anymore we're still going to tell the story and then we did another interview in november for this series and i remember bob stoutel and i were walking out of the meeting with with

bob and saying gosh we could do a multi-part series this could be like five parts or something we end up doing
(07:36) two weeks each of the stories were you know a typical news story even in those days is a minute and a half two minutes these stories were 12 13 14 minutes long and it was the biggest highest rated thing that's ever been on television in las vegas so more context we ended up doing a two-week series part six is where we're going to reveal the identity of bob so we're five parts into it setting it up history of area 51 and ufology and all that stuff we've already teased it over the weekend monday's the day we're going to release
(08:08) the identity of this mysterious dentist character and the whole world was trying to figure out who he was and that was the day that bob's in the station and uh trying to grab the tape i've changed my mind i said no sorry we're too we're too late into it i mean literally we were editing right up the last minute and i am taking the tape down to the edit bay and i'm going to run out to this studio and we started tussling for the tape and wrestled a little bit and i no it's too late we're too late into it and
(08:36) ran down the hallway stuck the tape in the machine and then i went out on set and history was made there's a lot i want to cover today based on your question so let's rapid fire go through them bob do you feel that this movie accurately tells your story yeah it really does i mean i had a chance to kind of go through it and jeremy assured me unlike george that it at any point you know uh if there's something that why said wasn't accurate i just said it had to be factually accurate um it didn't matter if i'd liked
(09:21) something or not uh just as long as it was was true but yeah yeah there was it certainly told the story up to that part i mean there's a whole lot it didn't say uh but that's way too much to fit into an hour and a half and you know there's like two hours of bonus materials and i'm still releasing footage to clarify certain points but just to be very clear bob gave me absolute access to his life was able to interview his mom you know his friends that all went through this a lot of people that didn't go on camera
(09:52) couldn't go on camera on behalf of bob because of whatever reasons they had so a lot of the information i gave you everything i could in the movie the only restriction because as i'm looking this you know i'm looking to be honest you got to look for holes i'm looking at bob i'm looking at a story and he gave me complete access his archives of tapes go ahead and take him document cell phone who do you want to call he was helpful in every way he could for me to help clarify his story the only thing he said
(10:23) was do not twist it more it's got to be accurate that's it and so hopefully we achieved that and you got a taste of that and there's a lot more coming through the bonus materials okay this is interesting one because we have commander fravor in the audience who i'm really excited to speak with soon i'm grateful that you're here commander bob do you have any thoughts on the recently revealed ufo uh videos and program detailed by the new york times so meaning the tech and gimbal the tic-tac-toe seeing those craft you have
(10:58) any thoughts about your experiences and and now the acknowledgement of a reverse engineering program the attempt to reverse engineer propulsion system as far as how they're looking at it but more importantly the gimbal and the tic tac the movements of those do you have any thoughts on that yeah very much so i mean they they move they behave i mean they act exactly like a gravity-propelled craft would it's to me it's a very vindicating thing and speaking to commander fravor and you know looking at the tape and you can see
(11:30) the way uh you know crap move as he uh mentioned the way it moves like a ping-pong ball in a cup and bouncing around something that doesn't have inertia i mean propulsion like this is not possible with our technology and probably won't be for a very long time but uh yeah these crafts seem to operate exactly like the craft that i worked on so it was uh i find that really fascinating i'm i'm anxious to talk to him some more about exactly what he saw yeah people are making that connection now because look in 1989
(12:02) george knapp broke the story with bob government program attempting to reverse engineer ufos remember we had been told in 1969 that all ended that is proven to be a lie by the pentagon now by their own admission and thanks george for proving those videos were real through the right process so now through the lens of 30 years not only the reports of how these things move in the videos of how they move but we're living in an era where we now know the study of ufos has been and is currently live and strong so we have to account for that when we

(12:36) look at what bob has told you again bob is just telling you his story take it or leave it it's better for him if you leave it because his life and his wife is great and he doesn't need more interruption but he thought it was important enough to untwist the knots over the years that have been twisted so that's what you get hopefully in the movie okay okay this is interesting what some some of these little obscure questions that bob didn't cover in the film what is the history of the alien human interactions according to the
(13:10) briefing documents that you were able to read when you were there what is the history of the kind of human alien thing like what did they tell you about the they didn't tell me anything i have to make a very big distinction between the information and technology i had hands on and could verify and you know analyze and briefings that i read that had to do with other facets of the project which i can't i can't say if they were real i don't know why they would be other information i read in the briefings was
(13:47) accurate so but there was some information from other groups everything was split into so many different groups that some dealt with metallurgy some dealt with you know the origin of the craft and information was so compartmentalized we couldn't talk to the other groups which is a really ridiculous way to have science move forward you have to have communication so they're uh the way the military handles stuff it just doesn't work with research but they were so concerned about you know somebody getting more
(14:22) information than they need uh they kept everything separate but in any case they alluded to the fact that there was there was some alien human interaction at some point but um that they had been involved with us for a long time that's the allegation yeah it went back it went back very far the crabs had been here for like ten thousand years or something like that right you had mentioned before kind of new new information that uh you they were they gave you the impression that the craft that you worked on and the other ones
(14:58) were from some sort of archaeological that's the impression i had it was for more of an archaeological archaeological dig it wasn't like the aliens land and said here is one of our craft it uh you know i think it's just something i don't know how we came across it um but we did but they were they were very old i want to get into these specifics that for 30 years people have asked and bob has explained to me but he just haven't explained to you so let's get into these little details you mentioned in the
(15:25) documentary that you have dismantled devices from another civilization what fasteners methods are used to hold it together screws clips whatever can you tell us yeah this is something that fascinates me i mean back in back in the 80s there was no 3d printing so it was it was a complete mystery how this stuff was put together the craft itself there is not one single right angle anywhere in any part of it every single thing has a radius of curvature to it and i think in the 80s i said when talking with george it's as if somebody
(16:04) made a big model out of wax and then heated it just a little bit so it all melted and then let it cool and that's the way everything looked it had everything in a smooth interconnecting look to it there were no fasteners anywhere there were no seams anywhere and uh you know nowadays you think well they had some gigantic 3d printer i guess you know using alien technology they could make it that way but i didn't even think of that back then it was just a mystery how it was but i mean was what was even more so of a
(16:36) mystery is that there's no wiring anywhere you know the sub-components from you know a reactor that tremend generates tremendous amounts of power and the other sub-components the amplifiers and the emitters there's nothing connecting them and when you remove them and move them away they still work it's it's unreal i mean it is absolute borderline magic so it's it's nothing that we're gonna you know duplicate and we're going to add this to an f-16 or something it's it's going to be a long time before we
(17:09) know what the hell is going on so george has said to me from the very beginning look if people don't want to believe bob they're going to find a thousand ways to discredit him because that's they don't want to believe you so go ahead however you're if you deny the evidence that we have then you're missing the picture and some of the greatest skeptics online you know tend to fixate on these little things and one question that's been like looming for 30 years and bob and i talked about it for
(17:35) like a minute and people are asking well how did you turn the reactor off bob if you if the reactor is on and you're putting your hands to it there's a

gravitational field right and you can't push chance how did you turn it on or off and that seems to be one of the things like the people that want to just not believe just bring up it's not even in like a nice way just asking a question so publicly just how did you turn the reactor on or off bob are they implying that it can't be turned off or
(18:03) yes the implication is with the gravity field as described oh so you can't reach it okay that's that's not how you turn the reactor off you don't touch the reactor i mean there there are actually a lot of ways to do that but the way we most commonly turned it off is if you take one of the emitters and rotate it i don't know what the angle is i think it was like 80 degrees or something but if you rotate it it the reactor shuts down so it's kind of a load sensing reactor and rotating the uh emitter to that angle
(18:37) at magical angle whatever it was um that's like a null position the reactor shuts down and that's how we turn it on and off but i mean there's there's not an on off switch everything is very fluid and operates when you really don't think it will yeah so how has your life or business how has your life or business changed since the release of the movie besides the raid bob yeah yeah the raid was not a good okay let's think about the goods how has your life or business changed since the release of
(19:14) the movie or has it um not a lot you know it's a very specialized business we sell scientific equipment and you know radioactive isotopes and chemicals it's not like the average person goes i need some strontium 90. and you know they're not gonna so it really it's not an increase in business although you gave me some of the extra movie posters you had and we put them on the website so we sold some of the posters but i mean bob's having a sale on strontium 90 this week right no really it it hasn't affected it at
(19:48) all i mean that's not any big degree i should say the effect that i have seen is that uh now in light of what is known publicly around the world about ufos and about the projects that people are now not with their pitchforks in the audience they want to hear okay maybe he is telling us the truth they want to hear what you have to say and i think that's the biggest change you know bob is not profiteering off of my film he wants me to succeed as a filmmaker he just wanted me to tell his story accurately i just want to make that clear because
(20:20) you know the hardest thing that i see is that people try to vilify or try to attack the messenger to dismiss the message and that's what i've seen and i think it's ridiculous but here we go um next one small stature aside why else do you think they might have been called the kids remember they called they never said aliens they said oh they always said the kids yeah yeah yeah so why do you think they call them the kids that's just conjecture i mean it says small stature aside but that's the only thing i would grab onto was
(20:56) just because they were little creatures obviously but i don't know i really don't know uh do you think that you were part of some sort of covert operation unbeknownst to you at the time so you know how people say you were there they showed you like a movie set they faked stuff you know do you think you were part of a culvert no okay so how do you know how do you know that what they showed you wasn't faked and uh it's important for people to hear well first of all the stuff that i had hands-on experience with
(21:31) um it is impossible to fake things like that you cannot fake a force field you cannot fake time slowing down i mean these things are not possible at all and probably won't be for hundreds of years using our technology so that you know there's there's no doubt about the technology i was involved in was way way beyond what humans are capable of at this point the way the craft was assembled like i said you know huge amounts of power moving around without interconnections and i mean this is beyond what tesla would
(22:11) have ever dreamed of again these things are not possible so yeah a movie said that's ridiculous bob has always made that distinction to me i was like how do you know the difference between you know the documents and he goes what i had hands on is what i can tell you about you just said two things i want you to clarify force field and time just slowing down time or stopping times time dilation explain those the force builder when we had the reactor fired up it was one of the things that barry my co-worker showed me and i think
(22:45) i mentioned that in the movie you put your he said put your try to put your hand on the sphere or the top and you couldn't it just pushed back it was like two like poles of a very large magnet and you know without having a metal hand it was uh it was an amazing feeling i mean i was i was really excited at that point i said oh

my god it's a force field i mean this is this is awesome um jumping over to the other question the time dilation when we had the reactor and the uh amplifier and emitter set up in the on
(23:21) the test bench we did a couple experiments and one of them was how we could get a watch to run at different speeds in the gravitational field so we actually saw time dilation so it was really fascinating one of the things i had mentioned a long time ago to george he lit a candle and you can see the flames stop flickering but it still emitted light which it kind of shouldn't have so i mean there are lots of indications that some of our physics wasn't complete in explaining what was going on so that's why some of the stuff is so
(23:56) important that it be released to the public but i just i don't know what's happened to this information or the technology since i left the project you know bob and i had discussed many times over the years could this be disinformation of some sort were you shown something and they assumed that eventually you'd spill the beans and it serves as a diversion or cover story for something else that's going on out there that they wanted to divert attention away from something else that was being tested at groom lake that was the first
(24:27) round of disinformation accusations sent our way what would be i know specified than that yeah what would be more classified than flying saucers that's the first but the other thing is if somebody did have an idea in mind that we're going to put out this flying saucer story then we're going to crush him and crush his credibility and will distract attention from something else out there that was kind of a miserable failure because as a result of bob's story every media organization in the world
(24:53) beat a path to area 51's door tens of thousands of people have gone out there with binoculars looking in the sky for whatever it is that's flying out there area 51 is a really legitimate national security site the men and women who toil and obscurity out there have helped us win the cold war they protected our country they do great and important work and they don't i mean this is not a good thing to have so much attention focused on that facility it's still important they still do important work
(25:20) so if somebody came up with a plan let's put out a flying saucer story to divert attention away from the x project man they they got sent to to alaska or something and because that was a really bad idea and and again bob has always made a distinction between the technology that he had hands on and the stuff that he read because some of that is pretty wild stuff and it fed into narratives that were floating around in the ufo world at the time we've met secret treaties with aliens and we've given them permission to abduct
(25:50) people and they've genetically engineered us he doesn't know if that's true and he doesn't know exactly why he was shown that information and we've discussed it a bunch of times you know it's possible that maybe that was an added little bonus that they put in there just to fly it up the flagpole and see what happens but big secrets can be kept big secrets are kept that was one of the arguments uh about us tackling this series back then is that nothing this big could be kept secret well i will ask commander faber about
(26:19) that later today whether big secrets can be kept um because they can be you know 1969 project blue book ended we didn't know until december 2017 or at least the public didn't know that they had an ongoing ufo study that it was going on that millions of dollars were being spent that a lot of people working on it and we've learned since that there are other classified projects along the same line that we still don't know the names of we don't know who's involved and what their focus is so secrets can and are kept so i want to
(26:48) keep with your questions to honor the fact you wrote them i can't get through all of them but i i do want to bring something up right now the raid the fbi raid there's recently released agency assist reports and i just want to tell you my experience i make this film people accuse me of fabricating the raid to dramatize my movie i made it up i dealt with that for months they said bob's wife joy was this was the fbi agent that you saw the photo of the back of i mean just crazy stuff so there i am one day defending that i'm
(27:22) a documentary filmmaker i'm just i don't need to share it with you i'm trying to document and share with you what i'm experiencing and seeing so there i am defending that next day a friend of mine he was able hours before us to get a local agency assist report we were unable to get the fbi report bob said there was a warrant he goes i saw it upside down but you know they didn't hand it to me and we're thinking well we can't find it so we get this agency assist report and then

like the next day i'm defending
(27:55) something else people are saying oh now it's prosaic it's just prosaic why there was so much law enforcement multiple agency wasn't the first time bob that uh people came to bob's place of business i said we were surveilled we have our own reasons to understand that the report comes out i thought there you go it proves what i said in my documentary it proves the scope the scale the forensic truck the surveillance and i'm like oh now i can relax on twitter not the case it is my belief and bob's and george's
(28:31) that they were there for 115. and we have very specific reasons that i can't prove yet to you but we have specific reasons to believe that's the case i want to hear from bob what was the experience i want to hear your personal experience it was swarmed with over 24 individuals from what i count but two came up to you at a door two came up to you with something in their hand they were coming in anyway were they looking with hazmat teams no there's no hazmat okay so tell us tell us your experience though on this
(29:06) and i'll clarify later now when they first came in they gave me the cover story and yeah the place had 24 or so agents in there it was shoulder to shoulder you had to kind of move around there were so many people in there and which already struck me as being weird i said if you guys are just looking for receipts what are why did you bring everyone here and uh some of the other underlings they brought with them just gave me some paperwork they said yeah we're looking for you know thallium metal and i said oh
(29:38) okay i'll get it gave him a little vial here of thale metal and i said is this what you guys have to say now or just you can put that away so i went okay these guys are starting to section off the building into cubic meters and holy cow what are you doing they had everybody else working down below and then they took me upstairs we went up there then they had the guys jump on the computers and try to suck everything off of those and that's when they played me your you know our conversation which was we what we were
(30:12) talking about is where the 115 was hidden i want to get a little more specific about that the experience though they said hey bob they showed up behind you two people and they're they have a upside down obvious warrant from fbi and like you know we have a couple of people coming can we come in so you're allowing in two people and then all of a sudden there's about 24 forensic collection agents truck multiple agencies the report the agency assist reports proves this it also says that there was a hazmat
(30:44) team you know in the whole suits hazmat and they cleared the place to make sure that didn't happen that didn't happen right so i talked with zach about that too because in the film he he just said hazmat because that was he just told me out there you know that's the word that came to his mind he goes but it wasn't like that from what my account that i've heard from you and zach they appeared disinterested with this basic idea of toxic materials the whole thing was they wanted to talk to you upstairs
(31:12) is that correct yeah that's that's correct they wanted to talk to me and the other guys all they wanted was a couple sheets of paper so they did say to you out the door we're looking for receipts and an order form from a client of yours that's what they told you in their world yeah this is something that happened like two years ago right we had already been over all this so it was clearly just a cover story to come back in and have access to the property which is which is our opinion based upon our experiences
(31:40) but i just wanted you to hear from bob the agency assist report very odd it's very detailed and not only that bob's experience of what happened doesn't jive with what you're reading in that agency assist report in a lot of ways no it's a lot of that is not is not true we are convinced behind a shadow of a doubt that our conversation was taken in the woods at his property the day before but i just wanted you to hear from bob his personal experience of that moment because every turn we make you know there's people that just
(32:14) they'll never believe and they look for anything to dismiss it or almost worse they just believe without thinking so well either way they're welcome to dismiss it and then they ask me less questions and that's fine okay back to back to some details from the audience have you ever looked at s4 from a satellite image could you identify it great question about s4 like could you see it from a satellite image have you ever looked for it on saturday yeah a lot of times um and i do like to make that distinction
(32:46) it is not area 51 it is s4 area 51 is to the north although a lot of people

relate them together they say s4 is part of the area 51 complex but that even that gets into some technicalities there because people say oh i know somebody that worked up at area 51 there's no flying saucers or anything like that up there and they're right there there isn't it's down at s4 there's only 22 people when i worked there and um as far as seeing it from the air yeah i've seen it many times there's
(33:18) a lot of people have sent me emails where they they think they see the hangar doors at the right angle and yeah you can see it on google earth it's it's not obvious but you can see the road that i drove to down from area 51 that's where i flew into and took the bus down and uh yeah i can point it right out to you in fact uh you your buddy john farat uh hired some time on a russian satellite to take a photo of an exact time that you said take a photo of papoose lake the americans wouldn't let him do it so he went to russia and they
(33:51) did yeah and he's and he's got the original uh negative and on that negative is a there and they posted it back in the days it is a circular metallic object hovering right over the mountain range of papoose have you guys seen that this poster they made it into a poster yeah it's it's great i mean they he hid it right on the nose it was awesome right when bob told them they should shoot that shot from a satellite from russia george knapp has said to me before we've and this is something that project i
(34:22) think we're going to do together we've learned more about the u.s ufo programs from russia than we have from the u.s and i think that's specifically because george took a trip during glasnost and porostroika and came out with some documents from the ufo program in russia which the world has yet to truly be able to see and i think we're gonna coming up soon next project george over my dead body oh yes yeah we'll do that project sometime yeah uh it he's not exaggerating i went went to russia i had a unique
(34:58) opportunity in the early 90s when you know they were trying to open up to the world they were experimenting with uh capitalism and democracy glasnost perestroika i read in the new york times that the kgb had opened up the lee harvey oswald file and i thought this might be the time to go and see if we could get uh ufo files so we did we worked on it we had a russian physicist who had been a national security adviser to the russian parliament and to boris yeltsin and we sent him he had been in the united states lecturing on nuclear disarmament at our
(35:30) national laboratories had nothing to do when he went back so we hired a company i was working for and and set him up and said go find people who were in a position to know about the russian ufo studies who have never spoken to journalists western or otherwise and let us know and it took him eight months and he set it up and i went in 93 to russia and i met a guy named colonel borisokolov ministry of defense who had been in charge of this russian program it was the largest ufo study probably in in history and for
(36:01) 10 years the every unit in the vast soviet military empire at the time was ordered to every anomalous aircraft or ball of light or ufo or strange object in the sky when you get those reports from military personnel fully investigate it get pictures get witness statements put it all together and send it to one central location and they did and we were able to acquire a lot of that information and interview colonel sokolov and basically he said they were doing the same thing we're trying to do he said we're
(36:31) we know that these craft have capabilities beyond anything that we've got and we wanted to study this to figure it out so we could gain an advantage over the us in terms of stealth capabilities we wanted to figure out the technology which as it turns out is the same thing we've been doing you know trying to figure it out to be continued bob back in 1989 when you were terrified and i just released a new video on my youtube talking about that time when you were scared you took friends multiple groups three
(37:05) wednesdays in a row you said guys things are really complicated for me it's one thing to tell you it's another thing to show you there's this little place called papoose lake it's not area 51 it's south there this obscure mountain range there's a test flight and i know when it happens and i'm gonna i'm gonna show you and you brought friends out there and you showed them those test flights as proof to your friends because you said to me it's one thing telling someone it's
(37:32) another thing showing someone right well working there i had the test flight schedule so that's when i took it was i mean the majority of my friends at that time we went out there and um you know the craft came up you know over the mountain range at the at the time i indicated and you know clearly everybody was amazed we watched it uh you know do some amazing maneuvers since we got away with it you know we did

it a couple more times you know and right up until we got caught so and uh george and i have talked with i
(38:07) think everybody now that was in those sightings and they don't agree on most things in life they do agree on one thing that bob was right he took him out there and what he showed them they had never seen anything before like that or since so they also filmed it and there there's a it's an old 80s camera not like our iphones even iphones you pointed at dark you get a light however there's a gentleman in the audience that did some incredible analysis of bob's original footage of the flying saucer coming up
(38:40) over papoose lake with the new software and analytics that he did it it's pretty incredible and he had a question why does the shape of the craft in your video change from frame to frame so radically are we seeing localized gravity lensing yeah that's exactly what you're saying because remember there's three emitters in that craft each emitter is producing its own gravitational field out of it and gravity bends light so it's just like taking a prism or cut glass ball and rotating it and you'll see different
(39:17) facets of light so the same thing happens as the craft move around and you see through one gravitational field to the next the craft's going to look different so it looks like it's jumping around or flickering and and that's that's exactly what you see in the video uh you're probably familiar with the m drive which is that propulsion device do you think this technology the em drive i'm sorry okay em drive do you think this technology is close to breaking the barrier for space travel no it's useful but i i am not
(39:54) that impressed with it i'm i'm sorry you know it's the hardest thing sometimes to ask i said bob bob look after all this time you know they've proven element 115 was fabricated and he looked at me as like yeah of course it is german but not the stable version i talked about there's you know dozens if not hundreds of isotopes or whatever he said he was unimpressed with the fabrication you know even though they called him when they were doing the experiments in fabrication uh you know a particle accelerator
(40:24) because he was unimpressed the next one i go bob they just came out gravity is a wave you're vindicated it's a wave it's it's not just a graviton like you said he goes well jeremy you know if you think about it i had 50 50 chance of being right so it's hard to impress bob he's a very skeptical dude so i think the most pressing question i saw on all of these cards bob what is your favorite pastime [Laughter] that's actually tough to say um well i don't know that's that's a
(40:59) stumper there i can tell you it's making laser beams and shooting off rockets come on yeah i mean probably building weird things i guess would be a pastime blowing stuff up comes to mind well i pyrotechnics i've been yeah i've i've done pyrotechnics since i was 12 so probably probably that or any kind of technical thing i love building stuff so i i tell her to say i i really enjoyed the making of the film because the breaks of our film were usually blowing things up or building lasers or hearing bob um you know talk on the
(41:35) phone to you know physicists from universities or government labs that are asking him about you know the the atomic weight of you know certain isotopes however they're explaining it is above my head but just hearing you do your thing my goal in my film it was not to prove bob's story bob said from the very beginning i i don't have everything to prove to you my story that's not why i'm telling you i'm telling you to save my own skin and i'm also telling you because he believes you have a right to know
(42:05) take it or leave it he's always been like that however however the movie after 30 years um it's really hard to ignore some of the evidence but most importantly what i hope you got from my film is what i got what i personally got getting to know bob and george told me this from day one when he challenged me in 2012 to try to get you know the bigfoot of ufology the elvis born again on camera the reluctant ufo messiah on camera when george challenged me to just show you who bob is to humanize him to show you his daily life
(42:37) the big question we're all sitting here with is he's telling you a story is he worthy of your trust that well no that's the question that really is the question if we can't prove it definitively it's telling your story you have to decide is he worthy of your trust and and the world has changed now and i think i would love to hear from george we are living in a different world now we're living in a world where we it is now admitted there are unknown craft of unknown origin flying in our airspace
(43:06) with impunity and an increased frequency and our own government is not only

interested now but has been for a long time proven so george can you just touch upon bob's story and that well it's a really exciting time and things are starting to move so fast i mean two weeks ago the u.s navy comes out with an announcement it just is astonishing to say we're going to try to make it easier for our pilots to uh report ufos these encounters are increasing there there are dangers to aviation there are legitimate concerns legitimate reasons
(43:40) why we need to start making it easier for pilots to talk about that would be unthinkable uh months ago i think commander fravor who we're going to hear from later today probably had a big role in that happening in speaking to people in washington and letting them know this is going on and the fact that these reports keep coming in that there are a lot of them that keep coming in now dramatic sort of encounters and and things that are are undeniable and the fact that you know we've we've learned a lot about
(44:07) atip and awsapp uh and you know things that uh that i had been allowed to know about but couldn't report for a long time is spilling out there's so much more that's still to come there's there's so much more to still to come and uh i don't know how much of it and how soon but it's coming you know and and the fact that it it's synchronized with bob's story and coming full circle 30 years ago he comes forward and now jeremy's film is out and and and all at the same time all these news events
(44:39) are happening where the doors are opening up a little bit i mean they're not wide open but they're opening up quite a bit and uh it's an exciting time i don't know if it's vindication i never felt like we needed to be vindicated but yeah it kind of feels that way it kind of feels that way yeah um so i want to hit a couple things too uh you know bob has always said to me like in private he goes look jeremy i i'm explaining to you the best i understood in alien technology i i'm explaining to you the best it was
(45:09) described to me and what i saw you know i don't have all the answers i'm sorry but i can tell you what i saw in what i think and one of the things that was always really touching i just want to be straight you know did element 115 was the known fuel source for the extraterrestrial craft that you worked on at one time in 1989 you said that you got a piece of element 115 out of los alamos where it was being machined under the code name la-1000 you say that in my movie you did have a piece of 115 at one time
(45:45) right well what where are you going with this well i i'm just i'm just saying the the element 115 was the key it is the thing that generates it's the fuel for the craft if you want to look it that way yeah and it has unique properties oh absolutely can you explain the unique properties of element 115 so that everybody really grasps it the way i feel like we weren't a hundred percent sure how how it worked because you just can't cut open the reactor to find out what's going on but it looked like the 115 is bombarded
(46:27) with radiation and it produ and it produces a stronger gravitational field now the rest of the equipment in the craft the reactor it takes that that wave that gravitational wave that comes off of it it roots it throughout the craft in a conduit just like microwaves and through the skin of the craft it takes that and funnels it down to the amplifiers and then to the emitter so it seems to behave a lot like microwaves do which propagate through tuned channels but it all came back to one little triangle of 115 that was the center of the whole craft
(47:05) and no i mean we don't know everything about it i'm not sure i could duplicate you gave me a piece of 115 i'm i'm not sure i could do much with it i could probably make it explode but i don't think i i'm not sure i can make it propel anything but um you know a lot of it was was guesswork too we were just trying to do our best educated guesses to come up uh with how this worked and you know our number one aim was to see if we could duplicate this technology with what we had at hand and uh you know
(47:40) clear across the board the answer was no all the time so we're talking about a stabilized form of element 115 so for example i learned this it's not okay it's stabilized it means you take something yeah i mean let me let me clarify so those i i learned this from bob and i can hopefully translate to you so for example there are 37 different isotopes for gold one is stable it's what's on your ring right right the rest are radioactive and yeah decay so the versions that have been fabricated by
(48:15) slamming particles in a particle accelerator and getting maybe four atoms at about a million bucks a piece that lasts for 220 milliseconds we're talking about one or two different isotopic combinations where there could be many many more

combinations in fact it's predicted by science that there's an island of stability right in that sweet spot for 115 so what you're talking about is stable physical element 115 220 something grams that was highly machined that were used in these craft is that correct yeah that's correct well you
(48:48) know say you were trying to use gold as your as your example i mean say you were just trying to fabricate gold you know just from atoms i mean would you say there were 37 isotopes or something like that look you only have a 1 in 37 chance of making it so most likely you're going to make unstable isotope after unstable isotope until you know one day you fall upon the combination that results in a stable isotope so yeah they just began playing with 115 and just the fact that they made you know four atoms of it on their first
(49:27) try and it was unstable you know that that really doesn't tell any story you have you've got a long way to go before you figure out every combination and if one of them is stable you'd said back then um that you didn't think we'd ever be able to make it it would be too expensive take too much energy to make a stable version that you thought it had to be natural wherever we acquired it it was performed produced naturally supernova double star something like that well i stick by that when i say we
(49:59) can't produce it i mean a usable quantity four atoms is not not visible not useful it it's nothing i mean to make to make a gram of it is still impossible even the version that they made so um yeah it's the amount of energy and time it takes sitting there plugging neutrons in is uh it's a time consuming expensive task and so you were told that there we had a stockpile of 500 pounds of element 115 however in your hand or you were able to work with about 228 grams highly machined in this triangular formation
(50:35) so you physically saw was it two to an hour it was 23. it was 220 something i said because that was even i can't remember but yeah that's all i ever okay but even that amount that couldn't have been made by any human technology oh hell no not even within our supernova do we think we could i mean it had to come as cargo from somewhere else is that correct well i mean you don't know there might be advanced ways of you know arranging atoms and fabricating you know elements on it on a gigantic scale that we haven't even conceived
(51:11) about so the only way i know of is you know the energies required and pressures and temperatures you know is some you know gigantic natural you know foundry like you know a neutron star or exploding supernova something along those lines but i don't know look at the technology that these guys have i mean that nothing set and since they can control gravity and they have force fields and things i mean they might have a machine that can crank this stuff out you know like we make plastic but my point is humans humans can humans cannot no
(51:48) did not cannot no no not at all if humans can't fabricate this and you were told this story what's so interesting to me is you the first time you go to site four and by the way site four it's not toxic you're not gonna die of cancer just being there people try to debunk bob story being you can't step foot on there too much radiation you're gonna die i've talked to two employees of area 51 who have gone on papua's for extended periods of time and they are not sick so that's another thing people try to
(52:20) debunk with actually one was stopped by civilian contractor egng security and he was a navy guy and kind of pissed about it and they stopped him if so if there's no if there's no facility there i'm not sure why he got stopped but i got him on record and i will be able to release that later one of the things about your story that i find really interesting your account of it bob didn't believe this was extraterrestrial his friends that knew him before that i spoke with said that bob felt bad for people that
(52:50) believed in ufos you know they got to be crazy so that's who he was before the first time and i want you to tell us this feeling the first time he saw the craft in the hangar he he ran his hand along he wasn't supposed to touch it and uh he thought wow everybody that saw flying saucers it was us it was america that's what he thought but i thought that was the first time i saw it when they let me in through the hangar i thought oh wow i mean this is the new advanced fighter we're keeping secret and this explains all those crazy ufo
(53:27) sightings and um you know it all made perfect sense to me until you know i got in contact with everything until you stepped inside walked inside tell us how you walked inside because people want to know that but that feeling you describe of seeing everything the size of the seats the feeling you had can you explain that to everybody like you explained to me yeah there is a hatch on the side that extends

below and above the center line and when you go and you pretty much have to crawl in there they have a little
(54:03) stanchion to go up there but it was obvious i mean immediately when you go in there why did they make this thing so small what the hell is going on you couldn't stand up in the middle it was clearly made for something much smaller than a person you know it's aside from all the technology but just the physical aspects of it that the material you know was all the same everything was the same color the way it was assembled everything started looking stranger and stranger to me um you know and then it became obvious
(54:34) once we started having discussions about what i was working on that this is a reverse engineering project you know it took a while for this to hit me because i was uh i really didn't buy any of this ufo nonsense for a long time so george i wanted to ask you know again through the lens of 30 years i know neither of you expected this to transform your lives and take over like this how has reporting and taking that risk on bob's story because you vetted him you didn't just believe you vetted him hard how has it changed your life over 30
(55:09) years well it certainly affected the arc of my professional life um i think i probably put a cap on what i could do because i would forever be the ufo guy and you know i've done a lot of ufo stories over the years starting with bob uh but i've done thousands of other stories and and uh i've got you know matt and i have had some success in terms of uh recognition for those stories but it doesn't matter wherever i go i'm the ufo guy and i'm stopped in you know in restaurants and bars when i
(55:42) end up in a bar and uh at men's in men's rooms and urinals as i told yesterday and uh and in foreign countries and airports and you know the ufo guy and grocery stores and people want to come up and hey do you really really believe that stuff and you know they don't they don't really care what i believe about ufos they want to tell me their ufo story and it's just amazing to me that everybody's got one and you it everybody's got one it's somebody in their family they've seen
(56:11) something or somebody else in their family or their grandma has a story or something landed in the backyard or out on the farm it's amazing how far it reaches so it has changed changed me in a lot of ways in that uh i was not really that interested in it you know until started working on this and and then it it's captured my attention ever since it's uh i don't work on ufo stuff all the time but i think about it all the time so i would add just one other thing in that skepticism in this topic is
(56:39) important it's important for you to be skeptical and ask questions but skepticism in the sense of hey i want to know more i want to learn more i want to ask questions i want to be i have those questions answered that's fine you it you need it in here because there's so much crazy stuff in the ufo world it's right to ask questions of bob and ask about his background and and figure out if there's uh logic to what he's saying but skepticism and debunking are two different things there's so much garbage
(57:05) and junk there's so much backbiting and infighting and turf wars and debunking by ufo people presumably people are interested in getting to the bottom of this who because a story comes from somebody else they got to attack it and it's just an amazing learning experience the last year or two since atip osap ttsa all that stuff came out how vicious the the field can be it's debunking it's not skepticism so ask questions be skeptical but have an open mind and an open heart and be willing to learn stuff about it
(57:38) what we've learned from bob is i i think it's true if it wasn't true i wouldn't still be reporting about it 30 years later this mystery seems to be tantalizingly out of our reach we learn a little bit more and it moves a little bit away the goal post seems to move a little bit maybe it's leading us somewhere uh maybe it's a learning curve i hope so but we don't know and uh but it's an exciting time i'm so glad for bob that some of these other events have happened to sort of like take the burden off of
(58:08) him as being this lone nut ball talking about flying saucer programs reverse engineering uh because he hasn't deserved the uh the scorn and ridicule and uh you know all the stuff that's come with it over the years it's been it's been a well i just want to end on one question for you but i i just want to say you know thank you uh bob thank you george for letting me go on this ride with you i you know i hope that we were able to bring things forward in a way that were logical for people to be able to consume
(58:44) thank you for letting me be a part of it you guys i know i've been in this

war together for 30 years just trying to get to the truth kind of last question what do you want the audience here in mcminnville from your story what what is it you want people in the world to know from watching from what is it you you're telling them what do you want them to understand very simply it's just like i said in the movie the events that i portrayed everything that i said happened exactly like i said it did that's that's all the government really
(59:16) does have or at least at that time had recovered alien craft and they were spending a lot of time and money trying to figure out how they work and see if they could duplicate it i have no idea where the project is now but back then that's what was going on and that's what i did [Music] [Music] you

the lazar tape... and excerpts from the government bible (1991) - YouTube
https://www.youtube.com/watch?v=deNGyFjrVCI

Transcript:
(00:29) um [Music] hi i'm bob lazar during late 1988 and early 89
(01:33) i worked on the propulsion systems of extraterrestrial vehicles for the united states government the hardware and technology i was exposed to should be placed in the proper hands of the scientific community and it is the right of every person on earth to know that there is physical evidence which proves that there is life elsewhere and that at least one form of that life has been here for those of you whose information about me is limited to this video i'll give you a brief background i'm a physicist i have degrees in
(02:04) physics and electronics technology i've worked in a number of scientific programs some of which require top secret and above top secret security clearances of which the most easily verifiable is my early 1980s job here at the los alamos maison physics facility in los alamos new mexico between december of 88 and april of 89 i worked as a senior staff physicist in what has to be the most secret project in history my place of work was a facility at an area known as s4 on the nellis air force range in central nevada area s4 is located approximately
(02:38) 15 miles south of the infamous area 51 installation at groom lake where the u-2 and sr-71 spy planes were developed for the duration of my employment at s4 i was paid by the united states navy for the purpose of this video i'm going to segregate the information contained here into two separate parts the first part will deal with information with which i've had hands-on experience and personal instruction in other words not only did i read briefings and not only was i taught the theories of these technologies
(03:09) but they were demonstrated for me and i know they are true and accurate some of the points covered in this first section will be how vast distances of space are traveled by virtue of an intense gravitational field how this gravitational field is generated what the power source is and how it functions and general information about disks and the project at s4 the second part of this will deal with subjects on which i've read supporting information yet for the most part i had no other way to corroborate the information or ascertain its accuracy
(03:49) when we get to part two it'll be obvious why proof of some of this information could not be conclusive some of the points covered in the second section will be information about the beings that brought us this technology and how these beings have historically interacted with man i've been prudent in selecting what to expose here and i think that some of this information should not be made available to the general public this information is being conveyed to you as it was to me with the exception that in most cases
(04:21) i've simplified things for those of you with non-scientific and non-technological backgrounds so let's begin at the beginning of this first section i'm going to give you three short science lessons and once you've learned them you'll not only know more about interstellar travel than almost anyone else in the world but you'll know the actual method another civilization is used to travel from another star system to the planet earth now during the course of this i'm going to have to relate information that i've
(04:47) learned at s4 to information that we're already aware of and when i say we i mean the general mainstream scientific community so it's not to waste too much time explaining established scientific facts and theories when i say we know this or we know that please feel free to consult any qualified scientist professor or science teacher to have them explain my statements to you one of the most predominantly

asked questions is how is it possible to cross vast expanses of space without exceeding the speed of light
(05:19) or how can you travel in reasonable time and economy between points that are light years apart now keep in mind that the speed of light is 186 000 miles a second which translates into roughly 669 million miles an hour and a light year is a distance traveled in one year at the speed of light proxima centauri which is the star system nearest ours would take four years to reach traveling at the speed of light so up until now when we've examined the requirements to travel these distances we've always had to consider the
(05:54) problems of traveling at a speed near the speed of light this poses problems with propulsion navigation fuel capacities and even when you consider the effects of acceleration on space time which include time dilation mass increase lane contraction and a whole host of other things it quickly becomes evident that this type of travel would require a level of technology that man has not yet achieved the truth of the matter is that traveling these distances does require a level of technology that man has not yet achieved but it has nothing
(06:26) to do with flying in a linear mode near the speed of light we know that the shortest distance between two points is a straight line so in our universe we've always assumed that the fastest way from point a to b was to travel in a straight line at the speed of light well the fact is that when you're dealing with space time and you enjoy the capability of generating an intense gravitational field the fastest way from point a to b is to distort or warp or bend the space time between point a and b bringing point a and b closer together
(06:55) the more intense the gravitational field the greater the distortion of space time and the shorter the distance between points a and b most of us think of space-time as the void or as nothing and remember it wasn't that long ago that man considered the air and our atmosphere to be nothing yet with time we've become aware of the elements and properties of the urinary atmosphere well indeed space-time is an entity and one of its properties is that it can be distorted or bent by a gravitational field we know
(07:23) that gravity bends or distorts space time and light by virtue of the fact that we're able to see stars which we know should be blocked from our view by the sun referring to the graphic here the solid line denotes the position of a star that's located behind the sun and the dotted line shows its position as viewed from earth this is made possible because the sun's gravitational field distorts the space time and light around the sun allowing us to view stars which should be hidden from view we know that gravity distorts time by
(07:54) virtue of the fact that if we take two identical atomic clocks and keep one at sea level and take the other one up to a high altitude when we bring them both back together they reflect different times the difference in this passage of time is caused by the fact that a gravitational field weakens the further you get from the source so the atomic clock which was taken to the high altitude was exposed to a less powerful gravitational field than the clock which we kept at sea level the effect of a gravitational field on space time is
(08:24) something that we've been able to observe but not to experiment with this is due to our inability to generate a gravitational field and up until this point in time great mass such as a star planet or moon was the only source of a discernible gravitational field that we're aware of so just as the gravitational field around great mass such as a planet distorts space and time any gravitational field whether naturally occurring or generated distorts space and time in a similar manner now the great benefit of generating an
(08:55) intense gravitational field is not only can you turn it on but you can turn it off if we refer back to our original illustration of space-time distortion we can see that when we generate an intense gravitational field we can distort the space time and in turn the distance between the point where we are and the point where we want to be we can then position ourselves at the point where we want to be and then stop generating the gravitational field allowing space time to return to its natural form in this manner we can travel great
(09:27) distances with little linear movement and this is how space time distortion translates into reduced distance now back to our original question how is it possible to cross the vast expanses of space required for interstellar travel without exceeding the speed of light this is accomplished by generating an intense gravitational field distorting space time and allowing you to cross many light years of space in little or no time and without traveling in a linear mode near the speed of light the next question is how do you generate

(09:59) a gravitational field up until this point in time i've used the term generate to describe the capability of producing a gravitational field but since i'm not aware of any way of creating a gravitational field from nothing a more accurate term might be to access and amplify a gravitational field and this is what i mean when i use the term generate to understand how gravity is generated or accessed and amplified you must first know what gravity is there are two main theories the wave theory which states that gravity is a
(10:28) wave and the currently accepted theory of gravitons which are alleged subatomic particles that perform as gravity which is total nonsense well gravity is a wave and there are two specific different types of gravity gravity a and gravity b gravity a works on a smaller micro scale while gravity b works on a larger macro scale we are familiar with gravity b it is the big gravity wave that holds the earth as well as the rest of the planets in orbit around the sun and holds the moon as well as man-made satellites in orbit
(11:01) around the earth we are not familiar with gravity a it is a small gravity wave which is the major contributory force that holds together the mass that makes up all protons and neutrons gravity a is what is currently being labeled as the strong nuclear force in mainstream physics and gravity a is the wave that you need to access and amplify it to enable you to cause space-time distortion for interstellar travel to keep them straight just remember that gravity a works on an atomic scale and gravity b is the big gravity wave that works on a
(11:34) stellar or planetary level however don't mistake the size of these waves for their strength because gravity a is a much stronger force than gravity b you can momentarily break the gravity b field of the earth simply by jumping in the air so this is not an intense gravitational field locating gravity a is no problem because it is found in the nucleus of every atom of all matter here on earth and all matter anywhere else in our universe however accessing gravity a with the naturally occurring elements found on
(12:05) earth is a big problem actually i'm not aware of any way of accessing the gravity a wave using any earth elements whether naturally occurring or synthesized and here's why we've already learned that gravity a is the major force that holds together the mass that makes up protons and neutrons this means the gravity a wave we are trying to access is virtually inaccessible as it is located within matter or at least within the matter that we have here on earth however the earth is not representative of all matter within our universe
(12:37) the residual matter which remains after the creation of a solar system is totally dependent on the contributing factors which were present during the creation of the solar system this is true whether you believe that the origin of the universe was an evolutionary event or that a supreme being caused this event to happen the two main factors which determine what residual matter remains after the creation of a solar system are the amount of electromagnetic energy and the amount of mass present during the solar system's
(13:05) creation our solar system has one star which is our sun but the majority of solar systems in our milky way galaxy are binary and multiple star systems in fact many single star systems have stars that are so large that our sun would appear to be a dwarf by comparison keeping all this in mind it should be obvious that a large single star system binary star system or multiple star system would have had more of the prerequisite mass and electromagnetic energy present during their creations this makes it possible for these systems
(13:38) to possess elements which are not native to the earth scientists have long theorized that there are potential combinations of protons and neutrons which should provide stable elements with atomic numbers higher than any which appear in our periodic chart though none of these heavy elements occur naturally on earth 88 of the first 92 elements on the periodic chart occur naturally on earth some heavy elements do occur in trace amounts but for the most part we synthesize these heavier elements in laboratories generally speaking the stability of
(14:07) these synthesized heavy elements decreases as their atomic number increases but experiments the lab for heavy ion research in germany have shown that this may only be true up to a certain point as the half-life for element 109 is longer than that of element 108 the point is that our observations and theories are accurate the fact is that heavier stable elements with higher atomic numbers which have more protons neutrons and electrons than any earth elements do exist however up until this point in history there has been no physical evidence to
(14:40) prove this but now that proof is here the most important attribute of these heavier stable elements is that the gravity a wave is so abundant that it actually

extends past the perimeter of the atom these heavier stable elements literally have their own gravity a field around them in addition to the gravity b field that is native to all elements no naturally occurring atoms on earth have enough protons and neutrons for the cumulative gravity a wave to extend past the perimeter of the atom so you can access it even though the distance that the
(15:13) gravity a wave extends is infinitesimal it is accessible and it has amplitude wavelength and frequency just like any other wave in the electromagnetic spectrum once you can access the gravity a wave you can amplify it just like we amplify any other electromagnetic wave to demonstrate how a wave is amplified we can use this oscilloscope and as you can see it graphically depicts the tone you hear as a wave as we amplify the tone you can see that the size or the amplitude of the wave increases giving us a more powerful version of the
(15:47) same identical wave and thus the tone sounds louder in like manner the gravity a wave is amplified and then focused on the desired destination to cause the space-time distortion required for space travel this amplified gravity a wave is so powerful that the only naturally occurring source of gravity that cause space time to distort this much would be a black hole this brings us back to our original question how do you generate a gravitational field you must have access to an element which is heavy enough for the gravity a wave to extend past
(16:29) the perimeter of the atom then you can access and amplify it for space-time distortion to complete our three science lessons the last question is what is the power source for this type of travel well for those of you with limited knowledge about power sources i'm sure you can probably imagine the enormous amount of power required to cause a space-time distortion for this type of travel after all we're amplifying a wave that barely extends past the perimeter of an atom until it's large enough to distort vast
(17:00) amounts of space time for those of you with extensive knowledge about power sources i'm sure it's probably even more puzzling as to how it's possible to have a compact lightweight onboard power source that can provide this much power for everyone to understand that i need to further explain a couple of things we briefly touched upon in the last question if you remember i said that for the most part we synthesize or create heavier elements in accelerators and their stability decreases as their atomic number increases
(17:30) so what does this all mean well we synthesize these heavier unstable elements by using more stable elements as targets and a particle accelerator we then bombard the target element with various atomic and subatomic particles at this point transmutation occurs making the target element a different heavier element this element now has a higher atomic number as the atomic number simply indicates the number of protons in the nucleus of the atom so this is what i mean when i say their atomic number increases what does their stability decreases mean
(18:04) the length of time which an element exists before it decays determines its stability atoms of some elements decay faster than atoms of other elements so the faster an element decays the more unstable that element is considered to be when an atom decays it releases or radiates subatomic particles and energy which is the radiation that a geiger counter detects as you can see this geiger counter is detecting the radiation from this uranium which literally means that the geiger counter is sensing the subatomic particles which are being released
(18:34) or radiated as the uranium decays those elements in which nuclear radiation can be consistently detected are radioactive elements these heavy elements which we synthesize in particle accelerators are of the radioactive variety and they decay very rapidly since we're only able to make a few atoms of these elements and because they decay so rapidly we're not able to observe much about them this is what i mean when i say their stability decreases however there are elements with higher atomic numbers which are
(19:07) stable even though they don't occur naturally on earth and we can't synthesize them in particle accelerators these are the elements in the 114 115 range which don't appear on a periodic chart beyond element 115 the elements become unstable again and in fact element 116 decays in fractions of a second this finally brings us to the power source the power source is a reactor which uses this element 115 as its fuel in this reactor element 115 is used as a target and is bombarded with protons in a small particle accelerator
(19:45) when a proton plugs into the nucleus of an atom of 115 it increases its atomic number and becomes an atom of element 116 which remember decays instantly what element 116 releases as it decays or what it radiates is antimatter what is antimatter any matter is the exact counterpart of matter which has a charge in a

spin that is in the opposite of all matter when combined with any matter in our universe any matter reacts and completely converts to energy and remember the rapid conversion of matter to energy is what we generally
(20:18) call an explosion to demonstrate the explosive power of antimatter let's pick a random area where an atomic bomb might explode oh let's say iraq and for demonstration purposes let's say an atomic bomb would explode for instance in uh oh baghdad well if one of our older atomic bombs exploded in baghdad the area of total devastation which is indicated by the red dot on the map would be approximately two miles this would be caused by a fission reaction in which less than one percent of the nuclear material is converted to
(20:51) energy most of you are familiar with the bombs that were dropped on japan in world war ii this is the same bomb that was dropped on nagasaki august 9 1945. about the same time dr edward teller who's known as the father of the hydrogen bomb figured out that a nuclear fusion bomb was possible fusion would release even more energy and cause an even bigger explosion from the same amount of nuclear material much to dr teller's dismay the japanese surrendered we never dropped the hydrogen bomb and dr teller has been in a bad mood
(21:23) ever since but if a hydrogen bomb containing the same amount of nuclear material as the nagasaki bomb were to explode in baghdad the area of total devastation would be approximately 20 miles this would be caused by a nuclear fusion reaction which again less than one percent of the nuclear material actually converts to energy or explodes the other 99 of the nuclear material on this type of bomb is dispersed but is not involved in the actual nuclear fusion reaction now if a bomb was made with the same amount of nuclear material as the
(21:57) nagasaki bomb and that material was anti-matter when that bomb exploded in baghdad the area of total devastation would include parts of africa europe and asia with the exact area of total devastation being very difficult to calculate this would be caused by a total annihilation reaction which is the complete conversion of matter to energy a hundred percent of the nuclear material on this bomb would explode or convert to energy we currently have no practical way to harness any matter into a bomb and generally speaking
(22:28) we can only isolate any matter in a particle accelerator and store it for a short time this demonstrates the enormous amount of power released when you totally convert matter to energy which is what happens when any matter and matter are combined so back to our power source inside the reactor element 115 is bombarded with a proton which plugs into the nucleus of the 115 atom and becomes element 116 which immediately decays and releases or radiates small amounts of antimatter the antimatter is released in a vacuum
(23:00) into a tuned tube which keeps it from reacting with the matter that surrounds it it is then directed towards a gaseous matter target at the end of the tube the matter and antimatter collide and annihilate totally converting to energy the heat from this reaction is converted into electrical energy in a near 100 percent efficient thermoelectric generator this is a device that converts heat directly into electrical energy many of our satellites and space probes use thermoelectric generators but their efficiency is very very low
(23:29) all of these actions and reactions inside of the reactor are orchestrated perfectly like a tiny little ballet and in this manner the reactor provides an enormous amount of power so back to our original question what is the power source that provides the power required for this type of travel the power source is a reactor which uses element 115 as a fuel and uses a total annihilation reaction to provide the heat which it converts to energy making it a compact lightweight efficient onboard power source i've got a couple of quick comments
(24:00) about element 115 for those of you who are interested by virtue of the way it's used in the reactor it depletes very slowly and only 223 grams of 115 which is just under half a pound can be utilized for a period of 20 to 30 years element 115's melting point is 740 degrees celsius i need to state here that even though i had hands-on experience with element 115 i didn't melt any of it down and i didn't use any of it for 20 to 30 years to see if it depleted so we've learned how space time is distorted by a gravitational field
(24:33) we've learned how that gravitational field is generated and we've also learned where you get the power to accomplish all of this now it's time to link all we've learned in our science lessons to the vehicle that utilizes all this technology and a few years ago i never thought i'd hear myself say this but that vehicle is a disc which is generally referred to as a flying saucer i had at least partial views of nine different discs out at area s4 but the one i'm going to

describe to you now is the one in which i not only saw
(25:02) two of the three interior levels but i also saw it fully functional in flight and no unfortunately i didn't get to go for a ride in it this particular disc appeared to be in excellent condition and because of its sleek appearance i nicknamed it the sport model the sport model is about 16 feet tall and 40 feet in diameter the exterior skin of the disc is metal which is the color of unpolished stainless steel the sport model sits on its belly when it's not energized as you can see the hatch is located on the upper half of the disc with just the
(25:35) bottom portion of the door wrapping around the center lip of the disc the interior level of the disk is divided into three levels the lower level is where the three gravity amplifiers and amplifier guides are located these are the things used to amplify and focus the gravity a wave that we learned about in our science lessons the reactor is located directly above the three gravity amplifiers on the center level and is in fact centered between them the reactor is similar to this half scale model the element 115 is machined
(26:07) into triangles like this and is then inserted into the reactor this piece of element 115 is the source of the gravity a wave as well as the target that is bombarded with protons to release the antimatter both of which we learned about in our science lessons the center level of this disc also houses the control consoles and seats both of which were too small and too low to the floor to be functional for adult human beings the walls of the center level are all divided into archways at one point in time when the disc was energized
(26:38) one of the archways became transparent and you could see the area outside of it just as if the archway was a window after the panel had been transparent for a while a form of writing which was unlike any alphabetic scientific or mathematical symbols i've ever seen began to appear in the transparent archway and i was never informed as to how all of this was achieved not that any of that would have required alien technology i was never given access to the upper level of the disk so i can enlighten you as to what the porthole-like areas are
(27:07) other than i can assure you that they're not portholes now before i go any further about the disc i'm going to show you where and under what circumstances i saw it tested my job in this program was to be part of a back engineering team back engineering is the act of taking a finished product and tearing it apart to find out what makes it tick the goal in this program was to see if the technology of the disc could be duplicated with earth materials when i went to work i was flown from mccarran airport in las vegas to area 51
(27:37) which is a highly secure government base on the nevada test site area 51 is located about 125 miles north of las vegas near the grew mountains in the groomed dry lake bed from area 51 i was bussed to an even more highly secure facility located about 15 miles south of area 51 called s4 s4 is situated at the base of the papoose mountains by the papua's dry lake bed the airspace around s4 is restricted and if any unwelcome aircraft strays into the outer sector they radio the pilot and instruct him or her to leave
(28:10) if that pilot continues and strays into the middle sector jets will be scrambled to escort the intruding aircraft out if for any reason whatsoever that aircraft penetrates into the inside sector before jets can be airborne ground-to-air missiles will neutralize the intruder the moral of this story is don't try and fly into s4 the s4 installation is built into the mountain and the nine hanger doors are angled at about 60 degrees these doors are covered with a sand textured coating to blend in with the side of the mountain
(28:40) and the desert floor as you can see in this representation my id badge had a white background with one light blue and one dark blue diagonal stripe in the upper left hand corner at the bottom of the badge there were letters and numbers designating various areas including s4 on my badge there was a star punch through s4 the back of the id badge was dark blue with a vertical mag stripe running down one side the hanger that housed the sport model was like a typical airplane hanger with the exception of the angled doors that i
(29:10) mentioned before the hanger was equipped with typical tools and extensive electronic equipment it also had a machine with an x-ray emblem on it and an overhead crane rated at 20 000 pounds equipment in this hangar was marked with a black number 41 with a white circle around it it was outside of this hanger that i saw the sport model tested now when the disc travels near another source of gravity such as a planet or moon it doesn't use the same mode of travel that we learned about in our science lessons when a disc is near another
(29:41) source of gravity like earth the gravity a wave which propagates outward

from the disc is phase shifted into the gravity b wave which propagates outward from the earth and this creates lift the gravity amplifiers of the disc can be focused independently and they are pulsed and do not stay on continuously when all three of these amplifiers are being used for travel they're in the delta configuration and when only one is being used for travel it's in the omicron configuration as the intensity of the gravitational
(30:09) field around the disc increases the distortion of space time around the disc also increases and if you could see the space time distortion this is how it would look as you can see is the output of the gravitational field from the amplifiers becomes more intense the form of space time around the disk not only bends upward but at maximum distortion actually folds over into almost a heart shape around the top of the disc now remember this space-time distortion is taking place 360 degrees around the disc so if you
(30:42) were looking at the disc from the top the space-time distortion would be in the shape of a doughnut when the gravitational field around the disc is so intense that the space-time distortion around the disc achieves maximum distortion and is folded up into this heart-shaped form the disc can't be seen from any vantage point and for all practical purposes is invisible all you could see would be the sky surrounding it the program out at area s4 consisted of three projects project galileo project sidekick and project looking glass
(31:16) project galileo dealt with gravity propulsion and was the source of all the information you've learned in this first section project sidekick dealt with a beam weapon that had a neutron source and was focused by a gravity lens project looking glass dealt with the physics of seeing back in time now i was not personally involved with the hardware of project sidekick or looking glass and those projects are beyond the scope of this video so this brings us to the end of this first part in which i'm presenting to you as fact
(31:45) at this point we begin our second part which is the section that contains what i call excerpts from the government bible i call it that because as you can tell from part one there's a small segment of the united states government that makes scientific and technological judgments from a knowledge base that is not available to the general public if the following information is true the united states government also makes judgments on a historical philosophical and even theological level from a knowledge base that is not available to
(32:11) the general public these are excerpts from some of that information as part of my indoctrination into the program at s4 i would randomly be taken into a small room which contained a table a chair and 120 or so briefings and blue folders i'd be left there to read for varying amounts of time usually about half an hour these briefings contained a wide spectrum of information mostly relating to aliens and alien technology these reports appear to be an overview of alien information which can be used to brief scientists from any field about
(32:42) the scope of the whole project and not just their specific field of endeavor the overview of project galileo was accurate i read the overview and later witnessed evidence which proved it to be accurate so it is possible that scientists involved with other projects could have seen evidence that these other overviews were also accurate but i can't make that assertion to me these reports were simply words on paper so to keep from saying allegedly and supposedly in every sentence i'll relay this information to you as i
(33:11) read it since i've already put this disclaimer on it this technology that you've learned about thus far was brought here by some alien beings from the zeta reticuli 1 and 2 star system these stars are located in the constellation of reticulum which can only be seen from the southern hemisphere zeta reticuli is a binary star system which means it has two stars and is located approximately 30 light years from earth these beings are from reticulum four which is the fourth planet out from zeta reticuli 2.
(33:40) this is the way star systems were referred to in these reports they simply designate the name of the star and the number of planets from the nearest to the furthest from the star for instance our sun was designated as soul and the earth was referred to as soul 3 because we're the third planet out from the sun a day on reticulum 4 is 90 earth hours long the beings are three to four feet tall and weigh 25 to 50 pounds they have grayish skin and large heads with unshaped wraparound eyes they have very slight nose mouth
(34:11) and ear positions and are hairless any dates in the information regarding these beings were written in a six digit number which began with 1623 since i had no idea what the six digit number was for the present year i had no way of calculating

when these beings arrived or at least arrived this time these beings said that they had been visiting earth for a long time and presented photographic evidence which they contended was over 10 000 years old there was an exchange of hardware and information in central nevada until 1979
(34:40) at which time there was a conflict which brought the program to an abrupt halt the beings left but were to return at a 1623 date and i don't know what that date is with the remaining hardware and information the us government started the back engineering program in may of 1987 some scientists took an antimatter reactor to an underground blast facility on the nevada test site to perform an experiment unfortunately for them their experiment required them to cut the reactor open which resulted in their deaths
(35:09) this explosion was explained to others at the test site as a previously unannounced low-yield underground nuke test i was hired in december of 1988 to replace one of these men these beings conveyed information about the capability of affecting the human brain to anesthetize the human body this is done without any physical contact from a remote source for this anesthesia to be accomplished the brain has to be in a relaxed state similar to that required for hypnosis if the brain is subject to any external stimulation like stimulant drugs or loud
(35:40) music this manipulation of the nervous system is ineffective these beings said that man was the product of externally corrected evolution they said that man as a species had been genetically altered 65 times they referred to humans as containers yet i don't know what we're containers of as i'm sure you now know it was impossible for me to corroborate the information in the second section and obviously if this information is true the ramifications are far-reaching and you don't have to be a nuclear
(36:09) physicist to figure that out so before i bring this to an end there are a couple of questions i should address for you the first one is how did i get into this program while working at los alamos national lab in 1982 the local newspaper did a front page story on a jet car i had built coincidentally dr teller was giving a speech in los alamos that same day we met and had a short chat about the jet car and i later listened to his speech i never met dr teller again but in 1988 when i decided to re-enter the scientific community
(36:40) i sent him a resume and inquired about a job dr teller responded by telephone and told me that he was no longer active but just functioned in a consultant capacity he gave me the name of a contact to call in las vegas i made that call and things progressed from there until i got into the program i never got a chance to ask dr taylor if he remembered me from los alamos so i don't know if that was a factor or not if you use nuclear fuel and not that possible nuclear fuel is feasible but whether these events
(37:16) which are interesting if you ever want to get to another staff that is an important question and that's about all i can say all i have time to say and what specifically the fuel will be i think it might be vision more about refusing is there any other nuclear reaction besides vision and fusion that you know of no is there anything such look please you try to explore the things about which i only will have to tell you it is not interesting it's a waste of time about the autonomous it is in my opinion not interesting
(38:04) i don't intend to answer it if you ask me that question on camera i will shut up i will sit silent you're not going to get an answer out of me on that okay and if i ask you on camera if you know bob lazar can you just say no i will sit silently the second question is that if all i've just presented to you is true and the government is keeping this a secret how can i make a video telling you about it well the bottom line is if there are any repercussions for making this video would simply confirm that what i told
(38:46) you is true so what you do with this information is up to you remember not everyone who sees a disc in the sky is crazy so keep your eye on the sky especially here in central nevada and thanks for listening you

UFO top secret: the bob lazar, interview (2003) [HQ] - YouTube

Transcript:
(00:02) [Music] ever since man has looked up into the stars he has seen strange objects in the skies but the search for proof of extraterrestrial intelligence has

produced disappointing results the best so-called evidence has only been a few photographs and film clips but now all that's about to change since 1985 more than 15 million americans have reportedly witnessed unidentified flying objects but despite the seemingly overwhelming evidence mainstream science has chosen to ignore the subject but now for the first time in history
(00:38) one of the greatest mysteries of this century is unraveling a former government scientist has come forward to discuss the military's classified work on extraterrestrial spacecraft [Music] human advances in technology have exploded in a million directions and show no signs of slowing down the ever-increasing pace of achievement in the last several decades is unparalleled in human history the high cost of developing and producing these technologies has limited the number of contenders from the private sector leaving the government and large
(01:23) corporate businesses on the cutting edge of new discoveries always in the public eye big business competes for high-paying contracts working night and day to invent or further develop the next big thing to satisfy the masses the government on the other hand must conceal information concerning national security that for obvious reasons should not be public knowledge but when it comes to matters concerning the welfare of our planet the living beings on it or potential clues to the mysteries of the universe many believe it should be our right to
(01:53) know the end of world war ii and the invention of the atomic bomb signaled a new era of international mistrust since the earliest days of the cold war which coincides with the roswell incident and the start of the modern ufo era the military has been especially secretive about its advances and achievements while always searching for the perfect weapon or super sophisticated tool of espionage high-tech surveillance equipment around the world and even in space has allowed global intelligence to see and be aware of many things that the
(02:31) common civilian cannot even begin to imagine the military recruits many talented civilians when special expertise is required and propulsion systems expert bob lazar claims he was one of them in this exclusive interview he gets his detailed account of his employment with the department of naval intelligence at the top secret facility known as s4 where according to bob he was hired to work on recovered alien spacecraft s4 is located miles north of las vegas and 15 miles south of groom lake this now not so secret military base at
(03:11) groom lake nevada is known as area 51 or dreamland as insiders like to call [Music] born in 1959 in coral gables florida bob has lived much of his life in las vegas nevada with degrees in physics and electronics from mit and cal tech he has dabbled in everything from chemistry to fireworks in an effort to understand the finer points of propulsion he has even assembled a jet car with a 22 000 horsepower engine salvaged from a navy f3d sky night that is capable of land speeds of over 350 miles per hour fate took a serious turn for bob in 1982
(03:53) arriving early for a lecture at los alamos national laboratory in new mexico given by dr edward teller one of the inventors of the atomic bomb bob was able to meet and talk to the famous physicist coincidentally dr teller was reading the local paper the monitor with a featured front page article on bob and the two struck up a conversation later bob sent dr teller his resume for consideration and soon after bob was hired by the los alamos national laboratory this los alamos-based directory lists bob as an employee
(04:26) by 1989 bob was brought into the top secret program at s4 known as project galileo in the following interview bob reveals many details of this amazing experience did you witness any disc technology at area 51 no there was no absolutely no et craft e.t technology anything like that at area 51 this is why s4 was made specifically to separate it there people at area 51 do not have the clearance how long were you employed at s4 and when were you hired when was i hired at s4 i guess early 89 and i was probably there only about six
(05:14) months or so on a very infrequent basis how are you transported to and from work at the time that i was working there at mccarran international airport in las vegas there was a special projects eg building when i was told to go to work i drove there parked my car there and got in a plane at the airport flew to groom lake where i deplaned and waited for a bus and the bus drove me down to s4 the s-4 facility is an area just off the papua's lake bed dry like that and it consists of nine hangers the hangers have sloped doors on them
(06:05) with a sand texture coating around the opposite end of the hangers there's the standard entrance where you're dropped off at go through a security check and inside there's a small complex there is some office space there are several laboratories the hangars themselves of course and uh a few other places i didn't

have free reign to go wherever i wanted to everywhere i went to i was essentially escorted so that was really all about that i saw inside the facility what was the basic layout were there underground levels
(06:46) i don't think there were any underground levels to it though there could have been i i don't think it was a you know an extensive underground facility it just looked like an installation that was butt up against a mountain and you know i didn't see any evidence of any stairs going down elevators or but like i said i don't know there could have been and i just might not have been permitted in those areas it's difficult to to really surmise how long it had been operational everything did look fairly new
(07:20) by that i mean i don't think this installation was there in the early 70s nothing was worn things look fairly freshly painted so you know as a ballpark guess i would say it would it would really surprise me if the installation was older than five seven ten years something like that what agency is in charge of s4 who controls the program i was paid by the department of naval intelligence and what they're doing researching extraterrestrial craft is beyond me but that's that's where my checks came from so i can only assume
(08:03) that they were in charge of that did you see high-level government or military personnel at s4 no not at s4 anywhere in in the overall facility at all at area 51 i believe i saw some military personnel but uh you know no no one i can identify or rank or you know is this research confined to the us government or did you see any international involvement at one time the russians were involved and supposedly there was some breakthrough made by our team however this project was split up and right after that happened the
(08:50) russians were no longer permitted on the facility at all and you know that's that's all i know about it what was discovered why they were kicked out when they started working with us is all unknown to me you were hired to replace a scientist killed in the project what exactly happened there allegedly obviously i i didn't see this and i don't know to be fact but this is what i was told that i was hired to replace one of a couple people that were killed while working on one of the reactors from one of the crafts apparently they
(09:28) for whatever reason cut open an operating reactor and the device exploded killing both of them the scientists that were killed there allegedly the detonation from the explosion was fairly large it would have rivaled a small tactical nuke so it was done at the nevada test site and it was to be passed off as an unannounced nuclear nuclear test did you have any direct contact or communication with aliens no not at all tell us about the briefing files under what conditions did you gain access to them i was put into the briefing room with a
(10:06) 121 or 22 briefings and really was just told to sit and read through them i think they were there just to mainly educate me on on what was going on they weren't a complete in in-depth explanation on everything else but just essentially a brief synopsis on some of the other projects that were going on there supposedly the information now this isn't something that i determine it's something i was told that the crafts originated from uh a planet that orbited the zeta reticuli star systems that articulate one and
(10:43) zeta articulate two or two two stars of a binary star system the craft allegedly came from there one or two autopsy photographs i saw dealt with just a small photograph a bus shot essentially just head shoulders and chest of an alien where the chest was cut open in tea fashion and one single organ was removed the organ itself in the in the other picture was cut and vivisection essentially the showing the different chambers in there this was totally unrelated to anything i was doing but from that photograph it looked like
(11:24) what you see in ufo lore as the typical gray so how tall it was from what i could see i i couldn't tell because i only saw a portion of the photograph but if everything else you see is correct i would imagine it was three and a half or four feet tall but there again you know all i had to see was a photograph and you know i didn't have much to go on you mentioned these beings have historically interacted with man how what was involved there allegedly this interaction has occurred since you know man was a
(11:59) simian creature and you know there were genetic alterations made how specifically did the briefings detail how the aliens manipulated our genetics over the centuries it mentioned 65 or 63 corrections or additions to the genetic makeup that finally resulted in you know a human creature in an earlier interview you had mentioned you saw what you thought may be an alien was it an alien what did you see what i had said and all that occurred was i was walking by a door a door that had a

small nine by nine window in it little wires running
(12:44) through it and glanced in there and there were two either technicians scientists or whoever they were looking down at something and what that something was caught my eye and i never really did see what it was a lot of people have asserted well there was an alien there aliens working around there and so on and so forth i mean i don't think that was the case but uh who knows i was you know you're seeing all these fantastic things and your mind gets going and you know you catch something out of the corner of your eye who knows what your
(13:16) mind's going to come up with so i certainly wouldn't stand on that as fact by any means what was the incident in 1979 that brought the alien exchange program of information to a halt again this was a story that was relayed to me and allegedly what happened in 79 there was some sort of information exchange going on where there were actual live aliens at the facility and at one particular point there was an area where some security personnel went to enter and apparently because not the sidearms but the bullets in the sidearms from
(13:53) what i understand if they would have entered the area the bullets would have detonated and supposedly one of the creatures tried to stop the security personnel from entering the area and a fight ensued and the bottom line from the altercation was that the security personnel i don't remember how many were involved but were all killed and they died of head wounds and that's all that all that i heard of that story what was your job description at s4 my official job description was a senior staff physicist uh
(14:33) i don't know if i actually had that position when i was there because i was there so infrequently i wasn't supervising anyone so i that was the official position i was hired under but whether or not i actually acted in that capacity i don't know what was the size of the staff working on project galileo well there were 22 people employed there totally and that was specifically for the galileo project no for the entire project there were 22 people with majestic clearance i had majestic clearance majestic
(15:09) clearance was designated as clearance 38 levels above q clearance and q clearance is the civilian top secret clearance when did you see your first disk the first disk i saw i believe it was the second or i think it was the third time i was up there normally the bus pulled around to the opposite end of the facility which was the main entrance and that's where we went in on this particular occasion it pulled up to one of the hangar doors which were normally closed and the last one was open we came out and i saw the disc in the
(15:47) hangar upon seeing it it struck me that well this explains all the ufo sightings not thinking that it was an extraterrestrial craft that this must have been some advanced form of fighter that we've been working on for years and you know people have just caught it being tested so on and so forth and it never even occurred to me even though i was looking at an extraterrestrial vehicle that you know this wasn't man-made when did you realize the craft was not of earthly origin well it probably really hit me when i got inside the
(16:26) craft and looked around and began to understand how the craft was operated and finally grasped the whole project as a whole as what we were doing the fact that we weren't building this thing we were trying to find out how it was made we were back engineering it what is back engineering well bank engineering is taking a finished product and finding out how the device or product was produced and essentially determining whether or not you can duplicate it now scientists aside what was your emotional response what were you
(17:12) thinking were the implications to the world or man in general from these revelations i really didn't think about implications of that sort as far as emotionally people have asserted that boy that must have been the most exciting time in your life and that's not the way it was when i first got to look inside the craft all i can say it's an ominous feeling you walk in there and it's it feels as if you shouldn't be there i know that sounds kind of corny but it's real ominous feeling it's not an
(17:48) exciting feeling it brings up a whole lot of questions in your mind well where did this come from and you know that they won't give you the answers to the whole story but it's uh that's the only way i can describe it how many craft are housed at s4 and are they in fact all disc shaped there are nine and their shapes vary i only got to do a close inspection on one of them the others i just briefly saw and they they pretty much varied i give everything nicknames there the one i worked on was kind of sleek looking and i gave it
(18:23) the name the sport model there was one that looked like a jello mold there

was one that looked like a top hat there was a disc that was turned up on its side and it had a large projectile hole with the middle bent outwards on it i can only surmise they were testing it to see if a projectile could penetrate it of course it's just a guess on my part but for the most part they were pretty pretty varied how many times did you enter the disc or did you only enter the sport model i only entered the sport model the other
(18:59) ones i wasn't allowed to loiter around to go near really even to look at i just at one point walking through the hangar doors all the bay doors between all the hangers were open and i got a glimpse all the way down the whole corridor but that was the only time it was ever open tell us about the lower level of the craft where the gravity generators are located the lower level of the craft the floor itself is hexagonal little hexagonal squares and the hatch or if you want to call it a hatch the access way to get in there
(19:38) is an ingenious little assembly it's a honeycomb structure and if you put your fingers and went into the honeycomb and push all the honeycombs will collapse in on each other making a hole it's kind of a neat uh a neat doorway something that we could you know use i don't know what for but i mean it's it's something that i haven't seen before and it's kind of a novel idea but a very efficient lightweight very strong access way i had to hang upside down in there to see the lower the lower level essentially and there
(20:19) were three large gravity amplifiers these devices looked like about a two foot diameter four foot long piece of pipe hanging by a smaller piece of pipe from the level above and they can be independently positioned and that's what what emits the gravitational waves that propel the craft the second level was the only other level that i was on it was the main level that contained the reactor where the seating was the gravity amplifiers themselves though we also called the devices that hung down on the lower level the gravity
(20:59) amplifiers because they were really one in the same they were probably the wave guides or horns if you want to relate that to microwaves and really that's about it that's all that was on that level so it's assumed this was not made for a human pilot it would be extremely inconvenient for a human pilot humans really can't even function in there the because of the ceiling clearance the seats were so tiny it was obviously made for a creature much smaller than a human [Music] how does the craft achieve lift
(21:33) it produces a gravity wave which is similar to the gravity wave that the earth produces however the craft phase shifts the wave in other words it it turns the wave not really in opposite polarity but something to that effect where it will work against the natural gravity wave of the earth and it produces a lift in that effect is there any internal protection for the crew does the craft generate a a gravitational field inside the craft itself well the craft generates its own gravitational field being inside that field
(22:15) essentially doesn't shield you but essentially you're in and this is a terrible way to say it almost in a different realm because you're you're now influenced only that by that gravitational field for instance people wonder how a craft like this can make a turn at such high speed a 90 degree turn when they would imagine people slamming up against the wall or something to that effect well that really wouldn't happen inertia would have no effect you're you're in a distortion and don't forget that gravity distorts time
(22:51) and space so really nothing is going to influence you while you're in there describe the gravity amplifiers for us and some of their different operating configurations there are three amplifiers the craft can operate on a single one can lift off the ground the way in which it's propelled are two different ways there's what they call omicron configuration where the craft is using one generator or a delta configuration where it's utilizing all three delta configuration would be for space travel essentially the craft will tilt
(23:31) up on its side as opposed to a science fiction movie where you see a flying saucer moving around the craft will tilt up on its side focus the three gravity generators to a single point and move through space that way moving around the source of gravity is a problem to a disc because it's interference essentially so what they do is they work with that interference to their benefit they'll use one gravity generator to lift the craft off the ground and as opposed to what we're used to for instance a plane
(24:03) once it's in the air we envision thrust or some force coming out the back of it to push it forward the crafts work completely opposite of that what they do is once they're hovering in the air they'll swing the gravity two remaining gravity

generators up in front of them and create a distortion essentially a downhill and the craft rolls downhill for infinity it's always chasing a little distortion that's why they look goofy when they fly around at low speed because they're essentially and anytime you run over you know the
(24:40) gravity field around the earth is not completely constant and stable depending on the minerals and density of the earth underneath it that gravity will vary somewhat and you will get odd movements of the craft so its low speed mode is is kind of unstable for the most part i only witnessed one test flight up close officially that i was in just inside the hangar the test was going off probably you know just as the sun was going down and it was a low performance test i believe there were some pilots or test pilots in the craft the craft must have
(25:22) been retrofitted to fit them because the seating arrangements were really not accommodating they were in radio communication with the craft which is kind of surprising to me because the gravity waves that the craft was producing should have distorted the radio waves also so apparently there's something there that i don't understand the graph lifted off the ground virtually noiseless other than a small corona discharge on the bottom of the craft indicating the presence of high voltage that dissipated at about 30 feet and it stood there
(25:57) completely silently and moved over to the left to the right and sat back down that was the entire test however that was an extremely impressive test maybe to someone that really knows little about science or anything that that wouldn't be a whole lot but you have to realize this craft was about 52 feet in diameter i don't know exactly how much it weighed but it weighed a lot and this was quite quite a scientific feat to lift something completely silently under control and you know perform a maneuver like that
(26:34) the craft itself was uh i assume it was metal it was cold to the touch that's why i say it was metal but it was a brushed aluminum actually just an unfinished stainless steel not shiny finish to it had no seams it was as if it was injection molded from one giant die i was completely amazed i i can't really reflect on how it made me feel but it that was exciting when you're on the outside you know you you pretty much think you know how could they keep something like this secret that's a crime against
(27:12) science it's a crime against the people and and all that but you know your feelings change once you're privy to the information once i was inside i mean there was kind of a bit of selfishness you know it's well i know about it now this is great you know we should keep it secret just so we all know about it you know that really does go through your mind though after a while it wears off but you know you felt privileged to be privy to the information how would you define gravity could you describe in layman's terms
(27:41) its basic principles for us gravity is something difficult to explain because it's something that we essentially don't understand it's just something that we can observe not much is really known about gravity there are many theories about it but they are just mainly theories there's theories of gravitons which allege that there these are these subatomic particles that that act like an attractive force like gravity that exchange between two pieces of matter there is also a theory that gravity is a
(28:13) form of wave an electromagnetic wave but basically gravity is a force it's it's the attraction it was the inherent property of matter to have gravity a mutual attraction for each other and that's it's basically all that we really know modern science current science right now identifies one gravity it's one force in nature apparently through research at s4 or information gained from one of the crafts they were researching there it appears that there are two different forms of gravity one form works on an atomic scale on
(28:56) subatomic particles holding pieces of matter holding atoms themselves together another works on a larger scale the scale we're most familiar with holding planets in orbit holding ourselves to the ground things of that sort because it produces a gravitational field i i wouldn't say the craft is invisible during the day however if you're under the craft because of the way the gravity is being used gravity bends time and space and it bends light if you are looking underneath the craft or from certain vantage points
(29:32) you will actually see what's above the craft it's a it's really a trick of the way light bends under the influence of gravity for instance we can see stars that are behind the sun that are blocked from our view by the sun the reason we can see them is because the sun is a tremendous gravitational field and it's bending the light around it where we can see the star space time and gravity are all essentially

interrelated they all act on one another gravity bends space gravity also distorts time when you vary one you essentially
(30:10) vary the other two if you as an example if you have a massive body say a planet or something that's making a lot of gravity producing a lot of gravitational waves if you will it distorts space it bends space to it it also slows down time these things aren't theories we know them to be true we cannot artificially create this because we can't create gravity but this is how they're all interrelated how are vast distances of space traveled by amplifying a gravitational field well because space time and gravity are
(30:55) all interrelated if you could produce gravity artificially an extremely intense field of gravity what you could do is actually distort the distance between two objects and make it shorter not just distorting the distance but now you're also decreasing the time the actual time between the two places so you're not traveling in a linear mode like flying a spacecraft from point a to point b you've actually modified the time and the space that you travel in so you're now traversing a huge amount of distance
(31:34) with little time and actually with traveling little distance as crazy as it seems that that's what's going on what are some of the inherent problems with traveling at the speed of light there are several problems traveling at the speed of light just a couple of them are the fact that as your speed increases so does your mass proportionally in other words the more energy you put in to go faster begins to slow you down by the fact that it's converted into mass you have other problems like just traveling at such an extreme
(32:10) velocity navigational problems the fact that you might run into little tiny micro meteorites at speeds like this it would undoubtedly destroy your craft there's just a whole host of problems that you're going to run into just attempting to do something like that aside from the fact the amount of energy required to accelerate to the speed of light is horrendous could you briefly describe project looking glass and project sidekick for us project sidekick was another project going on with galileo galileo was the project
(32:45) that i was involved in sidekick dealt with any of the weapon potential of the craft whether or not the craft had a weapon in it or could it be used as a weapon but it's had something to do with some sort of particle beam configuration where the gravity generator can be used as a lens to focus focus a weapon of some sort similar to the sdi device we were working on in the 80s but with the potential of a focusing device using the gravity generator and project looking class project looking glass dealt with the
(33:21) distortion the fact that there is a time distortion essentially looking back in time and by that i do not mean looking back years ago to see the wagon train days they're looking for distortions that are milliseconds in time and what what that was used for i don't know but that was just observing the time that the time distortion time dilation phenomena the craft and operation what is element 115 is it found here on earth or is it strictly an extraterrestrial material 115 is strictly an extraterrestrial
(33:53) material it probably occurs naturally in some other places maybe other star systems some people not familiar with science or chemistry say well that's ridiculous all the elements occur on earth you know but that's not true there are elements on the periodic chart that aren't found on earth i believe the heavy ion research lab in darmstadt germany has reached element 112 recently so 115 isn't isn't that far away and when they synthesize it it's not like they're making a a couple ounces of it they're talking
(34:28) about one or two atoms of it to make any usable quantity of a heavy ailment like that is virtually impossible element 115 is in the top of the reactor and the base of the reactor apparently is a small something similar to a cyclotron it's a particle accelerator a particle is accelerated to high speed and then deflected up a small tube and it's aimed at the 115.
(35:00) this transmutes the 115. similar to the way we we do that in a normal particle accelerator this causes a reaction a radiation emission that we really haven't seen before it produces antimatter this antimatter is guided down a tuned tube and reacts with a gas when matter and antimatter react they convert to a 100 energy this energy is converted heat energy is converted to electrical power in the reactor itself this is done through a thermoelectric and this electrical power is used to power other subsystems on the craft
(35:48) though there is no wiring you know as we would know it also that's almost a byproduct of the reactor the reactor also sets up a gravitational wave from the 115

being bombarded this gravitational wave was present at the top of the reactor and is essentially guided in the same way microwaves are guided through tuned tubes and this goes to their amplifying cavities and through the projectors that are in the bottom of the craft with the gravity generators running is there thermal radiation danger to the crew there is no thermal radiation while the
(36:23) reactor is running the thermionic generator is 100 efficient which is in violation of the first law of thermodynamics but in fact it works element 115 is stable and for those familiar with chemistry we know that elements with higher atomic numbers have shorter and shorter half-lives however when you reach a certain point they call it the island of stability there is a place and we've theorized this for a long time somewhere around 114 to 116 there should be an area in there where the nucleus of the atom is geometrically
(37:07) stable with protons and neutrons where it it no longer decays it's not radioactive 115 is in fact this element in fact it does occur again somewhere around element 247. of course you know we're nowhere near synthesizing that we can only you know predict things like that but uh that's that's where 115 is did they the aliens give us element 115 in large quantities whether or not it was given to us i i can't answer that question however i was told that we have 500 pounds by one of my co-workers
(37:47) how it was obtained and you know where exactly it came from i don't know whether it came in one of the crafts or you know with separate cargo somewhere anyone can speculate but i was i was told that was the figure you were able to get away with a sample of element 115 how much did you get away with no comment you witnessed several nighttime test flights unofficially while off the base what did you see the test flights i saw off the base actually the the best test flight was witnessed by my friends who i brought out there at the exact
(38:24) moment the craft was hopping around and doing some really impressive maneuvers i had turned around and i think was looking for the video camera or something to that effect but i missed some of the most impressive maneuvers but the craft was uh similar to what was done before that i had seen close up other than the fact that it went above the mountain range moved a much greater distance at a much higher rate of speed how are you able to find out about the test flight schedules the test flight schedules were told to
(38:58) me specifically because i was probably going to have to be present during those times and at that time the test flights were taking place on wednesday nights and from what they said that was because that was statistically the least amount of traffic in the area and that's all that they were concerned about does the propulsion system release any sort of discharge or exhaust there was a high voltage discharge on the bottom of the craft but as far as there being an exhaust there was not why did they appear as glowing balls of
(39:34) light in the night sky well that's kind of the same reason why a neon light or fluorescent light lights up what you're dealing with with is a high energy source in essentially a gas atmosphere oxygen nitrogen and when you apply enough energy to a gas molecule they emit photons they emit light and i don't think it's anything it's really a byproduct of how the craft operates when it's emitting that much energy the gas surrounding the craft emits light the same reason why lightning is visible
(40:10) you have a huge electrical discharge and the gas emits light in the form of lightning bolt if you were going to see one of these crafts at night operating it would appear really as a glowing ball or just a bright light in the sky from a distance even close up you'd see a glowing halo around it this is typically what you'd see in your normal ufo sighting if you've heard them a lot however keep in mind that lights in the sky are caused by much more common things than flying saucers tell us a little more about the aurora
(40:45) you witnessed taking off out of area 51. when i was leaving the area 51 facility heading down to s4 there was a tremendous roar and i have described it as the sound like the sky was tearing and i couldn't see out the windows of the bus all i can see out was the very front and as we came by i asked dennis who was my supervisor and on the bus at that time what that was he said it was an aurora a high altitude research plane and it was a large craft and the one glimpse i got of it was from the rear and it had two huge
(41:28) square exhausts with veins in them and it was just it sounded more like a rocket than a jet i don't know i'd even think he did mention that it was liquid methane powered but there again you know working on the disc technology i really could care less what was rolling around at area 51 but it did catch my eye as a

result of going public have there been any attempts made on your life one day when i was getting on interstate 15 driving down charleston boulevard a car came up alongside of me and i thought he was just trying to race me
(42:09) to get on the freeway this was after i had left the project it was a white boxy looking car exactly what make and model i don't know but i accelerated to get on the freeway to go fast and there was a gunshot and the back of the car was hit and i skidded off into the median and i stopped and i was frightened and i just stood there because i thought the guy was going to be alongside of me and just shoot me i had nothing to do i was essentially paralyzed with fear and i waited there and then nothing else happened
(42:48) and do i know it was a government agent trying to kill me no it could have been a drive-by shooting maybe you know so yeah wasn't it i mean it was an attempt on my life but by who specifically i i don't know though i was threatened uh before i had left that they threatened my wife's life and my life so i can only put two and two together and say that they were kind of pissed at me in an earlier interview you had mentioned that they had put a gun to your head tell us about that that was after we were caught
(43:24) out when i had the test flight schedule and i brought some friends out to show them the disc test we got caught out there and the following day i was debriefed down at indian springs air force base and i was in the room with the security guards that caught us my supervisor and some other people and some of the security personnel yeah they were essentially grilling me about security and you know how could i possibly bring people out there and uh i guess i wasn't as responsive as they would like and they got in my face and one of them
(44:05) pulled the sidearm out you know just pushed it against me have you maintained any contacts with your colleagues out at s4 no i never heard from anyone other than for a very brief time after i left dennis who was my supervisor did try and make contact with me at the uh the meeting place was the union plaza hotel and i took a friend of mine jean huff down there and another friend a former colleague and scientist from los alamos and we did we saw him but i also did recognize some security personnel walking around there from s-4s whether
(44:45) or not it was a setup or what was going on or was trying to talk to me we never found out and we left it just was a real strange situation i never heard from him since as we enter the 21st century how has your experience changed your beliefs well if you want to wear the question how are my opinions changed i would say considerably before i was at s4 i was more or less one of the one of the guys that thought you know all these government conspiracy and ufo buffs and things like that were complete lunatics i even remember before i was involved
(45:27) there a friend showed me a little newspaper clipping and said john lear was giving a lecture who was uh touting that aliens from another world came to earth and there's 70 different species and i remember laughing on the phone that this guy had lost his mind and i was also under the impression that you know well the government's all for the people and they you know you know they're out here to protect us and all that you know after the experiences i had there uh everything is completely turned around you know the
(45:58) government is doing everything but looking out for us i mean the only thing they're looking at is for themselves you know obviously the et craft do exist something had to build them so there must be aliens and since there are in the craft there there must be some sort of factory and an entire civilization somewhere and if in fact that is true and it apparently is then there must be others actual crafts and technology from another world and that's probably the most important event in history he kind of moved from science fiction
(46:42) into reality in my mind and it really just i guess opened my eyes the big thing is whether or not we can duplicate them if we can understand what a device is or how something operates or what its physical makeup is that's great but if we can't duplicate it it's useless to us so there's really two phases to the project going on there it's understanding what we're looking at and then once we understand it is can we duplicate it with earthly materials and earthly technology and you know unless we've got a handle on both
(47:16) of them all that technology is useless to us and if it turns out we can't do that all we have is one single prized possession that we have to take care of and that's it after all that's been said and done would you do this over again what would you do differently i would probably have played along for a longer time i would like to have known a little bit more about the technology and probably kept quiet if i could have and possibly never have said anything i almost wish i had done

that you know it's
(48:01) it's really only caused headaches and problems but i believe if i was given the opportunity again to go back in time and redo it i think i pretty much would have just shut up and gone along with the program i would have much preferred that instead of the navy or whoever it was that hand-picked a few renegade scientists here and there that they turn it over to some more qualified people obviously i was not the most qualified person on propulsion or field propulsion or anything of that sort i was just some guy i mean they could have picked i
(48:35) could have named 10 or 12 other guys that were more qualified than me but you know if they turned it over to the scientific community and not just a couple guys here in the united states i mean you need a large group of people in a large lab to research what's going on there not a little quiet installation it's the it's the security itself that prevents them from getting anywhere i mean it they never do work hand in hand you can't have a military mind science itself must communicate you have to have
(49:12) a free exchange of ideas that's how things progress and when you clamp down on a security system like that where you work in isolated groups and ideas cannot be exchanged you don't get anywhere and that's that's the problem they have what does the future hold for bob lazar well i'm not really involved in any of that stuff anymore that's kind of put behind me i have my own businesses that i work at some computer graphics some consultation other technical jobs radiation detectors and a few other things like that so really i
(49:52) just go about my life and that's you know something that happened that was fantastic and and it's over but it's kind of hard to shake it loose but eventually i will and that'll be that i think all the surveillance and everything stopped i don't think anyone's bothering to monitor me i've said everything that i know it's been all over the place so it's kind of a done deal as far as whether or not there are any craft out there i believe you know they were out and gone in probably the
(50:22) late 89 early 90s and the only thing people see now out there are you know either flares or planes coming into land but that's about it did you have an interest in flying saucers or science fiction in general as a child i was never interested in flying saucers as a child science fiction you know i watched star trek i guess with everyone else back then but for the most part you know i didn't even believe in flying saucers up until i was employed at s4 i couldn't help at one point in my discussions with
(51:05) privately with general secretary gorbachev when you stop to think that we're all god's children wherever we may live in the world i couldn't help but say to him just think how easy his task and mine might be in these meetings that we held if suddenly there was a threat to this world from some other species from another planet outside in the universe we'd forget all the local differences that we have between our countries and we would find out once and for all that we really are all human beings here on this earth together well
(51:46) i don't suppose we can wait for some alien race to come down and threaten us but i think that between us we can bring about that realization thank you all god bless you all [Music] [Applause] [Music] back [Music] [Music]

UFO's & area 51 - secrets of the black world (2004) - YouTube
https://www.youtube.com/watch?v=o34f4sEdxU0

Transcript:
(00:00) uh the time where i entered the hangar i witnessed uh recovered alien spacecraft that the department of naval intelligence in the united states was back engineering he was a u.s federal marshal and he was sent into the area to pick up a man a fugitive uh when he got to the gate it at groom lake uh he they they they let him on to make the arrest but they required an escort with him and then first they searched him and then they they assigned an escort and and when they prepared to leave the escort handed him a a black bag he said put it in your belt
(00:39) here because when this if a siren sounds we pull the bag over our head and lay down on the ground face down and wait till there's an all clear he says there are things here that are very secretive and they can't be seen so the man says well what happens if somebody looks up if you don't stay down they said they're shot on the spot and ask questions afterwards i have had the opportunity over the years to interview again people who have worked at the test site at groom lake one gentleman

spent 12 of his 30 years
(01:13) in black programs at groom lake when i asked him i said first of all i said do you believe in ufos and he looked at me with a straight face in 101 he said absolutely positively they do exist so can you expand upon that and he said no i can't about a year later we were talking about again activities at groom lake and i asked him i said you know can can you really let me tell me what's happening out there and he said well there's a lot of things that going on there that i won't be able to tell you
(01:45) until until the year 2025. but we have things in the nevada desert that would make george lucas envious we are here at one of the most mysterious places on earth behind these mountains begins the black world the super secret u.s navy and air force test site known as area 51. rumors rumor stated right here to test flights with craft from another world recovered by the military take place in this film we investigate these rumors and were at the end able to observe one of those mysterious ufos by ourselves right here near the black mailbox at the
(02:24) desert road to groom lake this is a nevada test site the area comprises about 10 000 square miles it's bordered on the south by mercury and on the west side by highway 95 and up here on the northwest by tonopah and across the top to crystal springs and down here to las vegas this area right here is the department of energy nuclear underground testing area with all their areas labeled there this is called the yucca strip up here is the tonopod test range where the f-117 used to fly out of and now there's other secret programs
(03:20) going on up there this area all across the north here is used for the red flag exercises which is the air force equivalent to the navy's top gun exercises they come out of nellis air force base here and fly this whole area right dead center of the test site is what is known as area 51 also known as watertown also known as the ranch at the very center is groom lake it's about 10 miles on each side and this is where most the secret activity goes on just 10 miles south of the groom lakes complex is an even more secret area
(04:05) this is where the saucers the discs are flown an area called s4 there's nine hangers inside the mountain and the dicks are flown up the immigrant valley up in this area they're flown like that and this is where they can be seen from this road mailbox road which is right here it's about 14 miles from there to where you see the discs up in this area up here is the tonopod test range and one of the workers up there at this lake right here one day saw a big door open on the in the dry bed of the lake and a disc come out of there
(04:55) hurry 51 was uh basically a a navy training base until 1955 when uh in conjunction with the cia lockheed made a secret test space out of it and the reason was to test the u2 uh in 1959 1661 they also tested the sr-71 out of there and it became a perfect area in which to test secret equipment and secret airplanes it was because it was so remote it was bounded on all sides by mountains and it was essentially a million miles from nowhere the security that it provided was just exactly what they needed in the after 1960
(05:46) it became a area to test not only planes but equipment uh machinery all kinds of secret things that they had uh in 1972 uh there is according to my research a complete blackout of detailed information records what have you for a period of 18 months nobody knows what happens between the summer of 82 and i think it was january uh summer of a 72 in january of um 74.
(06:23) there's absolutely no records they talked with security guards they don't know what happened there i don't know what happened there uh i don't really have any suspicions because um the flying saucer program began project red light began its my information in earnest at groom lake in 1960. they didn't attempt to fly one or two of the craft there was a major accident and the testing operation shut down for a number of years the testing operations began in earnest again i believe in 1980 81 82 around that area and the reason i say that is because the security
(07:00) increased drastically during that period and i believe that just south of groom lake which is in the northeast corner of of the nevada test site is a place called papoose lake it's a dry lake uh there's a secret area there called s4 and i believe that that's where they test the saucers out of uh my sources uh are varied but the primary source being bob lazar who worked on one of the nine saucers that were stored there conor stephens then you investigated rumors about the top secret flying sales investigation project
(07:40) in area 51 yes the rumors became a little more real to me in about 1978 when i discovered my first participant in the changeover of that base to a very special facility where they took up the runway and laid in underground facilities and

special laboratories and then relayed it and recon reconstructed the base to make it look just like it did before the material that is now stored at area 51 i believe came from the roswell roswell crash in 1947 they crashed at aztec new mexico in 1948 and another crash down along the mexican
(08:20) border in about 1949 or 50. the residue was first taken to los alamos and to other areas in new mexico under the control of the atomic energy commission also super secret facilities they were smaller and i believe that the real facility was constructed at area 51 when they modified when they changed over groom field to uh it was a field on a dry lake bed when they changed it over to become a special research facility and i believe they transported the material that had been collected and held elsewhere to area 51 about that time at least much
(09:01) of it for the research projects now that that changeover came it began in about 1948 47 or 48 probably early 48 when they modified the field changed over the building and the facilities and put in a habitat where they could control an atmosphere for extraterrestrial guests is my supposition now and they also put in laboratories for research and it's been expanded been worked and expanded almost since that time you got confirmation from the military didn't you yes one in particular comes to mind now he's not in the military but he ran
(09:43) several large military research programs here in nevada very top level programs the highest classification this is a person of from a very prominent nevada family uh well known it's provable where he worked and the kinds of things that he did he also confirms that the the alien technology has been in nevada since the early 1950s that it was it was even here before the base at groom lake was built that one of the reasons that the groom facility was built is in order to test this alien technology he told me that there was a live alien
(10:20) in custody for a number of years that they had difficulty communicating with the alien at first but eventually developed some sort of communication abilities he he is reluctant to talk he's worried about what will happen to his family but he has agreed to give me a videotaped deposition that would be released only after his death and i think when that comes out it will not only confirm what bob lazar had to say but shed a great deal of light on what our military what our government has known about the alien presence
(10:52) for the past 45 years including roswell las vegas nevada city of gambling city of the thousand lights and what only if you know gate to a world full of military secrets here we started our investigation into the mysteries of the black world because behind the mountains north of the glitter town begins the nevada test site nearly a state by its own surrounded by borders safer than any other border on earth since the iron curtain came down nuclear weapons are tested here the stealth fighter was hidden here and much more exotic planes are flown today
(11:43) [Music] magnificent our quest brought us to john lear one of the most successful and experienced pilots in the united states the son of the legendary airplane designer william pillier has flown in over 16 000 hours more than 160 different types of aircraft in over 50 different countries holds 17 world speed records it is the only pilot ever to hold every airman certificate issued by the federal aviation administration since the vietnam war has flown missions worldwide for the cia and other government agencies as well as
(12:26) many different experimental planes for the navy and air force other insiders have told here about the secret ufo test flights in area 51 but in 1988 these rumors became reality for him after he met a young nuclear physicist robert lazar in the summer of 1988 um i was having this house appraised and the appraiser brought along who was very the appraiser was interested in ufos and he brought along uh a friend of his uh who was a scientist former scientist at los alamos um the appraiser being interested in ufos wanted the opinion of this scientist
(13:05) on ufos and at that time i was doing a lot of lecturing there was a lot of publicity about me and ufos in the summer of 88 so i met this gentleman bob lazar uh and he didn't believe it at all he told me that he worked at los alamos on sdi he worked he had a q clearance he had a number of other compartmentalized clearances he uh he knew a lot of secret things he said that if there had been something like this some cover-up that he would have known about it so over the next uh three or four months we got to know bob very well he got to
(13:46) know us and we passed him various information which he checked out with the people that he knew that still worked at los alamos specifically people who had access to the classified library i told him that project grudge which the air force told us told the public was canceled in 1949 was still active he was able to determine through his friends uh who had access to the classified library at los

alamos that it was still going on uh there was another thing that uh i had mentioned that the one of the aliens that we had captured
(14:21) were kept at a secret place called a yy-2 facility uh he in fact found out that there was a classified mail stop at los alamos called y dash 2. now that doesn't mean it would be kept aliens there but it showed that i knew secret things that were going on there was enough evidence there that that he thought well maybe there is something to this and he wanted to find out so having uh the specialized uh highly uh educated person that he was he held two degrees master's degrees from mit and also knowing dr keller who was the father of the h-bomb
(15:00) he was able to send his resume to dr teller who then called him and uh asked him where he wanted to work dr teller proposed two places either eg g in las vegas or lawrence livermore laboratories in california bob said i want to work at area 51. uh he didn't tell dr teller the reason but he wanted to get as close as he could to where we thought the saucer testing was going on well during the next uh six weeks after that he was contacted by eg g uh he was given three security interviews uh and three interviews on his uh
(15:36) basic knowledge they were so impressed that uh that apparently uh they went ahead and hired him the first thing that i knew is on december 6 1988 bob came up here as he usually did in the evening i was sitting here writing checks and he sat right in that seat and i said what's going on bob and he said i saw a disc today and i said i was so startled i thought i didn't hear him right he said what and he said i saw a disc today and i said theirs are ours and he said bears and i said you went to the test site he said yeah i just got
(16:11) back this is the first time i went up there i said oh my god i said well what are you doing here i said don't jeopardize your security clearance work up there for a while and find out what's going on he said he said no he said you've taken so much flack over this thing people not believing you i'm going to tell you exactly what i saw and for the next three hours and 47 minutes he proceeded to tell me exactly what he saw on his first trip up to s4 at the nevada test site and basically it was that yes we had
(16:42) nine extraterrestrial vehicles he told me a little bit about the power plants he told me that he'd been briefed on the aliens that flew them he told me that he'd been briefed on a number of other secret things he told me that we in fact did have a secret base on the moon he told me that we in fact did have a secret base on mars a number of things some of which were so unbelievable it was had i not known bob uh to be truthful i would have been very suspect but uh i had known him for this period of time and i had no reason to
(17:17) to believe that he would tell me anything other but the truth well i had met ed taylor at los alamos one day we had a brief meeting and a talk i had shortly thereafter moved to las vegas and basically left the scientific community to do other work uh some time later i decided to re-enter and send applications out to several other national labs and also went to ed teller and he gave me a call and he said he might have something that i'd be interested in and suggested did i go for an interview shortly thereafter someone from egng
(18:04) called and told me to come down for an interview there they made it very clear that eg had nothing to do with it they were just using the building as a place to do the interview after a short time they said i was basically over qualified for the position but they may have something else in the future and i don't remember how much time lapsed after that but shortly thereafter they asked me to come down for another interview and they said this was involving i don't remember their exact wording but they led me to believe
(18:36) it was a field propulsion system and of course i thought it was something that in secret that we were working on uh later only did i find out that it was uh you know a back engineering program dealing with alien craft i flew out of las vegas mccarran airport and i flew to groom lake in a 737 aircraft we land at groom lake and there's a bus there that drives about 15 miles south approximately i'm i'm really not sure exactly how far uh down to a smaller dry lake bed known as papoose lake and right up against the side of the
(19:19) mountain is the uh s4 installation and what happened to you first when you entered it how did phil receive you it was very military-like it was certainly not a scientific atmosphere very high security everywhere you you walked you had to have an escort an armed escort even even into the bathroom all doors lock and open with your uh with your badge and it was a very oppressive atmosphere um how many times did you spend on this atmosphere before you saw the craft for the first time i believe i was only there two or three

(20:05) day probably two days before i saw the craft time how they are stored what your question was and your feelings when you saw it well my feelings it was very uh um i should step back a minute and say that when i first saw the craft the first time it was walking into the hangar and my impression was well this explains all the ufo sightings this is just a secret military aircraft we're working on and that's the end of that it was actually the second time when i saw the craft when i got to enter it and look over it
(20:43) and i finally realized what was going on that this is an alien craft and of course this was after i read the briefings and uh that was a totally different feeling that was not a feeling of excitement it was a almost a anomalous feeling that uh a feeling as if you shouldn't even be there as very difficult to describe it looked like uh if anyone's familiar with the billy myers sightings very astonishingly similar to that that craft it was a very sleek thin looking flying saucer shaped craft kind of hard to describe without drawing
(21:31) it but kind of a typical flying saucer shape did you see just one type or this one perhaps there were nine total i only got to essentially work back engineer or analyze one of the craft but there was a separate hanger for each of the crafts and each one was essentially different in its visual appearance did anybody tell you about the emus navy intelligence got requests from no no not at all that's uh a lot of people have speculated about it that they were either shot down or they crashed but the craft seemed undamaged so i doubt
(22:18) either of those would be correct it's very plain it's all one solid color uh a grayish pewter color the same color as the outside of the craft there are no sharp corners anywhere every device in the craft the seat the amplifier housings everything has a rounded corner on it almost as if it was all fashioned out of wax and then slightly melted so everything curved even where the ceiling meets the floor on the end everything has a curve to it um very very plain very wide open uh very impractical use of space
(23:00) and there are three levels the lower level houses the amplifiers themselves that swing the three of them the center level is where you enter the craft where the seats and the amplifiers are and the uh top level is a small area and i did not have access to that so i don't know what's up there do you think the alien craft you have constructed absolutely alien craft there's no question about it well first of all the scope of the project was to back engineer it if they were united states craft we wouldn't be going
(23:33) backward trying to find out how they were built if we had built them second of all the size of the equipment inside the size of the seats the materials that were in use completely alien to us pardon the pun and you know the fuel element 115 essentially non-existent uh all these factors together uh and of course the briefing information stating that they were alien craft um could anybody tell you how the propulsion function well that was part of my job was to back engineer that and find out exactly how that operated and
(24:11) they had made some progress but i really don't know how long the craft was was there being analyzed uh if it was one year or ten years before i got there but it seems like only a modest amount of progress had been made the propulsion system is really an amazing setup there's two parts gravity amplifiers and the reactor that provides the power the reactor itself is a total annihilation reactor fueled by any matter total annihilation is essentially the most efficient nuclear reaction that takes place of the
(24:50) three fission fusion and annihilation it uses a super heavy element element 115 as it would appear on the periodic chart none has yet been synthesized on earth um it's my opinion that this occurs naturally in in certain star systems this element is bombarded in an extremely small accelerator the element under bombardment undergoes spontaneous fission and produces antimiter particles these are interacted with a gaseous matter target and by means of a 100 percent efficient uh thermoelectric device is converted
(25:35) into electricity now 100 percent efficient any electric is essentially impossible uh you know the first law of thermodynamics says that's basically impossible there has to be waste heat and things of that sort but there's none detected in in this system that's another amazing form of technology this uh tremendous amount of power the system generates uh operates the amplifiers and also as a byproduct of the 115 undergoing uh this bombardment it produces a very interesting phenomena a gravity a wave as it's
(26:17) known to be called this gravity a wave is it travels in almost the same way microwaves travel this is essentially applied to the gravity amplifiers and by means

of the electric current also provided by the reactor it's amplified and focused the amplified signal is shift shifted slightly out of phase and and by virtue of that they can repel or attract a gravitational body the craft can take off on one gravity amplifier there are three in this particular craft when it's using just one amplifier essentially pushing away from the earth
(27:04) it's known as omicron configuration for space travel the craft will rotate up on its side face the three gravity amplifiers at the target they'll focus down on a single point uh some tremendous distance away and the amplifier and the associated and the reactor the associated reactor will be run up to full power and they essentially pull the fabric of space distort space and time toward the crap so they can trim traverse a tremendous amount of distance in in virtually no time at all they're not traveling in a linear
(27:38) fashion they're essentially bending space and space the fabric of space essentially and gravity and time are all interlaced uh when you start distorting gravity you distort time and space along with it these are these aren't theories we've known these for a while we just have no way of controlling them but apparently the civilization has found out how um did you manage your people they've done several test flights in it now not out of the atmosphere these are short controlled low altitude flights
(28:12) essentially they have a prized position here so they're not going to risk taking this to a point where they could potentially lose it as you know at the gravitational pull of the earth or going too high but i witnessed several tests um outside the compound and also one you know probably about a hundred feet away from the craft how did your craft behave in the flight very very quietly it lifted off and it made a slight hissing sound a slight blue glow from the bottom probably due to the extreme voltage that's present on the craft
(28:57) after a short time that that disappeared as it uh rose and uh just gently glided and later sat down it was very uneventful but almost totally silent you please describe the briefing documents and the information contained in it uh it was there were an extensive amount 120 some odd briefing documents all of them very short and essentially what they were doing was just giving me an overview of the other aspects of the research being done on the craft and the bulk of the information all the technical information was specifically
(29:41) dealing with the power and propulsion system which is what i was supposed to be working on but there were documents uh basically stating that these were aliens that possessed the craft there were some autopsy reports that uh not very in depth they had no reason to give me in-depth reports on that but uh they did have pictures and uh uh two pictures actually of the alien carcass with the chest cut open in a single organ removed and the organ itself was sectioned uh it seemed to from my non-medical viewpoint uh it seemed that this one
(30:22) organ performed uh many functions instead of one um there were documents on uh metallurgical work being done on the craft and really every aspect that separate groups we're working on and i'm sure they got a briefing on what my group was working on a very abbreviated one as uh i did on theirs and this will say where the aliens come from yeah it did mention the zeta reticuli system and how that information was extracted from the craft i don't know maybe there were star charts or something along those lines
(30:58) did they contain any information about the history of mankind the alien involvement and the history of mankind not not really nothing that said well this is the way things were uh there there there was mention of um alien intervention uh in in the past i mean extremely long ago uh something along the lines of uh i have millions of years ago uh for the information that that i looked at it it seemed that uh and there again these are briefing documents so i can't i i can't myself ascertain whether or not these are true i can only
(31:46) assume it because the briefing documents i read that pertain to the propulsion system were true because i i dealt with that but they did make reference to uh contact with the earth over ten thousand years ago uh also with uh genetic alterations that ended in uh uh a simian being and uh all kinds of uh did you claims meet an alien or something buddy other than in pictures no i've mentioned several times that i'd walk through an area and looked in a small window and saw something small there but i don't i
(32:29) really can't say that was an alien body a lot of people jump on that and say yeah you must have seen an alien but there's just as much chance that they were trying to figure out the size difference and how the the seats fit a body and you know they had made up a small mannequin or something i didn't see anything moving

around alive so i i i always say no i i have never seen a living alley how do you think for the job that's very difficult to say i i really i really don't know i'm certainly not
(33:01) the most qualified as far as physics goes so i really don't know i've i approach things at a very different viewpoint they might have been frustrated after a long time walking down the same path and not getting anywhere and they wanted someone essentially to come out of left field and approach it from a different angle with a different viewpoint and i'm kind of known for that why did you went public with the information when why why uh that's again a complex question it's not just one reason there's several stemming from
(33:38) from many things harassment to protect myself the fact that this information being contained is is also unfair but there are many many reasons after you went public they will try to silence you in any way oh in every way yes i was uh shot at while getting on the freeway here in las vegas uh friends were harassed and taken out of work that that knew me um many things happened well he was uh he was upset about the security at the base it was an oppressive place to work he was upset that they didn't have better scientists
(34:20) and a more open kind of research that would allow them to finally get to the bottom of how this alien technology worked he thought that that information should be shared with the entire world in order to benefit the entire world at the same time he was going through some personal crises that that may that led to him sharing some of this information with some people that he knew once he got caught he was worried about his safety they put guns to his head they told him he was in a heck of a lot of trouble and i think the reason he was willing to
(34:55) talk to me at least what he told me in the beginning was he was trying to save his his hide he figured by going public that they wouldn't dare do something to him it seems to me that that for several months there after he was talking to me there were serious attempts to intimidate him to keep him quiet but he had the courage to pursue it and i think he made the right decision because i'm not sure that he would be alive today if he had not spoken to the television camera michael i was in las vegas television
(35:24) for 10 years i worked stories about political corruption organized crime illegal drugs i've never done a story anything like this when i first met bob lazar i was only tangentially interested in the ufo material i had done some talk shows about it i knew the public was interested in it but i didn't know if i was going to be able to do the story about area 51.
(35:48) stories about area 51 and possible alien technology there had been floating around for as long as i had lived in las vegas but there had never been any thorough investigation primarily because no one who had inside knowledge of the program had ever been willing to talk about it publicly until bob lazar when i met bob i i had a meeting with him and my news director we we asked him a lot of questions we asked him the basics of his story it obviously is a fantastic story but we decided to go forward with it because bob himself seems so credible it
(36:24) it became very difficult very soon however because trying to verify bob's background proved extremely difficult it is still proving extremely difficult for example we quickly found out that the schools that he said he went to had no records that he was ever there his former employers where he said he worked had no records that he'd ever been there in particular los alamos national lab was the linchpin of his credibility we thought if we could prove that he worked at los alamos as he said it must have meant
(36:56) that he went to school somewhere because they don't just hire people off the street and if he worked at los alamos national lab on classified material it made sense that he could have been hired to work at other classified programs such as s4 papoose lake however the people of los alamos lab said they had no records that he'd ever been there they stalled on our request for information they uh they wouldn't return phone calls they wouldn't answer letters it was as if they didn't want us to have
(37:27) the answers well eventually we came up with a lot of indications that bob did work there we found for example the the newspaper from los alamos that lists him as being a physicist from the lab we found the the lab laboratory telephone book that lists him as being an employee at the lab we have talked to other people at the lab who worked with him who tell us that bob did work on classified projects that he was a physicist that he was there just this week almost four years after we first started making our inquiries at
(38:00) los alamos we finally got someone from the lab to say yes bob lazar was here

yes he worked at the meson facility yes that facility did some classified work it's taken a long time but now we know that bob was there we know he had a security clearance but we still know that there are a lot of the records that we're seeing searching have not been produced for us we don't know why what convinced you most that bubble told you the truth well i'm not a hundred percent sure about everything that he says
(38:32) because as journalists we have to be somewhat skeptical but a couple of things stand out in my mind number one is that bob has always told the same story the story that he told me on the first day that i met him about his experiences at s4 is the same story he tells today and most importantly when bob got into some legal trouble which in in the eyes of many people means that he's completely discredited when he got into his legal trouble he told the court system the exact same thing now the the courts the interesting thing
(39:02) is they're trying to verify his background the probation department and they said we can't verify his background therefore he should go to prison well my response to it is welcome to the club you can't get any information on his background bob was facing up to 60 years in prison if he did not tell the truth about his background and the story that he told to the court is the same story that he told to me on the first day and the same story that he's telling today after you interviewed lazar on tv did
(39:29) you come in contact with other witnesses from area 51 several witnesses uh more than a dozen now in in total have come forward with bits and pieces of information that confirm at least parts of what bob said no one has come forward with the kind of broad knowledge that he claimed but what i have learned from these other people tends to confirm that what bob is saying is true the problem is that none of them have been willing to talk publicly they will give me bits and pieces of information privately uh but i'm restricted from using their
(40:00) names and there's some very good reasons for that there's been an obvious attempt to intimidate these witnesses into keeping their mouths shut three examples come to mind one is a a former electrical engineer who worked in the television business who moved from las vegas and whom i worked with moved to another city he had told me by phone that he had seen a disc under a tarp in a building at groom lake well i tried to arrange to do an interview long distance interview um with a camera crew in the city where he
(40:29) lives he agreed to do it as long as i blacked out his face he comes out the morning after he makes the agreement to uh to give me this interview there's a car sitting in front of his his house two men in suits speaking into a radio he's not giving it much of a thought but they followed him to work when he gets out of work they followed him home no interview he was scared there's a woman who works in the court system here in las vegas in a very responsible position who formerly worked for a major defense contractor here in
(40:58) nevada she had sat in on meetings where she said the discussion between her employer and military officials was about wreckage from roswell which had been taken to area 51 alien wreckage she had agreed to give me this information in a private meeting that we were going to have but the day that the meeting was supposed to happen she didn't show up and i found out later she'd been visited by her former employers and they had told her she's still under oath she could be prosecuted but what's more her employers
(41:28) hinted that harm could come to this woman or her family if she talked to me they said we know you do a lot of traveling we'd hate for accidents to happen to you or your family so she will still not talk to me now three years later there was a third example this man who performed the tax returns of persons who worked at area 51 he had called me up on the phone at the tv station and told me he would meet and give me this information the next day he's visited by two men who say that they're from the secret service
(41:57) and they wanted to ask him about his tax returns but he said that it was his definite impression they didn't care about his tax returns they just wanted him to shut up and not talk about area 51. so there are a lot of people like that who have information who could confirm bob lazar's story if they had the courage to come forward i can't really blame them for not coming forward because our government or elements of our government or representatives of our government seem to use intimidation and fear
(42:27) tactics to keep these people quiet the only evidence that we got is we were able to steal or otherwise obtain a piece of the fuel that powers the saucers it was element 115 it's a stable element and we did several experiments with this we also

videotaped these experiments the experiment was to prove the high gravitational attraction the the heaviness of the element and other things we proved it to ourself unfortunately whoever is in charge of the cover-up stole it back the other thing was that on may on march 21st 1989
(43:14) he asked me if i wanted to view one of the test flights this was on a tuesday and i said well sure but how are we going to see one and he said there's going to be a test flight tomorrow night just at sunset and i know a place where we can sneak in still be on public land and watch it i said great so i said why at sunset and he said well statistically up in that area there's the least traffic around then so i drove with bob and uh the real estate appraiser gene off and myself and we drove up there got there just a little bit
(43:47) before sunset i took my celestron telescope we took a video camera uh got out of the car and within maybe 10 or 15 minutes this disc comes up from behind the mountains and starts doing all these fantastic maneuvers uh it was a light a very bright light and you couldn't see the disc form but i had my celestron scope with me which is eight inches extremely powerful and after a few minutes i was able to get it right in the the finder of the celestron telescope and i saw it for myself it was a disc there was no question in my mind and i
(44:24) just watched it go down behind the mountains we had heard about this location and actually the ultimate the information ultimately had come from john lear we found out we heard about the 29.5 mile marker the famous mailbox area so we went up there our first trip was the first saturday in january of 1990 and we arrived there about 10 30 at night and while we didn't see anything on that trip it was a saturday night we found out that the active nights are monday through friday and the weekends are usually shut down
(45:00) but what we did find out there were several other vehicles up there three motor homes and a couple of passenger cars and talking with those people we found out that they having had gone out there on numerous other occasions had seen plenty so we were determined that and we had understood from the beginning that this was going to be something where on one night you would see nothing and on the next night all hell might break loose so we were prepared for the long haul we were going to continue going out there until we should eventually see something
(45:32) so then upon returning back home i discovered that i could tune in the billy goodman happening out of las vegas in santa monica i could receive it so i started listening and almost the first night bob lazar was being interviewed by billy goodman and i in listened intensely and i discovered from lazar's interview that the best nights to go out there are wednesday nights that they pull out most of the stops on wednesday nights now the reason for that was explained that when they were preparing this facility and the
(46:10) operation they did a study on highway 375 the public highway through the action zone ticaboo valley and they determined from their study that there was the least traffic on wednesday nights on highway 375. so that's why wednesday nights were chosen for most of the action although we on and having made numerous other trips determined that almost any weeknight is effective monday through friday but wednesday's always seems to be the most prolific probably for that reason but then of course we wondered that since we were going out
(46:45) there on a wednesday night maybe that would perturb the formula and then of course it would shift to some other weeknd who knows so but still nevertheless it seems that wednesday night still continue to dominate the with the greatest amount of activity out there so our next trip was wednesday february 28th now on our first trip i had gathered together about seven or eight friends and we caravaned out there and saw nothing of course then i started organizing the same group of friends to make this second trip but this time was in the
(47:17) middle of the week and lo and behold when it came close to the time to depart we found out that none of our friends could make it work weeknight so pearl says boy i don't think i want to go out there all alone i said oh don't be ridiculous dear i said we obtained this information off radio kveg clear in santa monica being broadcast from las vegas i said there are people all over the western states that are hearing this we have a tangential interest in ufos at this point think of the people that have a voracious interest in the subject you're
(47:55) going to have people going out there from all over and i'm sure the word is spreading to other countries of the world you'll probably have people out there from australia and europe and all over the map to say nothing of the people from las vegas close by i said there could be scores even hundreds of people out there don't be ridiculous so we went out there we were all alone was actually outraged well

anyway we got out there and i believe we arrived around 3 30 in at the mailbox we decided to go to a
(48:28) little alien for dinner and we came back and got to the mailbox by about 5 30 was beginning it was dusk and beginning to get dark wednesday february 28 1990 and i got my lawn chair and suddenly at 7 30 the first craft came up and i was astounded i leaped out of my lawn chair had a camera around my neck my 35 millimeter point-and-shoot camera nikon action touch and i took a couple of shots and then we actually about every 45 minutes a craft would come up one at a time we had we saw six craft that night each one in
(49:10) succession and it was craft number about two or three that was was the most dramatic that is it was the one that came the closest and i took a photograph of it what we actually saw michael was a craft that was ellipsoidal in shape it was pulsating brightly and while we couldn't see the outline of the craft the strict outline we saw this very brightly pulsating ellipsoid and when i snapped some shots apparently the camera with its low end optics that is we didn't have a huge magnifying lens so it didn't bring the
(49:48) craft in so close that would have appeared as a giant blur of light so plus it must have caught the craft in a trough of its pulse because the photograph captured the craft beautifully that is the outline of it so it was just a fluke of being at the right place at the right time and having the right optical setup going to bloom lake area 51 what happened to you this night well on that night february the 21st 1990 i took uh accompanied a crew from nippon television network to witness the test flight of an object over groom lake
(50:42) which is known as area 51. we arrived at site around just after sundown because according to the information given to us on that same day when we visited mr lazar at his residence he said that if you go there after sundown and stand near the mailbox area of highway 375 looking south towards groom mountains and also to the jumble hills you'll see test flight of these objects and lord behold when we arrived at the scene exactly around 6 45 or so we started seeing and we suddenly started seeing an orangish yellowish light
(51:35) uh suddenly up here on top of jumbled hills making a motion to the right for about uh 15 seconds or so next exactly at 8 15 pm we had another sighting of the same object that suddenly appeared on top of jumbled hills came up above the hills and [Music] made its appearance went slightly to the right side and at that juncture in time it made a sudden dissension and a back turn which i estimated to be possibly about five thousand feet sudden dissension a back turn dissension and i had never seen anything like that in my life ever and
(52:30) it is definitely a test fight of highly unusual uh objects a demonstration of technology or propulsion system so exotic right now we don't know what it was but it was being tested at that very night well i've become probably the expert on area 51 in the united states since uh february 26th of 1991 which was my first trip out to area 51 on that trip i got as close as i have ever gotten to a flying saucer it was the first time i'd ever seen a ufo actually i was traveling in a car with with my friend down the road and a very large object
(53:18) flashed over the car and then began to float probably about a mile away from us in the open desert we got out of the car ran towards the object and got within a few hundred yards of a large disc shaped object about 40 feet in diameter that looked like a a saucer with a teacup on the top of it it glowed a brilliant reddish orange color and then glowed a real bright yellow color on one occasion we thought that the object was actually going to explode because it glowed so brilliantly it would shoot up to about 200 feet in
(53:48) the air make a falling leaf motion back and forth and then go back down onto the ground this object was uh was amazing i was so excited because i've never seen anything before like this ever in my life we got our faces burned we had a mild case of radiation poisoning after that we had fevers for three or four days of about 102 203 degrees which we felt was radiation poisoning and since then i've been out to the area 51 area uh probably some 40 50 times or so and have take taken quite literally hundreds of people
(54:21) out there we had gone to a place called rachel where there was supposed to have been this gathering of people one of which i had heard on the radio in los angeles and that's what seemed so intriguing we passed this large group of people in the middle of nowhere out in the desert there was a tour bus and probably 24 cars or so just in the middle of nowhere total darkness we went on by them and went into rachel we we stayed there for about 45 minutes just listening to the conversation going on and decided that

(54:56) the place to be was probably the group of people that we had passed about 15 miles back we went there and sat and began watching like it seemed everyone else was doing and then we had the first actual sighting i looked up in the sky and i thought there was a really bright star up there and i said john is that star kind of moving and right about the same time i saw that he goes yeah i think it is and right about that time it's just like like a falling star dropped out of the sky and and and just came straight down to
(55:27) the right above the a mountain range that was about five miles away from us and and just stopped there and hovered and then and then moved around the mountains a little bit making various maneuvers that no aircraft could possibly make and uh then it just it didn't just stop and then it and then it lowered itself down below the mountains out of view and that was the the first of uh many weird things we saw that night and uh the the people on the bus were there at that time they they got a lot plotted like oh there was a sighting
(55:56) and uh and it was getting late it was about one well it was not even quite midnight then and they uh so they all kind of applauded and said well that's there and they all got on the bus and left did you recognize any details not at that time not at that time that that particular sighting was completely on the other side of this large valley that was at least 15 20 miles across uh at the the point of where where we saw it come down and float across the valley yeah the most dramatic thing that happened that evening
(56:26) was uh after every a large number of the people that had left including the tour bus it was down to three cars and we were sitting in the middle of these three cars and had been watching a light maneuvering uh kind of wildly out on the other side of the valley and were just intrigued as it came straight toward us as if it was singling out uh jeff and i in particular from from this law immense distance away in a straight line and there was a car on the other side uh on our right side that had the dome light on and they were
(57:07) making sandwiches they didn't see this happen there was a car totally on the left side was going on they didn't see it happen they had the seats down and i think they were making out yeah and we were absolutely stunned uh i i felt absolutely awestruck as this light that we had been watching came straight towards us in just an instant it crossed that long valley and and became actually frightened because we're sitting we're sitting in a pickup truck and i'm looking right over right up like this and it stopped and
(57:42) hovered practically right over us and uh and then it turned on a light from the from the edge of the craft and i mean and when it came over us and stopped and hovered the light seemed to be on the top of it and it revealed like a silhouette of a disc and you could clearly say it was it was a disc shaped craft and it made no noise whatsoever just hovering above us you know probably maybe 100 feet you know you know in altitude above us yeah yeah and it stayed there and hovered for a few seconds more and that's when i was
(58:11) starting to get worried you know that something else is going to happen now that they've checked this out maybe they're going to land or you know i didn't know what was going to go on so i got pretty scared at that point and right about the same time i got scared uh the thing just zoomed back over the mountains and i mean you're talking about like oh was it ten you know five five eight ten miles and within a split second it was over this mountain range and then and then it stopped and then just
(58:35) lowered itself on the other side of the range out of sight we have to understand one fact that area 51 is has three tiers of security systems the outer perimeter security the inner security and also the regular military security plus automated security system we're talking about outer perimeter security area 51 is using semi-private security firms such as wackenhut corporation we call them wackenhut ss because basically it's the way they operate why can't hurt ss of course means why cannot special securities cooperation of course
(59:27) and they are assigned to guard the outer perimeters of area 51 and they because of the status of being a semi-private status they don't wear any insignias of any kind they wear military camouflage uniforms and carry machine guns and so on they ride unmarked four-wheel blazer type vehicles and they they harass citizens who even dare to drive on any of these dirt roads south of the highway 375.
(1:00:07) we have every right to be driving on these public lands as long as we don't cross the warning sign area we were harassed by dangerously maneuvering helicopter over public land on may 16 1991 a group of us all together 18 of us were in a seven car caravan just coming back on groom road after taking pictures of the

warning sign area we were coming back to highway 375 but suddenly we heard a throw thunderous sound overhead as if a railroad was passing over our cars when we looked out up there was this military helicopter
(1:01:00) that appeared and came about eight five to eight feet above our cars on purpose harassing us intimidating us and for the next 15 to 16 minutes we were trying to get away from this this helicopter we were frantically trying to drive and go away from this area and we were buzzed by this helicopter continuously for 15 minutes in one occasion this helicopter circled around as we were driving and came front of our cars at almost low level and just scared us and continued this illegal maneuvering endangering our lives
(1:01:50) [Music] where is it where is it [Music] there it is here it is there it is yeah it's flying over there i had to put the gain on just to see it
(1:03:10) boy am i better right right right unfortunately this isn't doing me any good i think so students who's that gary come shut up zigzags
(1:04:30) the ufo which yet was filmed by the japanese television crew that night was analyzed by nip and television with the help of latest state-of-the-art computers the result it's definitely no conventional aircraft [Music] foreign [Music]
(1:05:39) but also around las vegas unknown flying objects are regularly observed i took my wife to work one morning and on the way back i was looking out the windows i usually do and i carry my camera with me quite often and i saw this anomaly this ufo in the sky and so i stopped my car and pulled out and took some footage of it which is what you're looking at now i guess that's about it and it came on two different mornings as a matter of fact so on two different mornings i took pictures of it
(1:06:41) this was in 1991 and it was uh actually we've seen a lot of things around las vegas here it's a great area to spot ufo objects i've seen cigar-shaped ufos i've seen the regular discs and i've seen anomalies of all styles and types around here i've spent many a night all night up looking for ufo things in the sky [Music] [Applause] [Applause] one morning when i woke up i was drawing
(1:07:44) the curtains of the window and it was a cloudy day but clear and two they look just like bowler hats dull gray no windows no wheels no nothing just looked like a bowler hat metal definitely metal there's two of them one was flying in a steady fashion and the other one it looked like the pilot was drunk because it was uh it was just flying this way and they went down behind some apartments which were only about 100 yards away from me that i was impressed with i told my wife about it and she gave me a strange look
(1:08:26) and two weeks to the day she was at the same window i saw the same things and called me at work and she was jibbering away and i was yeah and from then on we'd seen quite a few i spent a lot of time out in the desert with my camera and i got rather obsessed with it for a while but uh as you'll see in some of the other footage of what i've got it's quite interesting and it's definitely unexplained it happened when i was at work it was a sunday and it was close to seven o'clock and for some reason i just took my camera to
(1:09:04) the parking garage roof and started filming uh what you see here which are two remote type objects sort of dancing around and uh in a little while you'll see another craft come along underneath it's a little larger and it's very stable and this guy's steadily heading north but these two which are dancing around seem to interact with it and then it goes on its way a few minutes later another craft comes along the base part of the mountain and uh in between that an airplane going into land at mccarran airport
(1:09:44) goes past so you get a good idea of the size and the distance and then these two objects again interact with this large craft and as you'll see towards the end of the tape here i follow it around to see where the craft went to and it's totally out of sight it's vanished did you recognize more details no not really no it was just close to dusk they were just lights in the sky it's slightly uh delta shaped i think the objects are that's how they appear anyway when i zoom in obviously the lazar ufos were just the
(1:10:28) tip of an iceberg a black world as fantastic as a fairy tale country or a far away planet yet committed researchers try to trace down the last mystery of these super secret test flights by looking at the maps and by discussing things not only with the sheriffs but also with friends of mine i found a mountaintop in which you can actually climb to the top of the mountain and it's about an hour and a half hike or so it's about seven miles to the top of a mountain which we call morton's mountain since i was the one
(1:11:02) that first found it climb up the top of the mountain and this is where you

get this spectacular view of virtue of the entire base you can see this particular video was taken at night so because of the fact that we were very afraid of being caught out there still during the day because we weren't really sure whether or not we were over the military's border or not at about 6 a.
(1:11:24) m every morning they were sending helicopters out literally chasing us around if we were anywhere near their border and the evening times they would send out the security vehicles the the bronco security vehicles who would do everything from take down our license plate numbers to actually go through our cars to looking for us in the desert thinking that we were actually stepping across their border this videotape comes from our efforts literally risking our lives at that time to be able to get a good view inside this probably one of the most top secret
(1:11:54) facilities the united states has above ground specifically what you're looking at is you're looking at area 51 at night taken in the uh taken at around dusk you're also looking at a another section of the video which was work that looks like was going on on the runway now for some reason the military was carrying out some kind of either construction operation at night now there seems to be a huge halogen lamp that's illuminating part of the field in which you'll see smaller lights which are trucks and and jeeps basically
(1:12:28) coming and going from this light you'll see on the film what we thought originally was a ship actually coming on and testing and moving around on the on the floor of the valley uh it didn't really move that much at night so that's why we concluded that it must have been some sort of halogen work lamp you'll see for the first time the object which is called old faithful now old faithful has called that because something appears in the sky over area 51 at 4 50 a.m virtually every thursday morning
(1:12:58) now many times this object is preceded by what in california have become known as sky quakes there is a very large object which we've witnessed out there between seven and 800 feet long and this object literally comes in from space traveling anywhere between mach 10 and about mach 18 flies over catalina island over southern california and then lands at area 51.
(1:13:23) this particular object that you're seeing we theorize is what's known as project senior prom which is underneath the project aurora banner and that this object is in fact an unmanned uh 132 nuclear weapon carrying nuke platform that in essence orbits the planet to be able to rain down nuclear bombs on virtually any country at the push of a button this object as it's landing you'll see it appear in the sky very dramatic footage of the first time any anything has ever been shot actually physically landing at 51 the
(1:13:56) object appears at exactly 4 50 am comes down in a conventional flight pattern now sometimes this object will shake back and forth violently just displaying all the characteristics of a quote conventional ufo unquote and uh on this particular occasion it comes all the way down in a very straight line you'll see a field around the outside of the object and when it comes down between two safety lights you'll see it actually physically land and then when it comes past a second set of safety lights the field around the ship actually
(1:14:27) blinks off and then you can see that it is some sort of unusual dart-shaped uh uh aircraft some sort of experimental aircraft because it does have wheels on it and it does appear to have a a a fuselage that is comes up in a point with a light at the top and at the bottom and then comes back at the at the bottom so it is a very unusual ship and this particular ship was in fact preceded by one of the famous southern california sky quakes [Applause] [Music] rachel is a small desert nested to
(1:15:42) highway 375 which passes the black world its inhabitants are mainly workers of the test site rachel's main attraction is the little ale inn the local grill and beer bar owned by pat and joe dravis which became the main information exchange for area 51 enthusiasts from all over the world it not only exhibits ufo memorabilia it also houses a library and a large collection of newspaper articles about secret government experiments documenting that the greatest secret of our time actually is no secret anymore aviation expert and writer jim goodall
(1:16:40) was one of the first to lifted the veil of silence i am a published author i've written for three different publications uh i have a number of articles on black programs and secret projects for jane's defense weekly for inter-ravia for aviation week space technology um i have three books right here that i have authored just on the f-117 alone that is my that is where i spend all my spare time is digging i've had my neighbors questioned i've had my mail opened i've had my phones tapped i was called up for desert shield for i

(1:17:26) mean i'm in the air national guard they held up my clearance at the pentagon they didn't deny my clearance they held it up because i asked too many questions of my government and my response was that is my job as american taxpayer it's my job to question my government whenever i feel it fit and i do and i make a lot of enemies and i i i'm referred to as that sob from minnesota i have a quite a reputation in the pentagon for being able to dig up information when no one else can what's going on in area 51 today based
(1:18:03) on information from first-person interviews i've made over the last six or seven years there are at least eight black programs flying out of groom lake out of area 51. that does not include does not count the b2 bomber because it's not a black program does not count the f-117 which is a virtually a white program today there are at least two very very high speed aircraft that are have been reported for since 1982 is when we've heard the first reports of them one of them is a small aircraft it goes approximately mach
(1:18:37) 4 to mach 6 there's an aircraft that has been tracked out of the bay area tracon in oakland california by the federal aviation administration center at least eight times since 1986 flying in excess of 10 000 miles an hour going through controlled airspace and a very very large aircraft at that besides the two high-speed aircraft there is a stealth or low observable electronic warfare aircraft it's been referred to as excalibur there is an aircraft that is designed to fly very very high but very very slow and
(1:19:17) very very quiet there's been some rumblings or reports there's a flying triangle much like the cancelled mcdonald douglas jones dynamics a12 of there was going to be an attack aircraft just recently out of lancaster california taking off from palmdale which is air force plant 42 and that's where the b1 was built the b-2 bomber is being built there the f-117 is being serviced there in the u-2 operations there has been at least three sightings of shaped aircraft being launched out of that area they made no noise and just people just
(1:19:56) happened to look up and see these things leaving the the area a relatively low altitude but again no noise have any unconventional technologies propulsion technologies involved yes i have uh had the opportunity over the years to interview again people who have worked at the test site at groom lake one spent 12 of his 30 years in black programs at groom lake when i asked him i said first of all i said do you believe in ufos and he looked at me with a straight face in 101 he said absolutely positively they do exist so
(1:20:35) can you expand upon that and he said no i can't about a year later we were talking about again activities at groom lake and i asked him i said you know can can you really let me tell me what's happening out there and he said well there's a lot of things are going on there that i won't be able to tell you until till the year 2025 but we have things in the nevada desert that would make george lucas envious another individual who was an nco an e9 which is a the highest grade you get as an enlisted man he's a chief master
(1:21:11) sergeant in the air force was a safety specialist he had three different tours of duty at groom lake on various programs now he had no connection with my my friend who worked on the other other black programs we were talking i interviewed him at nellis in 1980 86 time frame and i said what's out there and again he look he looked me straight in the eye and he says we have things out there that are literally out of this world i said explain i said i can't but trust me see we have things that are that that are better than star trek
(1:21:47) better than than anything you can see in the movies he said are the airplanes he said i can't comment there's four levels in sight four excluding the top level the surface which is basically a hanger hangers uh with the satellite there's it's really not too much to it but the levels are all operators the first second levels are all elevator where they keep the flying disc ships they bring it to the surface right when i was there they were trying to operate the discs but to my being unsuccessfully
(1:22:31) there's scientists there there's i mean i've personally witnessed thai white house officials being there right now i'm basically kind of scared i mean i'm on the run i don't know what everything holds for me i just want to get this time open a security guard at level two of s4 in area 51 and he described area s4 as a facility occupying at least four levels he was aware of four he worked on level two he had passed through level one he never saw level three or level four because no military people were allowed
(1:23:17) below those levels only very people with very specific clearances could go to level three and level four he described level two in considerable detail to us

and he said level two consisted of nine hangar bays i guess you would call them because they were the size they would hold a small airplane and there were circular disc shaped craft in seven of the nine bays he described the floor layout he described the security posts the guard positions a an area where bodies were stored in large glass cylinders he described special equipment he
(1:23:54) described the monitoring equipment the security system to go down to levels three and four he said that they were never allowed down there only specially cleared people with very specific clearances which included at least included a plastic card with magnetic information in it a hand print and a right eye retina scan and put their eye to a little camera and if they passed they could go down if not their instructions were to arrest them immediately and have somebody from above come down and get them this is a very vast conflict
(1:24:35) big place a big place the elevators are right here [Music] there's four elevators three and four are extreme extremely security there are no sentries down in three or four and the levels of doing four right don't know what goes on here i heard something about it abby or eb down there i'm not too familiar with what it is but as you get off the elevators get off and this is level two you walk in the bays are over here they're all separated by like an automatic doors that open and close each bay walk down there's five
(1:25:29) five on each side there's a hallway right there and they can each of these bays have elevators it'll bring them all the way to the top it'll bring the whole floor all the way up with a hydraulic system now as you walk down there's a lot of machinery right here which i have no recollection of what it does i believe it's i've never been in that area my job was to center a century for these three gates and up above in the level complex and sometimes i would be walking down here escorting people
(1:26:05) now over on this there's a hallway down here that breaks off which is a lot of there's a big computer system right here i believe it's a computer system i'm gonna say for sure right here is a level of seven tubes these tubes are about two feet in width they're about six feet in height stand down they stand on end on end now as you walk in and you look at these tubes i'm just gonna draw pressure one they're all exactly the same the end uh the human the the creatures inside are completely identical there is absolutely
(1:27:07) no way that i can see of identifying each and every one of them individually and there's a aluminum part right here i don't know if it's covering the genitals of them or not but the rest is filled with the solution there's a couple tanks right here i don't know if they're oxygen i don't know what they hold there's no identifying marks on them whatsoever there's no absolutely no air in the tanks it's all solution and the grays are are are just in here right here they're suspended so i imagine they're
(1:27:51) being clamped somehow some way to hold them in this complete where their feet is completely off the ground and stuff like that and under here there's about a one foot pedestal of uh black iron steel like uh it's really polished but it looks like a black polished anodized iron now the things inside i mean resemble what everybody sees and the only thing that's different about them from what i see on all the pictures that the eyes appear to be deteriorated or they're they look like prunes they're uh
(1:28:54) like your fingers get pruned they're all shriveled up and you can't see no eye socks and there's no visible eyelids or anything like that they have a grayish like uh a grayish pigmentation it's not sk scaly or anything it's like a pigmentation there's no apparent hair on them there's little holes uh not really slits but a little the bodies themselves are very very thin they don't they appear not to have any breast or navel or anything like that not that i can see yeah i've done i mean
(1:29:54) i wasn't able to sit and study them in full view for a while but they i mean i don't think i have heard talk there that i know their systems aren't like ours but they're very thin they look very very frail what convinced you that tennessee told me the truth we we only have uh look at him in the eye and talking to him we've analyzed his voice during the narration doesn't show any signs of stress we've had we've heard rumors of some details inside from others that has never been released or
(1:30:44) published so unless they were on the in side circle and knew what was being held back most people would never know the information that he gave us most of the information that he gave us checked with other information we already had and it has checked since with other information that we have acquired since the time we

interviewed him mr martin you came in contact with this action who worked at area 51 yes i was on an american television program called mysteries from beyond the other dominion and at the end of the program they gave
(1:31:16) my telephone number this gentleman contacted me through that telephone number and related to me that he was in fact a master sergeant at area 51 for over 12 years and that everything that had to be taken in and out of the base or transported from one place to another on the facility had to go across his desk of course the man had a very high level top secret clearance he gave me his name he gave me a military id number which i was able to check and his military id did in fact check out that he had worked at nellis air force base and had then
(1:31:49) worked at the area 51 facility he told me a number of very interesting things about how the facility was laid out how many levels the facility had how it was connected to other facilities and he asked me a number of questions about things that he didn't really know about just stuff that he had seen going across his desk and was curious about how certain things work so there was a an exchange of information between he and i uh it is unfortunate that he seems to have disappeared he seems to have moved with no
(1:32:20) forwarding address his telephone number no longer works i was in contact with him for quite a period of time and then the man simply vanished did he ever see an alien spaceship or any bodies on many occasions he told me chip is what he called himself that he had in fact transported a disc like saucers what he considered to be alien spacecraft and he remember he was not sure if they were alien or not he never saw the actual paperwork on the craft he was only responsible for transporting the objects from place to place
(1:32:51) however he did transport a number of very large 30 to 60 foot disc shaped craft he was responsible for transporting some bell-shaped objects he said when they were at rest that they were a very dull gunmetal color he did in fact witness on a number of occasions the tests of these craft because they would have to cart them out to a certain place and then they take them off and then the the objects would then fly around and he was asking me how something that looked so dead and so lifeless could then glow up the way that
(1:33:25) it did and and the metal on the ship would actually look as though it was alive as far as the alien bodies were concerned he told me that area 51 had five underground levels to it this was confirmed by three other sources that i had at the facility he also claimed that there were not only living aliens on the base that he not only saw because he was responsible for transporting them physically by jeep from one place to another but also that he saw a number of alien bodies in very large tanks that the tanks had a silver
(1:33:57) backing to them that they had a silver strips across the middle and the bottom of the tank they were filled with a blue liquid he said that he personally saw five different tanks that had these alien bodies in them the classic little gray bodies the three and a half to four feet tall but they also had four humanoid aliens that were had blondish and reddish hair um very little was unusual about them that would demarcate them from actual humans but he was told that these were actual alien bodies supposedly and this was his
(1:34:35) speculation now but he said that they were supposedly from the pleiades there are many underground uh alien facilities and they're all over the place there's also many underground u.s facilities in 1960 it became apparent to the military that if they were going to have any significant covert operations they were going to have to be underground the reason was people are extremely observant they notice everything that's going on and if there was going to be huge transportation of materials men equipment all kinds of stuff that it was
(1:35:11) going to be have to be underground there was a major meeting with all the major uh contractors the big contractors like morrison knudsen and those type of people and the meeting included the the highly specialized area of underground operations as far as drilling down there how you move that kind of dirt and they started then basically in 1960 building all these underground facilities right now they're just all over the united states just incredible how many there are there's a network of tunnels that connects edwards air force base
(1:35:50) with the tehachapi base with tonopod test range groom lake george air force base california city china lake it's a tremendous network i have varied and many people who have told me that they exist that they have been down there i have a friend that is a hydraulic engineer on one of the tunnel boring machines that's 28 feet in diameter he works the nevada test site where the tunnels go down almost 3 000 feet in addition to this i have had a number of ex-military persons uh engineers

who've worked in the
(1:36:32) aerospace industry for the aerospace companies out in the antelope valley such as lockheed northrop rockwell who have related to me their knowledge of underground facilities not in all cases have they revealed what they knew about alien life forms or alien technology but they said that these underground facilities exist without a doubt okay that many aero escape space companies have these facilities that most of our air force bases our naval bases have these type of facilities underground and that ultra secret work
(1:37:23) goes on in secure underground facilities now our difficulty has been in trying to come up with the evidence that these facilities are connected with the ufo phenomena so we have had to approach this not only from the viewpoint of listening to testimony but keeping some of these facilities under surveillance so that we could take cameras up there or any means that we can to record phenomena that seem to be emanating from or associated with these facilities and that has been done and people have reported seeing classic ufo phenomena around
(1:38:11) these facilities there are four aerospace covert facilities this is what we call the aerospace connection in the antelope valley and also the san joaquin valley rockwell in the san joaquin lockheed mcdonnell douglas and northrop in the antelope valleys and these operations are extremely suspicious they have a surface cover activity they call themselves rcs testing sites that stands for radar cross section and apparently their presumed purpose is to test various aeroform designs atop pylons with radar cross section and
(1:38:57) the disturbing part is that we have found out with incontrovertible proof that there are extensive underground facilities and for example northrop we have documented to have 42 levels underground now if this is radar cross section testing which is above ground why do they need 42 levels underground also at the lockheed facility out in helendale we had an investigative reporter who saw a blueprint of the building plans for that facility that he wasn't supposed to see it showed that they had an extensive underground facility
(1:39:41) 300 feet down and when this reporter interviewed the person who was in charge of that facility they had a nice pleasant interview until at the end he told the director that he was aware of this extensive underground facility and what could he tell him about that and immediately the man's eyes grew wide and he said this interview is terminating so it's very suspicious and then of course we have other reports of people in the area who say that they have seen alien craft emanating from these facilities and terminating at these facilities
(1:40:24) and other kinds of blue beams strange lights in the sky surveillance orbs size of basketballs medicine balls that survey the area and move in ways that we don't possess that kind of technology in terms of the northern facility which is also known as the ant hill the construction the underground facility was greatly enlarged in the early 80s and what took place there was an enlargement i understand from 13 levels underground to 42 levels underground and we have reports from construction workers who actually worked on
(1:41:08) the site cement truck drivers and at one point michael cement trucks suddenly appeared on the scene five miles long pouring concrete continuously 24 hours a day seven days a week for weeks and we figure at three yards of concrete excuse me nine yards of concrete per truck close to a million yards of concrete must have been poured underground also we understand from the construction workers that three silos were constructed there three underground silos and we were bringing out the fact that saucers have been seen to
(1:41:52) just come screaming out of the facility as if they had had some travel distance underground and and yet and also craft would like helicopters would come into the facility and just disappear into the ground so we knew from construction reports and from visual reports outside the facility that something very suspicious in the way of silos was going on norio and i put together the first investigative team to actually fly over these facilities and investigate them from the air with video cameras still camera shots
(1:42:22) it was very exciting and on our first flyover of the northrop facility we spent about an hour in the air on that trip it was historic you can imagine that my heart practically jumped out of my mouth when we're flying over and the pilot unsolicited says to me by the way there are three silos down there now i had learned from my inside contacts that three silos had been constructed there and i was looking for those silos the minute we appeared over the facility i was intensely looking for three silos didn't see any and
(1:42:59) suddenly the pilot says to me but i just told you i was shocked i tried to

contain my excitement and i pretended to be rather casual about it and i said i'm sorry i beg your pardon but did you say silo's down there and he says oh yes he says you see those white diamonds and sure enough there were three white diamonds now this pilot you must understand we rented the plane in the antelope valley so he flies that area continuously he has students he's a pilot instructor so he's flying over there all the time he told me
(1:43:32) that on numerous occasions when he's flown over these facilities those white diamonds the white covering will be gone to reveal a deep dark hole or silo into the ground not only the black projects but deep black projects program that is taking place about 10 miles south of groom lake groom lake facility of course is a black projects program that that is technologically speaking not in line with higher technology technology that is present 10 miles south which is located on papua's lake facility that is where
(1:44:20) a new type of propulsion system is being tested on and again it's my contention that some select u.s pilots have been given instructions on maneuvering these objects we have from all types of reports and sources this established this one fact is that there is some type of uh pumpkin seed program this is a nickname of a new type of function system using pulse detonation uh system and this is known as the pumpkin seed program because these objects are they have almost like a diamond shaped uh they form to this now this is
(1:45:17) part of the black project program however what i've been investigating is more than that it's the super deep black projects program which could possibly involve technology much higher than this type of pulse per person system which could be antimatter or some type of anti matter as mr lazar has been stating the sources of our information are not only from researchers that have received a lot of infos through aerospace connection the we have been in touch with several persons that confirm that black project program is ongoing and
(1:46:05) groom lake facility uh papoose lake facility plus other facilities such as in california the northrop mcdonnell douglas and lockheed all of these facilities are conducting some type of testing of certain type of aeroforms that resemble almost a disk and it's possible very possible that the technology behind this could be received by from some intelligence not necessarily [Music] us in other words we're talking about something possible transfer of technology after i had of course got out of service i worked for the government you know as a test
(1:47:04) pilot on various different particular aircraft while i did that particular activity the i was asked if i would mind working on some simulators and i thought that was a good idea good for my future so i did we uh we were then reassigned it was just not myself there were several other fellows like myself engineers that were reassigned to certain companies here in the united states on the various different simulators that were that they were making for uh the various new aircrafts that they were building for example you know the f-89 f-94
(1:47:46) uh and f-102 and a group of others we spent uh probably close to three and a half four years just in training on simulators and uh just exactly you know how a simulator an actual simulator for these aircraft work you know and the new designs as they came along after they thought that we were trained sufficiently then we were asked to do another project which was more or less in my field is mechanical design uh that was to uh join metal together without glue nuts you know or any adhesives so forth you know uh for aircraft purposes to
(1:48:34) then the indication was was to make the aircraft uh lighter okay and this this course is uh several years going on in the meantime of course security classifications were going on you know as far as we were concerned and just the individuals that were going to work on these particular projects before going to the to the actual facility where i had done this activity we uh developed this particular process of joining this material it took quite some time over a period of about four years and then it was indicated to us that
(1:49:10) we'd go on a special project in new mexico which we did and it was about three or four years after we had gotten there that we found out that these were simulators for that we would be engineers on simulators for flying discs those uh one particular project i worked on uh associated with that disc was several years of course it's very time consuming in a translation of uh scientific data as provided to us by the a specific type of gray as this information was given to our scientists and various different engineers that we
(1:49:52) had no association with but they were doing what they call a copy engineering the copy engineering was a process where they had taken an item or a portion of the craft and they were disassembling it writing their procedures and

identifying certain things as they took it apart and how it related to from their science to our science and could we use that i spoke in a little lecture here a while back that no average pilot could fly a flying just because it was so complicated and so foreign to the individual pilot that
(1:50:30) there would be no way that he'd be able to hop in one even if they gave it to him and said here fly this consequently what we did we took their avionics and transferred into our science and our technology and used the avionics that we know of as far as aircraft is concerned uh the basic principles in all this as far as the av addicts was concerned was no different than their than a regular aircraft that we have if you understand that uh uh say for example a fighter a fighter aircraft it's it's much different than a
(1:51:10) flying disc there were certain uh situations that we had to resolve and basically we only looked at a couple different things because the flying disc only flies in about three different positions and that is uh at 65 degrees uh flat horizontal and possibly vertical but it was very difficult to fly vertical the avionics that we developed for that was for the 65 degrees pitch and yaw and flat flight did you ever see this by yourself i saw this from a distance can you do this not up close uh if i was describing a disc uh for you
(1:51:59) to so you'd understand what we're looking at if you did see the bob lazar poster very very similar this facility i've worked at is is i'd say as far as secrecy is concerned it's much tighter than possibly even nellis here and some of the other facilities you know in this country uh the the entrance and the locations and the scenario on i'd say hey guys you know here this is you know this is this is what the ship looks like it's okay that's what the ship looks like as far as entering the ship no but that was a disc
(1:52:39) how far away was it oh i was say 10 or 15 feet away was it flying i was standing on the bottom it was just sitting on the ground on his belly what did you feel in the moment and saw it what did you what was your impression of it i had uh my impression was as an engineer which is great have you ever seen any aliens we were introduced to grays that were associated with the project but they were uh i could say that in the time that i spent maybe i've seen the grace a half a dozen times or more but uh i know more than ten times i think but
(1:53:24) they were on uh the reason that we saw them was actually for us to get used to being associated with them okay it's no different than say going to africa and seeing a bunch of pygmies and you know looking at those people for a while and then you know it's it's it this is a little different than that but it's the same same situation where you're seeing something that's a little bit different than us sitting in this room you know talking right now with their features and their makeup and that kind of thing
(1:54:00) the conclusion that i have made from this is kind of a tentative conclusion and it's in several parts number one united states air force is interested in any foreign objects that are invading our skies they would be foolish if they did not conduct a serious investigation of what appears to be superior technology in order to do an estimate of the situation that's point number one number two is over a period of time they could have progressed quite far in the study of this technology far enough that i believe
(1:54:45) brings us around to point three and that is you recruit your best minds from where the aerospace industry to work on highly classified or what they call black projects in order to see if we could duplicate or develop this technology for ourselves because what every military wants is superior an advantage over the enemy and of course this kind of technology would offer us an incredible advantage over almost any enemy at least that could be found on earth was extraterrestrial technology already used for cigarette military projects
(1:55:43) i think it's entirely possible the sources i have say that that's the reason that we were studying alien hardware in the first place wreckage from roswell and other crash sites so we can figure how how it worked and have a military advantage over our adversaries uh could be the black manta could be the aurora could be stealth technology one of the things we learned in russia is that they were studying ufos for incorporation into their stealth program and they also studied ufos for incorporation into their sdi program
(1:56:13) so it was going on there chances are very good that it was going on here as well the piece of ufo blower or information that really sticks the closest to home was a letter from a very close friend of mine who wrote a letter to ben rich ben rich is the retired president of the lockheed advanced development company the people that brought you stealth that brought you the sr 71 the u2 ben was asked do

you in a letter do you believe in ufos and he wrote back to my friend yes both kelly referred to kelly johnson the founder of skunk works
(1:56:52) and i are firm believers in ufos well it's got john andrews uh very very excited so he wrote another letter back to ben said please explain please clarify you're talking we're talking about two categories of ufos both man-made and extraterrestrial and ben wrote back again on his letterhead handwritten which you know you have a copy of saying yes we have ufos do exist both man-made and extraterrestrial and we refer to them as unfunded opportunities and he underlines the ufo are these super secret test flights with
(1:57:30) recovered ufos for real do u.s government scientists really investigate extraterrestrial technology we wanted to find out the truth test the claims following bob lazar's recommendation we drove out to the black world on december 2nd 1992 together with an abc television camera crew first we waited near the black mailbox at the groom lake axis road then followed by a black unmarked fort branco of the wagon hooth special security we changed our location to the campfire hill an elevation on the roadside closer to
(1:58:13) the base it was a wednesday night and shortly after sunset at about 6 15 pm the first mysterious flying objects appeared [Music] you know a signal player now it's come [Applause]
(1:59:38) [Music] [Music] [Music] [Music]
(2:02:45) so [Music] [Music] [Music] [Applause]
(2:03:59) [Music] [Applause] [Music] flares aerial maneuvers or test flights
(2:05:45) of extraterrestrial spacecraft one thing is sure their flight characteristics were more than unconventional our eyewitnesses were convinced i saw well right over the horizon there um as most of us said so far i saw a light come up and over the horizon probably a few degrees over the horizon and it broke into uh first two lights then three lights and then it seemed to string string them all together kind of like a pearl a string of pearls or beads and uh there seemed to be a connection as the light jumped from one
(2:06:26) position to the next and it was kind of an orange yellow color and uh it seemed to be sort of swirling around at the same time it wasn't a straight directional thing it's just it's kind of like they're going like this a little bit you know the first thing that was interesting we saw along this ridge out here were a series of um of white blinking lights that seemed to be uh as we looked through binoculars the same light or or several lights that were moving real rapidly around the sky blinking um very unusual all right
(2:07:06) the one that seems to be attracting the most attention is the one we saw out right that direction that had a strange color and seemed to split uh described that one for me yeah well it was an orangish red light that was rather intense and it seemed to split off into different pieces at one point and come back together again i think that was the most interesting aspect of that we've seen a lot of interesting things tonight what was that they saw in the skies above nevada we'll try and have some answers next a big ufo
(2:07:39) convention came to an end in las vegas last night and afterwards naturally some of the members went out in the desert to search for ufos a news crew went along too and sure enough it wasn't long before a mysterious unidentified object appeared not too surprising somewhere up there you see it because this patch of desert is right near a military test site this looked like no aircraft lights that any of these folks had ever seen this was a bonafide ufo sighting i i think it was yeah and then ufo means unknown flying object and this
(2:08:09) definitely was nothing i've ever seen before was it a bird was it a plane was it the aurora the secret plane we don't know more to come i'm sure and the air force is not saying anything as usual oh fascinating you have a good weekend of course all of you good night everybody

UFO's the best evidence? ray wardle, george knapp, KLAS TV, bob lazar, series 1. (1990) - YouTube
https://www.youtube.com/watch?v=s-M59KDKFzE

Transcript:
(00:06) well george knapp we'll take a look at that as we get a special series ufo the best evidence question mark part ones coming up have seen an unidentified flying object yet the subject of ufos is generally scorned by science journalism and the government an eyewitness news investigation into the topic that was broadcast last

november has drawn worldwide attention and not all of that attention has been positive tonight george knapp picks up where our previous series left off the new series is called ufos the best evidence
(00:36) question mark gary and mary ruth we've added the question mark for a good reason there are many unanswered questions about ufos and about some of the people who claim to have knowledge about the topic questions about credibility and motives we'll be taking a hard look at some of those questions this week and beyond one thing we've found is that despite some sniping from other media and the scoffing of government officials people want to know about ufos even some very prominent people here because i know
(01:03) 15 years ago if you would have said something especially with the guys i hang around they would have gone right you know and wouldn't go into sparks kent orem is a hard-boiled semi-cynical public relations man currently running the election campaign of nevada governor bob miller a few years ago orem says he and his wife saw something strange in the night sky over mount charleston and we looked at it for about two and a half minutes and it never budged and at the time i made a joke to my wife you know i mean if you were under the
(01:33) starship enterprise you know that's sort of what it might look like and it was i would say it was gigantic and it was more of a square shape but it was a lot of lights and so i had a pair of binoculars in the back of my ram charger so i went to get them we finally found them and then we looked up in the sky and it was gone i mean just flat gone it depends on who i'm talking to about apprehension you know they kind of raise an eyebrow actions you know chuck woodworth is a 20-year veteran of the metro police department a
(02:02) trained observer who grew up in the shadow of the nevada test site he and four friends saw their ufo in the desert north of ph all we saw was a lot i'm gonna tell you it's the most intense light i've ever seen and i've been under some around some pretty heavy lights i've uh if you stood under uh the uh police helicopter at night when they're lighting up an area and they come right down are really saturated with lights those would be very very dim to the lights we saw from this i would judge this distance so
(02:32) we observed them to be at least 20 miles 15 to 20 miles from us and they were intense neither woodworth nor orem can identify what they saw but both believe recent publicity about ufos has made it easier to openly discuss the subject there are still those who have reservations though two of southern nevada's best-known elected officials say they've seen ufos but neither was willing to admit it on television a veteran las vegas attorney sent us this letter saying he once had access to a top-secret military briefing book
(03:03) that included dozens of official photographs of alien beings and alien spacecraft the attorney did not want his name used most people believe that that ufos are physically real rather than imaginary that's what the polls say but the same the different poll also shows that those same people believe that other people don't believe that ufos are physically real no one can say just how many ufos are cited each year primarily because it's difficult to report a sighting metro police won't take ufo reports at
(03:31) all and offered no advice on where to send them the faa and mccarran tower also say they're not interested and if you call nellis air force base as ruth ruiz did this is the response you'll get and he told me that they're not interested anymore in the ufos because now we know whoever it is or whatever it is it's not a threat to us our national security now that's what he told me nellis will give you the number of a private ufo hotline located in seattle what's more both nellis and mccarran
(04:04) spokesman say they have no memory of even a single ufo sighting over their facilities a claim that is flatly contradicted by informed sources at both locations some ufo sightings are reported to the planetarium where astronomers can usually come up with a logical explanation venus when it first you know a few months ago and venus first appeared in our evening sky you know for this time around uh you know we got a number of calls what's that bright object in this in the sky uh we'll be getting uh calls on jupiter
(04:31) pretty soon because it's now rising about midnight in the east uh you know so we get those calls mainly it's just curiosity you know they see something strange they hadn't noticed before even die hard ufo believers admit that 90 of all ufo sightings are explainable but it's the other 10 percent that are of interest one good unidentifiable flying object whose characteristics and appearance indicate we're dealing with a vehicle whose behavior says it wasn't made here is worth 50

cases that you can explain
(05:00) just as most drugs don't cure diseases if you're sick with something you want the one that does don't tell me about the ones that don't so the focus with flying saucers has to be on the evidence the best evidence from all over the world using ufos and evidence in the same sentence as a sore spot with some media outlets the las vegas review journal has taken a dim view of ufo reports columnists have cleverly compared the ufo topic to the search for elvis media critics say it's nothing but a ratings ploy
(05:31) when an international ufo convention was held in las vegas the lone story done by the rj was a profile of ufo debunker phil class with a headline suggesting it was class who knew the truth about flying saucers later though the paper succumbed to ufo fever with a front page story in its sunday supplement about ufo sightings in nelson nevada their word seems to be you know snicker snicker and and make fun of it but you know it's just this uh attitude that the journals have got if they didn't know about it before it couldn't possibly be true
(06:05) i mean they've been sitting on this story now for about two years when i first started out and there hasn't been one of them that has done any useful research at all anyone who takes about one hour to review some of the available evidence [Music] cannot come away without the firm conviction that there is something out there not all media have shunned ufos radio talk show host billy goodman for months devoted most of his program to the topic but goodman's show was cancelled by station management his listeners suspect
(06:43) it's part of a government plot station executives say while the show was popular with listeners it wasn't popular with advertisers they cancelled goodman they say as part of a format change to news and sports programming much of goodman's multi-state audience is now listening to florida-based talk host chuck harder who's for the people network is heard on 80 stations coast to coast and frequently focuses on ufo developments in southern nevada predictably ufos remain a staple of the tabloids which seem to be getting even
(07:13) further out than before nazi astronauts return to earth in surprisingly good health according to nasa sources space aliens stealing our frogs they must be stopped before it's too late remember the psychic who invited aliens to land at a monday night football game they never showed up not because the eagles bears match-up wasn't appealing but because the goodyear blimp scared them away one weekly tabloid featured a story about bob lazar the young scientist who says he worked at s-4 a secret nevada military base where the
(07:44) government is allegedly tinkering with flying saucers of alien origin the article included hyped-up non-quotes and artists versions of s4 lazar has also been featured in ufo magazines this article demanded that he open up his life for scrutiny by skeptical ufo buffs other ufo magazines aren't much different from tabloids this one awards ten dollars a month to the person who can rig up the best phony ufo photo lazar's story has even made it into car and driver magazine a recent article highlighted a nevadan named bob
(08:17) who had built a stealth corvette for the ostensible purpose of penetrating groom lake to capture video of the flying saucers lazar's story also caught the attention of at least one television network nippon television of japan which set a crew to nevada to produce a special about lazar and area s4 ah you know he quite he seemed to be quite interesting guy you know he knew what he was saying it's not another fruitcake you know we just came out and wanted to tell all the story so we did some backup check
(08:47) and there seemed to be some truth lee and his crew have produced 17 one-hour programs about ufos for national broadcast in japan he says he can't understand why american networks avoid the topic for the report on the tsar nippon set aside two full hours on a saturday night i don't know about here but in japan to our special on a saturday evening from seven to nine it's you know it's a hell of a you know a spot there there are more than a few people who consider the public fascination with ufos to be downright dangerous
(09:16) aviation writer phil class says the belief in alien beings and a government cover-up is quote potentially as dangerous as jonestown that's the jungle settlement where dozens of people willingly committed suicide a study by two psychologists concluded that persons obsessed with ufos especially cigar-shaped flying saucers or rounded discs are victims of a familiar freudian syndrome if an interest in ufos is a sign of mental aberration then count the u.
(09:44) s government as being among the disturbed bob lazar of course can recite a litany of strange things he says have happened to him tapped phones break-ins

threats but even if you don't buy his story there are others who can attest to a government interest in ufo adherence terry tavernetti is the former police officer who performed polygraph tests on lazar tavernetti who has a corporate security job with a major las vegas business says that shortly after his involvement with the lazar probe was made public his employers were contacted if the
(10:14) corporate offices were unemployed received a telephone call from a government agency wanting to know why i was getting involved in something that uh i shouldn't be and i asked well what agency what was said did they identify themselves and i said because i'll be more than happy to talk to him and i always refuse this information told that he didn't know meaning my boss tabernetti who still retains the tapes and printouts from lazar's polygraphs also says his home was burglarized in early january
(10:46) as an investigator of over 20 years i don't believe in coincidences there's a reason for everything i mean could it have been a random residential burglary uh yes a las vegas man named roy byram contacted us back in november 1989 saying he had information about area 51 that he had gleaned by preparing tax returns for several people who worked at groom lake less than 24 hours after phoning us byram says he was visited by two men claiming to be secret service agents who quote just wanted to lean on me a bit
(11:17) journalists who've studied the field for many years say that government interest in persons with inside information about ufos is very real a body of information about ufos in the possession of our government which is so sensitive to the people in custody of it that they will do just about anything to protect it finally there's this item a las vegas resident currently working for local government told us she previously worked for a defense contractor and was privy to numerous high-level discussions about
(11:49) crashed disks recovered bodies and alien technology she was going to provide us with some of this information but less than two weeks ago says she was visited at her home by a man identifying himself as a government agent the man said that any release of information would lead to trouble adding that our source does a lot of traveling and that quote accidents can happen the agent also mentioned that harm could come to the woman's family she has now declined to talk with us and you know gary and mary ruth people watch uh reports like this at
(12:17) home and i think some of you view it with interest but they view it as in the same way they're interested in a movie of the week this is not a movie of the week others uh seem to believe particularly our media critics like we're making this stuff up and we're not making it up we've spent almost a year on on this investigation and uh there's a definitely a body of information out there that deserves an investigation though but proprietors joe and pat travis have few complaints they're expanding now into a second
(12:43) trailer thanks to the patronage of a few dozen locals and a steady stream of ufo buffs drawn by reports of flying discs on the other side of the groomed mountains i i think most people that come up here come up for the enjoyment just to get away from the hassles and the city just to get out and to do something different and this is something different to do ufos have become so synonymous with rachel that a flying saucer was included on posters advertising the annual town celebration likenesses of ets adorn the walls of the
(13:14) bar and joe travis is even talking about renaming the place the ailey in yeah alien you know we're gonna have we're gonna will nice drinks you know like the transporter uh beating me up like that it may be self-serving but the travis's insist that plenty of folks actually see the flying saucers on any given night numerous headlights slice through the darkness outside area 51.
(13:42) the curious are routinely monitored by omnipresent security forces both in the desert and in the bar if there are any that are kind of acting a little bit strange i know about it and so do they you mean the people over there come over here to see if people are still coming up here oh yes oh yes if rachel was big enough to have a mayor bob lazar could probably be elected his statements about government activities inside the test range are largely responsible for the influx of visitors lazar says he was hired by the united states navy to work in an ultra-secret
(14:15) facility dubbed s-4 approximately 10 miles south of area 51. s-4 sits adjacent to the dry bed of papua's lake lazar says and is built to blend in with the desert according to lazar s4 is home to at least nine flying discs of alien origin the craft are powered by anti-matter reactors propelled by anti-gravity generators the fuel is a heavy element called 115 he says and the mission of those who work at s4 is to master and duplicate the alien technology using earth materials and

know-how he believes the technology is
(14:49) extraterrestrial for several reasons one because the machines do things that are beyond earth technology two because of the tell-tale small furniture inside the flying discs and three because of briefing papers he says he read at s4 they were autopsy reports i mean i didn't look completely read them because i didn't have time and as soon as i got into some interesting things i wanted to get through these really quickly because i know i didn't have much time uh basically i looked at the pictures in them
(15:18) to save time and there were pictures of what a dead aliens i mean how do you know they're aliens what do they look like the uh i guess the typical gray if anyone knows what that is the three and a half four foot tall uh smooth head light smooth large head uh with that they had their organs laying out or what yeah their organs some of them the organs were bisected taken apart there were drawings associated with the organs uh the bodies were all cut up i didn't see a picture of a live seemed like well-being barring a full
(15:54) confession by the government which seems highly unlikely it may be near impossible to prove what lazar says it's tough enough proving anything about him the schools he says he attended say they still have no records of his enrollment los alamos national lab where he says he was employed as a physicist has consistently denied that lazar ever worked there when los alamos was confronted with a 1982 lab phone book containing lazar's name officials came up with a different story they now say lazar worked briefly for a
(16:23) lab subcontractor in a non-sensitive position after numerous inquiries over several months however neither the lab nor the subcontractor have provided copies of lazar's records interviews with lazar's former co-workers confirmed that he did work on sensitive projects including sdi research involving this massive particle accelerator if so he must have had a security clearance but trying to track that down has also proved difficult even with the help of nevada congressman jim bilbray for months bill bray's
(16:55) office has been playing postal patty cake with several government agencies concerning lazar's records bilbray's staff has written letter after letter to the navy cia fbi and other agencies requesting files on lazar the agencies aren't saying they have no such files they say they can't find them or are still looking the fbi the world's greatest detective agency has spent almost five months searching its own records but is still looking for lazar's file lazar insists he was investigated by the fbi not only for his
(17:26) los alamos clearance but also for his work at s4 it at one time three came to the house one sat me down started talking to me while the others kind of ran around the house doing things i have a little lab in the house and they wrote down everything i was on the blackboard they wrote down any chemicals and things that i had in in the room and just kind of ran all over the place lazar says he wrote down the name of one of the agents mike thigpen the las vegas fbi office says no mike fig pen has ever worked here however an informed source at the fbi
(17:58) says thigpen was here for a period that he worked for a separate division of the bureau came in did a job and left what that job was the source didn't know lazar is as much to blame as anyone for the difficulties in proving his story he is admittedly careless when it comes to paperwork like some absent-minded professor when his first wife died more than five years ago he says he walked away from everything a house full of furniture pictures papers in addition he's done things in his life that do not help his
(18:28) credibility for a time he designed and raced incredibly powerful jet cars he hung out with rock stars and helped produce record albums and he and his first wife had an interest in a legal brothel that interest eventually led to some work he did for a small bordello in a residential las vegas neighborhood when you add it all up lazar says he's an easy target to discredit there's a tremendous amount of you know odd things that i've been involved with over the time just because i have a wide variety of interests a lot of it
(18:58) can be misconstrued and you know taken out of context and i'm sure it can be used to make me look look pretty bad and you know there again maybe that's one of the reasons uh they looked at before hiring me i'm an easy person to hammer into the ground you know you can take any one of a million things most people lazar says have been very supportive of his decision to come forward and then there's the ufo community lazar's testimony hit the ufo field like a tidal wave for instance this is an international
(19:28) computer network called paranet more than 20 000 people from all over the

world are hooked into the system and bob lazar is one of their favorite topics they share information about his background debate his allegations and theorize about his motives and actually there was there was international coverage of what was going on here the very first day you know after the special was run what we're really pressing for and what we're watching for is more empirical evidence that we can that we can work with one item that popped up on paronet is
(20:01) this supposedly official briefing dated february 1990 that states lazar did work on the test range but that he was never allowed inside the quote advanced systems test area this statement says lazar is merely out for media attention and that all further inquiries should be handled by nellis public affairs nellis officials told us that the briefing wasn't written by the air force and that they have no information on lazar various ufo experts have also been beating a path to las vegas to talk with lazar dr jacques valle an astrophysicist
(20:33) computer scientist and author wanted to find out for himself if lazar is believable he seems very credible i think that he was in the places that he described he also seemed to have concern with remembering parts of the things that went went on there he seemed to if you remember we asked him if he felt that his memory might have been tempered with now that is is something that i think should be of concern as we explore his story could it be that he was exposed deliberately to certain things uh perhaps to distract attention from
(21:15) from other things and but i i'm certainly of the opinion that he's not lying that he's telling the truth and that he's genuinely concerned with uh finding out what happened to him valet believes it is possible that lazar's memory was tampered with adding that u.
(21:31) s intelligence agencies have been experimenting with mind control techniques including drugs and brainwashing for decades lazar has stated previously that he was drugged and subjected to intense intimidation tactics valet's statements are also consistent with the results of lazar's polygraph tests my personal thoughts the pre-test interview of three and a half hours the test itself the post-test interview showed absolutely nothing to detour my thought that bob wazar was truthful unfortunately we're dealing with a subject matter here to where fear
(22:04) on behalf of mr lazar of reprisal might far exceed just the threat of losing his credibility as a scientist which would make polygraph may be totally ineffective lazar was credible enough for the nippon tv network nippon devoted two hours of prime time to a special on lazar and ufos in march the network planned to fly lazar to japan so he could appear live following the documentary but those plans fell through when lazar received a phone call from his ex-boss at s4 the day we were supposed to go had tickets in hand even went down and
(22:46) bought yen down at the currency exchange you know we got threatening phone calls i mean that basically said she'll never make it back here so we really sat down and just thought how important really is the interview and we didn't go and frankly they don't operate like that how do they actually i mean what they tend to feed uh information into the system through people that they know will repeat it without questioning it bill moore is something of an expert on the government's anti-ufo tactics and he's
(23:16) clearly skeptical about lazar's story he thinks lazar may be part of a government disinformation campaign either willingly or unwittingly moore's suspicions have been heightened by lazar's unwillingness to open up parts of his private life to public scrutiny lazar says he doesn't care whether ufo people believe him or not and that he doesn't want to have his background picked apart even though he's done things in private that might seem strange he says he stands by his original statement the the job i had the
(23:43) involvement with the you know the government cover-up that sort of thing the story isn't altered in in any way i mean that stands as fact and that's the bottom line is government disinformation for real is there an s4 is there a connection between ufos and stealth technology more on these topics tomorrow george knapp eyewitness news eight healthwatch station atop angel peak can pick out aircraft for 500 miles for the most part it detects commercial craft big airliners traveling at certain speeds on occasion military craft will jam the
(24:16) station's sensors as part of training exercises and once in a great while the big radar will pick up signals from something strange something that apparently just hovers over the groom mountain area it mostly stays put it doesn't doesn't move in range or azimuth very much and uses a stationary code that we normally use for a test function the sighting sometimes lasts for up to 15 minutes barnes says it could be an advanced helicopter but he doubts it so what is it that floats above the most

top secret location in the world
(24:50) finding out isn't easy the groom mountain location also known as area 51 is shut off from the world by a combination of desolation motion detectors laser sensors and a highly mobile force of large ominous security personnel men who are according to informed sources culled from the ranks of veteran green berets navy seals and police agencies and are supposedly trained by america's elite delta force so what's the big secret at area 51 it's likely there are more than one but the biggest may be the one bob lazar
(25:23) says he worked on lazar says he worked a few miles south of groom at a place called s4 and that this is where our government is trying to master at least nine flying discs of alien origin the hangers are all connected together and there are large bay doors between each one and there were nine total that i saw each one being different lazar is the first person to publicly proclaim first-hand knowledge of the s-4 saucers but stories about alien technology being tested in nevada have been whispered for years the government generally dismisses such
(25:56) reports outright much as u.s senator harry reid did in this letter to a constituent and if a denial isn't enough there's always laughter such as occurred during dedication ceremonies for eg g's new facility at nellis what is it that they do over there well i've tried to tell them that that's where nick keeps the space people from vroom lake and during the week he lets them out and they do root canals for us in our hospital clinic jim goodall for one doesn't think the story is all that funny
(26:32) goodall is one of the best known aviation writers and photographers in the world and has written what may be the definitive book on stealth technology he did it by cajoling information out of a network of aerospace and military sources goodall was skeptical about ufos at the beginning but his attitude changed during his stalking of the stealth fighter an engineer employed at lockheed aircraft's so-called skunk works operation which tests many of its advanced machines at area 51 told goodall that the ufo stories are
(27:03) true he looked at me says absolutely positively without a doubt they exist i mean it sort of it sort of startled me and i said i said what do you mean he says well we have stuff from the nevada desert that would make george lucas envious goodall pursued it further a civilian who worked on various projects at groom lake over a 10-year period had much the same story he sort of hemmed in hard and he sort of stepped back and said we have stuff out there that that anything in essence anything you've seen on star
(27:36) trek this is really before star wars came out it's anything you've seen captain kirk do or what he what he has so we far exceed his capability but does this mean the technology is extraterrestrial goodall put that question to a third source a master sergeant who says he did three tours of duty at groom so the united states government and the military has things that are out there you can't describe them as airplanes that are literally out of this world they are any any emphasis out of this world he says and they're alien to anything
(28:06) that you've ever seen and he says and i i try to press him for some more and he says he says i can't comment i've gone much farther than i should have already in addition to goodall's research there is at least circumstantial confirmation for some parts of bob lazar's account for one thing there really is a place called s4 on the nellis range that according to nellis public affairs captain jeff milkey milky told us the military operates certain equipment at s4 but he wouldn't say exactly where it's
(28:36) located or what equipment is tested there lazar says he and other personnel would muster at eg g and would then be flown to groom lake aboard planes much like these photographed outside eg g's nellis facility once at groom lake lazar says he would ride a bus down a long dirt road to s-4 adjacent to papua's lake the latest maps of that area show a long dirt road leading from groom to papua's what the map doesn't show is the type of activity underway at papoose if there really are flying saucers there
(29:08) it's conceivable that some of the technology may have found its way into earth contraptions for instance the stealth there are more than a few similarities between stealth technology and some characteristics ascribed to ufos which is why some people suspect that both types of vehicles have been nurtured and tested in the same corner of the nevada desert there is no question that stealth has been put through its paces in and around the nellis range in area 51 if there's any person outside the government who might also know about the
(29:37) testing of ufos or a connection to stealth it's this man ben rich the brains

behind such aviation marvels as the u2 the sr-71 blackbird and the stealth fighter rich is the longtime boss of the skunk works lockheed's advanced systems division when asked about a possible link between stealth and aliens he didn't bat an eye some people say it's alien technology no it isn't it's just good american ingenuity they take a lot of hard lots of good people working together and then the cooperation of the air force we couldn't
(30:10) have done it with the cooperation air force they kept the minimum amount of people knowledgeable about it and we did it in the black but this denial doesn't tell the whole story when it comes to ben rich and ufos rich has confided to close associates that he is a quote believer this letter from rich to a longtime friend confirms this belief a follow-up letter from the friend asked for a clarification whether rich might be talking about man-made or extraterrestrial ufos rich responded saying he believes in
(30:39) both but added there are kooks and charlatans associated with each category jim goodall who has known ben rich for 15 years admits that he too has seen the letters and thinks rich is sending us all a pretty strong hint if anyone outside of the select group of people within the military department of defense who would know about uh alien spacecraft the hardware portion of it if anyone in the world would know about it it would be that gentleman was president jimmy carter also privy to information about ufos on the nellis
(31:10) range that's what this alleged presidential briefing document suggests the so-called aquarius document was obtained in 1983 by journalist bill moore moore says government agents allowed him to photograph aquarius in a hotel room but the photos aren't that clear and neither are photo-static copies a retyped version of the alleged presidential paper purports that the u.
(31:30) s military has been in contact with aliens since 1964 and that an effort to test fly alien aircraft has been underway in a misspelled nevada since 1972 under the code named project snowbird bill moore says even he isn't convinced that snowbird is real and even if it is it doesn't mean saucers are flying at groom or papua's lakes in order to divert the attention away from what's really going on up there it might serve the purposes of those responsible for diverting attention to spread stories about ufos
(32:03) and alien technology in that area if someone really did try to divert attention away from groom lake by spreading ufo stories they made a big mistake just ask any of the city folk who routinely drive up to sit outside the base and watch more importantly moore's suggestion that someone official might be spreading false information about ufos must seem supremely ironic in certain circles that's because more is considered by some to be the reigning expert on disinformation at a 1989 ufo convention moore admitted
(32:33) he participated in a scheme to feed bogus information to a fellow ufo researcher with moore's acquiescence government agents convinced a researcher that space aliens had built a secret underground base at dulce new mexico moore says he has a good reason for allowing a fellow researcher to be bamboozled my involvement was only with the motive of learning how the process worked who was involved with it and ultimately if i could what was behind it why is the government doing this kind of thing i never did quite learn why
(33:13) but i did learn who and i learned a great deal about how many people in the ufo field aren't buying it they say moore was taken in by his own government sources ufo magazine called moore's actions malevolent more counters he did ufology a favor by proving once and for all the government really is spreading disinformation in essence what i was doing was rubbing the noses of the ufo community in what's going on all around them all the time and saying hey fellas wake up you're being had you're being used
(33:44) and you better be aware of it because it's it's gotten to the point where it's beginning to influence what people think about this subject well a lot of them didn't like that a lot of them didn't like it in spades what does this say about the validity of the snowbird document lee graham would certainly like to know graham is a california aerospace worker who forwarded snowbird to the u.
(34:06) s government to find out if it's real what he got instead was an ongoing investigation of his own ufo activities one of the agents sent in to check graham out is a mike mageowitz who according to documents filed with the justice department told graham that snowbird was not only real but had been declassified if it's declassified graham says why is he still under investigation the pentagon won't tell him nor would it tell us and we were not allowed to talk to mike madgeowetz but is snowbird real has it been declassified

(34:36) dale hardik a media liaison for the pentagon told us he didn't know and he had no idea where to go to find out if all of this seems complicated and confusing then welcome to the world of government disinformation and there's a lot more where this came from well sometimes uh when you deceive the public you're protecting the public uh and i certainly would protect the public in deception operations if it was for their own good is the so-called falcon another source of disinformation or is he for real more on that tomorrow george knapp
(35:10) eyewitness news 8 1889 was the taping of a conversation that allegedly took place between space shuttle pilot john blaha and nasa concerning an alien spacecraft houston uh this is discovery we still have the alien spacecraft under observance was this actually the voice of blah talking about a ufo people wondered voice comparisons were made to find out houston uh this is discovery we still have the alien spacecraft under observance it's a shame we can't be here all the time with a permanent manned space station we ought to get in
(35:45) that direction the man largely responsible for publicizing the alleged blah tape was bob ecksler a former nasa mission specialist but that was 1989. this year exler says it was all a hoax and the government did it there's a an experimental transmission facility by the air force in the geographic location of the origin of the transmission the national security agency is located within that area [Applause] it's a hoax of unknown origin but this there's room for speculation it just is too good a hoax for someone to just
(36:19) contrive and come up with exler and others suspect that distortion and disinformation are the government's primary tools for dealing with the ufo topic journalist bill moore can recite a long list of examples of how the government has spoon-fed bogus ufo information to gullible researchers moore admits he even played a role in one such scheme more alleges the official lying dates back to the 1940s when the air force began studying ufo cases 80 percent remained unexplained in 1949 yet they were telling the public
(36:52) at that time in public press releases dated the same month that only 10 percent remained unexplained flat out lied to the press at the time the press couldn't say is a different but now 40 years later with freedom of information and access to that document it's clear they lied to the press why did they do that and all the way through you can trace a deliberate pattern of disinformation deception uh the laughter curtain the ridicule the debunking uh the ufo bashers that came out and come out there's still a few of them
(37:32) around and say that anybody involved with ufos is a crackpot anyone who knows ufos knows the brilliant but arrogant bill moore his fingerprints are all over the foremost cases and questions in ufology he and stan friedman are primarily responsible for painstakingly documenting the roswell incident the apparent crash of a ufo in new mexico in 1947 which is perhaps the best documented ufo case of all the so-called mj-12 documents which allege that a secret panel of scientists and military men are in control of a ufo cover-up
(38:07) first surfaced in an anonymous mailing to moore's close friend film producer jamie chanderay the ufo community is deeply divided over the legitimacy of the mj-12 papers even more controversial though is moore's reliance on an informed source code named falcon the entire historical aspects from from day one from the uh first sighting and jamal we're here to uh recently i think within the last five years is contained in uh a large book that we refer in within the intelligence community as a bible can you give me a physical description
(38:42) of these aliens the creature about uh three foot four to three foot eight inches tall their eyes are extremely large almost insect the style uh their eyes have a couple of different inner lids and that's probably because they were born on a planet that had a son or a binary son the uh the days were extremely bright they had no teeth as we know it they have a hard gum like uh area uh they're internal organs are quite simple they have a a one organ which encompasses what we would refer to as a heart heart and lungs it's one pulmonary sac
(39:26) their brain is more complex than ours has a uh did several different lobes in ours have uh their hearing is quite better than ours almost better than the dogs small areas uh the side of their heads and uh their sexual organs are they have males and females and if the female has the sexual organs similar to ours similar to our our females that don't require very much liquid they transfer all the the food that they eat into into and the liquids they extract the liquid their body extracts the liquids out of the of the food so don't require a lot of
(40:06) liquids but they have been able to eat uh some basic food products vegetables and fruits that we would eat but i believe they're they have problems

digesting meat products our bee products and i don't believe that they eat meat on their planet falcon is one of a dozen alleged intelligence operatives who've been funneling information to moore and chanduray the other sources have also been assigned bird-like code names including condor and hawk falcon in particular has vocalized support for many of the same
(40:38) ufo positions defended by moore namely the existence of mj-12 the legitimacy of the aquarius document which alleges that flying saucers are being tested in nevada and the reported plot to withhold ufo information from the public moore and chanduray have for the first time produced a videotape for mass distribution sort of falcon's greatest hits our job in the field was to investigate sightings uh landings are contacts with ufos or ufos extraterrestrials in a way that we wouldn't draw attention to the public
(41:16) so we had to do our investigation through covert means and that's why we were disguised uh are under cover of military or other federal agencies when we're investigating these ufo sightings we run it just like we were doing an intelligence operation we would solicit either winning or unwittingly uh we uh recruit these people just as an intelligence officer would recruit an agent to foreign country to provide us information on these sightings we've used uh newspaper uh personnel uh willingly and unwittingly and we've
(41:55) used uh scientists or we oppose the scientists well sometimes uh when you deceive the public you're protecting the public uh and i certainly would protect the public in deception operations if it was for their own good but uh some aspects of this ufo uh investigations that have occurred over the years have no reason to be helped with help from the public the general knowledge that that there were aliens that landed on earth uh back in the early 50s my 40s early 50s and that we have had some type of communications with them since
(42:35) moore and chanduray say they have independent confirmation that falcon is or was an intelligence operative but even some of moore's closest contemporaries have reservations about the material this whole business about condor and falcon and guys putting out documents with false statements in them i've seen some and i've tried to stay away from it i try to work with something i can get my mitts into i'm convinced for example that falcon and condor the alleged agents who spoke on the ufo cover-up live program in october 1988
(43:06) were embroidering a lot of the information they gave out i'm absolutely convinced that some of that was disinformation but the important thing is that they are confirming that there has been contact contact has has been established moore's ufo enemies are less complementary they think falcon and condor are trying to use them as pigeons there's a widespread assumption that falcon is a former air force intelligence officer named richard c doty who is infamous in ufo circles for gleefully misleading researchers
(43:36) some have alleged that moore is either an agent himself or is at least on the disinformation payroll still others say more is just out to make money whether on falcon tapes or mj12 documents if i were out to get rich to make money on this thing i'd have done that five years ago when we got the mj12 documents sold in the national enquirer in fact they wanted to buy them i wouldn't sell them i had two publishers approach me want to do the story i turned them down we don't know about this stuff until we know something about this
(44:07) material there isn't a story here so it's not money what i'm out to do is find out what the bottom line is and how it will influence man's future i think it's high time somebody rubbed the human race's nose in its own excrement and said hey folks to an alien this is what you look like this is what you're doing to your planet as difficult as it may sound to us they are so far advanced and that they can't uh communicate with us like we could communicate with each other on this planet and i believe it's uh partly
(44:44) because of uh them being scared scared of us as a different type of uh creature if there are aliens it's no wonder they're scared of us considering how some humans have reacted to the prospect of their presence tomorrow a look at how ufos have become convenient vehicles for conspiracy buffs and right-wing zealots george knapp eyewitness news 8.
(45:07) ufo picture almost from the beginning con men have used the subject for their own ends many times lately though there's a new twist some ufo believers are using the e.t phenomena as a means of whipping up public hysteria they wrap themselves in the american flag mix in a little old-time religion and laugh all the way to the bank as we'll see in tonight's report some scientists believe there is a real body of data concerning ufos the question is how will that data be used there

are people who must have people in
(45:35) washington and elsewhere must have a building full of data that i think the scientific community should have data that comes from radar from sensors on earth from sensors in the ocean and from sensors in space those sensors have been deployed for other reasons for reconnaissance for intelligence for guidance for communications and so on those sensors are all over the place and they must pick up the ufo phenomena because we know the the energy constraints and the boundaries of the ufo phenomenon it has to trigger those sensors we know
(46:09) it does so somebody has all that data jacques valet is something of an anomaly a solid scientist who thinks ufos deserve to be studied valet was the real life model for the french scientist character in the film close encounters of the third kind his books were among the first in the field to express concern that intelligence agencies might be spying on ufo groups he was also among the first to notice that some of those who were preaching the ufo gospel were pursuing their own political agendas using flying saucers to attract
(46:39) attention to other causes one explanation is that it's simply there are people in society who have extreme beliefs of one kind or another and that they gravitate towards extreme beliefs about ufos and aliens and and bases in you know on earth and so on just as well as in politics they gravitate to extreme beliefs today's et extremists out tabloid the tabloids these aliens aren't merely here to rape our women or steal our frogs they want it all it's just that instead of the illuminati the trilateralists the
(47:15) bilderbergers the rothschilds the world bankers uh and on and on and on uh being a in a plot to take over the planet and and enslave the world and make a fortune in the process now it's the aliens who are overseeing the whole process and they're doing it the most vocal of today's cosmic doomsayers is bill cooper a former navy petty officer who says he read and copied top secret military documents which outline an incredibly complex plot involving international bankers industrialists politicians drug cartels the cia and of course the
(47:49) aliens cooper's first televised unveiling of this grand conspiracy came in a 1989 appearance with john lear on the talk program on the record we are in possession of alien technology which we have actually in effect traded human lives and property for there is a formal treaty which is illegal under the constitution with this alien nation um everything about it is illegal and to tell you the truth and my estimation just stinks rotten like john after this mufon conference is over i think i'm going to get out of this
(48:27) tube but he didn't get out of it instead he jumped into it with both feet cooper soon became the featured speaker at ufo lectures all over the west a january 1989 appearance at the showboat hotel in las vegas drew 700 people at 10 ahead or 15 at the door this promotional material proclaimed petty officer cooper to be the nation's foremost expert on ufos who's responsible for this designation it seems that people in listening to what i have to say and what others have to say have made their own determination
(48:58) on that fact never at any point have i ever made such a statement as the audiences grew so did the story cooper's thesis titled the secret government grew from a modest five pages in january 1989 to a much heftier 28 pages by may of 1989. in the earlier version cooper pledged that this was it there would be no additions or corrections he swore part of the statement i swear that this information is true all true two weeks later he changed the story and swore that was true then he changed it again and swore that
(49:36) was true then he started suddenly assimilating information which he got from other researchers and other individuals and incorporating that into his story and claiming that it was part of the material that he had seen in 1972 according to the cooper scenario humans have had a base on the moon since the 1950s another on mars since the 1960s we've recovered dozens of crashed discs and scores of alien bodies the aliens are here to use us for food and genetic experiments including mass sterilization which is why we must hang on to our guns and
(50:09) oppose birth control george bush is in on it so is henry kissinger the vatican and most of the nation's leading scientists john kennedy was assassinated because he was going to blow the whistle on the drugs and saucers connections bill moore stan friedman phillip class john lear bob lazar and anyone else who questions cooper's credibility have been written off as agents of mj 12 and thus part of the plot so what's the motive get rich quick where he's making thousands and thousands of dollars going around the country was in atlanta
(50:41) last week uh and charged fifty dollars a plate for people have dinner with

him so they could ask him questions you know the man is in my opinion based on the research that i've done about him and i don't mind saying this on camera let him sue if he wants to challenge i'd love to have him in court in my opinion he's a total phony total phony well let me ask you how much money do you make in what you do and how much do you expect to make i don't think it's anybody's business but my own
(51:10) cooper insists his information came from reports he read in 1972 moore points out some of the documents included in cooper's thesis contain entries from 1974 75 and beyond and thus couldn't have been read by anyone in 72. when i first met him a couple years ago he said he could vouch for 50 percent of what i was saying since then bill apparently can vouch for a hundred and fifty percent of what i'm saying john lear was instrumental in bringing cooper out of the ufo closet but even lear now questions cooper's claims
(51:44) in 1988 lear helped an acquaintance compile and write a ufo paper under a pseudonym o h krill the name is an inside ufo joke krill is supposedly the name of the first alien to communicate with humans the o-h was just picked out of thin air but later during an interview program lear says cooper stated otherwise just out of the corner of my ear i heard cooper talking about o.
(52:11) h krill and god i turned beat red and i grabbed him and i walked into the living room i said what are you doing and he said about what i said all age krill is a joke we invented that for some papers no no i saw that in the navy i said that's impossible bill you couldn't have possibly seen that in the navy we came up with that last year so that's that's one cooper's paper states that the basics of his story have been independently verified by two sources one of whom is tony pelham reporter for the now defunct las vegas
(52:41) bullet newspaper i personally believe that bill cooper is a complete fraud and that he's read a lot of ufo books and he took advantage of charging 10 and 15 dollars a person to give some lectures which a lot of people will pay to listen to pelham says he found bits and pieces of cooper's background that checked out but there was no confirmation of the big stuff for instance cooper's copy of the 1972 documents now cooper explained to me that his set of documents he had stored while he was living in california in
(53:13) a garage storage area behind his home and he said a mysterious fire destroyed him and as a reporter at the time i said well fine just simply give me the location and the date the address and i'll verify with the fire department the fire and he became angry and said no i don't want to get anybody and i said well how could this hurt anyone for me to verify the date and place of a fire cooper insists his stories are true those who disagree he says are dupes of the secret government former associates like john lear who
(53:42) dare to question cooper's material receive unsettling messages on their answering machines john this is bill cooper you know i really don't know how to express my anger but i'll tell you right now i told you a long time ago anybody that attacks me is going to get crucified and mr i've always been very very kind to you and you know it but my patience has run out i hope you have a good flight [Applause] call this a prediction but it probably won't be all that long until eyewitness news is accused of being part of the
(54:23) secret government conspiracy as well because of this report the tragedy in things like this is that well-meaning people who are genuinely curious about the topic are misled and frightened and any hope that the topic might be given more serious consideration is tossed right out the window as bill moore put it it plays right into the hands of those who really don't want the subject to be treated fairly household intelligence are perhaps the least credible aspect of the et phenomenon the stories are so unsettling
(54:50) so far outside our realm of experience that the human mind can't easily absorb them the evidence suggests beyond any doubt as far as i'm concerned that we're being visited by some kind of some form of intelligence which is higher than ours and some kind of technology which is higher than ours and it is able to pick up human beings at will as objects of study the way we might a lesser species to admit all of those things as possibility as a real possibility is to be staggered so we keep it at arm's
(55:20) length conveniently hopkins has done more first-hand work on abduction cases than anyone he lectures all over the country has written two best-selling books on the topic created a foundation to help abductees and has interviewed and investigated thousands of people who claim an abduction experience there's an enormous number of people have been through this experience and who are having recurring abduction experiences i don't know how it operates on the scale i don't

know how they can do it but they're doing it who are the
(55:47) abductees hopkins says they come from all walks of life and because so many say they were first abducted as children hopkins and others believe the victims are chosen more for genetics than anything else a university study of 225 alleged abductees found them to be above average in intelligence self-sufficient honest and generally devoid of mental disorders [Music] is that someone there you know [Music] [Applause] [Music] the movie communion like the book of the same title is based on what writer whitley strieber says
(56:35) are real life experiences strieber doesn't claim to understand the full story of what happened to him but he insists it is real not something he dreamed up under hypnosis the material i was talking about none of it is based on hypnotic regression i've remembered pretty much everything that's happened to me at my cabin and most of the other people have too and most of the letters i receive are from people who have just natural memory they haven't been undergoing hypnosis either the experience described by many
(57:03) abductees is sometimes compared to rape hopkins once arranged for a psychologist to evaluate the case files of several alleged abductees without telling the doctor what he was looking for and when we told her that these people were reporting these abduction experiences she said well that her tests showed that there was no psychopathology present with any of these nine that would explain these accounts as some sort of psychological aberration and she said though it doesn't the uh nothing proves that they had the experiences she said
(57:35) if they had had these experiences these are exactly the sorts of problems you would find as with rape victims and this is a species of rape in a certain sense and then i can't talk anymore i can't feel anymore and then the one behind me pushes me up and stops pounding on my back pounding on my back what do they want what do you want from me what are you doing for me what do you want i want to go home hypnotherapist lane keck has been contacted by dozens of alleged abductees from all over the country while most
(58:24) proved to be wrong about their experiences keck has found two that apparently were not wrong there's certain cases that i cannot disprove and there are some who seem to remember clearly being abducted going aboard a mothership and being shown different things and of course there's no way to prove it but what i can say is it appears just appears that they have had this experience or believe that they have had it but hopkins says there is frequently physical evidence to substantiate these stories often the victims discover unexplained
(58:59) cuts scoop like scrapes or scars as if skin samples had been taken from them alleged ufo landing sites are sometimes found near the spots where abductions supposedly occur the grass is killed uh it is the soil is baked to a kind of rock-like hardness and we don't know what does that but there is a circle of absolutely dead grass and absolutely rock-like soil which will not then support life you can test it by taking a sample of it and then control soil from two feet outside the circle uh put seeds in them water them so forth
(59:36) you get nothing from it's as if it's been sterilized now we have something like 2000 cases like this and we cannot duplicate it in the laboratory we can't take some of the control soil put it in the microwave or heat it or do anything to it to get it to this particular degree of hardness and sterility we don't know what the energy sources are that are causing this effect but you have to say we have a phenomenon here that that absolutely requires investigation regardless of this other evidence the debate over abductions
(1:00:05) always seems to come back to the use of hypnosis and with good reason tomorrow we'll examine some of the problems associated with hypnosis and some alternative explanations for abduction experiences we'll also update the investigation of what some have called the abductee murder case george knapp eyewitness news eight a group of southern nevadans interested in ufos and alien abductions in early march the bodies of borland and her brother were found in a las vegas apartment borland had been mutilated and set on
(1:00:35) fire her murder sent shock waves through the ufo community primarily because of what borland claimed she knew she'd confided in letters to friends that she had an inside source involved with government testing of ufos in nevada the source was someone very close to her and according to the letters was very upset because of borland's involvement with a ufo contact e group the source allegedly told borland enough about area s4 to allow her to draw sketches of the alleged ufo base when borland was killed her source was
(1:01:04) one of the first people questioned by police the source is no longer a

suspect lawmen have issued a warrant for a man believed to be in hiding in california the murders are completely unrelated to ufos they say but that assurance hasn't been good enough for borland's ufo group membership is dwindled by 80 percent partially because of wild stories being circulated by some ufo lecturers i've received a lot of calls from people in the so-called ufo underground and they're just afraid they don't know
(1:01:36) what's going on they're afraid to come public um stacy kind of held it together and it's changed a lot since then suddenly up here and there's no explanation the ufo group organized by borland is one of dozens scattered around the country dedicated to exploring the alien phenomenon most members don't make claims of having had an alien contact they're merely curious jeff graf is among the curious he says he's seen numerous ufos over the years and decided to undergo hypnotic regression
(1:02:08) after discovering a scoop-like scar on his leg he says the regression revealed that as a child he'd been taken on board a spaceship it's hard to believe you know and i didn't want to really believe it myself and even after having regressions i've still gone back and forth as to whether i truly believe it or not one reason for the reticence is that graff isn't entirely sure his hypnosis sessions were objectively conducted psychologists and others say there are many problems with regressions
(1:02:34) which is why even some abductees who've relied on the technique have doubts i think that hypnosis is an inappropriate technique to use to try to find out information about this when hypnosis was used in my case by dr donald klein and by the way i might say to everyone never let yourself be hypnotized by a ufo investigator if you want to do this go to a qualified licensed therapist only anyway i was hypnotized by him to enable me to live through the fear not to find out the facts and that's what it's good for
(1:03:08) science has come up with several explanations why people under hypnosis claim to have been abducted by aliens bad dreams wild imaginations reactions to high stress media brainwashing epilepsy and something called confabulation in which the brain just makes up what it can't recall hypnotherapist lane keck says most of the alleged abductees that he sees are actually remembering some other traumatic or emotional experience one of the cases had to do with a c-section they had a fee they had seen a movie and the abduction
(1:03:43) and the probes and all of that and they reacted strongly to that and when they came in the office what it turned out to be was their own birth a traumatic experience and they had a c-section and they were lifted up and out and these memories really do stay with us one of the main problems with hypnotic regressions is the hypnotherapist but hopkins says audiences and readers have filled his head with horror stories about hypnotists who were biased untrained or who were gouging their subjects for thousands of dollars
(1:04:18) often the therapist is the source of the abduction fantasy a person under hypnosis will easily pick up what your own beliefs are and what you expect them to to say and they will lead you consciously or unconsciously they lead the witness to say certain things and i have a lot of trouble with that i think it is unethical and i think it's not going to get us to the truth but hopkins who's conducted scores of regressions couldn't agree more during his sessions he purposely tries to lead his subjects away from the
(1:04:47) abduction scenario to see if they return to it on their own but his data isn't entirely dependent on hypnosis between 20 and 30 percent of all the cases we have people remember them without hypnosis some of the most famous cases hopkins also says the concept of media brainwashing doesn't hold water because even though most americans are familiar with books and films about aliens and flying saucers the same isn't true for the rest of the world yet abductee reports from say new york are identical in detail to
(1:05:18) abductee reports from zimbabwe besides hopkins has an ace in the hole that has not been made public i've been collecting uh drawings that people have made of a notational system it would seem numbers letters whatever that they see inside ufos on a wall or a page or something and they're virtually identical they have never been published obviously they're one of my ways of being able to test the veracity of a new witness but i've had a situation once where recently where women made these drawings she had remembered
(1:05:51) what she'd seen in the ufo she remembered under hypnosis and and partially normally made the drawings and i was so stunned i showed her a couple of other people's drawings too at that point to show it was exactly the same folks the best

evidence gary the long-awaited conclusion some people get very angry about this alleged cover-up stuff they say this is america we have a right to know if it's true without realizing what they may be asking to hear tonight we examine a few additional ufo cases some intriguing video tapes and a couple
(1:06:25) of very big what ifs without a doubt the photographic evidence in this case is by far the best documented evidence i've seen in 40 years of field investigations into the ufo phenomenon the addition of the videotape tended to corroborate the photographic evidence and vice versa bob exler's reference is to a series of ufo sightings in gulf breeze florida sightings that are among the best documented in ufo history the gulf breeze incidents have been publicized on national television and in a new book the evidence dozens of
(1:06:58) color photographs of odd craft videotape of those craft photo analysis by ufo investigators and outside experts alleged ufo lending sites and polygraph and psychological tests conducted on the key witnesses in the case there are skeptics who argue that such evidence can be rigged but what's important in this case is that more than 150 people including public officials also saw the same ufos on several occasions at different locations coincidentally perhaps the reports of the ufo sightings were soon followed by the arrival of
(1:07:31) advanced military radar equipment in and around gulf breeze the military interest in the gulf breeze cases has quite an interesting phenomenon within itself they have reported at the pensacola naval air station a significant amount of radar signatures involving the ufo activity there they have deployed ready alert teams the air and sea rescue squads and helicopters have gone out on several occasions none of this means diddly to science and in a sense how can you fault the scientists the ufo phenomenon isn't like
(1:08:04) botany or zoology the objects of study don't stick around for observation they're fleeting here one minute and gone the next if anyone would bring in some little green men and they would run around on my conference table i would consider that convincing see but absent that kind of physical evidence i remain very skeptical much of the evidence that does exist is of uncertain value this videotape of objects cited over las vegas is the subject of much local speculation some say it shows ufos others think it looks like a couple of
(1:08:35) kites at least one person insinuates it's a hoax this tape obtained from nippon tv shows a ufo that seems to just disappear if it is technology it's technology we don't have it's small wonder that even ufologists can't agree on where the alleged aliens are from or what they might want jacques valet thinks they may be from other dimensions instead of other planets but hopkins thinks the aliens are here to interbreed with humans because their species is in trouble whitley strieber says the visitors may
(1:09:04) be interested in our souls whether or not there really are alien visitors evidence does exist to show our government hasn't been entirely truthful about the topic documents have been withheld or destroyed agencies have lied about their investigations other agencies have spied on ufo groups and researchers journalist bill moore asked the fbi for his own files after a year of legal wrangling the feds released only six of the 61 pages and the six pages they did release were heavily censored stan friedman had a very similar
(1:09:36) experience bob lazar is still fighting to obtain his records this reluctance by the government to even discuss ufos became evident in our talks with an faa employee in the way of ufos i mean people wonder why we don't pick them up on radar i guess i have to say i'm not in a position to respond to that you're not supposed to talk about it that's correct behind the scenes government agencies sing a different tune this is a reproduction of a chapter from an air force textbook written for use by air force cadets it
(1:10:08) states that ufos have been around for thousands of years that most reports are from reliable witnesses that there is evidence they are of alien origin and that the topic is worthy of in-depth study when ufologists found out about the chapter it was pulled from the curriculum why i think in a nutshell that the government painted itself into a corner about ufos for very legitimate reasons 45 years ago and i think the paint's still wet they don't know what to do about it could the government have legitimate
(1:10:41) reasons for maintaining a cover-up many of the same investigators who've complained loudest about it say yes timothy good thinks alien technology now in the hands of the u.s government is so potentially important to the military that it should be withheld it was classified higher than the hydrogen bomb back in 1950 and it's still classified way way above top secret and that's perfectly valid in my

opinion it's rather like the the hydrogen bomb i mean i think we're entitled to know that it's there the effects
(1:11:13) that it has on us but i don't think we're entitled to know how to build one there may be other reasons for the secrecy in 1960 nasa published a study that hypothetically pondered the effects of human contact with an alien civilization the study concluded such contact would result in anarchy the complete disintegration of human society institutions religions governments unless it was handled in a very gradual manner with the public being slowly conditioned to accept it otherwise panic if you go on the air and
(1:11:42) say the age of the world is over tomorrow we die i suppose so but i think that the government's too smart to do that i think it has to be done properly what is the proper way how does a president tell the public the government's been lying all these years that beings from beyond are really here the difficulty of such a pronouncement may itself be a reason for non-disclosure what politician in his right mind would want to get up in front of a national press conference and say my fellow americans i come to you
(1:12:13) before you tonight with an announcement of great importance despite all our denials flying saucers do in fact exist we don't really know what their intentions are we don't really know whether they're going to be friendly or not they can fly circles around the best aircraft we have in flight we are unable to duplicate any of the metals found on the several craft we have recovered nor are we able to figure out how they are propelled we do know they can paralyze anybody they want to it will take them into their craft we do not
(1:12:43) know if they represent a threat but we know that they're here and there isn't a damn thing we can do about it we have really nothing positive to say about that thank you a good night one other note in our reports about bob lazar we told you he worked on flying saucers at an area called s4 and that federal agents have done a background investigation on him for his clearance one of those agents was named mike thigpen thigpen is not an fbi agent as we reported but according to informed sources he does work for something called the
(1:13:14) office of federal investigations which does most of the security clearance work for the test site the ofi is not listed in the phone book the department of energy spokesperson we spoke with didn't have a number for them either nor did ofi's washington office yet the ofi is real and it's here we just can't find it to confirm if a mike fig pen works there or if anyone else at ofi might have investigated bob lazar but we're going to keep trying what about people a lot of people have been calling asking for information on all
(1:13:42) the stories a lot of people have been calling we have prepared a free handout with a lot of names and numbers and addresses where people can write for information and tapes and books and things like that other material just write to us here at the station uh klas tv post office box 15047 or if you can't write this down the address is in the phone book and send a self-addressed stamped envelope and we will get something else in the mail in a couple of weeks you went into this believing that that ufos exist well i went into it wanting to know i'll
(1:14:13) say that have your feelings changed what have you come away with now after a year of working on this as you might have picked up from that that piece i think i'm a little more sympathetic to the government's position i mean some of the material that we have seen in the course of this investigation i think would be very unsettling and upsetting to the public it's like one air air force officer put it too the same air force officer who for a while was in charge of of the project blue book he said our job in the air force is to identify
(1:14:42) intercept and destroy aircraft and unidentified aircraft over the united states now we can't identify these things we can't intercept them and we certainly can't destroy them so really this is a job for science not for the military i think what we can say about this is there is a body of information there is some kind of a phenomenon here that can't just be written off the government is sitting on a certain amount of information that it isn't letting us know about and i don't think the topic has been
(1:15:08) fairly treated by science or journalism it would be interesting if we could have a much larger investigation by someone else you

(00:03) ever since man has looked up into the Stars he has seen strange objects in the skies but the search for proof of extraterrestrial intelligence has produced disappointing results the best so-called evidence has only been a few photographs and film clips but now all that's about to change [Music] since 1985 more than 15 million Americans have reportedly witnessed unidentified flying objects but despite the seemingly overwhelming evidence mainstream science has chosen to ignore the subject but now for the first time in history
(00:38) one of the greatest mysteries of this century is unraveling a former government scientist has come forward to discuss the military's classified work on extraterrestrial spacecraft [Applause] [Music] human advances in technology have exploded in a million directions and show no signs of slowing down the ever increasing pace of achievement in the last several decades is unparalleled in human history the high cost of developing and producing these Technologies has limited the number of contenders from the private sector
(01:21) leaving the government in large corporate businesses on The Cutting Edge of new discoveries always in the public eye big business competes for high paying contracts working night and day to invent or further develop the next big thing to satisfy the masses the government on the other hand must conceal information concerning National Security that for obvious reasons should not be public knowledge but when it comes to matters concerning the welfare of our planet the living beings on it or potential Clues to the mysteries of the universe many
(01:52) believe it should be our right to know the end of World War II and the invention of the atomic bomb signaled a new era of international mistrust since the earliest days of the Cold War which coincides with the Roswell incident and the start of the modern UFO era the military has been especially secretive about its advances and achievements while always searching for the Perfect Weapon or super sophisticated tool of espionage high-tech surveillance equipment around the world and even in space has allowed Global intelligence to see and be aware
(02:30) of many things that the commons civilian cannot even begin to imagine the military recruits many talented civilians when special expertise is required and propulsion systems expert Bob Lazar claims he was one of them in this exclusive interview he gets his detailed account of his employment with the Department of Naval intelligence at the top secret facility known as S4 where according to Bob he was hired to work on recovered alien spacecraft S4 is located 125 miles north of Las Vegas and 15 miles south of Groom Lake
(03:08) this now not so secret military base at Groom Lake Nevada is known as Area 51 or Dreamland as insiders like to call it born in 1959 in Coral Gables Florida Bob has lived much of his life in Las Vegas Nevada with degrees in physics and electronics from MIT and Caltech is dabbled in everything from chemistry to fireworks in an effort to understand the finer points of propulsion he has even assembled a jet car with a 22 000 horsepower engine salvaged from a Navy f-3d Sky Knight that is capable of land speeds of over 350 miles per hour
(03:48) [Music] serious turn for Bob in 1982. arriving early for a lecture at Los Alamos National Laboratory in New Mexico given by Dr Edward Teller one of the inventors of the atomic bomb Bob was able to meet and talk to the famous physicists coincidentally Dr Teller was reading the local paper the monitor with a featured front page article on Bob and the two struck up a conversation later Bob sent Dr Teller his resume for consideration and soon after Bob was hired by the Los Alamos National Laboratory this Los Alamos base
(04:22) directory lists Bob as an employee by 1989 Bob was brought into the top secret program at S4 known as project Galileo in the following interview Bob reveals many details of this amazing experience did you witness any disc technology at Area 51 no there was no absolutely no at craft ET technology anything like that at Area 51 this is why S4 was made specifically to separate it there people at Area 51 do not have the clearance how long were you employed at S4 and when were you hired when was I hired at S4 I guess early 89
(05:11) and I was probably there only about six months or so uh on a very infrequent basis how are you transported to and from work at the time that I was working there at McCarran International Airport in Las Vegas there was special projects EG and G building when I was told to go to work I drove there parked my car there and got in a plane at the airport flew to groom Lake where I deplaned and waited for a bus and

the bus drove me down to S4 the S4 facility is an area just off the papoose lake bed dry like bed and it consists of nine hangers the
(06:03) hangers have sloped doors on them with a sand texture coating around the opposite end of the hangers there's the standard entrance where you're dropped off at go through a security check and inside there's a small complex uh there is some office space there are several Laboratories the hangars themselves of course and uh a few other places I didn't have free rain to go wherever I wanted to everywhere I went to I was essentially escorted so uh that was really all about that I saw inside the facility what was the basic
(06:42) layout were there underground levels I don't think they're running underground levels to it though there could have been I I don't think it was a an extensive underground facility it just looked like a an installation that was butt up against a mountain and uh you know I didn't see any evidence of any stairs going down elevators or uh but like I said I don't know there could have been and I just might not have been permitted in those areas it's difficult to uh to really surmise how long it had been operational
(07:17) everything did look fairly new uh by that I mean I don't think this installation was there in the early 70s nothing was worn things look fairly freshly painted so uh as a ballpark guess I would say it would it would really surprise me if the installation was older than five seven ten years something like that what agency is in charge of S4 who controls the program I was paid by the department of Naval intelligence what they're doing researching extraterrestrial craft is beyond me but that's that's where my
(08:01) checks came from so I can only assume that they were in charge of that did you see high-level government or military personnel that's for no not at S4 anywhere in in the overall facility at all at Area 51 I believe I saw some military personnel but uh you know no no one I can identify or rank or you know is this research confined to the US government or did you see any International involvement at one time the Russians were involved and supposedly there were some breakthrough made by our team however this project was
(08:47) split up and right after that happened the Russians were no longer permitted on the facility at all and uh you know that's that's all I know about it what was discovered why they were kicked out when they started working with us is all unknown to me you were hired to replace a scientist killed in the project what exactly happened there allegedly obviously I I didn't see this and I don't know it to be fact but this is what I was told that I was hired to replace one of a couple people that were killed while working on one of the
(09:25) reactors from one of the crafts apparently they for whatever reason cut open an operating reactor and the device exploded killing both of them the scientists that were killed there allegedly the detonation from the explosion was fairly large it would have rivaled a small tactical nuke so it was done at the Nevada test site and it was to be passed off as an unannounced nuclear nuclear test did you have any direct contact or communication with aliens no not at all tell us about the briefing files under what conditions did you gain access to
(10:03) them I was put into the briefing room with a 121 or 22 briefings and really was just told to sit and read through them I think they were there just to mainly educate me on on what was going on they weren't a complete in in-depth explanation on everything else but just essentially a brief synopsis on some of the other projects that were going on there supposedly the information now this isn't something that I determine it's something I was told that the crafts originated from uh a planet that orbited The Zeta
(10:41) reticulate star systems that are particularly one and Zeta reticulate two or two two stars of a binary star system the craft allegedly came from there one or two autopsy photographs I saw uh dealt with just a small photograph a bus shot essentially just head shoulders and chest of an alien with a chest was cut open in t fashion and one single organ was removed uh the organ itself in the in the other picture was cutting vivisection essentially the showing the different chambers in there this was totally unrelated to anything I
(11:20) was doing but from that photograph it looked like what you see in UFO lore as the typical gray so how tall it was from what I could see I I couldn't tell because I only saw a portion of the photograph but if everything else you see is correct I would imagine it was three and a half or four feet tall But there again you know all I had to see was a photograph and you know I didn't have much to go on you mentioned these beings have historically interacted with man how what was involved there allegedly this

(11:54) interaction has occurred since you know man was a Simeon creature and you know there were genetic alterations made how specifically did the briefings detail how the aliens manipulated our genetics over the centuries it mentioned 65 or 63 uh Corrections or additions to the genetic makeup that finally resulted in a human creature in an earlier interview you had mentioned you saw what you thought maybe an alien wasn't an alien what did you see what I had said and all that occurred was I was walking by a door a door that had a small nine by nine
(12:42) window in it little wires running through it and glanced in there and there were two uh either technicians scientists or whoever they were looking down at something and what that something was caught my eye and I never really did see what it was a lot of people have asserted well there was an alien there are aliens working around there and so on and so forth I mean I don't think that was the case but uh who knows I was you know you're seeing all these fantastic things and your mind gets going and you know you catch
(13:14) something out of the corner of your eye who knows what your mind's going to come up with so I certainly wouldn't stand on that as fact by any means what was the incident in 1979 that brought the alien Exchange program of information to a halt again this was a story that was relayed to me and uh allegedly what happened in 79 there was some sort of information exchange going on where there were actual live aliens at the facility and at one particular point there was an area where some security Personnel went to
(13:47) enter and apparently because not the sidearms but the bullets and the sidearms from what I understand if they would have entered the area the bullets would have detonated uh and supposedly one of the creatures tried to stop the security Personnel from entering the area and a fight ensued and the bottom line from the altercation was that the security Personnel I don't remember how many were involved but were all killed and they died of head wounds and that's all that all that I heard of that story what was
(14:25) your job description at S4 my official job description was a senior staff physicist uh I don't know if I actually had that position when I was there because I was there so infrequently I wasn't supervising anyone so I uh that was the official position I was hired under but whether or not I actually acted in that capacity I don't know what was the size of the staff working on Project Galileo well there were 22 people employed there totally and that was specifically for the Galileo project no for the entire project there were 22
(15:06) people with Majestic clearance I had Majestic clearance Majestic clearance was designated as clearance 38 levels above Q clearance and Q clearance is the civilian top secret clearance when did you see your first disc the first disc I saw I believe it was the second or I think it was the third time I was up there normally the bus pulled around to the opposite end of the facility which was the main entrance and that's where we went in on this particular occasion it pulled up to one of the hangar doors which were normally
(15:42) closed and the last one was open we came out and I saw the disc in the hangar upon seeing it it struck me that well this explains all the UFO sightings not thinking that it was an extraterrestrial craft that this must have been some advanced form of fighter that we've been working on for years and you know people have just caught it being tested so on and so forth and it never even occurred to me even though I was looking at an extraterrestrial vehicle that you know this wasn't man-made when did you realize the craft was not
(16:15) of Earthly origin well it probably really hit me when I got inside the craft and looked around and began to understand how the craft was operated and finally grasped the whole project as a whole as what we were doing the fact that we weren't building this thing we were trying to find out how it was made we were back engineering it what is back engineering well back engineering is taking a finished product and finding out how the device or product was produced and essentially determining whether or not you can
(17:05) duplicate it now scientists aside what was your emotional response what were you thinking were the implications to the world or man in general from these Revelations I really didn't think about implications of that sort as far as emotionally uh people have asserted that boy that must have been the most exciting time in your life and I that's not the way it was when I first got to look inside the craft the all I can say it's an ominous feeling you walk in there and uh it's it feels as if you shouldn't be there I
(17:44) know that sounds kind of corny but it's real ominous feeling it's not an exciting feeling uh it brings up a whole lot of questions in your mind well where

did this come from and you know that they won't give you the answers to the whole story but it's a that's the only way I can describe it how many craft are housed at us for and are they in fact all dish shaped there are nine and their shapes vary I only got to do a close inspection on one of them the others I just briefly saw and they they pretty much varied
(18:19) I give everything nicknames they're the one I worked on was kind of sleek looking and I gave it the name of the sport model there was one that looked like a Jello mold there was one that looked like a top hat uh there was a disc that was turned up on its side and it had a large projectile hole with the metal bent outwards on it I can only surmise they were testing it to see if uh you know projectile could penetrate it of course it's just a guess on my part but for the most part they were pretty pretty varied
(18:52) how many times did you enter the disc or did you only enter the sport model I only entered the sport model the other ones I wasn't uh allowed to loiter around To Go near me really even to look at I just at one point walking through the hangar doors all the bay doors between all the hangers were open and I got a glimpse all the way down of the whole Corridor but that was the only time it was ever open tell us about the lower level of The Craft where the gravity generators are located the lower level of the craft the floor
(19:29) itself is hexagonal little hexagonal squares and the hatch or if you want to call it a hatch the access way to get in there is an ingenious little assembly it's a honeycomb structure and if you put your fingers in one end of the honeycomb and push all the Honeycombs will collapse in on each other making a hole it's kind of a neat uh a neat doorway something that we could you know use I don't know what for but I mean it's it's something that I haven't seen before and it's kind of a novel idea but
(20:07) a very efficient lightweight very strong uh access way I had to hang upside down in there to see the lower uh the lower level essentially and there were three large gravity amplifiers these devices looked like about a two foot diameter four foot long piece of pipe hanging by a smaller piece of pipe from the level above and they can be independently positioned and that's what what emits the gravitational waves that Propel the craft the second level was the only other level that I was on it was the main level
(20:45) that contained the reactor where the seating was the gravity amplifiers themselves though we also called the devices that hung down on the lower level the gravity amplifiers because they're really winning the same they were probably the wave guides or horns if you want to relate that to microwaves um and really that's about it that's all that was on that level so it's assumed this was not made for a human pilot it would be extremely inconvenient for a human pilot humans really can't even function in there the because of the
(21:20) ceiling clearance uh the seats were so tiny uh it was obviously made for a creature much smaller than a human how does the craft achieve lift it produces a gravity wave which is similar to the gravity wave that the Earth produces however the craft phase shifts the wave in other words it it turns the wave not really in an opposite polarity but something to that effect where it will work against the natural gravity wave of the earth and it produces a lift in in that effect is there any internal protection for the
(22:02) crew does the craft generate a a gravitational field inside the craft itself well the craft generates its own gravitational field being inside that field essentially doesn't Shield you but essentially you're in and this is a terrible way to say it almost in a different realm because you're you're now influenced only that by that gravitational field for instance people wonder how a craft like this can make a turn at such high speed a 90 degree turn when they would imagine people slamming up against the
(22:41) wall or something to that effect well that really wouldn't happen inertia would have no effect uh you're you're in a distortion and don't forget that gravity distorts time and space so really nothing is going to influence you while you're in there describe the gravity amplifiers for us and some of their different operating configurations there are three amplifiers the craft can operate on a single one can lift off the ground the way in which gets propelled are two different ways there's what they
(23:17) call Omicron configuration where the craft is using one generator or a Delta configuration where it's utilizing all three Delta configuration would be for space travel essentially the craft will tilt up on its side as opposed to a science fiction movie where you see a flying saucerer moving around the craft will tilt up

on its side Focus the three gravity generators to a single point and move through space that way moving around a source of gravity is a problem to a disc because its interference essentially
(23:50) so what they do is they work with that interference to their benefit they'll use one gravity generator to lift the craft off the ground and as opposed to what we're used to for instance a plane once it's in the air we envision thrust or some Force coming out the back of it to push it forward the crafts work completely opposite of that what they do is once they're hovering in the air they'll swing the gravity or two remaining gravity generators up in front of them and create a distortion essentially a downhill
(24:26) and The Craft rolls downhill for Infinity it's always chasing a little Distortion that's why they look goofy when they fly around at low speed because they're essentially and anytime you run over you know the gravity field around the earth is not completely constant and stable depending on the minerals and density of the earth underneath it that gravity will vary somewhat and you will get odd movements of The Craft so it's low speed mode is is kind of unstable for the most part I only witnessed one test flight up
(25:01) close officially that I was in just inside the hangar the test was going off probably just as the sun was going down and it was a low performance test I believe there were some Pilots or test pilots in the craft the craft must have been retrofitted to fit them because the seating arrangements were really not accommodating um they were in radio communication with the craft which is kind of surprising to me because the gravity waves that the craft was producing should have distorted the radio waves also so apparently there's something there that
(25:42) I don't understand um the graph lifted off the ground virtually noiseless other than a small Corona discharge on the bottom of the craft indicating the presence of high voltage that dissipated at about 30 feet and it stood there completely silently and moved over to the left and to the right and sat back down that was the entire test however that was an extremely impressive test maybe to someone that really knows a little about science or anything that that wouldn't be a whole lot but you have to realize this craft was about 52
(26:18) feet in diameter I don't know exactly how much it weighed but it weighed a lot and this was quite quite a scientific feat to lift something completely silently under control and you know perform a maneuver like that the craft itself was uh I assume it was metal it was cold to the touch that's why I say it was metal but it was a brushed aluminum actually just an unfinished stainless steel not shiny uh finish to it had no seams it was as if it was injection molded from one Giant die I was completely amazed I
(26:57) I can't really reflect on how it made me feel but it that was exciting when you're on the outside you know you you pretty much think you know how could they keep something like this secret it's a crime against science it's a crime against the people and and all that but you know your feelings change once you're privy to the information once I was inside I mean there was kind of a bit of selfishness you know it's well I know about it now this is great you know we should keep it secret just
(27:27) so we all know about it and you know that really does go through your mind though after a while it wears off but uh you know you felt privileged to be privy to the information how would you define gravity could you describe in layman's terms it's basic principles for us gravity is something difficult to explain because it's something that we essentially don't understand it's just something that we can observe not much is really known about gravity there are many theories about it but they are just mainly theories there's
(27:59) theories of gravitons which allege that they're these are these subatomic particles that that act like an attractive Force like gravity that exchange between two pieces of matter there's also a theory that gravity is a form of wave and electromagnetic wave but basically gravity is a force it's uh it's the attraction it well it's the inherent property of matter to have gravity a mutual attraction for each other and that's it's basically all that we really know modern science current science right now
(28:37) identifies one gravity it's one force in nature uh apparently to research it as for or information gained from one of the crafts they were researching there it appears that there are two different forms of gravity one form works on an atomic scale on subatomic particles holding pieces of matter holding atoms themselves together another works on a larger scale the scale we're most familiar with uh holding planets in orbit holding ourselves to the ground things of that sort because

it produces a gravitational
(29:14) field I I wouldn't say the craft is invisible during the day however if you're under the craft because of the way the gravity is being used gravity bends time and space and it bends light if you are looking underneath the craft or from certain Vantage points you will actually see what's above the craft it's a it's really a trick of the way light bends under the influence of gravity for instance we can see stars that are behind the Sun that are blocked from our view by the Sun the reason we can see them is
(29:49) because the sun is a tremendous gravitational field and it's bending the light around it where we can see the star space time and gravity are all essentially interrelated they all act on one another gravity bends space gravity also distorts time when you vary one you essentially vary the other two if you as an example if you have a massive body say a planet or something that's making a lot of gravity producing a lot of gravitational waves if you will it distorts space it bends space to it it also slows down time
(30:31) these things aren't theories we know them to be true we cannot artificially create this because we can't create gravity but this is how they're all interrelated how are vast distances of space traveled by amplifying a gravitational field well because space time and gravity are all interrelated if you could produce gravity artificially an extremely intense field of gravity what you could do is actually distort the distance between two objects and make it shorter not just distorting the distance but now you're also decreasing
(31:13) the time the actual time between the two places so you're not traveling in a linear mode like flying a spacecraft from point A to point B you've actually modified the time and the space that you travel in so you're now traversing a huge amount of distance with little time and actually with traveling little distance as crazy as it seems that that's what's going on what are some of the inherent problems with traveling at the speed of light there are several problems traveling at the speed of light uh
(31:50) just a couple of them are the fact that as your speed increases so does your mass proportionally in other words the more energy you put in to go faster begins to slow you down by the fact that it's converted into Mass you have other problems like just traveling at such an extreme velocity navigational problems the fact that you might run into little tiny micro meteorites uh at speeds like this they would undoubtedly destroy your craft there's just a a whole host of problems that you're going to run into just
(32:27) attempting to do something like that aside from the fact the amount of energy required to accelerate to the speed of light is horrendous could you briefly describe project Looking Glass and project sidekick for us project sidekick was another project going on with Galileo Galileo was the project that I was involved in psychic dealt with any of the weapon potential of The Craft whether or not the craft had a weapon in it or could it be used as a weapon but it had something to do with some sort of particle beam
(32:59) configuration where the gravity generator can be used as a lens to focus focus a weapon of some sort similar to the SDI device we were working on in the the 80s but with the potential of a focusing device using the gravity generator and project looking class project Looking Glass dealt with the Distortion the fact that there's a Time Distortion essentially looking back in time and by that I do not mean looking back years ago to see the Wagon Train days they're looking for distortions that are milliseconds in time and what
(33:35) what that was used for I I don't know but that was just observing the time that the time Distortion time dilation phenomena the craft and operation what is element 115 is it found here on Earth or is it strictly an extraterrestrial material 115 is strictly an extraterrestrial material it probably occurs naturally in some other places maybe other star systems some people not familiar with science or chemistry say well that's ridiculous all the elements occur on Earth you know but that's not true and there are elements
(34:10) on the periodic chart that aren't found on Earth I believe the heavy ion research lab in darmstadt Germany has reached element 112 recently so 115 isn't isn't that far away and when they synthesize it it's not like they're making a a couple ounces of it they're talking about one or two atoms of it to make any usable quantity of a heavy ailment like that is virtually impossible element 115 is in the top of the reactor and the base of the reactor apparently is a small something similar to a cyclotron
(34:46) it's a particle accelerator uh a particle is accelerated to high speed and

then deflected up a small tube and it's aimed at the 115. this transmutes the 115. similar to the way we we do that in a normal particle accelerator this causes a reaction a radiation emission that we really haven't seen before it produces antimatter this antimatter is guided down a tuned tube and reacts with a gas when matter and antimatter react they convert to 100 energy this energy is converted heat energy is converted to electrical power in the
(35:38) reactor itself this is done through a a thermoelectric converter and this electrical power is used to power other subsystems on the craft though there is no wiring you know as we would know it also that's almost a byproduct of the reactor the reactor also sets up a gravitational wave from the 115 being bombarded this gravitational wave was present at the top of the reactor and is essentially guided in the same way microwaves are guided through tuned tubes and this goes to their amplifying cavities and through
(36:13) the projectors that are in the bottom of the craft with the gravity generators running is there thermal radiation danger to the crew there is no thermal radiation while the reactor is running the thermionic generator is 100 efficient which is in violation of the first law of thermodynamics but in fact it works Element 115 is stable and for those familiar with chemistry we know that elements with higher atomic numbers have shorter and shorter half-lives however when you reach a certain point they call it the island of stability there is a
(36:55) place and we've theorized this for a long time somewhere around 114 to 116 there should be an area in there where the nucleus of the atom is geometrically stable with protons and neutrons where it no longer decays it's not radioactive 115 is in fact this element in fact it does occur again somewhere around element 247.
(37:20) uh of course we're nowhere near synthesizing that we can only predict things like that but that's that's where 115 is did they the aliens give us Element 115 in large quantities whether or not it was given to us I I can't answer that question however I was told that we have 500 pounds by one of my co-workers how it was obtained and you know where exactly it came from I don't know whether it came in one of the crafts or you know with separate cargo somewhere anyone can speculate but I was I was
(37:57) told that was the figure you were able to get away with a sample of element 115 how much did you get away with no comment you witnessed several nighttime test flights unofficially while off the base what did you see the test flights I saw off the base actually the the best test flight was witnessed by my friends who I brought out there at the uh exact moment the craft was hopping around to doing some really impressive Maneuvers I had turned around and I think was uh looking for the video camera or something to that
(38:33) effect but I missed some of the most impressive Maneuvers but the craft was similar to what was done before that I had seen close up other than the fact that it went above the mountain range uh moved a much greater distance at a much higher rate of speed how are you able to find out about the test flight schedules the test flight schedules were told to me specifically because I was probably going to have to be present during those times and at that time the test flights were taking place on Wednesday nights and from what they said that was because
(39:12) that was statistically the least amount of traffic in the area that's all that they were concerned about does the propulsion system release any sort of discharge or exhaust there was a high voltage discharge on the bottom of the craft but as far as there being an exhaust there was none why did they appear as glowing balls of light in the night sky well that's kind of the same reason why on neon light or fluorescent light lights up what you're dealing with with is a high energy source in essentially a gas atmosphere oxygen
(39:49) nitrogen and when you apply enough energy to a gas molecule they emit photons they emit light and I don't think it's anything it's a really a byproduct of how the craft operates when it's emitting that much energy the gas surrounding the craft emits light the same reason why lightning is visible you have a huge electrical discharge and the gas emits light in the form of lightning bolt if you're going to see one of these crafts at night operating it would appear really as a glowing ball or a
(40:23) just a bright light in the sky from a distance even close up you know you'd see a glowing halo around it uh this is typically what you'd see in your normal UFO sighting if you've heard them a lot however keep in mind that lights in the sky are caused by much more common things than flying saucers tell us a little more about the Aurora you witnessed taking off out of area 51.
(40:48) when I was leaving the Area 51 facility heading down to S4 there was a

tremendous Roar in I have described it as the sound like the sky was tearing and I couldn't see out the windows of the bus all I can see out was the the very front and as we came by I asked Dennis who was my supervisor and on the bus at that time so what that was he said it was in Aurora a high altitude research plane and um it was a large craft and the one Glimpse I got of it was from the rear and it had two huge Square exhaust with veins in
(41:31) them and it was just it sounded more like a rocket than a jet I don't know I'd even think he did mention that it was a liquid methane powered but uh there again you know working on the disk technology I really could care less what was rolling around at Area 51 but uh it it did catch my eye as a result of going public have there been any attempts made on your life one day when I was getting on interstate 15.
(42:02) driving down Charleston Boulevard a car came up alongside of me and I thought he was just trying to race me to get on the freeway this was after I had left the project um it was a white boxy looking car exactly what make and model I don't know but I accelerated to get on the freeway to go fast and there was a gunshot and the back of the car was hit and I skidded off into the median and I stopped and I was frightened and I just stood there because I thought the guy was going to be alongside of me and just shoot me I had nothing to do I was
(42:43) essentially paralyzed with with fear and I waited there and then nothing else happened and do I know it was a government agent trying to kill me no it could have been a drive-by shooting maybe uh you know so was it I mean it was an attempt on my life but by who specifically I don't know though I was threatened before I had left they threatened my wife's life in my life so I can only put two and two together and say that they were kind of pissed at me in an earlier interview you had mentioned that they had put a gun to
(43:18) your head tell us about that that was after we were caught out when I had the test flight schedule and I brought some friends out to show them the disc test we got caught out there and the following day I was debriefed down at Indian Springs Air Force Base and um I was in the room with the security guards that caught us my supervisor and some other people and some of the security personnel uh yeah they were essentially grilling me about security and you know how could I possibly bring people out there and uh I guess I wasn't as responsive as they
(44:03) would like and they got in my face and one of them pulled a sidearm out pushed it against me have you maintained any contacts with your colleagues out at S4 now I never heard from anyone other than for a very brief time after I left Dennis who was my supervisor did try and make contact with me at the uh the meeting place was the union Plaza Hotel and I took a friend of mine Gene Huff down there and another friend a former colleague and scientist from Los Alamos and we did we saw him but I also did recognize some
(44:42) security Personnel walking around there from S4 so whether or not it was a setup or what was going on or was trying to talk to me we never found out and we left it just was a real strange situation I never heard from him since as we enter the 21st century how has your experience changed your beliefs well if you want to wear the question how are my opinions changed I would say considerably and before I was at S4 I was more or less one of the uh one of the guys that thought you know all these government conspiracy
(45:20) and UFO Buffs and things like that were complete lunatics um I even remember before I was involved there a friend showed me a little newspaper clipping and said John Lear was giving a lecture who was touting that aliens from another world came to Earth and there's 70 different species and I remember laughing on the phone that this guy had lost his mind and uh I was also under the impression that you know well the government's all for the people and they you know you know they're out here to protect us
(45:51) and all that you know after the experiences I had there uh everything is completely turned around you know the government is doing everything but uh looking out for us I mean the only thing they're looking at is for themselves you know uh obviously the ET craft do exist something had to build them so there must be aliens and since there are in the craft there there must be some sort of factory and an entire civilization somewhere and if in fact that is true and it apparently is then there must be others actual crafts and Technology from
(46:33) another world that's probably the most important event it is it kind of moved from science fiction into reality in my mind and it really just I guess opened my eyes the big thing is whether or not we can duplicate them if we can understand what a device is or how something operates or what its physical makeup is that's

great but if we can't duplicate it it's useless to us so there's really two phases to the project going on there it's understanding what we're looking at and then once we understand it is can we
(47:12) duplicate it with Earthly materials and Earthly technology and you know unless we've got a handle on both of them all that technology is useless to us and if it turns out we can't do that all we have is one single prized possession that we have to take care of and that's it after all that's been said and done would you do this over again what would you do differently I would probably have played along for a longer time um I would like to have known a little bit more about the technology and probably
(47:48) kept quiet if I could have and possibly never have said anything yeah yeah I almost wish I had done that you know it's uh it's really only caused headaches and problems but um I believe if I was given the opportunity again to go back in time and redo it I think I pretty much would have just shut up and gone along with the program I would have much preferred that instead of the Navy or whoever it was that hand-picked a few Renegade scientists here and there that they turn it over to some more qualified people obviously
(48:29) I was not the most qualified person on a propulsion or field propulsor or anything of that sort I was just some guy I mean they could have picked I could have named 10 or 12 other guys that were more qualified than me but um you know if they turned it over to the scientific community and not just a couple guys here in the United States I mean you need a large group of people in a large lab to research what's going on there not a little quiet installation it's the it's the security itself that prevents them from getting anywhere
(49:01) I mean it they never do work hand in hand you can't have a military mind science itself must communicate you have to have a free exchange of ideas that's how things progress and when you clamp down on a security system like that where you work in isolated groups and ideas cannot be exchanged you don't get anywhere and that's that's the problem they have what does a future hold for Bob Lazar well I'm not really involved in any of that stuff anymore that's kind of put behind me I have my own businesses that I work at
(49:39) UH computer Graphics some consultation um other technical jobs radiation detectors and a few other things like that so really I just go about my life and that's you know something that happened that was fantastic and and it's over but it's kind of hard to shake it loose but eventually I will and that'll be that I think all the surveillance and everything stopped I don't think anyone's bothering to monitor me I've said everything that I know been all over the place so it's kind of a done deal as far as
(50:15) whether or not there are any craft out there I believe you know they were out and gone in probably the late 89 early 90s and the only thing people see now out there are either flares or planes coming into land but uh that's about it did you have an interest in flying saucers or science fiction in general as a child I was never interested in flying saucers as a child science fiction you know I watch Star Trek I guess with everyone else back then but uh for the most part you know I didn't even believe in flying saucers up until I was
(50:51) employed at S4 I couldn't help at one point in my discussions with privately with General Secretary Gorbachev when you stop to think that we're all God's children wherever we may live in the world I couldn't help but say to him just think how easy his task and mine might be and these meetings that we held if suddenly there was a threat to this world from some other species from another planet outside in the universe we'd forget all the little local differences that we have between our countries and we would find out once and
(51:39) for all that we really are all human beings here on this Earth together well I don't suppose we can wait for some alien race to come down and threaten us but I think that between us we can bring about that realization thank you all God bless you all [Music] [Applause] [Music] [Music]
(52:54) right

bob lazar: ? project gravitaur, | the richard dolan show (2023) - YouTube
https://www.youtube.com/watch?v=eSn9_i5piRQ

Transcript:
(00:02) greetings and welcome to the Richard Dolan show where every week we fight the good fight I'm very happy to be here for something that's really quite unusual

something new uh my guest is Luigi vitelli who actually is a friend of mine and Tracy's for a number of years Luigi is the president and CEO of uh Motivo this is operating out of Montreal in Canada Motivo has started uh has a division within it called we are not alone you can figure out what that means we are not alone Wana is what we call it
(00:37) and uh one of the uh the first major project that this company has done is to work very closely with Bob Lazar that is the bobazar to do a comprehensive Recreation of of everything everything having to do with S4 everything to do with Bob lazar's experience this is crazy stuff you really want to see what we've done so their division is called project gravior Luigi is the executive producer of Project gravitator uh they just this is amazing stuff so I just want to jump in Luigi welcome to the program thank you Richard
(01:18) it's always a pleasure it is indeed always talking with you as well so I want I don't want to keep people waiting uh too long on this I want to jump right in I would like for you to tell us what we what we have in store here you have sent me a number of incredible images uh that are Recreations of essentially the Bazar experience as for they're extraordinary people are going to want to see these uh can you just give us a little bit of a backstory about how this all came about sure well first again
(01:50) thanks for for letting me be on here it's always a pleasure I'm a big fan of yours so this is great that we're able to talk about the project so first thing is this all started like almost two years ago and uh as we are not alone had gotten started within the company we wanted to start working on projects that were very near our hearts in terms of the best quality stories that I've ever been uh laid out in the public regarding this topic whether that be UFOs flying saucers or even potential extraterrestrial contact so we've we've
(02:27) done a little bit of work already with uh some of the witnesses that were at aial school back in 94 and that's something that will eventually come out in the future but we wanted to start it off with a project with Bob Lazar it all started off with an idea that we simply wanted to create one of the most realistic reproductions of The Craft that he worked on and the reason why we did that is because we said every time you see something out there that has to do with UFOs or aliens in terms of anything in product like
(03:04) it's always kind of cheesy where it's always there's always a little bit of a light-hearted cheesiness to it versus how serious this topic is like people like you do things that been going on in Congressional hearings very incredible things are coming out so this topic is much more uh digestible today in society than it was 20 30 years ago and because it's actually coming there's a lot of evidence that is coming out so it's a serious topic so we wanted to basically create something that would
(03:40) have been a serious product and we thought if if we have to recreate a craft which craft do we choose and who do who would we know that has actually been inside one so that's that's Bob Lazar that that was Lazar yeah so we I reached out to his office about two years ago spoke to Zach which is his right hand at United nuclear uh I pitched the idea say look we we want to make a model I've been making stuff for 25 years I kind of know what I'm doing with that I would love to have an opportunity to say that Bob helped us on
(04:21) this so that we could promote it as something that is officially what Bob says and not all the stuff that's online that is horrific inaccurate by the way there a lot of inaccuracies out there so uh I guess my conversation with Zach must have allowed him to realize that I was serious he spoke to Bob next day Zach calls me says look he says he's willing to at least talk to you so we had a call first conversation with Bob was mainly him trying to figure out who I was so he essentially said if you wanted to do this how would you do this
(04:59) I'll never forget that was the first thing Bob said to me goes how would you go about in making this so I started explaining you know all the years I I spent many many years of my life in China I I I learned how to make things for a long time then brought that knowledge back to North America so I started explaining how I know how to use metals and casting and how to integrate different materials like silicone and all that so he kind of stopped me he says okay I I I could see that you know what you're talking about he goes so
(05:30) we basically HD it off and he said all right come and see me it all it all began with a trip to meet him in his home in Oregon where we sat there for a few days going through the absolute details of that craft that he had seen witnessed and worked in Back in 88 and ' 89 and I left Oregon came back to Montreal my team was

excited that I came back with this like mountain of data that we said now we got to take this and create something with this so using today's technology there's a lot of ways of doing it
(06:09) but before we even thought about making a a physical model we had to create a digital file sure yeah so the digital file started off in a very basic way uh so that we could at least get things on a screen so that we could write a million notes on every different section so we had uh created believe it or not like at the very beginning I think we had like 90 Pages just on the craft and that included every single part this the the basically everything Bob could remember we had very good measurements and everything Bob said look I I can't
(06:53) tell you 100% because I wasn't that close I didn't go measure that part so we went with mathema iCal approx approximates based on the ones that were accurately measurable sure so we came up with something very very precise and as we were building it I started realizing that there was this Evolution happening in the 3D world not 3D printing by the way 3D uh design there was a lot of new technologies emerging by when we started this uh there's a engine created by epic games called Unreal Engine and it's this
(07:32) phenomenal 3D engine that you could create any environment in if you know what you're doing so we started off with Unreal Engine 4 because that's what we had at the time and I hired a few people one of them had also worked on Marvel comic movies so I had some pretty good people who knew how to use unreal uh I had hired contractors from Sweden Lithuania Japan uh England and um and Finland I had a whole bunch of experts from around the world all working on creating the craft in unreal and as we did that now this this was like also new
(08:14) for me because I had never worked with such with such a a technology before and as things were progressing things were becoming wildly realistic I mean I was every single time I would see an update I would sit back look at my computer and go Jesus like I mean this stuff is wildly incredible and I said well if we're going to make a craft well we have to make the environment the craft was in so we have the proper lighting and the exact environment it was in so that's when we started saying how about we
(08:48) start building the hanger and these were decisions that I was taking simply because I was absolutely so happy with the quality that this Tech does and all that basically open these floodgates and we said that's it we're building S4 Area 51 Papoose Lake we're gonna build it all the whole thing the whole thing and um yeah it's really quite remarkable and I I have a feeling that listeners and viewers are chomping at the bit I think they want to see some of these images and I'm I'm wondering if
(09:23) we can jump in and you can discuss these with us I got your website here we'll show that also and I do have a link for that below that's project gravitator uh.com uh we'll I'll show that in a minute but how about we just jump in Luigi sure to some of these images let me uh start here this now this is all recreated these are all digital files right but this is so I assume you spoke with Bob about like what did it look like to walk you're about to walk into uh we'll describe this here yeah so
(09:57) everything you see although it's you know for some viewers if you say digital file every one thing I want to make explicitly clear everything is real size in a digital environment in in an in a 3D digital environment meaning that if someone were to put VR goggles on this is real size so it's not a design on a computer it's it's a very very heavy environment it's very heavy on the computers you need supercomputers to make this so as you walk in the you walk in this room this is that Infamous
(10:33) security room where there was the handbone scanner yeah before we get into that let me just uh I just want to point out because I don't think that we I made this very clear your team is creating really two products here right so you're creating uh a film right this is actually about an hour and a half long or a little bit more I think featuring Bob walking through the kind of virtual Recreation of S4 pus and so forth so that's going to be fascinating uh you want to release sometime in early 24 right into that but then you're
(11:07) describing a follow-up VR project by which individuals will be able to kind of do this they'll be able to go into it and that's what we are looking at here essentially yeah that's right so what you're what you're the same environment that we're use that we built so imagine we built everything from Groom Lake all the way to S4 Papoose Lake that environment is our Central piece and that is going to be used extensively in our documentary film and then will be available to the public on

multiple different platforms whether
(11:39) they want to go through it with their phones which will be a lower resolution version all the way to a high super high realistic quality with some uh go 3D goggles and they would be able to and not only they they won't just be able to walk through it they'll actually be able to interact with stuff so if they put their hand on the scanner it'll light up this is the scanner I think right that's right that's the handbone scanner that Bob had to place his hand there and there would be a bright light it would
(12:10) read the the length or density of his bones and there would be a little security ID card that would pop out of this on the right side there's like a little uh slot take his card and that at that point would swipe his card on the security panel that was door there and enter inside of S4 facility so let's move on so we're going into the hallway here uh this is a very realistic looking hallway I don't know how you I I suppose you just discussed this with Bob he gave you description of what it looked like
(12:41) and this is your Recreation so he goes to the door hand scanner going down the hallway and then finally we're out into the hanger I think there's other rooms that that you did not uh show me the visuals up but you've got other other areas here as well right there's a when when you're in the hallway the first thing you see is this very gloomy long hallway with this uh kind of a bowling green colored cinder blocks on the bottom side and there's doors on each side very quiet uh he said it was very
(13:16) uh very uh kind of a not a very uh inviting place if you want to call it very dead very boring he said uh so there was to he of the first things he had to do was go into this small briefing room that is not shown in these images we'll have it shown where there was all these blue documents that he was able to filter through uh there was always security there you will ALS everybody will also see this in the film so there was security guards at all times some of them were wearing desert camo security and some of them were
(13:51) wearing a dark navy blue with no insas on them uh he didn't know why there was a difference all he knew is that they were both security uh there was a a nurse station where he was asked to go there to do some allergy tests because he might be uh because he they said you're going to be exposed to foreign materials and all and all that so that will be shown in the movie yeah and then there's the infamous propulsion lab everybody anybody knows about Bob Lazar story he was hired by eg&g special projects to go
(14:26) work hired by the US Department of Naval in elligence to go work at this secret facility on some kind of propulsion project so they had told them it was going to be some Advanced propulsion so there was a laboratory in there that was absolutely dedicated to the propulsion side of whatever was going on at S4 and he that's where he worked and that will be extent extensively shown in uh in our documentary and then there's this hanger which is the main hanger where he was finally brought in uh I can't remember I
(15:01) think it was the second day where he was walked in S4 through the hanger door and not the main entrance door and that's when he was able to for the first time see the uh the dis sitting there on its belly on the ground in this hanger uh there were security guards there there was an not many people in The Hanger as he walked in he look here's here's a great shot of it there yeah that's and this is B yeah so this is the infamous bobl this is the this is the sport model this is the flying disc that
(15:38) he was able to see up close and I mean this was something that he initially wasn't completely understanding he didn't know what it was and at a certain point he was able to identify that there was a an American flag on it uh it was a reversed American flag that he saw stick of it I just want to stop and and just look at this beautiful uh graphic rendering that you your team did right it's absolutely amazing and you I mean I just love it you see the the flag is right by the hatch the opening there right by the
(16:13) ladder but I just think that's uh just beautifully rendered uh your team did an incredible job here well this is our our whole goal here was we wanted to and this is what we had told Bob and Bob was saw the seriousness of our team and that's why he agreed to work with us because he realized that we were not going to be doing anything that might have uh reduced the quality of the story or even potentially damaged uh more disinformation or more wrong information there's a lot of a lot of uh inaccuracies my team spent months while
(16:50) we were doing this not only did we get information from Bob of course

everybody's going to Google they're going to go and find out whatever is out there so we can get we can pull data and there was so much info that was wrong so Bob said you know what this is a great opportunity to get this down to exactly what I saw yeah that way there's no more inaccuracies out there this is if anybody wants to know what I saw this will be it that way it it's as clear as you can get it so here's another uh
(17:22) really nice angle that you guys put together here I just think that's beautiful that's the opening hatchway yeah into the craft and as you can see it's got like this weird angled opening that has a a center floor kind of in the center and then you've got this opening on on the bottom that was something that took quite a while to engineer properly yeah interesting uh you see the American flag there it's another just angle that you created here yeah looks looks really good and here as well and that the that
(17:53) flag you know there was there was a lot of chatter when we were doing research there was a lot of people that had said oh you know it's impossible that he would have seen that flag from that angle if the craft was sitting on its in in the in the hanger he was walking by it and I'll never forget when we actually had to do the first official beta testing of our virtual reality and the hangar by the way is mindblowing okay I mean not because we did that but it literally blew my mind because it looked it literally looked like we were
(18:26) there and the first thing I did I remember because I remember reading so many comments that it was impossible to see that flag from that angle Bob Lazar could not have seen that so I walked I purp I purposely walked to the entrance of the main hangar door as if I was Bob walking into that Hangar looking at the craft and the first thing I noticed was the reverse American flag it was you could see it from that angle and I never forget saying oh my God you could see the flag you know and we all St stood there people put their goggles on and
(19:06) they said you know what yeah you can and something that I consider to be uh a win for us because that means we we measure things properly you know what I mean right yeah yeah that's very good point yeah so keep in mind it wasn't just about what it looked like it had to be accurate to everything so that was important now before we go into inside the craft because you have some nice Recreations of that I just want people to see uh how some of this was done this is a image of your this was at yeah this
(19:38) was at the very beginning what you're looking at here is like maybe month one as we were kind of just pulling images trying to find anything we could uh that would help us come up with at least some graphics for us to have references so this is the very very beginning of of the project and then as we moved forward obviously uh we we also even had Bob himself come to Montreal spend days with us and we worked side by side he looked at every single aspect every detail anytime something was wrong Bob would point it out you know he would say no
(20:20) that was not that color or that was not there so it was it was kind of a and and what was really cool that I considered to be real fun was he remembered tons of stuff while he was in the environment so there was there was a moment a a h moment for Bob at a certain point he was inside the hanger and he had this tablet that we gave him and every everywhere he pointed the tablet was as if he could see where he was in the hangar and at a certain point we were all talking and he just said sh everybody sh and we said said what he
(20:59) goes I saw that and he was just near that those little stairs going into the craft and he and he says I W I remember that I remember being right there that's so creepy he goes I totally remember that and it talking about this right here going up these stairs yeah but from a from from a lower angle let's say from the bot like you know being on the ground because this image is from the top so it was so so to see him like stop and he was like I I remember that you know and he we were all like really and
(21:36) he goes oh he goes absolutely that happened you know so it was so genuine when he said that you know we were we were like all smiling going man this is this is a really this is a really cool project for us because not only do we get to work with the guy but we're also helping him remember because we're giving them the opportunity to revisit S4 it makes a big difference when when someone gets really good visual cues uh to to jog your memory I mean it's you know can happen with a good photograph it'll often bring us back and uh and you
(22:12) guys recreated something that um I'm gonna guess like even Bob or anyone close to him was never able to do to this level of exactitude so it does kind of make sense that this would jog his memory and yeah well able him to remember certain

things that may not have been there not only not only did that J memory but our questions were also uh something that he would we would ask him a question and he would say yeah it you know it was about you know I don't know six feet by four feet and then we would create it and he would
(22:49) look at it and he would go oh you know what no that that's incorrect he goes that didn't look like that he goes make it a little small so we were able to live some sometimes change and you go that's it you know goes that's how it was and so certain things were very specific I could we could totally see his uh his responses were so genuine when we G and when he gave us by the way when he gave us all the dimensions of what he could remember of The Craft uh and that they had to coincide because as the uh 3D Engineers of Des
(23:28) designers that were making this they would always say well Bob only gave us these measurements of these components but you're telling me that the the disc should be about 52 feet so we're going to Hope because of the way we have to build it that this will make sense based on what he's measured versus the 52 feet and also there were things that Bob would say that were physical limitations in the craft for a human he says it was is a very although it's a 52t disc the entrance is so narrow and it's so
(24:05) slanted that you have to crawl into the craft there's no way you can walk into this craft so a normal 5 foot 10 you know or or or a taller person would absolutely have to crouch down on their knees and crawl in all the way to about where the amplifiers are where you can now start to we're gonna take a look at that actually maybe we should jump in there now sure yeah so this is a distance shot as you're entering the craft I assume no so on the left side so if you're looking at this image yeah you
(24:38) see three seats imagine the third seat to the left and you would imagine the third seat to the left aiming at nine o'clock on a clock okay so the entrance is at 10 o'clock so it's a it's further away you cannot see it in this image but that patchway that you saw from it being in the hanger where the little stairs are to to go in yeah the entrance is to the left at the 10:00 position okay okay but but essentially this from one edge of the inside of the disc you could look forward and and you would see these
(25:12) chairs that's right and they're kind of molded into we're gonna get a closer look right this is all these these components that this is one of the seats everything was one piece so even the way we built it in 3D is one piece so there was a lot of a lot of work to do to blend it all in with with all its because I mean we had to make it in pieces and then put it all together so there there's a a pretty uh it's basically it's a one color everything is one material everything is the exact same peor silver color it's
(25:52) all Blended together these these seats were obviously molded into the ground and and every time we would say we would call them seats Bob would always say yeah they they look like seats but we don't we didn't know if they were actually seats he says we're assuming they're seats but I was he says we don't know if they were you know no I mean all they sure as hell look like SE I assume that a a normalized human male or a human female probably could not sit in that comfortably no actually imagine
(26:24) imagine the height of the seat would probably be to your knee or even lower so you can imagine how tiny they were he he clearly he clearly indicated these were not in any way uh designed for a human adult right he says there there's no way child perhaps yeah maybe a small child could fit in there somebody something very slim could fit fit in there but he was not able he said if I had to sit in that thing I would have felt like I was sitting in one of those little Fisher Price seats that are made for kids that you see at Toys R R Us he
(27:00) says it's just too small so it's it's really tiny in there let me ask you a question did you or or Bob or any of your team you had to have moments when you're putting this all together where you're thinking good grief this was this is alien technology we're we're recreating alien design here right uh just like does that ever just like stop you in your tracks and just kind of blow your mind a little bit there Richard we have countless times like we spent like weeks working we would need
(27:35) we some of the staff would sleep at the office I'm serious like people would work like 12-hour shifts sleep at the office we have like a big nice place we have showers and stuff so they would sleep there next morning they're because they're they want to get this right and sometimes while we're sitting there looking at the screens putting it all together we all stop look at each other and we're going dude this is this is crazy this is like the inside of an ET craft and and we got so

familiar with it
(28:05) that at a certain point it it didn't impress us anymore because we just knew exactly what it was at all times and when we started pulling out some images and renders and people saw it we were worried we're like we hope people like this you know we hope this is what and the first person was Bob the first person we had to show was Bob you know the remember there was a call that we did with him on zoom and we said we're going to share our screen and we want you to tell us what you think and we shared the screen and we
(28:39) went into the craft and I'll never forget I actually have it recorded I don't think I'll ever put it public but we have that call recorded and Bob literally just went oh my God he says you got it he says you did it and he and he used the word creepy a lot he says look at those seats look how creepy they are I remember that that creepiness about them so they have like this weird shape to them and they're they're they're small and and he said it was so it was such a very Bare Bones environment it was so one color there
(29:19) was nothing in there it was almost uninviting it was it was he always said ominous he says ominous a lot but with us he said creepy a lot lot and he said I always felt like I didn't belong in there when I was in there and uh the components he says you you you got the amplifiers correctly he the seats are correct the position look at those in a second by the way the yeah yeah so so and we showed him that famous honeycomb hatchway that he's talked about many times I don't have a picture for you here but there's this little hatchway
(29:55) that's on the ground behind the seats that uh was he was able to explain that was explainable to him like you basically you pull on it and you could open this hatch they had all collapsed on itself it it looked like honey a honeycomb like the cereal placed you know horizontally embedded into the ground you just put your finger in one of the holes and you pull and they just collapse on itself and then you can access the lower level he saw that he saw how we created that and he was like Jesus he goes you did it
(30:30) you know and and we thought that's cool I'm happy that we did I said you know based on all the data that we got I really would have been surprised if we would have missed it because in reality the thing is really simple the craft is very simple there's no buttons in there there's no levers in there there's there's there's nothing in there that's remarkable let me let me ask you about this now so there now we're getting into some of people can see the chair one of the chairs is in the background
(30:58) there and explain what we're looking at in the foreground here yeah this is a this is an one of the first renders that we have pulled out so what we have here what you're looking at the seat that's in the background is the center seat which is the seat that is right in front of the placement of where the reactor goes so you're looking we're looking at this square base plate with a small Tower in the center of it with a next kind of next uh design on the base plate and you have a hemisphere that has been
(31:34) removed in this particular case because it usually is applied on top so it covers that Tower sure now that reactor uh has a small indentation the ground of the actual ground of The Craft where it sits there's a small square indentation right there where the reactor sits aha okay so that's where they know know where to place it it doesn't it doesn't lock in it doesn't magnetically connect in it it just sits in that square and uh as soon as the hemisphere is then well obviously the element 115 is inside that
(32:13) Tower by the way that's where the the the fuel if you want to call it of this reactor is it is inserted inside that little Tower there's a cap that goes on it you take the hemisphere apply it on top of the reactor and at that point you have your uh completed reactor now before you can get anything really started there's a pipe that's hanging from the ceiling you can actually see it in the other image that you had prior to this one oh let me go back as you can see there's this vertical pipe that is hanging from the
(32:56) ceiling that is direct directly above the hemisphere when the when the reactor is in its set place that pipe has like a a basically a edge that is rounded off so that it can perfectly apply on top of the hemisphere and that was something that Bob was very uh detailed about where he said it was about three in in diameter and you could pull it down or pull it up from the ceiling and it did not have a telescopic mechanism it's the material itself would just simply disappear into the craft so really W yeah he says you canot we could not see
(33:43) how this thing was being pushed into to the ceiling and when we pulled it

out we couldn't tell he said how it was coming out it was like just magic he goes it so he says it was very bizarre to see something like that because you we're usually used to something that like a telescopic thing that one goes into the other and so he says that was something that really blew my mind he said because I couldn't figure out where that was this something that that no one at S4 understood did Bob know whether this was
(34:17) understood by anybody else the only person Bob was able to communicate with was his lab partner Barry castio yes and okay Barry castio had been very informative to Bob throughout the time that he was there so Bob would ask questions Barry would say yeah this you know this pipe does this but there were no answers so it it's basically yes we know it does this we've already observed this this has been noted but we can't figure out how it's doing it and no nobody's ever found Barry castelo by the
(34:52) way nobody has no they've never um yeah interesting yeah it's Bob was asked a few times you know have you ever been in contact with him or he says no I I never he goes that that was it I when Bob was on Joe Rogan he actually said he goes he would have wished that Barry would have come out after he went out or at least something like that but that never happened and he says maybe all this caused an even higher degree of security that changed the entire project completely he doesn't know that so that was a hard
(35:28) that we don't even know if he's alive at this point it's been so many years that's right uh let me ask you let's just look at some of these other images this is the same this is the same yeah this is basically you're looking at the reactor from another angle it's the cap has been removed this is a reactor inside the lab yeah so now uh now we you and I discussed this just before we went on and you explained that this is literally a separate reactor yeah this is a this actually a really
(35:59) important part of the story yeah which will be highly detailed in the in the movie so there was a propulsion lab that was right adjacent to the main hanger where Bob was able to uh View and inspect the sport model disc that propulsion lab uh was already set up when he was when he arrived at S4 the very first time so when he walked into the lab with and was introduced to castio by Dennis Mariani who was his Superior at the time uh there were a whole bunch of things in the uh lab already so uh he later found out that
(36:41) this was a propulsion reactor some gravity reactor that was sitting on the table as you see it here you have the hemisphere of the base and all that and then there was the element 115 which is this triangular piece that's copper colored uh just just sitting on the table and then on the ground to the left of the reactor was one of those amplifiers those those rectangular consoles that are near the seats okay yeah uh and it's it's actually very important to note that although the craft has been depicted in the past by
(37:18) many people and there's a lot of designs of it and a lot of people did some people did great work while others uh so so uh one amplifier was actually missing in the craft when he went in there meaning with they had cut it with a plasma cutter they cut out an amplifier so that was something that I remember have we had very big we we've talked about this extensively also for the film because he said they must have been really sure that they had to be 100% sure that that would not the craft if they did that uhuh because he
(38:02) says they decided to cut into whatever that was they had he said we didn't even know what that thing was really how it did what it did so that was a big deal for him that they had already established the fact that they understood that that was potentially safe to cut that piece out so I don't have an image of the amplifier here I don't think well you have it simply with that image of the entirety of the interior of the craft with the seats where you see a rectangular there and and what I could do that large rectangle see these
(38:41) there's two of them here okay this is behind uh the seat the seat is facing toward the viewer here right so there's behind the seat yeah you have one that's centered right behind the seat and then you have another one that's on the right of the right seat uhhuh yes yeah and then there's one on the left that is not there it's missing because that's actually what Bob experienced it was it was not there it was not there okay I see in the lab there was this amplifier sitting on the ground to the left of the
(39:16) reactor and on a adjacent table there was an emitter a a cylindrical uh which was what is on the lower half of the craft I don't think I sent you an image Richard have this here potentially you know I could potentially share my screen and show you what an emitter looked like uh but the cylindrical emitter was on its side

it's about a 4ot by 2 foot cylinder it was black outside and it was kind of a copper colored inside and it was just sitting there on this table to to the left and Barry had explained to him that when these three
(40:02) components the reactor the amplifier and the emitter are in proximity it just works now how it works we we don't know we just know that it works so okay that was the core objective of him being at S4 was to figure out how all this stuff worked and he said it was just assumptions after assumptions writing notes you know figuring trying to look through things and try to test things to understand what is what is it doing and to this day Bob says I I don't think they know how it works even today interesting very
(40:45) interesting I think I have one more image from the interior of the craft yeah uh I I lightened this slightly but this is looking at the interior of the edge clearly of of the disc right yeah and and this is a this is what if you could see that's like there's archways kind of you could see those archways yes yes yes and the that those archways is what Bob calls the super structure of the craft it's like a one layer and then there's like an outer shell layer layer around it uh if you remember at uh when
(41:18) when Bob explained the story one of the those archways became transparent at one point while was inside the craft there was a team working by the archway and while he and and Barry were analyzing the position of the reactor in the center of the craft there was a moment where the arch well this this Archway just became completely clear like you could see right outside the craft as if there was nothing there and that caught his attention and he he stood up and there was about onethird of the screen onethird of the archway had become uh
(41:56) kind of a screen if you want to call it it was a it was a bluish seethrough part of the archway with these black symbols that appeared they look he he kept he kept referring them to us like little eyes because of the way they were they look like like oval shapes with these circles in them so he goes they look like eyes at first and there was a lot of symbols and they were they were moving like this on the screen like they were kind of doing this they weren't static they were moving and he actually he we chuckled about this because he he
(42:34) got up and caught his attention and he started walking towards he just took a step and he remembers he says you know Barry re when Bob Bob come back because you're not allowed to do that like you're you're you can't do that so he says I remember standing up and wanting to go and figure out how the hell that happened yeah and I immedi whatever yeah yeah and I immediately had Barry go no no no Bob Bob like you know you're G to get in deep here so he he goes you know I went back to the reactor and it
(43:09) kind of you know he says I I didn't get to go close to it but I saw it and it was as clear as as if there was nothing there so that's something that and that's why we show that image because those that's what those archways look like from the interior yeah no that's just fascinating uh that actually is all of the kind of interior shots and exterior shots that uh I have here uh I'll just show couple of other nice images that you um sent me just to give people an idea of uh how this project turned out so you have a
(43:41) camera person and behind her is an interesting image on the screen there maybe you can describe that yeah this was a cool Moment In The Way We Were filming with Bob in Montreal in our studio so to the right you can't can't you'll see another picture later but to the right Bob is on this ginormous green screen I'm going to show it right here there's Bob yeah there's Bob there's the green screen we have all our markers there so this this was done to create the most highly realistic uh
(44:12) introduction of the real Bob inside the highly realistic unreal environment so what was happening is while he was being videotaped that we told him you're now in the in the hanger live he was seeing live on the TV exactly what he was where he was I see that was that was really cool for him because it allowed him to move very uh freely knowing that he wasn't going to be banging into something because even though he didn't have anything to bang himself on on the green screen we didn't want those things to happen when we
(44:51) actually brought that those movements of in the mo of him into the the scene so there's some really really cool and really Hightech Precision work that we did to provide the visuals that everybody's gonna see in this film it's fascinating there there's Bob looking good there you have a couple of other images of Bob here I'll just show yeah that's him that's him in Oregon in his in his lab yeah and in fact uh the uh the thing in front of him that uh yeah is a death ray it says death ray yeah

on
(45:25) it which is kind of we had a lot of fun with that that that thing is so that's a that thing is so badass like it's it's crazy I mean that is a super cool I mean I don't I've never seen that before and Bob activated it for us a couple of times and it will burn a hole through anything so like it's crazy crazy powerful and you know this is stuff Bob makes you know this is he does pretty cool stuff actually he's the guy who everyone knew is the guy who liked to blow things up he was great at that uh
(46:01) just a couple of nice pictures of Bob here I think this might be the last one this is the last one here yeah that's that's him with his with his Infamous Jet bike that we took for a spin a couple of times really cool uh yeah we had good times we had really good times he's a he's such a cool guy he's such a Down to Earth normal humble good person MH I mean my whole team everybody fell in love with Bob and his and his wife and his Entourage at first I had people on my team that were like H you know there's a
(46:35) lot of things out there on Bob Lazar we're not too sure of it once they met him and spent a lot of time with Bob the entire Team all like unanimously all said yeah this guy's not bullshitting this guy's for real there was not one red flag was ever raised in our entire two years working with the guy I have always felt this way about Bob Lazar myself um researching his uh story and Bob and I met briefly on one occasion I don't know him nearly as well as you do but I I found him to be very genuine and uh more to the point
(47:10) I just always found him to be uh a thousand per consistent with every single thing he ever said uh even under periods of great pressure and duress against him personally uh he he always stayed the course and I think he's uh he's fortunate and that he's gotten to live long enough to see his reputation be very very strongly corroborated by many many developments in the field he is the uh you know he's the you could say the original whistleblower right well that's that's GNA be the the name
(47:40) of our movie our movie is gonna be called Lazar the original whistleblower it's kind of it's kind of helping you walk right into that one uh by the way I just want people to see your website here this is uh gravitator project gravatar.com I will have a link below and people can just kind of uh see what you got going on here a lot of information about it and and so yeah we have like there's some information on Bob if you click you you could check it out I mean there's gonna there's going to be a lot going on
(48:15) on our social media real soon by the way everybody's got to look out for our We Are Not Alone YouTube page is this the first interview that you're doing on this this is the first yes okay I thought so so and I actually wanted I wanted it I I I I respect you so much that I wanted it to be the first thank you very much and I honestly I think uh the the viewers of this are gonna thank you the most uh this is a really interesting project that you and your team have done uh it's obviously very sophisticated Luigi and um and I
(48:52) think it's it's interesting that you've got really two aspects of this thing going going on so there'll be a film treatment where we will hear Bob uh talk about his experience with all of the uh as accurate as possible Recreations around him I think that by itself is fascinating I think I mean I can imagine many people are going to want to see that but then it's quite possible I mean we'll have to find out if even more popular will be your follow on which will be the virtue the VR experience
(49:22) that people themselves can can engage in to kind of go through S4 and not just the hanger uh from what I'm understanding from but the entire whole base the whole base I mean if anybody listening knows the story just to give you a little idea how cool this is you could go for a stroll on Papoose Lake you can walk through the main entrance put your hand on the hand scanner get your ID card swipe it get into the hallway you can go to the nurse station you can walk into the briefing room sit down and read The Briefing documents
(49:58) you'll be able to go into the propulsion lab and actually physically manipulate the pieces if you know what they do you can actually take Element 115 put it in the tower put the cap on put the hemisphere twist the emitter and gravity happens you'll be able to go into the hangar you'll see all not the other eight hangers a at one time Bob saw all these hanger doors open you will see that all the other crafts are there the gello the top hat and other design unbelievable so it's pretty cool when
(50:32) when I I started researching the whole UFO topic uh my first full year of

really being immersed I think was 1993 about 30 years ago and um so Bob Lazar was he was known his story was still kind of fresh you know he it was only a couple of years and when I would go on to what was then the internet there wasn't internet 1993 basically all the bullettin boards and all of that um there was a lot of talk about Lazar and you know it's just kind of an amazing thing for me personally to to think back because I remember that time quite well
(51:08) and and now here we are 30 years later and you have recreated in I think extreme virtual reality detail that entire experience that Bob had or at least as much as realistically we can ECT at this point that's a remarkable thing for me to think about and i' I have to think anyone who remembered when the Bob Lazar story broke and I know there's uh listeners and viewers out there who do remember it uh they too must be blown away by what you and your team have been able to accomplish now you know took three decades a little a
(51:48) little more than three decades but we've gotten to a point where you've got the the graphic capability the scientific uh uh applications in place and all of that that you can create not just the sports model craft that's interesting enough right not just the hanger that it was encased in that's cool that's interesting not just the building the hallway The Briefing room all of that all of it but the base itself ah I mean I I'm just gonna say on behalf of everyone thank you for doing this this isn't this is a genuine
(52:24) service to the community and I just I I find it rather exciting and I'm very glad let me just say this last thing that we can talk about it here on this program I'm very very glad to be able to do that I'm I'm really glad and thank you for that but what I want and what my team wants is we can't wait to show it to everyone because we want to see what people say because we're also we're being very humble here and we're going okay we did a good job but we you know you never know what people people will
(52:56) say but I'm I'm pretty optimistic as well that we've done something that's going to be really cool I uh I suspect so so um I guess we're g to wrap this up here we've we've gone a really good length of time uh do you have an idea as to when you think the film I think it's the film that's coming out first and then the VR experience after that what's your timeline that you're looking at right now so we're we're we're looking at uh first quarter of 2020 4 we had
(53:26) initially had thought that it was going to be in December of this year but unfortunately there's certain things that are just not possible at that time uh we're negotiating we're already in talks with some people which is cool we don't know where that's going to go uh we do feel that it will be first quarter I'm hoping it's February my personal hope my aim is February my whole team's aim is February but it there's so many pieces this is a lot of this a big there's a lot of of pieces moving at the
(53:56) same time and following that is going to be I mean if the movie comes out in February and we hope we hope so we're going to give it maybe two or three months after the movie that we will finalize the VR experience to be launched probably on steam or something where it'll be available on so many different platforms at that point but so that people can experience it after they see so best thing is watch the movie you'll see everything you'll hear Bob saying everything and then after that you could go be Bob in S4 so yeah I want
(54:32) to yeah I want to go in that's awesome yeah um well good I'm I'm so glad we did this Luigi this has been an absolute delight and um I'm glad that you got the full cooperation of Bob on the project thank you Richard yeah yeah it just seems like it's done at a very high level uh very accurate it's the kind of thing where you and your your guys your team have really uh filled in uh a kind of a big missing piece that I think a lot of people have wanted all this time and um certainly I I did not expect any kind of project
(55:09) like this and it's a it's a great surprise so yeah we can't we we we can't wait to show them we can't wait yeah well that makes many of us so uh we will we will definitely stay tuned for that again I will just remind uh listeners I have the link to project gravur below I would encourage people to go check it out and um until then I guess when when this does come out maybe we can uh we can get together and we can discuss that yeah I mean even follow us on Instagram it's always project gravior follow us on
(55:45) YouTube it's under We Are Not Alone on YouTube by the way it's not project graor and links you'll have all the up some great stuff coming this month by the way well well uh I want to thank you Luigi vatelli what a fantastic discussion we had here thank you for all the information uh I want to thank the listeners for hanging

out with us during this period of time if you like what we've done here you know what to do please like and share the video subscribe to my channel that always helps me out if you really like what I
(56:14) do on a regular basis go to my website Richie Doolan members.com where I do this type of work all the time many days a week got a great Community there as well I also want to thank my YouTube membership Community here uh for supporting the work that uh I do as well so I want to thank everyone um for that and that's it thank you again Luigi thank you listeners thank you thanks everyone we'll be back again this is uh the end and I'll catch you all again really soon well us keep fighting the good fight
(56:48) later

John Lear and Gene Huff Discuss Bob Lazar with George Knapp (RARE) - YouTube
https://www.youtube.com/watch?v=J83c6bewGho

Transcript:
(00:00) John and Jean you there yep we're here George thanks thanks guys I think this going to be fun um John I want you to set the stage set the scene sort of uh 20 years ago you know it's hard to believe now that people didn't know about Area 51 but I mean you knew about it back then you were uh floating around on the edge to see whatever strange things were being test flown out there and a few other Aviation Buffs knew about it and people who work there knew about it but largely the world didn't know about it and uh it was still a
(00:28) secret and and was was pretty much unknown in the world of euphology right right my friends uh I had a couple of friends that flew the SR71 and of course I hung around Van eyes and uh every Monday morning locked would depart with their three constellations with all the engineers uh this is in the 60s early 6 or the middle 60s uh and then in Friday afternoon uh they would all the three constellations would come in all in trail formation and land and those were the engineers and uh that worked up there and I never knew exactly where it was except
(01:02) it wasn't too hard to figure out you know somewhere in the Nevada test site and the way I figured it out is I was doing some soaring out of a little place near parump and um one of the guys there we got talking about um um the test site and he made the comment he said uh uh yeah I've been up there but no Area 51 stuff and that's the first time I heard Area 51 and of course from then it wasn't too hard to track down and find out that area 51 make groom uh meant Groom Lake I thought it was a dona poot
(01:36) death strange but it wasn't it was Groom Lake you started poking around out there taking photos some amazing photos no I mean no one is ever going to get that close again uh of the facility itself I've used him in a couple of documentaries and and uh I guess you stumbled onto information about the existence of the stealth fighter which is how you came to K and our attention and helped us break that story yeah and of course you know I still tell the story about the f19 which was uh co-produced with the uh with the f-117a
(02:05) the 1177a was a cover for the f19 the f19 they built 62 of them and it's still a secret and people still don't believe it and I have friends that you know worked on it and uh and saw it Fly and of course the Navy used the bulk of them and some went to Israel but yeah I've got those black and white photos I took in 19 I believe of 77 and I went right down to the dry lake bed that's when there was no guard shack all the was was a uh a little booth but nobody was in the booth and we could look across the
(02:35) dry lake bed and that's when I got that picture of the Mig 21 that was sitting outside the one of the hangers and if you go to the site where uh uh special projects is they have that photo there and that was said and they said that's the only known photo of a Meed groom light and that was my photo man I yeah we'll never no one will ever get that close again here I'm sure that you made a lot of friends by by publishing that photo or or releasing it to the public Jean had you ever heard of Area 51
(03:02) before you met Bob Lazar and John yeah I saw a young butd intelligent journalist named George nap do a program on it in Las Vegas but that's the first I heard of it when you did that little local on the record television show you look back at it now how uh how how far the story has gone how it's changed and how many people all over the world know about Area 51 it's really hard to remember a time um

at least for most people when it wasn't so widely known when it wasn't so iconic right when we
(03:33) when Bob took us out there to see the disc test not that we necessarily want to jump right in there yet but uh it was as desolate as the place could be we we took an RV and in in a even in a vehicle of that size we were just uh engulfed by desert and night sky there wasn't a light or a human being as far as the I could see and after you broke Bob lazar's story I would say what was it about 12 months there were actually tour buses taking you know tour of people out to Area 51 to show them where Grom Lake
(04:02) was well you saw my stories but before then before you had talked to Bob had you ever heard of the place uh no not no wait but jean didn't you say you watched on the record yeah well George and I talked about that a year before well that's what I said when I saw you guys on on the record all right I tell you what guys I had never heard of it we're gonna take a break when we come back I want to get into the story of what you saw 20 years ago tonight uh we're going into the break with Sami Hagar who can't
(04:29) seem to Drive 55 stay with us everyone for Coast to Coast a.m. we're talking with Jean Huff and John le about what happened uh and what it started March 22nd 1989 20 years ago tonight when they went out into the desert at the suggestion of a guy named Bob Lazar and watched a test flight of something amazing when we come back we're going to get into specifics about what they saw that night and what they think it represented stay with us on Coast to Coast a.
(04:58) welcome back to Coast to Coast I'm George knap join joined by Jean Huff and John Lear talking about the origins of the area 51 Story how it all began uh Jee why don't you tell me how you met Bob Lazar uh back then I was working at a place called National appraisal service down on Easter Avenue in Las Vegas and Bob owned the back then this was prior to digital cameras and U good appraisal software so real estate appraisals were still typed out and uh actual 35mm photos were taped or pasted in the pages of a real estate appraisal and Bob Lazar
(05:32) owned the photo processing lab that serviced all the residential real estate appraisers in Las Vegas so he was Bob the photo guy well this was before he's Bob the UFO guy right right well he was still a pretty eclectic fellow I mean he he'd show up for photo deliveries in a in a Honda with a jet engine in it so he wasn't your your normal guy he he looked like a scientist and was certainly an interesting guy even if he owned the photo lab and and uh you know not everybody drives a car with a jet engine
(06:02) around Las Vegas but certainly not in 1985 and you were sort of instrumental in in making the link from Bob to John leer right I had seen John on on the record with you and and was really interested I mean John had a lot of UFO history uh would talk about Richard Nixon was in the know and the late Jackie gleon had a house shaped like a UFO in Florida or something like that did I remember that right John yeah yeah he was a a big collector of um of UFO memorabilia and uh that you know it's it's just strange how it happened I had
(06:41) had talked to Bob and uh Bob's then wife Tracy whose father uh was still working down at Los Alamos he worked on the uh explosives that impoted and compressed the atomic material and atomic Bob so he actually worked on implosions down at Los Alamos and and uh so I had first talked to Tracy Bob's wife and then she had told me Bob had worked at Los Alamos and he was a physicist and um I started telling her about seeing this guy John Lon on the record and and uh about the UFOs and he had mentioned that there was
(07:17) that people in Los Alamos were in the know and when Bob heard that of course the first thing he wanted to do was prove that he knew more than everybody else and that you know he had never heard about this Los Alamos but then when he started inquiring to some people with uh top secret security clearance down at Los Alamos that he knew he found some substance to some of the things John was talking about on your show John you came into the TV station K TV where I work uh and tried to interest my mentor uh and friend the late that day
(07:47) in looking at a pile of UFO documents and you had some credibility with the TV station because you had helped Ned and our station break the story about the existence of the stealth fighter out there in the Nevada desert which was an awfully big story story that was a really interesting day because I you know Ned and I were good friends and you know I tipped him off to the stealth fighter and stuff like that and when I told him about this flying sauca thing he blew me off he said it's not possible John I would have known I didn't know
(08:14) you were standing right behind me and as I started to walk out you said hey

John uh look I want to see some of your stuff and that's how it all started and um and in the we did a show called on the record and uh one of the shows that airs it like 6:00 in the morning on a Sunday that nobody watches and it's a city councilman would be on and there's John Lear unveiling his uh his beliefs about UFOs and government coverups and things and all of a sudden the phone's ringing off the hook and people are paying attention and calling
(08:43) me up and hey when you going to have that guy on again so we had him on again had him on a third time it was even a bigger response and that's sort of how I got hooked on this stuff is that I thought gosh this touches the pulse of the public in a way that I had never been aware of before I couldn't figure it out so so we thought maybe we would look into this and in that third show John leer hinted that he might know a guy who was working out at Area 51 on recovered alien technology you remember that show John yeah yeah and you called
(09:10) me up in that afternoon and said uh any ideas on what we can do for an encore and I said well I have a friend that just got canned out there maybe he would want to talk and uh then you set the whole thing up for that interview so through Jean Huff you meet Bob Lazar and yeah Jean called me and uh he said um uh I'd like to get a copy of all your uh your tapes and stuff and I said well uh uh I need an appraisal and so we traded the tapes for the appraisal and he brought over Bob Lazar to hold the measuring tape and uh Jean and I are
(09:46) talking about UFOs and Bob couldn't have been more disinterested he was rolling his eyes I mean he thought this was all just baloney he just couldn't believe he said look I worked at Los Alamos if it had been if there had been anything like that I would have known well first of all you know I hadn't known Bob Lazar that long back then so we we weren't as all buddy buddy as we we weren't as all buddy buddy as we are now when I when I called John it's now and said I'd like to get some of your
(10:14) copies of some of your stuff the response was actually kind of get lost I don't have time for that nonsense and then he found out I was a real estate appraiser and he did need a real estate appraisal and then the deal took place and I had brought Bob with me and it was funny because I had never never seen anybody treat Bob with such disdain as John did John just thought he was some little kid that I brought you know with me to hold the other end of the measuring tape when we measured his house and about the third time that I
(10:40) said you know he used to work down at Los Alamos John finally listened and said you used to work at Los Alamos and then the conversation started so the reason I I raised the these questions I mean the issues of how you guys all met is because there are critics out there who believe that JN is somehow the evil puppet master who created this this whole thing who who talked Bob into making this story up that you guys are all in this together but the reality is you didn't really know each other and it kind of fell into
(11:08) place oh and there's there are giant personal things going on behind the scenes here it wasn't it wasn't all you know this easy and cut cut and dried there were a lot of coincidences that took place um you know in Bob's personal life things that went on that you know would just not not really be a f for this radio show I it sounds a lot more convenient than it was but yeah it was a lot of synchronicity a lot of hure coincidence that made things turn out the way they did I mean the amazing part
(11:38) of it you know Bob meet Bob the photo Guy meets Jean the appraiser Jean the appraiser knows John leer and offers to do an appraisal in in exchange for this uh UFO info Bob is not the UFO guy doesn't like the topic doesn't think it's credible and then suddenly gets hired out there I mean it is a lot to swallow that he was able to do it yeah was that three months between or four months between the summer of 88 and uh and December when Bob got hired uh you know we gave him some pieces of information said just look into this and
(12:09) one of them was the uh uh the Y y-2 facility and the other was the excaliber and there was one more thing and and this is really secret information and so he talked to his friends back at Los alos they said yeah yeah there's such a place is that now that doesn't mean that's where they keep the aliens but there was a definitely a secret place and then he got interested and that's when he called Dr Teller and asked for the job out there we'll come back you hear some excuse me George in case you
(12:37) hear some paper unfolding here I'm unfolding a copy of Bob lazar's personal daily calendar he kept on his wall from September of 88 through August of ' 89 so I'm ready with these dates and entries when we come back yeah he's ready with

December 6th trip to nowhere okay well I do want to get into that I want to jump ahead and we'll come back to this I want to jump ahead to the trip out out there into the desert 20 years ago tonight you you both I would assume remember it pretty well oh yes oh yeah
(13:05) uh what tell me how that came about um and uh and what you saw when you got out there John why don't we start with you okay well uh the day before Tuesday I was over at Bob's house and he was making me uh a doggy Death Ray and what that was was my dogs were getting in marily flowers and we had to figure out a way to keep them out so he was making an amplifier that would broadcast a hyid s which would allegedly keep them out and in the afternoon he just said uh they're going to testy a saucer tomorrow
(13:36) night you want to go see it I said well how and he said well there's a road on the northeast part of Groom Lake that leads in there and without violating uh you know their uh they are trespassing we can go right up to the border and watch it because it'll be coming right above S4 and I said well great yeah I'd love to do it and that's how it started and Jean uh when did he tell you and ask you the same sort of question in the same way you know that's the way it looked from John's Viewpoint now behind the scenes
(14:08) what a lot of people didn't know was going on was um by the way marily Lee is John's wife we got to watch talking so inside here so the listening audience understands who's who when he said marily and uh so uh Bob's wife then wife who they were divorced after this had had an affair and um Bob was even at that point kind of distraught he Bob is a peculiar personality in that he loves women and it's not a sexual thing it's a it's Bob will do anything for women and it could be he used to be in love with John's
(14:49) 80-year-old mother Moya he would do anything for or four-year-old little girl he teach her a science lesson now Bob is adopted and a lot of psychiatrist and Psych olist an armchair therapist say that you know Bob's mom gave him away and so therefore he spends his a life trying to um you know appeal to women I mean I don't know if there's any substance of that certainly it's not anything to do with his mother he his mother Phyllis is as wonderful of a mother as any man could ever have so it's not like he was lacking anything in
(15:22) his actual life the people that adopted him are Wonder were a wonderful couple and but anyway Bob's wife had had enough there and he was actually taking her out there to impress her to try and keep her and and and and we were excess baggage I mean I was happy to just be in on it and I'm sure John was too and you know I would have done anything to be included with that trip but I told John we spoke a little bit this afternoon that I don't think if Bob hadn't been trying to impress his wife to keep her and you know do
(15:56) anything he could to attract her back to him I don't think any of us would have been taken out to see this but as long as he was taking his wife out there uh we got to go too and I think he also wanted a couple of gregarious characters like John and I be he knew he was going to blow the blow the lid off this thing and he was going to need somebody to speak publicly to back him up if he got caught well it's an interesting point because you know a lot of people have asked in the years since why would Bob
(16:20) violate his security oath why would he spill these beans why would he risk going to prison by talking about this stuff or by taking you guys out there and showing you tests and I guess you've just answered it is he was trying to hang on to his wife yeah we weren't hanging around having an A beerer and he said hey you guys want to go see a flying sa he's not that kind of guy in fact Bob was you know while he was in this I mean he was a very peculiar personality here's a conversation with pop oh I'm exhausted I'm dead tired I
(16:49) was up to three in the morning last night oh yeah what what were you doing why you know as though you're prying into his life you just a casual conversation he would start a conversation and you just ask a question any friend would and then he'd act like you were prying into his personal life but he was Paranoid the U you know the people Mike fpen well that's a long story anyway the the who were they fromi invation they were doing the security checks at his house in the middle of the night and uh a lot of big
(17:21) things going on that that in Bob's personal life and um and so he had a lot of stress he was in the in had the POS Poss ility of losing his wife he was in the most secret and wonderful program that a scientist could ever dream of being in he couldn't tell his wife he couldn't tell his friends and and when he finally broke uh we were blessed because of it so who goes out how many of you went four just the

four yeah John and Bob and uh Tracy Bob's ex-wife and me in John's RV the first night you take
(17:52) it from there John yeah we left my house about uh I think it was about 7:00 and we drive out there and um uh we're driving up that long uh that Long Hill there just before you get to the the pass and U and the transmission broke down and so uh Jean agreed to hike down to uh Elmo there or to Rachel or to Elmo and get uh some transmission fluid so we were delayed about an hour while he goes down get it we Port it in it works again we drive up we get to uh uh to the cut off the groom l Road there and drive down that long
(18:31) dirt road so it's now it's about 8:15 8:30 and we drive down this long long road to about as far as we thought we could go without getting in trouble and then we pull over uh we get out I had my 8 in Celestron telescope which I set up and uh Bob you know Bob said it's going to be at 9:00 they test at 9 o00 so we all waited and uh I'm trying to focus in the uh Celestron 8 which you know is really tough tough to do and uh there it comes right against the hill just has advertised at 9:00 and this thing comes up and starts
(19:07) flying around and of course it's very difficult to focus with the uh Celestron 8 and I couldn't get focused until it stopped uh in midair and started descending and that's when I said I got it I got it and you know what I saw was a flying disc it was oriented about 45 to the Horizon it was throwing radiating a a yellow goldish kind of U stuff that was coming off it and uh I said here quick Jean take a look and as I as I stepped back I hooked my foot around the tripod and moved the telescope and of
(19:44) course Jean's never forgiven me it was the most tragic you know trip in ever in history an extraterrestrial disc in the middle of an 8 in feston telescope and John's uh foot hooked the tripod and and jar it and then the disc had gone down below the mountain range but could you see it with your naked eye well we had binoculars out there too yeah and he's right about the glow coming off of it and everything happen you know another peculiar thing was uh this past Sunday a week ago today my son Daniel turned 20
(20:14) and of course which means that and of course which means that you know the the night this happened I've got a s day old baby my first and only child and my in-laws my wife's parents are out here staying with us and I'm pretty much a homeboy I'm not one to up and go drinking with the boys in the middle of the week so here on a Wednesday night you know after dark with a seven-year-old baby in my in-laws in town I excuse myself and say I'm going out for the evening which was pretty unusual I didn't tell them where I was
(20:44) going or anything but I don't nothing would have kept me from joining joining anyone on that trip so Bob Lazar tells you when it's GNA uh this test flight's going to take place sure enough it turns out to be accurate you see this thing I mean what a feeling that might have been must have been what a Rush right it really was and you know I hear these stories occasionally people say you know that Bob well uh he doesn't have a degree we can't trace it down so if he worked out there he must have been a
(21:09) cook well my answer to that is if he was a cook then they tell all the cooks when the secret test flights are going to be made on the flying saucers I mean that's a big it's a big point that he knew when the flights would take place because there have been no news stories about that there had been no discussion about it in UFO circles or UFO magazines he knew when they'd take place Bas on whatever it was that was flying out there it looked like a flying saucer and he knew about it so I don't know how you
(21:34) explain that one away and we didn't mistake you know people go oh yeah well you probably misook the stealth fighter or or whatever well you know John Lear probably knows a little more about Jets and airplanes than anybody you'll run into walking down the street and we didn't mistake an airplane I mean you know we're I think the collective knowledge there was smart enough though that there was no fixed Wing aircraft that we were seeing and in fact we Jim taliani another mutual friend of ours was actually working on a totop test
(22:04) range then he didn't have his clearance yet but the the stealth Fighters were still out at TTR then so we we didn't mistake a a terrestrial craft for an ET craft that mistake did not happen how long was the thing in the air that you could see I don't what would you say John maybe 10 15 minutes yeah less than that maybe 68 minutes cuzz I remember it was uh right at 9:00 and then we did that videotape that they played on TV the other night and uh and uh uh the video camera I think it was like 9:05 or 06 or

(22:37) something that when we were uh you know castigating each other you know there's a video camera ready to go and it's sitting on the bumper while we're watching you know uh the greatest thing in in history and nobody thought to pick it up it was exhilarating though I mean it was it it it was it's hard to believe it was us you you hear this story and uh it was just it was just unbelievable now at the time were you worried about getting caught was Bob worried about getting caught yeah that first night we
(23:06) were concerned that's the that's what some of us had the binoculars on the disc and other had binoculars on the desert to see keep an eye on the security guys to see if anybody would come out to chase us okay so it was so much fun he decides to uh do it again right in the next two weeks you went out again same group different a couple slightly different group okay now that the the next time the next Sunday or the next Wednesday night was March 29th and that night I was flying with the American trans a and I had a trip to
(23:35) Minneapolis so on the Tuesday night I called Bob and I said what are you guys you guys going out or I said what are you gonna do uh and he said we're going fishing and uh so that was the the secret code word we we're going up to groom Lake in fact on his calendar here John Wednesday the 29th it says Jim me his wife and it says fishing in parentheses underlined that's what the entry is on Bob's calendar for that day so you're so that and so then uh then the third night was uh April 6th and
(24:05) that was going to be the big night when we got you know we had the Geer counter the video cameras the stuff and everything and and there was me Jean Bob uh uh Tracy's wife and uh and Tracy and uh that's that's the night we got CAU all right we save that story for when we come back after the break uh how it all went downhill at least for Bob Lazar and how the story of eventually broke as a result stay with us our guests John leer and Jee Huff on Coast to Coast AM I'm George knap welcome back everyone our guests
(24:40) John leer and Jean Huff talking about the early days the origins of the area 51 story in Bob Lazar uh let's go back John you were talking before the break about this third trip that uh that the group took up yes I hate to interrupt but I think we should step back to March 29th for a second John was out of town and didn't go March 29th we went out there again and it was myself and uh Bob's ex-wife Tracy Bob and Jim taliani our mutual friend that worked out at tonopa test range and this was the night
(25:10) when the disc actually came the furthest I guess North up the mountain range where we actually got the closest look and of course after not getting any video of it that first night when John was there we had a video camera and Bob Lazar remembered to get some video which is the famous video that's been shown on your specials the disc jumping around in the sky and this was when I told the story of how unusual it is to see a craft using gravity propulsion which I speak matter of factly of now I mean I didn't
(25:41) know that's what I was seeing then I was a certainly a novice speaking about any of this but the the craft would be a long way away and uh like like it was when we saw it the first time when John was there the the uh amber I guess colored glow sort of coming off of it and and um unlike a train coming toward you on train tracks or a car on a highway uh the the human brain is and I is used to seeing objects move and I guess we calculate geometrically the speed and you know where it's whether it's going to intersect with us or
(26:16) that's how we anticipate something coming at us I guess it's a a a a you know a a I guess similar to an animal you know when to when to flee when to when to run when to stand and fight and and anyway the uh the disc would you'd be looking at it and it wouldn't you wouldn't see it come toward you you'd just blink and suddenly it would be closer and and you'd go now did did that happen or am I seeing things and then you're still standing there looking at it and then you'd blink and suddenly it'd be a lot
(26:49) closer and this was alarming to your mind because you didn't see it travel at any particular speed toward you it would just jump and sudden suddenly it would be nearer and to the point where it came far enough down the uh mountain range that it glowed very brightly we actually backed up behind the trunk lid because it started to Glow so brightly I guess I don't know if we thought it was going to explode or what I mean Bob didn't explain that that was just the glow from the from the you know electrical power
(27:18) dancing around on the the static charge I guess on the skin of the disc so we backed up and actually went behind the trunk lid that's that's how uh close it

came and and how fearful we of it but that's that's night Bob laar got the video and and that's the closest uh we ever did see it come down the mountain range okay so after the first one and the second one the trips out there where you saw these things were you able to get any other information out of Bob or was he still being kind of closed mouth
(27:43) did you ask him hey you really do work out there how did you know about this what are those craft and and did he get into the propulsion technology that sort of thing yeah I mean he would use the old demonstration of folding a dollar bill in half and showing how they distorted space and time to travel rather than flying in a straight line in a linear mode but uh you know he he knew his phone was T noises on his phone he had marital problems with his wife I mean he was very up and down emotionally so no it wasn't a big party where you
(28:14) have a beer and go now tell me about those flying saucers it didn't happen I mean he let us in on that and uh but it wasn't a big UFO free-for-all uh answering all the questions and the telling us the secrets of the universe I know that sounds strange but that's the way it was and I guess the personal question would be did it work did it impress I mean he's taken his wife out there to impress her and keep his marriage together did that part of it work was she impressed well here's the answer on
(28:40) April 10th Bob's entry in his calendar says life equals zero so I would say no John it must have been driving you crazy to uh have seen these things I I know uh what an inquisitive mind you have you must have had a million questions for him was were you getting answers well you know the the big night was uh in December the first time we went out there was December 6th and I came home from a trip I I think a couple days later and I'm sitting at my desk and he came over and uh I'm just writing out some checks and he just casually
(29:15) mentions I saw a disc today and I said what and he said I saw a disc today and I said theirs are ours he said theirs I said well what are you doing here I said theyve are you followed you out here they're going to find out you're telling me stuff why don't you work for a couple of months and then tell me and these are his exact words he said no Johnny said you've taken so much crap over this for the past few months that I've known you I want to tell you that it's real I was there I touched it I was in it and uh it
(29:46) it's real and so then we spent about two hours talking and he would say uh he said I can only answer questions I can't volunteer information now why he said that I don't know but that's exactly what he said well part of that John was the security guys had found out that that Bob knew John Lear and they wanted Bob to uh interact with JN to see if Jon really knew anything about the actuality of what was going on there so while JN was listening to Bob Bob was listening to John and reporting to the security
(30:20) guys what JN said so that's why Bob behaved Bob behaved like that is as he was spying on John so what night that was in December uh you know it was it was shocking to me because I remember we uh we wrapped up the evening he walked out we stood at the front door we looked up at a star and I said now if I wanted to go there I said uh and I had a craft do I just head towards it he said no you go to the right and uh so then I he explained how that happened or how that worked and I remember walking in inside
(30:52) and and standing in my den and just standing there for about 10 minutes just totally totally a struck at the information that I have been told that night because of course you know I I believed it you know the stuff that I knew I thought it was true but for somebody to say yes I saw it it's true you know the whole thing is true I mean that was that was really something that really it took about you know several months uh for it to sink in for you to real really believe that yes yes it's true there are aliens uh they
(31:24) are visiting us and and Bob did work on their graft you you can authenticate that after he started telling us things it still wasn't a free-for-all where he just answer questions and right I mean he'd still be closed mouths about things uh I I I sensed a type of paranoia I guess he he had people you know doing random Security checks at his house but it was never until much later just a big party where he just entertain and answer every question he could about the craft right right yeah you know we sorry go
(31:59) ahead John go ahead go ahead John I'm sorry one thing about the phone taps is uh my phone was tapped too and I had a guy uh from uh it was centel and and uh I had a couple of teenage daughters by the way uh um uh Jackie and Ally and Moran jiller listening tonight hello to them uh allly and Jack had um telephones and

were're always changing their numbers and always changing rooms and everything and so we knew the sentel guy so one day he's out here and this is like in December January when all this
(32:31) is going on and he comes down to my Den after you know working on a project he says John your phone's tapped and I said yeah well I'm not surprised he says well do you mind if I uh check and see where the tap is I said no you know if it doesn't cost he think no it doesn't he so he came back in about a half an hour and he said you know I've been down Monroe and down Hollywood and down Bonanza and the tap is further than that and I said well don't worry about it I said all our phones are tapped you know
(32:56) we're into this client office stuff he says no I just want to check so the next morning he shows up about 10:00 uh he says John I can't work on your phones anymore I said why not he's because he said I traced your tap and it's a main frame and there is no paperwork for it and I took it to my boss told her about it she said uh if you don't like it you can quit and uh so that was the that was a pretty interesting time we should also point out that there was another tap uh that became relevant to Bob's life in
(33:26) fact that's how he found out that his wife was having an affair and we'll get into that story and then go back to the uh the big confrontation with the security guys when we come back I'm George nap this is coast to coast stay with us welcome back to Coast to Coast I'm George knap joined by Jee huff and John Lear talking about the early days of the area 51 story The Legend uh Jean um you mentioned earlier and we don't want to get too much into Bob's personal life uh but it is relevant to the larger
(33:53) story that uh that he learned that his wife had been having an affair and I think it was with with her flight instructor at the time tell us how he learned that well uh by the way I wanted to interject here while John and I say Bob told us this and Bob took us out there and showed us that and it's important for someone listening to understand the the emotional uproar in Bob's life I mean here's a guy who is going to work on call he's not even on a on a steady schedule yet and when he's at work you know he's done everything
(34:23) from read reports on you know an alien civilization and seen alien bodies Viv sectioned and weighed and and ultimately actually you know went inside and touched a a flying disc that you know as far as he could tell and as far as was told to him was brought here from another star system along with seeing another eight beside the one that he touched and was in uh in addition to having you know being in the process of losing the love of his life uh you know this guy was an emotional mess when this was going on so not
(35:02) everything makes sense and Probably sounds as perfect as it could or should have been but you know it it was a bad time in in Bob's life when this was going on now how how he you want to know how he found out she was having an affair yeah John and you were both talking about the security measures John mentioned that his phone he believed was tapped and uh well you know ultimately uh the the guys at the OPM at the uh what were we going to call them the ofi office of thei who works for the OPM off office of personnel management
(35:39) the ofi had his phone tapped and they had heard his wife having conversations with her boyfriend over the phone uh they didn't know whether Bob knew or not so they were they already knew that they were going to that if Bob lost his wife he would be an emotional turmoil and be a security risk so they were going to at least temporarily yank his clearance but they couldn't do that until they knew that he knew that his white was having an affair they knew before he did and so ultimately she confessed and told him
(36:11) she was having an affair and if I remember correctly she called her mother over the phone uh I think or maybe it was her father in another state and said you know I'm I'm messed up in the head I'm emotional an emotional turmoil I've been having an affair and I told Bob and when the guys at the uh uh uh on the other end at the ofi heard now they knew Bob knew his wife was having an affair and coincidentally this all all happened on the day or the day before Bob took us out for the last uh to witness the last
(36:48) disc test so all of this came down when uh I guess we should go into how we got caught out in central Nevada yeah let's tell that story go ahead John you take a over okay so it was uh Tracy and her and her sister and Bob and me and Jean we get in the car we start down the road and U towards uh the lake bed and the question was how far do we go and I kept saying I was riding shotgun I kep saying well let's stop here because you know even a mile closer isn't going to help us uh you know get any

clearer shots so
(37:23) uh they decided Well let's go a little bit further going further and further and all of a sudden two sets of headlights come on in front of us and and just right at the same time so we thought well there could be a problem here so I told um Tracy's sister I said she was driving I said now careful when you turn around because we don't want to get stuck in the dirt here so we turn around and we go racing down this dir road now our lights are off also John and we don't want her to hit the brake
(37:50) lights because they'll see our brake lights go ahead so we go racing down this road and uh it's obviously they're going to catch us so we decide and this is before we got to the highway we decide well let's pull over we'll jump out I'll set up the telescope and if they ask us what we're doing we'll just say we're looking at the stars and uh now John just to interject here prior to that we stopped and when we knew we were going to get caught Bob got out of the car took the gun in just
(38:20) in case of rattlesnakes and went running across the desert toward the highway so he wouldn't get caught with us now go go ahead okay yeah but that that was the last stop so we jump out I get the the telescope out I start setting it up Bob runs out in the desert with the gun and we're all standing around there and then the two cars show up skiding to a stop and the and the security guys get out and they got the guns and uh they were big guys too are are they pointing guns at you no they're on their shoulder
(38:49) they're SW on their shoulder so before they got out uh I I I ran up to the car and I I uh to their car and I put my hands on the on the top of the car and I said uh you guys aren't dopers are you yeah we thought you were chasing us you know and they said no we're not dopers uh we'd like to ask you a few questions so they asked us for they asked us what we're doing out there and we say we're looking at the stars and then they said well then why were you driving so fast away from us and of course nobody had an
(39:18) answer for that so they said okay well let we need to uh to see some driver's licenses and Social Security numbers so we gave my social sec numbers and I guess we were there myit John is that is that true because I thought I thought um I thought it was you I I didn't think we presented ID to them we presented ID to the sheriff later that's right that's right but we told them our social security numbers in right right so um uh we gave them our social security numbers I guess it was about a half an hour they
(39:46) came back and they said okay now look we can't kick you off this land because it belongs to BLM but we can give you an awful lot of problem if you stay here and so they jump in their car and we thought they drove away they said we'd like to have you up on the highway if you're looking at stars the Stars will look just as good from up there so the uh the the trunk is open uh because I had got the telescope out and it's and it's bright so we can't see too much except what's in the in right
(40:17) around the car so anyway we wait for about 10 15 minutes and here Bob comes out of the desert and uh so he tells us this fantastic story he says boy I had my I had the 9mm pointed right at them if they were going to come at me I was going to blow them away me I was going to blow them away da da da so unbeknown to us the security had parked about a 100 meters down the road turn turned off uh their car and they were recording us they were taking video and they had this parabolic mic and they were recording what we were saying well also John
(40:51) remember I guess they were watching us through night vision goggles and you and I you and I saw saw a green glowing thing kind of drop as though somebody had them at their eyes and dropped them down hanging around their neck and we saw this green light and I said did you see that and you were the one that said yeah those must be night vision goggles so they were watching us also yeah but yeah I guess I didn't put it together that it was them that had the night vision goggles but anyway so Bob tells this story and we're laughing and joking
(41:19) and telling about flying saucers and everything and not realizing that we're being recorded So we break down and tell scope put it in the back of the car and uh and shut the trunk and now in the trunk also we've got a guer counter telescope video cameras gun we were really equipped that night right for everything go ahead so we drive up and just as we hit the highway um what is it Lincoln County Lincoln County or n county sheriff Lincoln what is it Lincoln Lincoln County L County Sheriff uh puts on the
(41:51) lights the siren and everything and officer laroe yeah what was his first name Doug Doug yeah Doug Doug Doug Laro yeah I got a good story about him anyway uh

so over the loudspeaker says uh get out of the car put your hands on top of the you know on top of the car and you know we're all doing that anyway but he keeps saying it louder and you know we're think all right all right we're doing it you know I said get out of the car put your hands on top of the car so we're all standing there five of us with our
(42:20) hands on top of the car and uh so he says okay well now I've only got two questions here is uh number one why are there five people in the car here and there was only four when you were on the test site and where's the gun so it was really funny because we were there for about an hour and uh and he never did recover the gun well we didn't give him permission to search the truck and he kept us there as long as he legally could without taking us in he said I you know I could I you know I'd have to take
(42:52) you in if I'm going to detain you any longer but you know stay away from here and no more sh Shenanigans and then he let us go so Jean's kidding me here is because uh the uh Doug Laro the sheriff says uh okay I need to see some driver's license and like a complete idiot and I and I admit it I was a complete idiot I said my driver's license is in my jacket in the trunk of course will ever forgive me for that but um so I guess we uh I said oh no no it's not in the trunk and Doug says open the try oh boy so we opened
(43:28) the trunk but he didn't search it he just uh I got out my license and uh that was the probably one of the weirdest hours in my life is we're all sitting we're all standing in front of the car in front of dog Doug Laro he's got got those two questions he says look he says no problem I get a I can get a search warrant he says uh either you uh you know tell me what I need to know or uh or you know we're going to take you in so so it was really interesting we that shuffled there and then and nobody made
(44:00) any comment and then after about an hour Doug says okay I don't know what the deal is here and I don't know why I'm being told this but I'm told to let you go so okay I'll tell you what we're going to stop the story there pick it up after the break we're going into the break talking with Jee huff and John Lear about Area 51 and this is Leonard SK and I know a little we're talking with Jee huff and John le about the beginnings the origins of the area 51 story they're regaling us with the the
(44:29) night that they got caught out there after Bob Lazar had taken him out to show him uh a third uh disc flight and uh that was pretty much the beginning of the end for Bob Lazar and his involvement with that program he was in a lot of trouble H but it was not the end of the story when we come back we'll pick up what happened next stay with us on Coast to Coast amm welcome back everyone Jean Huff John Lear talking about Area 51 let's pick up the story fellas uh where you You' just got caught the by the security guys and then by the
(45:00) sheriff they take down this information uh how quickly does that filter back to Bob's employers George I think we should first interject also that night the third night we had rented a car that's why they couldn't run plates and get any ID or info on any of us because we had a rent a car so that that kind of uh baffled Laro also that's why he couldn't find out who we were without our IDs okay okay uh so had well let me put it this way had there been a disc flight while all this is going on obviously you're
(45:30) not paying much attention to what's going on over the hills but did they have a test flight that night or did you see it I don't remember seeing I don't think we saw anything that night okay so how quickly do things go downhill for Bob as a result of what happened out there well on his calendar here it says they called that he called that night bad day at groom and the next day it says debriefed at work so the very next day he went in he was called in to go to work and uh he went to the eg& terminal
(46:03) which no longer exists that that if you remember you guys do because you're in Las Vegas the EG g& terminal at that point in time AB budded Sunset Road not far east of the Las Vegas Strip and he went there and Dennis marani who was the security guy that shadowed him when he was at S4 uh said that uh Bob started to go toward the plane to take the to take the jet out to landed Area 51 and Dennis said we won't be going that way tonight and they took uh they took a car and actually drove out to Indian Springs Air
(46:37) Force bace where Bob got a very nasty debriefing and uh they they showed him uh they asked him why he took all of his friends and family out there to what the disc does he said that's kind of what we what what we meant when we told you this was above top secet secret you know that we didn't want you to tell everybody about

it and and uh they showed him a stack of transcripts of everything on his phone lines including his wife Tracy talking with her boyfriend and uh said that now that he knew his pretty little
(47:10) wife was having an affair he was a security risk and uh that they were going to yank his security clearance uh I had for some period of time I don't remember the duration but he could reapply you know months or whenever down the road uh when he'd be more emotional stable wasn't that astonishing that they would say that he could come back to the program after he has obviously you know spilled the beans to people without clearances you know that is a good question and we've I've discussed that
(47:39) with Bob and we really concluded that probably the decision on what to do with him was done at a higher level they they had to do something immediately right they got a guy from the program taking people out there to watch the disc test they've got to reprimand him and kick him out what to do with them for the long term had to come from wherever Washington DC wherever whoever you know whoever calls the shots whoever that may be or they may be uh may not have known you know by that next day I think uh they had to decide what to do this was
(48:12) just this was the interim reprimand and in fact it it it definitely was because they had called him and told him that they wanted to come back out to work and he and he said no I'm not going and they said are you refusing he said yeah I'm not coming out there anymore so they did call to have further intercourse with Bob Lazar but he wouldn't go back out yeah he was worried what might happen to him right now one of the interesting things they told him in the debriefing is when they started it they said uh oh
(48:41) yeah when you talked to John le and said you were going fishing that really threw us FR yeah that really fooled US fishing but go ahead to show the roller coaster that this guy's life was on now he's losing his wife now here in on a day in April you know on his Cal daily calendar he writes his life was so mundane that here at the beginning of April he wrote the entry we turned house air conditioner on and car air conditioner on he actually recorded what day he turned his home and car air conditioning
(49:16) on the next day it says bad day at groom and the next day it says debriefed at work so he goes from having so little going on that he's writing he turned his air conditioner on to going to see show us a disc room to getting debriefed at Indian Springs Air Force Base and that's the that's the roller coaster this guy was on at that point in time John you know all the criticisms of the story that have surfaced over the years and people I understandably there problems with it there are gaps there are things that
(49:44) don't seem to make sense part of the the one that really sticks in people's craw is is how Bob could be out there um without a clearance you know in a short period of time when you consider are all the strange things in his life um you know the questions about his educational credentials things of that sort the fact that he knows you and then he brings people out to see this test flight and they still are talking to him about working for him that that a lot of people have trouble buying all that I'd
(50:14) have trouble buying it if it didn't happen to me I mean it just doesn't make any sense um but George you know this brings up a good point and and a lot of scientists in fact that email you have trouble with this because they all say look I've got a PhD I'm one of the foremost scientists in that field and certainly they would have chosen me before Bob Lazar and of course your credentials weren't necessarily the CR credentials weren't necessarily the criteria I mean Bob's adopted Bob's a
(50:43) renegade uh you know I I I who am I to say what the criteria is but they have to decide who will be helpful who can take it I mean let's face it there are there are philosophical uh theological ramifications to all of this and uh they don't just let I it wasn't a a contest of who has the greatest credentials that's who gets in this program and this offends some people you know certainly if if they would have wanted great scientists well they would have chosen me so therefore I don't believe this is
(51:13) going on but the criteria was when you say John was never who had the greatest credentials yeah was who they could probably discredit the easiest if he ever said anything about it and and the fact that Bob had a a a a a chance meeting with Edward Teller and that you know just a word from Dr the late Dr Edward Teller uh probably meant a lot I mean you know who knows how all of that happened but uh it you know Bob did you know we still don't know the the totality other than what Bob told us of what he did uh down at

(51:47) the Maison physics facility down at Los Sal almost I mean he did have a background uh uh you people have told John you have other CIA guys have told you that they they love to take adopted people and orphans and people that they can uh you know get rid of and get get rid of their personal information and have no family looking for them right just so they can shoot them and nobody will say hey what happened to my dad and stuff like that and the idea of uh that that they would take somebody with gaps in their background John and you mentioned it
(52:19) maybe he was the mo one of the most qualified guys in the country if you are looking for someone with scientific and Technical capabilities and expertise but who could just be easily um destroyed if the if the need arose right uh he told us about he had three interviews uh after he called Dr Teller then he was uh called in in the first interview uh they were all I guess technical interviews uh and he told us after he did those interviews each one he said uh he said I aced it and he told us exactly what they
(52:52) asked and what his answers were and they were high highly technical nature the only interesting thing was on the second interview the first question was now tell us about John leer and what your relationship is with John le and uh he says uh I know John le uh but I think uh he sticks his nose in places where it doesn't belong and Bob said uh what he didn't tell him is he also likes to stick his nose into places it doesn't belong you know here's a funny thing remember I told you that Bob uh loves to
(53:27) uh appease women and while he was John you aren't going to like me saying this when uh when he was still trying to do whatever he could to impress his wife to keep her and attract her back here's an entry here that uh they took a flight when John was he was fing in l1011 so Bob's wife was taking flying lessons now she doesn't even have a private pilot license John lets her fly in l1011 in the in the Pilot's chair and what did you give her 20 or 30 minutes of flight time John in in that l1011
(54:01) hello hello no comment so there's there's another attempt to trying to get his woman back someone named John let him fly in l1011 maybe it wasn't John le yeah there's plenty of guys named John in this world you you both both have heard the criticism that maybe maybe this was a setup that uh that they were they had got Bob for this job just precisely so they could do exactly that they figured he's kind of a rebel and uh a troublemaker and there's no way he's going to be able to keep this secret
(54:31) we'll tell him some stuff he'll go ahead and spill the beans and we'll all have a good laugh about it what do you think about that starting with you John certainly plausible I've always thought that or you know I thought uh possibly that they were trying to get the information out and they said L's interested in this let's work this out so you know he can get the information out and uh and I've always told Bob we you know we tried our best but we didn't do a very good job well when you
(54:57) extrapolate that out then there must have been some people who wanted to get it out and some who didn't right I I think there was a conflict there because if they all wanted to if it was a consensus that they wanted to get it out you know it they it could have been accomplished uh they you know what I mean they tried certainly tried to pre pre to prevent it after the fact well the effect was they they put it out and they drew it back I mean you know owed Bob to to spill those beans allowed us to tell the stories and then uh in the
(55:31) eyes of a lot of people discredited him entirely but they told him when he was there he asked them how do you keep this secret and they said it's the easiest thing in the world to keep secret that as long as you don't prove anything one way or the other as long as you keep people on the fence and you know ridicule those who believe or who think they've seen proof ridicule them and and just uh dismiss the rest uh it's easy thing to keep keep secret because everybody wants to say oh there's
(55:58) there's no life anywhere else that we've discovered you know why would we have the SE project why you know but and and as a Counterpoint George look at all the information you've amassed from civilian Pilots military Pilots I mean uh confirmed with rate ground radar air radar an actual siding by pilots it's something moving thousands of miles an hour past an airliner and a long time ago before it could possibly be any industrial aircraft in the 50s you know a crew of Air Force men and yet everybody goes well I wonder what that
(56:31) was you know they even though it couldn't possibly have been a craft from Earth piloted by human beings they still don't conclude that that must be something

or someone from somewhere else so or our government saying well guys this is this can't be a threat to National Security so we're not going to worry about it I mean craft that can outfly anything you've got that demonstrate Mastery over things like nuclear missiles and and uh can can even enter nuclear codes on your most powerful weapon systems I mean it's to
(57:00) if that is not national security stuff I don't know what it is right and there is no one there you know from from the biggest skeptic I mean if everyone was intelligent and honest if anyone people who who dismissed the possibility that there's life elsewhere and that that life has been here that it is here or that it has been here uh you know in Antiquity uh if they actually read and examined the evidence they could do nothing but conclude that there is life somewhere else and that life has visited the Earth but it's easier to not examine
(57:32) it and just say well why don't they land on the White House lawn and since they have it I don't believe it what about the idea that they uh they allowed this story to be told used Bob to tell it used the rest of us to tell it so that they could distract attention from something else maybe something else that was a legitimate Earthly made technology out there what do you think about that John very plausible yeah they uh they had a lot of things to cover up I think the um they kind of mastered the cover
(58:01) up there with the F-117 because the f19 uh was a secret it still is a secret we haven't heard of any brand new really super sophisticated airplanes except the F-22 and that's that's old technology and certainly you know after uh 20 25 years they have stuff that's uh that's really really uh out of this world as far as technology and and to that end whatever that end was they'd have alien beings VI Viva section I'm not saying I'm naive and I I know what great length they could go to program someone but I
(58:39) always say to what end I mean they go you know is that the best thing they could come up with we we're afraid that someone's going to see our new spy plane so I'll tell you what let's try and uh make everyone think that you know flying saucers and there's light you know that's a pretty touchy subject I mean it touches Theology and philosophy that there must be a better way is what I'm thinking well my thought is if that really was the plan that they had an idea that let's tell this crazy UFO
(59:06) story then destroy destroy the credibility of the story and we'll distract attention away from whatever is flying around out there whatever secret projects we've got going at this very very valuable base that that policy was a miserable failure and backfired on them because to this day you've still got people going out there with binoculars and telescopes to see whatever it is that's flying around in the sky you've had tens of thousands of people who've made the track out into the desert you've had every major news
(59:33) organization in the world gone out there to look around you've had Congressional investigators and all kinds of media attention if they didn't want attention for something that was going on out there uh somebody really screwed up not only there but everywhere there's nowhere in the world that people aren't looking you know as a as a reaction to that probably and and so you can't you just because you can't get away with it there you probably can't get it get away with any anywhere that there are human
(1:00:00) beings the idea that some people have raised that Bob was part of this thing that he was a a disinformation agent working with this government John how would you respond to that that he was a different disinformation agent that he was working with them to tell the story and and stir the pot uh it's certainly plausible I don't believe it but you know he could have been you know the I've heard that before and first of all I've even heard Bob say you know had they asked me to do that I probably would have participated
(1:00:28) he doesn't deny that he would be a guy that would do that if they asked him however he is the worst guy in the world Bob Bob can't you know his memory he can't keep he he treats most subjects with such disdain he wouldn't waste his time waste his time uh and Bob's told that same story uh you know he would be the worst guy in the world to make up a lie and trying to perpetuate a lie he just he he's too busy being productive doing other things I mean he would he would be the worst guy to include that type of
(1:01:06) endeavor uh one of the threads that's out now we're going to cover some some ground um that where the the controversy still uh rages over whether he's a legit guy or not whether there really was a program like this out there uh something I saw on Above Top Secret a thread just saw it yesterday talking about Papoose Lake and these guys theorize that since they cannot see any roads on their Google shots

of Papoose Lake leading from Groom down to Papoose therefore there was never a facility there you
(1:01:38) want to tackle that one John yeah um Google is uh uh is monitored by the Department of Defense and every sensitive uh area is airbrushed and if you don't believe that just go to the Nevada Test Site there's a huge new of Sly called Sandia uh there's two huge new runways it's about a third of the way from tonot test range to groom Lake many of my friends have been there many of people work there and there's nothing visible on uh on Google go to Wake Island or Johnston island or Midway Island where the military has a huge
(1:02:15) presence now and all there is is just uh you know just um um plain sand and stuff and there's huge operations out there and uh so all of this stuff uh where you anybody that thinks they're using Google and can find out any information all of that all the good stuff is air brush down well I remember seeing satellite photos where you could see roads out there in fact I've got one hanging on my wall right now um so and and that's I'm pretty sure that the guys who have worked at Area 51 who've come forward
(1:02:46) who've talked about and they they don't buy the saucer story but they said that there were uh other kinds of test flights out at Papoose that they've used at for a number of years yeah 1990 they moved the real sensitive stuff up north just out the window over and you got those Maps I sent you yeah so you you think that they uh as a result of this story breaking that they moved all the sensitive stuff somewhere else I think it was already being built at that time but they did move it all up there it's
(1:03:13) out the window of or just to the east of Highway uh 93 alternate and I have friends that worked there and uh it's it's really a huge facility and it's very very secret it's the new Area 51 but you know it's 20 years old now and George I I think it's naive I mean what year was it you won the Emmy Award for UFOs the best evidence a two-hour UFO special I don't know if people elsewhere would know people in Las Vegas that were around then would know that and by that next year they were taking tour buses
(1:03:44) out to Central Nevada so it it would be naive to think that they kept doing disc test on Wednesday night after dark after you know essentially the entire world world was informed of it uh they they that program was definitely moved this is what's funny about well tell you what hold that hold that thought because when we come back we'll get into discussing how uh Area 51 story went across the world like a tsunami stay with us for a conversation with Jee huff and John leer Beatles take us into the break welcome back everyone we're
(1:04:16) talking about the area 51 story and I know the broad Strokes of this story are well known to many of our listeners uh who are wondering why we're covering this the the same stuff and and what I had hoped with this conversation with Jee huff and John leer is that we fill in some of the blanks and that is the small stuff that happened the broad Strokes are well known the story has gone all over the world of course it's the small stuff uh the details about uh the trips out there to see the saucers that I think are important important in
(1:04:44) the chain of evidence about the the story uh you know the point being how did Bob know you know if he's a fraud as many people uh believe and then they have some reasons to believe that how did he know the test flights would take place on Wednesday nights uh because the witnesses two of whom were talking to tonight went out there they videotaped it they saw it it really did happen how did he know uh there are many questions that have been raised about his academic credentials and we get into some of that
(1:05:12) as well but it's the small stuff and what what uh the people who were directly involved with Bob lived through that I think is very telling and and every day I get inquiries about the area 51 story and I'm sure you guys do too from a new uh a whole new round of uh folks out there who've just discovered the area 51 story and and uh are curious about it which is you know part of the reason we're covering this what I'd like to go into for the next couple of minutes is what it what it um was like
(1:05:41) during that time period because it was a tumultuous time a lot of things were going on you guys lived through it I I liveed through some of it and it was uh there were some strange things that really were happening which uh the people who don't believe the story and don't want to accept it have hard times uh accepting Jean why don't you start it off I mean you were really close to Bob you live through it you know what happened in the months and years afterward why don't you just give me a general sense of what it was like then

(1:06:11) well after you know after he went on television and did we get that far yet I guess no we haven't got that far I had to see where we're at here well first of all he was destroyed eventually Tracy left and uh Bob was a Broken Man I mean borderline suicidal uh uh he was just literally physically sick and uh he was destroyed emotionally so now look what he's gone through he's gone from you know being in between scientific jobs working at Los Alamos running a little uh uh photoprocessing lab out of his home
(1:06:48) amongst the many other projects I mean he's Bob's a productive guy he's always doing something with Science and Tech technology jet cars uh things like that and he goes and gets into this program gets exposed to alien Hardware gets caught gets kicked out of the program loses his wife I mean he was a Broken Man I mean he really felt he had nothing left to live for at that point in time yet the heat was still on when they called him and demanded that he report back uh out to work and he told them no well now he not only were
(1:07:23) there clicks on all of our phone lines uh he started being followed one time he went to work out at a gym um with Shelly ball uh who is Jim Tani's significant other the guy that we mentioned before worked out at tonopa test range and he had Bob owned an Uzi uh you know not full automatic but Sunny automatic Uzi and they went in and worked out at the gym when they come out the doors to Bob's Car are standing wide open and it had been they rifled through the papers in there yet the uzi is still sitting
(1:07:57) there on the floor so if it was just some punks who broke into his car they certainly would have stolen that Uzi instead his car is just left with the doors standing wide open his gun still in there things like that happened I I'd be at my appraisal office uh we were all not carrying guns that would have been illegal but there were guns at the place the buildings we were at at that point in time and Bob would stop by on his photo I'd be sitting there doing real estate appra he'd come in uh with his
(1:08:29) face all red and say give me your give me your gun and I'd hand him a gun and he'd go back out in his car there'd be people chasing him around uh uh when he was getting on Highway 50 15 one time a government looking vehicle with blacked out windows pulled up next to him was chasing him and they pulled up next to him the window rode down and they shot his tire out that's T night he stayed over at my uh at my place slept on the couch cuz he was scared to go home right he didn't want to go back to his house
(1:08:55) and uh he came home the one night and his entire house had been rifled through the door front door had been broken open the dead bolt had been broken open and people had looked through his house and left the door a jar and everything messed up so not only were they after after him they wanted him to be paranoid they wanted him to know that they were listening to his phone and that they were following him so it didn't they write something on his Blackboard or something like that or or eras something or yeah yeah I think I think so I don't
(1:09:22) remember specifically what it was but there were a whole host of of paranoid situations that Bob was going through and and he was in he was in no shape uh you know he was out there on the edge anyway it was a bad time in his life and John you remember this time period people who weren't there didn't live through it have a hard time accepting that it was real but it was real uh for those who were living it yeah it was real and uh you know when you when you come to the realization that yes there are aliens they are visiting we
(1:09:57) the government does interact with them we do have access to their technology I mean it's a real it's something that uh it takes you a few months to get used to and you know there were other things that we didn't cover here George like when Bob was in the program he was told that there were a one guy that worked as one of the scientists out at S4 didn't show up for work for a night or two and they were on on the lookout for him and I guess they sent guys from the ofi to try and find him and the Word was that
(1:10:27) the Russians were in Las Vegas trying to bribe people for information of what was going on at S4 and at this point in time Dennis Mariani who was again the the security guy who shadowed Bob to and from work uh took Bob to the police substation over on St Louis down by St Louis in Eastern Avenue and registered his gun Bob had moved here from New Mexico and he had that Uzi and he had a 44 magnum and a another had a 44 magnum and a another small pistol like a 25 or whatever and uh and they here's here's
(1:11:02) vintage Bob Lazar out of the eg&g building they were going to issue him a gun and uh it was just a little 32 or whatever and the lady told Bob that he had to

sign for it and that if it came up missing he was going to owe them $500 and the Bob argues with them and said it doesn't even cost that much why would I give you $500 if I lost a gun gun that only cost $250 and uh he said why can't I use my own gun and she said well we didn't know you had any and that's because he lived in New Mexico and you didn't have to
(1:11:34) register guns back then and they took him to the police substation but but it's funny that here Bob Lazar is in the most secret program anyone could ever imagine the Russians are chasing people around they go to issue him a gun and he argues about the deposit on it and uh but anyway so Dennis marani took him down to the police substation and registered his guns so he would have legally registered guns to protect himself and of course since then I think the head guy at that substation was lieutenant and of course George we have
(1:12:04) a mutual acquaintance TJ who I've tried to get people to go down and you know that would be important to get those records who who did Dennis marani talk to that they could just walk in there in the evening at night time and register a gun at a police substation like that but uh you know people who tried to get into there were told mind their own business and and nothing that I'm aware of ever came to fruition from those records of course the lack of Records is the the main reason that a lot of people don't
(1:12:33) believe the story Stan fredman comes to mind the fact that Bob can't prove that he went to school the places where he claims he got earned degrees we're going to get into that as soon as we come back from this break I'm George knap stay with us for more of Coast to Coast AM welcome back to Coast to Coast my guests Jean Huff and John Lear talking about the origins of the area 51 one story in Bob Lazar um I remember 20 years ago tonight you guys were out in the desert you saw one of these discs being test
(1:13:01) flown and Bob was the guy who told you about it and then uh a month or so two months after that sometime in May Bob went on the air at KV blacked out his face he used the pseudonym Dennis which was sort of a twisted little shot at his boss Dennis marani uh the guy who sort of was in charge of him out there and and uh life was never the same he told the basic story in a four or five minute interview uh we started working on a much larger special after that and and things were very different but I remember in the
(1:13:35) first the very first story we ever aired in November of that year where we revealed Bob's true name and identity um we mentioned that you know his claims of educational credentials MIT and uh Caltech that we could not verify that and you know subsequently a lot of people have come forward to say aha uh there's no records that he ever went to those shows Stan fredman comes to mind I I give Stan a lot of credit for actually doing the leg workk himself and and checking it out uh but the fact is that we reported that in the very first story
(1:14:07) where Bob lazar's name was ever used it is troubling uh to me and I'm sure to you guys that he can't prove that he went to those schools I know we all must Harbor some doubts about whether he ever did go to those schools why he would lie about it I personally uh have great uh doubts about it for the for a simple reason not because there's no uh there are no records but because I can't imagine Bob sitting through other kinds of classes that it would be required to get a degree at any school English Lit
(1:14:36) or something like that I can see him sitting through science classes Electronics classes but not the other kinds of things he'd have to sit through Jean why don't you start it there you've answered this stuff before is it possible that Bob just um exaggerated his credentials in order to get a great job well I don't know that he needed those credentials to get the job and I mean are you know he got the job the at least the one job we know of Down Los alos through Kirk Meyer which is a head hunter that provides uh people you know
(1:15:08) for for Technical and scientific positions at Los Alamos and other National Labs so are they all so stupid that Bob told them oh yeah I've got a couple of master's degree and they said okay well here you uh we'll hire you as a senior staff physicist and you go do this job certainly for he had clearance I mean there's evidence that he had security clearance so the people that did his security clearance are so stupid you know what I mean I don't know that he needed those degrees to get those
(1:15:36) jobs if anything I think he exaggerated it after the fact for ego ego reasons or whatever I mean if he did it's unfortunate because I truly believe that he worked on flying discs at S4 and if people are dismissing the story because because of his lack of educational credentials then it was a tragic tragic mistake

but no one said you needed two masters degrees to have any of the jobs he's held at Lo Alum author us for but wouldn't you say I mean the argument being and John maybe you can tackle this
(1:16:09) gosh you'd have to have degrees you'd have to have be a really smart guy and they'd only pick the best scientist well I guess we covered this partly before but it's got to bother you as well you know Bob real well uh do you Harbor questions about whether he really went to those schools or not no I don't uh because when he came over with Jean he had a resume with him and there was copies both of his degree from MIT and Caltech and I asked him when he went there because uh this guy Tom mood did a
(1:16:37) timeline and uh Bob said that uh that um Los Alamos had sent him there now I have no doubt about that but I don't know how the timeline works I don't know how how he could have fitted in well I don't I don't I'm not saying he didn't go to those schools but the question is did he graduate with a master's degree and what what courses could have transferred from one program to another I mean that's a complex scenario I mean if you have two master's degrees it doesn't mean you
(1:17:09) went from your freshman through uh you know six years of college for each one taking all those classes individually so it's a complex it's a complex Paradigm to say that he's got the two master's degrees and but you know we you know I've discussed this with a lot of people and and the one thing that we those of who've been around Bob and John you know this he is a comprehensive Problem Solver I mean not only does he understand physics he understands Electronics he under he understands a
(1:17:42) lot of things he is he's a jack of all trades and master of quite a number it's not you know Ma not master of none he he's he's a master in electronics I mean uh he's fixed audio file stereo equipment for me and said look I did this for you but don't tell anybody I can do this because I don't want to be fixing everybody's stereo equipment and uh so you know we tried to I and others have tried to resolve who were they looking for for that program at S4 I mean there's nothing really they were
(1:18:16) learning science and from physics that didn't really exist with materials that didn't even exist you know commonly on Earth and so is there any background or other job that would have prepared you for back engineering just from another planet and and what degree and and what uh what importance did they place on what in other words your background your educational credentials how about whether you could take it I mean a lot of people uh a de devoutly religious person wouldn't want to hear uh some of
(1:18:54) the things Bob read in those reports uh again who who who could they trust who would help them who could they trust or who could they uh discredit if they uh couldn't trust them I think the the criteria was a lot more than you know you've got these look if they just wanted people with uh master's degrees they could have had any number of phds in the entire world would have given their right arm to be in that program so that simply could be the criteria well you know for me the Lynch pin uh of his
(1:19:28) credibility was always Los Alamos if he worked at Los Alamos lab and sensitive or classified uh capabilities that that it was entirely plausible that he could be pulled into a program at Area 51 or S4 and I don't think there's any question in fact there's no question in my mind that he really was at Los Alamos I remember the time that he took us there on a weekend and and we went in and uh heape of that tour and he went any any place he wanted right yeah he walk waved at the guard he took us in it
(1:19:56) was like a rabbit going through its own burrow zipping through these buildings and stuff he knew his way around waved at people we brought a video camera in as you mentioned John and and nobody stopped us we took video of that and it was pretty clear he knew his way around the place he was in the phone book uh but still uh that's not enough I mean people well that doesn't prove he worked at S4 if he was at S4 doesn't prove he worked on saucers it's it's part of the reason why Bob doesn't really like to
(1:20:21) talk about the stuff anymore cuz there's always going to another round of questions isn't that is this not true of anyone if someone worked on a a terrestrial uh program I mean did are they allowed to take home evidence and if they worked there did they work on that craft does that craft exist I mean can forget Bob lazark and some man who's working out in central Nevada on uh whatever our newest spy plane is right now is is he allowed to prove that he's working on that and and how does he do

(1:20:50) that let's talk about element 115 this is the magical uh element that Bob said was used to power these flying saucers John um give me your take on 115 give me your take on 115 I know that there's a story that Bob stole some from S4 and brought it home which is an incorrect assumption on the part of a lot of people but you got to see this stuff and and what it could do in a fairly interesting experiment involving a cloud chamber right yeah we took a regular Bell jar and some dry ice and we put the um uh the element 115 it was in
(1:21:29) the little we didn't steal it somebody gave it to him from uh Los Alamos and we put out the story that he stole it so we wouldn't implicate the guy that gave us from gave it to us from Los alus John wasn't that code named like La 1000 or something like that yeah something like that anyway put the uh the 115 on the dry I and then we hung uh hung the um Coleman lantern Manel which uh has storium in in it and uh the the U the the gist of the experiment the uh the reason we did that was to see the attractive properties of 115 could it
(1:22:03) deflect the alpha particles coming being emitted from the thorum emitter uh and and it did we videotaped it and uh the cloud chamber you know the the dri made the the cloud so that we could see the particles in what direction they're going and of course they're going straight out at a million miles an hour and there's nothing that should deflect them but in fact the uh uh the particles uh at least one of them was deflected and the we caught that on videotape now the question is where's the videotape
(1:22:34) now I know that Bob has a copy and you had a copy and it's like many things in this stuff they just seem to disappear all the really hard evidence disappears well I've got it somewhere I I just don't know where it is this big pile of stuff was the 115 still inside of that clamshell holder during this experiment the little lead thing that we that Bob made yeah well took it out of there no there no there was a a clam shell that it actually came in because it had to be kept under Neutron bombardment when it
(1:23:04) was at rest I mean it was a it wasn't just a little thing that Bob made remember well there was a lead container that Bob kept the uh the 115 I don't know about the clam shell thing but there was a clam shell thing with whatever whatever Neutron emitter uh on the inside of it I don't know you know I'm not a scientist I don't know what I'm talking about but I know the 115 had to be kept under Neutron bombardment at rest for whatever reason and and there was a casing that it came in I mean I
(1:23:35) don't know that that's the same one you're talking about I didn't I didn't see the casing I just saw the little Arrowhead shape okay that put on the dry ice and there was me Joe Van and Eddie and Bob and Bob and I think Jim Tanny was there Jean did you ever see 115 out of the case no not out of the case um you you've heard the stories about I'll tell you what we'll we'll hold this to after the break but I want to go into the stories about uh 115 because it's now a real element it wasn't back
(1:24:03) then it came out of the sky in appropriate song for this time period we'll be back with more of Jean Huff and John le and maybe a call from Bob Lazar we still have our fingers crossed I'm George knp this is Coast to Coast AM we're talking with John leer and Jee huff about the early days of the area 51 Story how it all came about in in particular one of the Lynch pins of the story is this mysterious magical element called 115 at the time the Bob Lazar first mentioned it to me uh I was no scientist but I was smart enough to know
(1:24:34) that uh the periodic table didn't go that high there was no such thing now there is uh however the 115 that's been created in a lab is far different from what Bob Lazar described back then when we come back we'll pick up the conversation there about what they saw with what the 115 and we might even get into where that piece of stuff is now stay with us for more Coast to Coast am.
(1:24:59) welcome back to Coast to Coast my name is George knp we're talking with John leer and Jean Huff about the area 51 story The Bob Lazar story and a a key factor in that story is the sto is the information about something called Element 115 as I mentioned before that break uh I had first been told about it and said well it doesn't exist Bob and he comes back and says well it's theorized there is an island of stability that uh that something like this could exist and and of course now it has been created in a lab but it's uh
(1:25:31) it only lasted for a couple of seconds Gan how do you reconcile Bob's uh version of what 115 is like stable 500 pounds of this stuff with the reality of what scientists have found found well I'm not but I'm much of a judge I mean from a Layman's point of view first of all remember 500 lb isn't a a room full this is a a

a an element heavier than lead so 500 lb isn't you know isn't as much as one would surmise and um uh all I know about it is it had to it had to be it wasn't Just5 I believe
(1:26:09) it was an isotope of 115 and it I remember it had to be kept under Neutron bombardment at rest because it would be inside this reactor in the disc it would be uh they'd actually bomb barded with a I think a proton wasn't it John that was sent down a a tuned tube uh of to uh uh to actually plug into the nucleus of the 115 which would then it up to 116 yeah make it 116 and then it would fishing off some particles some of which were antimatter and this antimatter would be reacted with matter and uh then the heat
(1:26:49) from that reaction would be converted to electricity and this is how the disc was powered so that's the B that's the basic story of 115 and in in uh even back then in Van noon's scientific encyclopedia I think it was the U the lab for heavy ion research or something like that at darot Germany had done some research and and they were sneaking up on 115 but hadn't created and and since then uh they yes they have created some 115 in a lab but if you if you actually EX examine how they do some of these experiments I mean they'll
(1:27:25) bombard this and bombard that and move particles with a significant percentage of speed of light and then use this filter or that filter and and and so it had to exist and then exist for x amount of seconds or fractions of seconds and then it decays so no one had enough of it a quantity of it that they could actually study it and do anything with it even though they have not only found that it it does exist it's not just a theory that there there is an island of stability there but they what they found is that it uh it decays rapidly but
(1:28:00) again the 115 Bob worked with wasn't just 115 like hydrogen is hydrogen it was an isotope and there were special properties involved with it including how you had to keep it when it when it wasn't in action I remember uh during that tumultuous period when Bob thought maybe his life was in danger going to his house one night and he had the 115 in in that lead casing sort of uh with a bullseye on it in front of his uh particle accelerator right so the what was he doing there I guess the threat was that he
(1:28:34) would uh accelerate particles down and plug in a proton into the into the uh one of the uh I don't know if he would have been able to achieve the speed or the power to do that but I doubt that somebody at the ofi would know whether he had that capability or not then I guess it was a threat that caus an anim matter reaction explosion meaning if they were going to take him out he was going to take them out everybody was going at the same time right John uh you you buy the stuff the story on 115 based on what you saw with that cloud chamber
(1:29:04) experiment yeah and uh the fact is the um uh the 115 uh was stable there is a island of stability up there but 116 is not and what they were doing is bumping the 115 up to 116 by uh injecting protons into it and what it would do is when it got to 116 it would immediately Decay and uh and what would happen is during the Decay it would throw off antimatter which was mixed with matter to create heat to create power for the U uh uh for the ship and the other was they could access the gravity a wve uh and the gravity a wve they used to uh access and
(1:29:45) ampli amplify it to pull space towards them to go hundreds of light leers you know in a very short second but um naturally occurring element with 15 cannot uh be found uh anywhere near us it can only be found in a solar system much larger is the way Bob explained it uh the the two main factors which determine the residual matter that remain after the creation uh of a solar system is the amount of electromagnetic energy and the amount of mass present at the time of the creation of that solar system a much larger solar system than
(1:30:19) the one Earth is in would have to have been created to Element 115 occurring as a natural element so no there's no possibility that uh uh it's here or it could be mind here which some people have said uh and there's no possibility that they could actually make it it would take years and years and years of of uh pumping uh protons and years of electromagnetic energy to to make the element 115 that that Bob had there there's a there's a story that of something that happened that hasn't
(1:30:50) really been told that you guys have not discussed in public but at one point this uh piece that that Bob had was stolen wasn't it there was three and two were two were stolen bu me out on this Jean and then uh and then one we have no comment on Jean the the who who stole it who stole the S the the piece you know I just have a vague memory of that I don't remember who did steal that John you know I remember trying to cut a deal to recover it and U actually Bob Bigalow was actually involved in that but I

(1:31:27) don't want to I I don't remember uh I don't don't remember who the guy was that took it or how he got access to it by the way with all that stuff John rattled off there with gravity a waves and blah blah blah blah blah we before you take callers from the public we know that earth scientists do not agree that gravity is a wave and we know that there should be so much waste heat from an Anor reaction and a little reaction inside of a flying disc that everything would melt and and and we understand that I mean we're not we're
(1:31:59) not the scientists and and we can't answer those questions is where did all the waste heat go and and the arguments about gravity being a wave just for the record okay well I remember that there was uh that uh one of the pieces was stolen and I thought it was like a neighbor a friend or a hanger on who was uh at the house and was interested in all the UFO stuff who took it and somehow you got it back but uh and I just don't remember his name or how that came about because I I you know I remember Bob was real upset that it
(1:32:28) happened and we had to try and cut a deal to get it back and go meet with a guy and we were setting a meeting out at the the Old Las Vegas speedway not the new one the old one over on Northeast part of town there and all of that and and uh but and I don't want to start I don't remember the names and and how it happened so um what happened to the piece I mean you know uh you know what happened to it can you can you say how much can you say say well you know it was you know he buried it at a place where it be hard for anybody to get it
(1:33:01) it would be hard to to get and uh and but it would be secure at that at that location for a long time and would be obvious if it if it's uh if its containment was ever jeopardized so basically you know uh it's known it's known where that uh that that piece is yeah yeah uh speaking of elements it's not it's not like I could drive there and go pick it up or I would right uh speaking of strange elements the element ponum surfaces later much later in the Bob Lazar story uh of course after this
(1:33:34) UFO stuff Bob tries to leave all of it behind doesn't want to talk about it anymore starts up a scientific supply business online United nuclear and and sells all kinds of weird stuff to to schools and labs and one of the things that he sold was something called ponum and it surfaced in uh major news story year or so so ago two years ago when a Russian spy was killed um presumably through the use of polonium and news organizations start looking around to see where could somebody get polonium and whose name comes up Bob laar ladies
(1:34:09) and gentlemen hey how how'd that work out well you know he always had things like that around I remember him talking about polonium and in fact he had ordered some polonium and burum from a a scientific Supply place a long time ago and uh a guy from the nuclear Regulatory Commission came by Bob's house and wanted to know why he wanted ponum and Brilliant because those are actuators like like I know what I'm talking about here they're actuators in in the nuclear explosion in an atomic bomb ponum and
(1:34:39) buril are actuators of some sort so when he he ordered some and tried to buy some back then the U NRC S A guy by his house who really knew what he was talking about and Bob couldn't talk his way out of it because the guy said well well for what you need you can use these other things you don't need pomum and brillium because Bob had a pseudo purpose other than whatever he wanted it for and so then when he opened up his own scientific supply place he found a supplier of it but we're talking about
(1:35:05) you know uh it's just so they can use it to detect it with Geer counters I mean you could fit the amount he's selling would fit on the head of a pin so it's not a quantity of it let's talk about the broad Strokes here we got a couple of minutes left before we open up the phone lines did you uh first you John and then e jeene did you have any idea at the time that this was going to become this big I mean the area 51 story is sort of a phenomenon it's known all over the world they you know books and
(1:35:34) movies and things of that sort and t-shirts and ashtrays and trinkets and posters and um you know it's been featured on all kinds of TV shows and in all kinds of articles in the UFO field and Beyond did you have any idea how big it would get back then well first of all you said a couple couple months after he did the uh the thing in silhouette I think it was the week after because we did that on the record and uh and you said the phone was ringing off the hook and it was the next day that you had Bob uh do the silhouette interview and then
(1:36:05) the day after that that you came up here with Bob's toow and interviewed Bob to uh to to find out what his credibility was but the answer to what I thought

uh I honestly believe that after he did that inter interview and silhouette that the story would break worldwide and everybody would know that we had flying saucers and Aliens were visiting us and everything I honestly believe that I did too George I I I I thought we were seeing a a change in the world in fact I would tell Bob before it ever went public I'd I'd say boy you know this
(1:36:41) would make a great screenplay and um in fact right after he got caught uh I was going to put the material together uh to write a book and he knew I had done some screenwriting in the past and gone to screenwriting lectures and courses and things like that and he said don't don't write a book why don't you write a screenplay and like you said I wrote the screenplay and of course that movie's all all almost been made four or five times now but all always falls through for whatever through the millions of
(1:37:12) normal Hollywood reasons and uh but yes I did think uh this in fact I was talking to John today when Bob was in the program and when he started telling us some things and when it looked when when he started hinting around about taking us out to see the dis test uh he'd tell me about being with his partner and I'd say well what's his name and he goes I don't know and I'd say well don't they have those name tags on just like you have that you pick up when you go to work and he said yeah and I said well if I were you I'd
(1:37:43) start noticing some people's names just in case things go bad and because Bob's got a bad memory anyway and and he would work there and be so absorbed in what he was working on uh you know he'd see a number of people with name badges on and wouldn't even notice what their names were and uh so yeah I I I convinced him to start looking at people's names because I did think this would be a worldwide story and and it would certainly be helpful if you could locate any these other people to corroborate
(1:38:12) what Bob was saying I guess uh you didn't weren't thinking about the marketing potential immediately I mean you thought about a screenplay but good gosh this thing is a cottage IND it's gone in so many different directions and and all over the world in fact John and I just said today that there's nobody on this planet that has made less money from ethology than me and John le everybody in the world has sold videos and books and everything in the world we we haven't made us that and you were
(1:38:38) there in the beginning right right well H how has it changed your lives um you know John you pretty much believe that this stuff was possible and so there was no fundamental shift in your belief system but it's had to have had an a an effect on your life personally economically yeah it really was and uh you know at that time I was working for American trans a and of course uh everybody or you know most of the people know that in July of uh 89 which was a month or two or couple months after this happened they called me in and they said
(1:39:13) John you don't really believe this stuff do you I said well as a matter of fact I do and they said well you know we can't have a captain flying in L 1011 with passengers believes in flying saucers and uh and that was it for me uh they fired me and uh it was probably a good thing that happened because I went to work uh for the cargo airlines there in Detroit and had a lot of fun met a great bunch of guys and and really had a career kind of change instead of flying you know passengers and have to worry
(1:39:44) about them I was flying cargo uh boxes and you know it's all night flying and it was it was just worked out great for me because I I'd rather fly at night and sleep all day long and Jean for you um you you mentioned that this isn't the kind of thing that you cashed in on in any way but it has had to have a profound effect on how you see the world around you hasn't it it did I actually started reading everything I get my hands on uh uh you know again with me it's the basic of qu questions of man I
(1:40:14) you know yes uh gravity propulsion and uh antimatter uh reactors and that's interesting thing to a degree but you know who are we where do we come from where are we going to life after death God you know the the basic questions of man are what I'm interested in and and you know I I think if anything you know you know with knowledge comes unhappiness and knowing where we stand on the interstellar food chain and not necessarily believing anymore that you know you know what I mean no knowing where you stand on the on the
(1:40:53) interstellar food chain uh and um you know I'm pretty much backed down for I was born and raised a Christian and went to a Lutheran grade school and uh you know I'm all the way down to Life as a series of chemical reactions and and of of course uh the one thing that I think I gained out of it is that I I truly believe uh

well I I don't believe uh well I I don't believe you know uh creation you know as opposed to Evolution I don't believe in straight line Evolution either I believe that and
(1:41:29) this has gotten around a long way since I grappled with this in the in the late 80s but I believe that man is a product of externally corrected Evolution which is part of the things bobin read those reports out there in other words that man's straight line Evolution was intervened by a non deity Catalyst and so no I don't think that when the dinosaur were here we were some little rodent hiding in the bushes and we ended up being the human beings we are I think our Evolution has been intervened by at
(1:42:02) least you know who knows how many times but but certainly by someone from elsewhere and I think I think euphology I think UFOs and aliens uh which may look like us or may not look like us or the basis for many of the uh God lord and Angel story from the Old Testament and and if you read Zechariah sit's Earth Chronicles and uh and look at the the Samaran writings and and uh all of that information I think you you start to get a handle on on how all of the religions and things that really govern this planet and in some
(1:42:41) instances ruined this planet uh where they came from and and how things got to be the way they are so I guess that's a plus I don't know um John anything to elaborate on that well I got a little bit farther than that uh you know I really believe that uh uh the entire solar system is inhabited all the planets are inhabited uh including the Moon Venus Jupiter they say that you know four of the planets are gas giants the only gas giant we have uh uh in this solar system is NASA uh and his son U Jim oer but uh NASA is the only gas giant
(1:43:23) what that did you say NASA is the only gas giant yeah NASA would be the only gas giant fellas it's been interesting we've still got some time to go we're going to be opening up the phone lines with our listener questions and I've got a few more of my own and we might still hear from Bob I don't know stick around everyone for more Coast to Coast amm I'm George knap welcome back everyone my guest John leer Jean Huff talking about the uh Origins of the Bob Lazar story area 511 flying saucers all of that I'm going to
(1:43:55) go to the phone lines in just a second I do want to touch on one other thing uh Jean you were talking about how how this has profoundly affected your view of life and universe and where we came from there was something else that Bob Lazar said he read in some of the documents out at uh at Groom Lake uh that is very disturbing we didn't touch on it before but it was and it was tough to get him get out of him as I recall and I'm talking about this reference to a harvesting of souls do you remember what
(1:44:23) that was about I don't think Bob read anything about a harvesting of souls they he read that man was the product of externally corrected Evolution and that man as a species had been genetically altered 65 times and uh of course we we extrapolated that out and said now how do you genetically alter a species certainly uh breeding wouldn't do it especially historically when transportation and communication weren't what they are now so uh we actually concluded that airborne and waterbor viruses especially retroviruses just
(1:44:57) like AIDS is a retrovirus that goes in and destroys your immune system if someone if an advanced intelligence could U you know do genetic alterations and actually uh send airborne and waterborne retrov viruses out to retrofit anything that has that water and a as a common denominator could then be genetically altered John do you recall Bob reading I mean I know there's been a lot of info uh on the harvesting of souls but did you recall Bob reading that at S4 I don't no what he read was uh that the aliens referred to us as
(1:45:31) containers right and uh I was trying to get him toh say well I think what we contain is souls he says no it didn't say that he said it could be uh you know the right genetic information to be altered or whatever just let me say here that since Bob probably isn't going to call in I'd like to tell uh our listening audience what I think that he would have said if he'd come on okay he would have said U I don't know I don't remember I don't care I don't recall and any question that starts with well John
(1:46:02) leer says Bob would have said everybody knows John Lear is a nutball John L is crazy um but yeah on that note I mean we have we all know each other here in Las Vegas and we have talked about many things that I don't know if they're able to be understood out of context to someone who doesn't know anything about the subject and happens to be listening so uh we may have to come back another time and answer a lot more questions because the things we've said beg more questions and I'd also

like to say that
(1:46:34) Bob really did was regretful that he you know he was supposed to try and call in but he was in transit over a 2,000 mile trip hauling three horses and three dogs and three cats and furniture and a four vehicle Caravan and uh it's not like this was you know some ploy to get people to listen that Bob Lazar might call in I'm I'm certain we can get him to join us another night when he's not in the middle of a cross country move oh well put then we're going to go to the phones our International line Greg in Ontario
(1:47:05) hi Greg how you doing pretty good how are you okay what's on your mind um first off I I just wanted to congratulate your your guests on uh having the spine to express these kind of views especially for people with a professional background like a pilot uh some people tend not to take these kind of things seriously um what I wanted to ask though was if you gentlemen believe that faster than light travel is possible something along the lines of How It's depicted in Star Trek for example no doubt about it how is it
(1:47:37) depicted in Star Trek well in Star Trek it's depicted as just a an engineering exercise and uh we don't have the engineering expertise yet well yeah I'd say we do believe that that what Bob Lazar learned is that distorting space and time rather than flying at a significant percentage of the speed of the light in a straight line in a linear mode they actually distort the space and time that you're that between you and your destination uh similar I guess to creating an artificial Wormhole would
(1:48:11) that be a good radio demonstration I don't know but yes that you can distort space and time and ultimately you did travel faster than the speed of light although you never flew faster than the speed of light in a straight line John you want to tackle that us yeah it does John you want to tackle that as well well basically um we think as um as outer space space is is a nothing that is just a cold thing nothing's there actually U uh one cubic meter of space contains one hydrogen atom uh it's actually a fabric you could
(1:48:47) take this and push it and pull it and distort it what they do do with the gravity amplifiers is to pull that space towards them wrap it around the craft turn the gravity generator off and then you're instantaneously hundreds and thousands of miles uh away from where you you pulled that space you unite you unite or coales or join with that particular uh piece of space and what they can do is uh recycle that generator every 12 milliseconds so if you can travel hundreds of th000 miles every 12 milliseconds uh and you you know you
(1:49:24) multiply that by how many milliseconds are in how many 12 milliseconds are in a second uh then times a minute then times a day and a year you can go a pretty long distance in a pretty short time by the way earth scientists know that they know that gravity distorts space and time that's how we that you know the the old experiment they did where you could see see stars behind the Sun during an eclipse that's a famous experiment so they you know we know that that gravity distorts space and time what we don't
(1:49:53) know is how you can generate an artificial gravitational field and this is the info that the aliens brought how you can when you can do that you can distort space and time and to a much greater degree than that you know caused by a star planet Greg thanks for that call we need to take a break right now we'll come back with more of your calls for John le and Jean Huff right after this stay with us I'm George knap on Coast to Coast amm welcome back everyone I'm George knap this is coast to coast am. talking with Jean Huff and John Lear
(1:50:22) about Area 51 Bob Lazar flying saucers you know the story we're going to go to the phone lines east of the Rockies Davis in Kentucky good morning Davis good morning gentlemen and bless you all I was thinking back it it's been years ago but art had I thought Bob on and they were talking about the 118 element and somebody called in and said that uh there was a a Microsoft encyclopedia that you can buy called Encarta or something like that that in the physics section 1976 or something there was there was an article in there about that
(1:51:06) uh and apparently it had been discovered on a meteorite that came in you know naturally and uh some other elements had been discovered uh I I I don't have the article you know don't have that kind of money to buy that but anyway uh this guy described that U they discovered up through 12 through 124 naturally on Earth someplace in Africa through spectral you know technology I don't know um leave it out there with you I've never heard that and I would think that would be some of the biggest news in the scientific Community I've
(1:51:49) never heard a whisper of it of you John or George no that that's

impossible not on Earth it has to be a s well he said it came in on a meteor right well that's interesting maybe we'll have to look for that uh that article and see see what the origin of the story is to be to be stable and have a handful of it in the meteorite I I have my doubts that that's probably accurate but maybe it's a maybe there's a piece of Truth there and it's just a little mixed up thanks Davis appreciate it west of the Rockies Dale
(1:52:18) from here in Las Vegas hi Dale hi uh I was just wondering I've read the stories about the Flying Saucer that Bob Lazar observed and I'm wondering where are they now and if the government has them why wouldn't they use them because I can imagine all kinds of good uses for them where do you think they are John do you think they're at the new Area 51 you were talking about they're probably at the new Area 51 I don't think they'd use them they're very careful uh with uh you know what they do with them I don't
(1:52:49) think that uh we use use them for like going anywhere or transporting I think they're still studying them and if they can glean any technology from it they're going to use it on a craft or in any any any capacity that would look normal to any you know earthwing if if if they don't fly the craft themselves if they learn something from the craft that can be used in another craft of a more acceptable shape so you could operate it in broad daylight without uh being under SU Su that that is probably what they do
(1:53:23) who knows they might be using them for something they haven't told us about I suppose if you used them as for example in a in a war in a theater of war the technology that Bob worked on with with those flying saucers is certainly far Advanced we have our own anagraph technology which we developed between 1953 and 1955 my father uh was a major contractor on that development and uh through his company leer Incorporated so you know we had Annie grab a form of it in 1955 that's why you never see anything in the news on how we're
(1:53:57) progressing on Annie grab we already have it but it's a secret I guess the the danger would be if you use it like in a war and somebody gets get shot down then you got some explaining to do thanks Dale thanks for the call First Time caller Robert in Arizona hi Robert hey Mr nap and your guest good evening to you thank you for taking my call sure thing in 2004 for when Bob Bazar was on Coast to Coast radio with artville the night he talked about Element 115 he mentioned at the last of the hour of the interview and before they went on the
(1:54:34) news break and nobody ever did a followup on this but he said that when Elm 1115 was before it was put U fired up in the reactor he said that a gas was introduced into the reactor and the next hour when calls were taken nobody ever asked what that gas was and now well the gas was just the gas was just the matter that the antimatter interacts with there's it's put in a tune tube the the antimatter like I know this I'm just saying this is as Bob has told me in the past the after the an after the 115 is
(1:55:11) bombarded this is all a closed system the 115's bombarded turns to 116 it decays releases antimatter the antimatter travels down a tuned tube meaning I guess what's a tune tube whatever Force magnetism electromagnetic so it doesn't explode because the tube itself is made out of matter okay so it travels down a tuned tube and it it interacts the matter that it interacts with to cause the antimatter matter explosion from which the heat is turned to electricity that matter is gas that's what the gas is so I don't think it
(1:55:46) probably I don't know what gas that was it could be hydrogen it could be anything it's just that's the matter Target that the anim matter explodes with does that answer your question Robert uh Robert's gone we're GNA move on our Wild Card line Roland in Boise Idaho how you doing Roland hello Roland are you there I'm here George what's on your mind well thanks for taking my call sure uh and I've I've um proud to say that I've uh read transcripts of all your interviews with Bob Lazar over the years and uh so
(1:56:20) I've kind of started this back in the late 70s and uh basically I'm calling to defend his position lazar's physician that he's a Tech head guy not a you know not a not a politician so uh he knows his Tech uh one of the things that I wanted to bring up was that if there's Standalone uh energy production like Bob indicates with his with the technology uh what would that do to the world of economics today when you look at Exxon Mobile who's uh produced record profits more than any other company and
(1:56:59) any other industry ever over the past you know uh year or so uh these people would not want a standalone energy producer that can power cars uh electric for homes and and factories uh they've got a good thing going and they're not going

to allow the status quo to be disrupted so that's why I'm saying that we when you see some of the the the movies where you know people's identities are all messed up and credit cards are deleted and things like that uh these people have the power to do that and I think that's exactly what
(1:57:35) they've done to Bob lasar but uh would either John or uh uh Mr uh Huff care to expound on how uh this Standalone energy might affect our world of economics today John you want to tackle that one yeah of course uh it would uh it would everything would collapse if we were able to use all that it's the same thing with oil oil is abiogenic which means it's self produced it's not made of dead dinosaurs there's plenty of oil all over the place we have the greatest reserves of oil under the United States it's just
(1:58:12) they want us uh to think that uh you know that that we've peaked oil and that we're running out and and that we've got to be careful that's all baloney we've got all the oil that we we need George I would just say I think this gentleman's right I mean the essence of that is where there where there are people uh there are problems there's greed and and other concerns and so yes something fantastic that could be a Wonder for all of us to grasp and enjoying our lives could very well be kept from us because
(1:58:42) of greed is tragic as that is so I think he's absolutely right well if it's real if the technology exists and we've got it you know that that might be a very plausible reason for the cover up is just not to upset the economic apple cart thanks for the call Roland wildcard to line bill in Texas hi Bill hey George how you doing okay wonderful show tonight thanks you have a comment and a question for your guest uh earlier I was listening to well several years ago I guess they were talking about when
(1:59:13) Jackie gleon went to Homestead Air Force base with uh President Nixon at the time to view uh dead a bodies that's the story and anyway just as a curiosity feature I was stationed there about that time of course I didn't see any dead alien bodies but there were some uh there was one story of uh the southern Miami area in Homestead Air Force Base being uh hovered over by uh UFOs two particular nights and they sent you know uh aircraft up to investigate and I don't know what became of that but uh anyway I did get on Google and Google
(1:59:48) that and and checked out cuz I was unaware aware of uh Jackie Gleason going down there to check that out but it was I found that very interesting and my question is what do your guest feel as to 2012 what do you think uh what do they think might happen if anything at all and I'll hang up and listen to the responses thank you very much thanks Bill let me take that it's sure baloney there is no Planet X there is no neiro and if there is it's not going to cause any uh any problem uh whoever is running
(2:00:17) the show here wants to keep us in a state of anxiety and worry and oh yeah the world's going to end but all that's baloney come go just like every other day that's been by the way if you read uh if you're referring you're referring to nibby Ru and the Anunnaki from Zechariah siten if uh you read Zechariah sit's new last book of that Earth Chronicle series end of days I got some bad news for people like me who were hoping that it would be close enough first of all if the if the gods of Eden
(2:00:54) of if you know they don't need to wait for Nibiru to get back here they could fly here if they just wanted to come here so they don't need to wait uh if that uh Planet exists in a in a in a comet uh 3600e orbit around our sun uh though the anunaki do not need to wait uh until it gets close so they could visit the Earth certainly if they had that type of Technology thousands of years ago they certainly have it now and secondly the way siten has that orbit figured is it's not going to be in the same proximity to the Earth as it was uh
(2:01:28) you know 2,000 years ago uh for till like the year 2900 so in 2012 if you're basing that on the Zachariah hit calendar absolutely nothing is going to happen you know I remember uh vaguely something about a project Looking Glass that Bob had talked about and read something about it in these documents some sort of a a a a machine that where you could peek into the future see back in time could you see forward uh that one was just about seeing seeing back in time and I and he it it was just another there were other projects going on he
(2:02:03) was in Project Galileo that was the project or what it was called then with the back engineering of the disc there was another one with a gravity a beam weapon I think with a gravity lens if I remember right called project sidekick and uh then the other one was Project looking at glass which was a method of seeing back in time and again we think of seeing back time in time as going back and seeing who

shot JFK right but seeing back in time for scientists just being able to see back two or three seconds could make a big difference so
(2:02:35) all right uh stay with us more of your questions for Jee huff and John leer on Coast to Coast AM I'm George knp stick around everyone hey welcome back everyone we're having a conversation with Jee huff and John leer about the events of 20 years ago how this whole Area 51 story got started uh getting some interesting uh personal insight into what it was like to live through those times and some details on things that happened back then uh that maybe you hadn't heard about before even though the general story is very
(2:03:03) familiar we'll come back and take as many of your calls as we can fit in uh in the home stretch of this show stay with us from more Coast to Coast amm welcome back I'm George knap this is Coast to Coast AM we are in the home stretch with our guests Jean Huff and John leer we get as many questions in as we can we're going to Allentown Pennsylvania and Ed is standing by on our Wild Card line hi Ed hi there George good morning good morning to you what's on your mind uh first of all uh I would like to thank the three of you for all
(2:03:32) the work you've done and in this Fe in this topic you brought it to reality to this earth and you saved Bob lazar's life practically and um I think that should be the world should be indebted to all three of you in that sense and you a lot for it also George um a line of levity 20 years ago I was watching Joan Rivers on a tonight's show episode and she made a UFO joke that I thought was hysterically funny and I want to share it okay she said she said you'll never see a UFO land on the Jewish front lawn and the audience
(2:04:10) laughed and she said because they turn it over turn it over to see who manufactured it anyway um I have question it's compound um is element 115 like manufactured by any Corporation is it regulated by the government and I have another question also after that if I may okay Jean I'm ready uh his question is uh is element 115 manufactured by the government or anybody else I I think the answer probably is the you know that it's made in they tried to synthesize some of it in a lab yeah they're synthesizing it it happens in in labs in
(2:04:48) government Laboratories in Europe and the United States uh you know they all they get their funding from governments I'm not aware of any private Endeavors but they wouldn't necessarily call me and tell me they were working on it so I don't know if it's done privately or not I I don't think anyone created enough of it to be able to even study it so I I really don't have an answer yeah I agree it cannot be uh it cannot be uh made it naturally occurring element and that can only occur in large large large solar
(2:05:18) systems uh Jean wasn't there a time when some one of these Labs these heavy ion Labs that you referenced earlier they were contacting Bob for information about 115 even though you know he's a non-scientist and e phony and all that stuff in the view of a lot of people yeah some scientists from Germany they had about a 100 page formula literally a 100 pages of a physics formula all about5 and uh you know it it was it was gibberish to me you know I mean I you know I was I was lost I I I joked if I told Bob if I were him I'd put time Z
(2:05:54) equals z at the end of it that's how complex it was second I'm sorry go ahead and uh but anyway uh yeah there there are there are people there are people who firmly believe there's an island of stability and certainly with isotopes that there will be uh that that heavy stable elements do occur elsewhere uh it's just like John said before the amount of energy the cost to synthesize that would exhaust the planet I mean it'll never be synthesized in any quantity what was the second question is that caller still there
(2:06:29) guess not west of the Rockies Jeff in California hi Jeff calling from albian California and listening on kkoh 780 AM home of Ross Metro at Areno Nevada and uh John I'm curious as to how you came up with the infamous John Lear test and how much of that Bob Lazar was attributable to that and also what was your um opinion of art Bell's response to that in in regards to whether he would reveal that as a public official on the veracity of those issues brought up in that John leer test well actually it's just something I wrote up based on
(2:07:05) information I had what I'm going to have to do is write disclosure test 2.0 to bring it up to date with things I have learned since then what's the John le test John I don't even know that was a a SC Ure test that I gave to Arc Bell several years ago and it's all over the the net it's based on what I thought was going on and a lot of it was true but a lot of it uh was not and like I say I've got to relate I've got to write the disclosure 2.
(2:07:35) 0 which I haven't gotten around to yet all right well I look forward to

reading that then thanks for the call we're going to go to our first time caller line Thomas in Michigan good morning Thomas uh good morning gentlemen Jean you were um asking about um connection with God if you took a look at the book of Psalms and realize that it's a timeline that has been describing events at a rate of a chapter for year for the last 100 years I think you'd catch on take a look at Psalm 74 where it talks about Leviathan it was in that year that we
(2:08:06) get raised the Russian k129 diesel submarine which sank in ' 68 that thing is the Leviathan and you take a look at Psalm 68 the Chariots of God he's talking uh about vehicles coming back here to basically stop a war those were the year we sank that submarine we had missile disruptions throughout the entire uh United States as Russia because they were getting too close well sense to you and you're at peace with it then you're you're a lucky man okay well I think it would be very helpful because uh yeah the Psalms work
(2:08:42) as a timeline they explain everything that's going on we have 911 in there we have the 91 Gulf War in there World War two Holocaust the atomic bomb development in 1945 all the things that you're talking about are being explained to you right out of there I don't think Jean wants to argue with you uh the point being that you know you're uh you're good with it and uh he sees things differently but I thank you for the call anyway Thomas thank you wildcard line William in Florida hi William good morning
(2:09:14) gentlemen morning my question to uh all of you I don't know if it would have come better at the beginning of the show or maybe it's more appropriate at the end uh for years now as I've I've observed euphology and the fascination with flying saucers I always go back to what's referred to as the Original Flying Saucer sighting by Mr Kenneth Arnold uh around Mount reer Washington June 24th 1947 um Mr Arnold made a comment saying that um described a boomerang shaped object that skipped like a saucer but
(2:09:47) did not look like a saucer flying saucers from what I've seen have never been seen prior to him saying flying saucers and I know several of the gentlemen there are pilots as am I and you know that a flying saucer per se is a aerodynamically inferior design um if it was a uh a good design and it would work aerodynamically the space shuttle would probably be a flying saucer I'm very interested in your response to that and in your opinion is all this Flying Saucer stuff for like of a better term um could it be based on misinformation
(2:10:25) from the very beginning from 1947 well first what saying isn't true there are if you you take a look in in videos and um books and printed information about uh things objects in the sky in in Antiquity you know in centuries past there are there are saucer shaped objects in in in that people seen in the sky long before Kenneth har yeah I agree with that so so what the Paradigm you're setting up is not is not correct the other part of it is is aerodynamics even a factor in building if they're not flying through the wind with a winged
(2:11:05) aircraft I mean the the uh the I don't want to start a moon argument with John but the but the moon Rovers didn't look like a 747 either you know what I mean they weren't flying flying in air in in our atmosphere so thanks William I appreciate the call Mike in Indiana also on a wild card line good morning Mike morning guys and just to add to that previous caller with the dis shape uh take a look at a frisbee the round good play I got a question for you guys and I don't know if you're going to have an
(2:11:38) answer for it or not uh but you probably will who invented nano technology

Bob Lazar's Explosive 1991 Revelations: Inside Area 51's Secret Tech and UFO Claims - YouTube
https://www.youtube.com/watch?v=ZbDYpBchpjg

Transcript:
(00:01) the first part will deal with information with which I've had hands-on experience and personal instruction in other words not only did I read briefings and Not only was I taught the theories of these Technologies but they are demonstrated for me and I know they are true and accurate some of the points covered in this first section will be how vast distances of space are traveled by virtue of an intense gravitational field how this gravitational field is generated what the power source is and how it functions and general information about
(00:38) discs and the project at S4 the second part of this will deal with subjects

on which I've read supporting information yet for the most part I had no other way to corroborate the information or ascertain its accuracy when we get to part two it'll be obvious why proof of some of this information could not be conclusive some of the points covered in the second section will information about the beings that brought us this technology and how these beings have historically interacted with man I've been prudent in selecting what
(01:14) to expose here and I think that some of this information should not be made available to the general public this information is being conveyed to you as it was to me with the exception that in most cases I've simplified things for those of you with non-scientific and non-technological backgrounds so let's begin at the beginning of this first section I'm going to give you three short science lessons and once you've learned them you'll not only know more about Interstellar travel than almost anyone
(01:40) else in the world but you'll know the actual method another civilization is used to travel from another star system to the planet Earth now during the course of this I'm going to have to relate information that I've learned it us for the information that we're already aware of and when I say we I mean the general mainstream scientific community so it's not to waste too much time explaining estab scientific facts and theories when I say we know this or we know that please feel free to consult
(02:06) any qualified scientist Professor or science teacher to have them explain my statements to you one of the most predominantly asked questions is how is it possible to cross vast expanses of space without exceeding the speed of light or how can you travel in reasonable time and economy between points that are light years apart now keep in mind that the speed of light is 186 ,000 mes a second which translates into roughly 669 million miles an hour and a light year is a distance traveled in one year at the speed of
(02:42) light proximate centuri which is the star system nearest Stars would take four years to reach traveling at the speed of light so up until now when we've examined the requirements to travel these distances we've always had to consider the problems of traveling at a speed near the speed of life this poses problems with propulsion navigation fuel capacities and even when you consider the effects of acceleration on SpaceTime which include time dilation Mass increase Lan contraction and a whole host of other things it quickly
(03:14) becomes evident that this type of travel would require a level of technology that man has not yet achieved the truth of the matter is that traveling these distances does require a level of technology that man has not yet achieved but it has nothing to do with flying a linear mode near the beat of light we know that the shortest distance between two points is a straight line so in our universe we've always assume that the fastest way from point A to B was to travel in a straight line at the speed of light well the fact is that when
(03:44) you're dealing with SpaceTime and you enjoy the capability of generating an intense gravitational field the fastest way from point A to B is to distort or warp or bend the SpaceTime between point A and B bringing point A and B closer together the more intense the gravitational field the greater the Distortion of SpaceTime and the shorter the distance between points A and B most of us think of SpaceTime as the void or as nothing and remember it wasn't that long ago that man considered the air in our atmosphere to be nothing yet with
(04:13) time we've become aware of the elements and properties of the air and atmosphere well indeed SpaceTime is an entity and one of its properties is that it can be distorted or bent by a gravitational field we know that gravity bends or distorts space time and Light by virtue of the fact that we're able to see Star which we know should be blocked from our view by the sun referring to the graphic here the solid line denotes the position of a star that's located behind the sun and the dotted line shows its position
(04:44) as viewed from Earth this is made possible because the sun's gravitational field distorts the space time and light around the Sun allowing us to view Stars which should be hidden from view we know that gravity distorts Time by virtue of the fact that if we take two identical atomic clocks and keep one at sea level and take the other one up to a high altitude when we bring them both back together they reflect different times the difference in this passage of time is caused by the fact that a gravitational field weakens the further
(05:15) you get from the source so the atomic clock which was taken to the High Altitude was exposed to a less powerful gravitational field than the clock which we kept at sea level the effect of a gravitational field on SpaceTime is something that

we've been able to observe but not to experiment with this is due to our inability to generate a gravitational field and up until this point in time great Mass such as a star planet or moon was the only source of a discernable gravitational field that we're aware of so just as the
(05:44) gravitational field around great mass as a planet distorts space and time any gravitational field whether naturally occurring or generated distorts Space in Time in a similar manner now the great benefit of generating an intense gravitational field is not only can you turn it on but you can turn it off if we refer back to our original illustration of SpaceTime Distortion we can see that when we generate an intense gravitational field we can distort the space time and in turn the distance between the point where we are and the
(06:15) point where we want to be we can then position ourselves at the point where we want to be and then stop generating the gravitational field allowing space time to return to its natural form in this manner we can travel great distances with little linear movement and this is how space-time Distortion translates into reduced distance now back to our original question how is it possible to cross the vast expanses of space required for Interstellar travel without exceeding the speed of light this is accomplished by generating an
(06:48) intense gravitational field distorting SpaceTime and allowing you to cross many light years of space in little or no time and without traveling in a linear mode near the speed of light the next question is how do you generate gravitational field up until this point in time I've used the term generate to describe the capability of producing a gravitational field but since I'm not aware of any way of creating a gravitational field from nothing a more accurate term might be to access an amplify a gravitational field and this
(07:18) is what I mean when I use the term generate to understand how gravity is generated or accessed and Amplified you must first know what gravity is there are two main theories the wave theory which states that Gra gravity is a wave and the currently accepted theory of gravitons which are alleged subatomic particles that perform as as gravity which is total nonsense well gravity is a wave and there are two specific different types of gravity gravity a and gravity B gravity a works on a smaller micro scale while gravity B works on a
(07:51) larger macro scale we are familiar with gravity B it is the big gravity wave that holds the Earth as well as the rest of the planets in orbit around the Sun and holds the moon as well as man-made satellites and orbit around the Earth we are not familiar with gravity a it is the small gravity wave which is the major contributory force that holds together the mass that makes up all protons and neutrons gravity a is what is currently being labeled as the strong nuclear force in mainstream physics and gravity a is the wave that you need to
(08:22) access and amplify to enable you to cause SpaceTime Distortion for Interstellar travel to keep them straight just remember that gravity a works on an atomic scale and gravity B is a big gravity wave that works on a stellar or planetary level however don't mistake the size of these waves for their strength because gravity a is a much stronger Force than gravity B you can momentarily break the gravity B field of the earth simply by jumping in the air so this is not an intense gravitational field locating gravity a is no problem
(08:56) because it is found in the nucleus of every atom of all matter here on Earth and all matter anywhere else in our universe however accessing gravity a with the naturally occurring elements found on Earth is a big problem actually I'm not aware of any way of accessing the gravity a wave using any Earth elements whether naturally occurring or synthesized and here's why we've already learned that gravity a is the major force that holds together the mass that makes up protons and neutrons this means the gravity a wave
(09:28) we are trying to access is virtually inaccessible as it is located within matter or at least within the matter that we have here on Earth however the Earth is not representative of all matter within our universe the residual matter which remains after the creation of a solar system is totally dependent on the contributing factors which were present during the creation of the solar system this is true whether you believe that the origin of the universe was an evolutionary event or that a Supreme Being caused this event to happen the
(09:57) two main factors which determine what residual matter remains after the creation of a solar system are the amount of electromagnetic energy and the amount of mass present during the Solar System's creation our solar system has one star which is our sun but the majority of solar systems in our Milky Way galaxy are binary and multiple star systems in fact many single star systems have stars that

are so large that our sun would appear to be a dwarf by comparison keeping all this in mind it should be obvious that a large single St
(10:29) star system binary star system or multiple star system would have had more of the prerequisite mass and electromagnetic energy present during their Creations this makes it possible for these systems to possess Elements which are not native to the earth scientists have long theorized that there are potential combinations of protons and neutrons which should provide stable elements with atomic numbers higher than any which appear in our Periodic Chart though none of these heavy elements occur naturally on Earth
(10:58) 88 of the first 92 elements on the periodic chart occur naturally on Earth some heavier elements do occur in Trace Amounts but for the most part we synthesize these heavier elements in Laboratories generally speaking the stability of these synthesized heavy elements decreases as their atomic number increases but experiments the lab for heavy ion research in Germany have shown that this may only be true up to a certain point as the halflife for element 109 is longer than that of element 108 the point is that our observations
(11:28) and theories are accurate the fact is that heavier stable elements with higher atomic numbers which have more protons neutrons and electrons than any Earth elements do exist however up until this point in history there's been no physical evidence to prove this but now that proof is here the most important attribute of these heavier stable elements is that the gravity a wave is so abundant that it actually extends past the perimeter of the atom these heavier stable elements literally have their own gravity a field around them in
(11:58) addition to the gravity it B field that is native to all elements no naturally occurring atoms on earth have enough protons and neutrons for the cumula of gravity a wave to extend past the perimeter of the atom so you can access it even though the distance that the gravity a wave extends is infinitesimal it is accessible and it has amplitude wavelength and frequency just like any other wave in the electromagnetic spectrum once you can access the gravity a wave you can amplify it just like we amplify any other electromagnetic
(12:33) wave to demonstrate how a wave is Amplified we can use this oscilloscope and as you can see it graphically depicts the tone you hear as a wave as we amplify the tone you can see that the size or the amplitude of the wave increases giving us a more powerful version of the same identical wave and thus the tone sounds louder in like manner the gravity a wve is Amplified and then focused on the desired destination to cause the space time Distortion required for space travel this Amplified gravity a-wave is so powerful that the only naturally
(13:15) occurring source of gravity that cause space time to distort this much would be a black hole this brings us back to our original question how do you generate a gravitational field you must have access to an element which is heavy enough for for the gravity Ave to extend past the perimeter of the atom then you can access and amplify it for space-time Distortion to complete our three science lessons the last question is what is the power source for this type of travel well for those of you with limited knowledge about power sources
(13:49) I'm sure you can probably imagine the enormous amount of power required to cause A Spacetime Distortion for this type of travel after all we're amplifying a wave that barely extends past the perimeter of an atom until it's large enough to distort vast amounts of space time for those of you with extensive knowledge about power sources I'm sure it's probably even more puzzling as to how it's possible to have a compact lightweight onboard power source that can provide this much power for everyone to understand that I need
(14:18) to further explain a couple of things we briefly touched upon in the last question if you remember I said that for the most part we synthesize or create heavier elements and accelerators and their stability decreases as their atomic number increases so what does this all mean well we synthesize these heavy or unstable elements by using more stable elements as Targets in a particle accelerator we then bombard the target element with various Atomic and subatomic particles at this point transmutation occurs making the target
(14:49) element a different heavier element this element now has a higher atomic number as the atomic number simply indicates the number of protons in the nucleus of the atom so this is what I mean mean when I say their atomic number increases what does their stability decreases mean the length of time which an element exists before it decays determines its stability atoms of some elements Decay faster than atoms of other elements So the faster an element decays the more unstable that element is considered to be when an atom decays it

(15:21) releases or radiates subatomic particles and energy which is the radiation that a Geer counter detects as you can see this Geer counter is detecting the radiation from this uranium which literally means that the Geer counter is sensing the subatomic particles which are being released or radiated as the uranium decays those elements in which nuclear radiation can be consistently detected are radioactive elements these heavy Elements which we synthesize in particle accelerators are of the radioactive variety and they Decay very rapidly
(15:55) since we're only able to make a few atoms of these elements and because they Decay so rap rapidly we're not able to observe much about them this is what I mean when I say their stability decreases however there are elements with higher atomic numbers which are stable even though they don't occur naturally on Earth and we can synthesize them in particle accelerators these are the elements in the 114 115 range which don't appear on a periodic chart Beyond Element 115 the elements become unstable again and in
(16:26) fact element 116 decays in fractions of a second this finally brings us to the power source the power source is a reactor which uses this element 115 as its fuel in this reactor Element 115 is used as a Target and is bombarded with protons in a small particle accelerator when a proton plugs into the nucleus of an atom of 115 it increases its atomic number and becomes an atom of element 116 which remember decays instantly what element 116 releases as it decays or what it radiates is Annie matter what is Annie matter Annie matter is the exact
(17:06) counterpart of matter which has a charge in a spin that is in the opposite of all matter when combined with any matter in our universe any matter reacts and completely converts to energy and remember the rapid conversion of matter to energy is what we generally call an explosion to demonstrate the explosive power of any matter let's pick a random area where an atomic bomb might explode oh let's say Iraq and for demonstration purposes let's say an atomic bomb would explode for instance in uh oh Baghdad well if one of our older atomic
(17:40) bombs exploded in Baghdad the area of total devastation which is indicated by the Red Dot on the map would be approximately 2 miles this would be caused by a fishing reaction in which less than 1% of the nuclear material is converted to energy most of you are familiar with the bombs that were dropped on Japan in World War to this is the same bomb that was dropped on Nagasaki August 9th 1945 about the same time Dr Edward Teller who's known as the father of the hydrogen bomb figured out that a nuclear fusion bomb was possible Fusion would
(18:14) release even more energy and cause an even bigger explosion from the same amount of nuclear material much to Dr teller's dismay the Japanese surrendered we never dropped the hydrogen bomb and Dr Teller has been in a bad mood ever since but if a hydrogen bomb containing the same amount of nuclear material as the Nagasaki bomb were to explode in Baghdad the area of total devastation would be approximately 20 mil this would be caused by a nuclear fusion reaction which again less than 1% of the nuclear material actually converts to energy or
(18:47) explodes the other 99% of the nuclear material on this type of bomb is dispersed but is not involved in the actual nuclear fusion reaction now if a bomb was made with the same amount of nuclear material as the Nagasaki bomb and that material was anti when that bomb exploded in Baghdad the area of total devastation would include parts of Africa Europe and Asia with the exact area of total devastation being very difficult to calculate this would be caused by a total Annihilation reaction which is the complete conversion of matter to energy
(19:22) 100% of the nuclear material on this bomb would explode or convert to energy we currently have no practical way to harness any matter into a bomb and generally speaking we can only isolate any matter in a particle accelerator and store it for a short time this demonstrates the enormous amount of Power released when you totally convert matter to energy which is what happens when any matter and matter are combined so back to our power source inside the reactor Element 115 is bombarded with a proton which plugs into
(19:52) the nucleus of the 115 atom and becomes element 116 which immediately decays and releases or radiates small amounts of antimatter the antimatter is released in a vacuum into a tuned tube which keeps it from reacting with the matter that surrounds it it is then directed towards a gaseous matter Target at the end of the tube the matter and anim matter Collide and annihilate totally converting to energy the heat from this reaction is converted into electrical energy and a near 100% efficient thermoelectric generator this is a
(20:21) device that converts heat directly into electrical energy many of our satellites and space probes use thermoelectric generators but they're efficient is

very very low all these actions and reactions inside of the reactor are orchestrated perfectly like a tiny little ballet and in this manner the reactor provides an enormous amount of power so back to our original question what is the power source that provides the power required for this type of travel the power source is a reactor which uses Element 115 as a
(20:52) fuel and uses a total Annihilation reaction to provide the heat which it converts to energy making it a compact lightweight efficient onboard power source I've got a couple quick comments about Element 115 for those of you who are interested by virtue of the way it's used in the reactor it depletes very slowly and only 223 G of 115 which is just under half a pound can be utilized for a period of 20 to 30 years L 115's melting point is 1740 de C I need to State here that even though I had hands-on experience with element 115 I
(21:25) didn't melt any of it down and I didn't use any of it for 20 30 years to see if it depleted so we've learned how SpaceTime is distorted by a gravitational field we've learned how that gravitational field is generated and we've also learned where you get the power to accomplish all of this now it's time to link all we've learned in our science lessons to the vehicle that utilizes all this technology and a few years ago I never thought I'd hear myself say this but that vehicle is a disc which is
(21:54) generally referred to as a flying saucer I had at least partial views of nine different discs out at area S4 but the one I'm going to describe to you now is the one in which I not only saw two of the three interior levels but I also saw it fully functional in flight and no unfortunately I didn't get to go for a ride in it this particular disc appeared to be in excellent condition and because of its Sleek appearance I nicknamed it the sport model the sport model is about 16 ft tall and 40 ft in diameter the
(22:26) exterior skin of the disc is metal which is the color of polished stainless steel the sport model sits on its belly when it's not energized as you can see the hatch is located on the upper half of the disc with just the bottom portion of the door wrapping around the center lip of the disc the interior level of the disc is divided into three levels the lower level is where the three gravity amplifiers and amplifier guides are located these are the things used to amplify and focus the gravity a wave that we learned about in our science
(22:56) lessons the reactor is located directly above the three gravity amplifiers on the center level and is fact centered between them the reactor is similar to this halfs scale model the element 115 is machined into triangles like this and is then inserted into the reactor this piece of element 115 is the source of the gravity a wave as well as the Target that is bombarded with protons to release the antimatter both of which we learned about in our science lessons the center level of this disc also houses the control console H and
(23:29) seats both of which were too small and too low to the floor to be functional for adult human beings the walls of the center level are all divided into archways at one point in time when the disc was energized one of the archways became transparent and you could see the area outside of it just as if the archway was a window after the panel had been transparent for a while a form of writing which was unlike any alphabetic scientific or mathematical symbols I've ever seen began to appear on the transparent Archway and I was never informed as to
(23:58) how all of this was a achieved not that any of that would have required alien technology I was never given access to the upper level of the disc so I can't Enlighten you as to what the port hole like areas are other than I can assure you that they're not Port holes now before I go any further about the disc I'm going to show you where and under what circumstances I saw it tested my job in this program was to be part of a back engineering team back engineering is the act of taking a finished product
(24:26) and tearing it apart to find out what makes it tick the goal in this program was to see if the technology of the disc could be duplicated with her materials when I went to work I was flown from McCarron airport in Las Vegas to Area 51 which is a highly secure government base on the Nevada Test Site Area 51 is located about 125 miles north of Las Vegas near the groom mountains in the groom dry lake bed from Area 51 I was bus to an even more highly secure facility located about 15 Mi south of Area 51 called S4 s S4 is situated at
(24:59) the base of the papoose mountains by the papoose dry lake bed the airspace around S4 is restricted and if any unwelcome aircraft Strays into the outer sector they radio the pilot and instruct him or her to leave if that pilot continues and Strays into the middle sector Jets will be scrambled to escort the intruding

aircraft out if for any reason whatsoever that aircraft penetrates into the inside sector before Jets can be airborne ground to air missiles will neutralize the Intruder the more moral of this story is
(25:29) don't try and fly into S4 the S4 installation is built into the mountain and the nine hanger doors are angled at about 60 these doors are covered with a sand textured coating to blend in with the side of the mountain and the desert floor as you can see in this representation my ID badge had a white background with one light blue and one dark blue diagonal stripe in the upper left hand corner at the bottom of the badge there were letters and numbers designating various areas including S4 on my badge there was a star punch
(26:00) through S4 the back of the ID badge was dark blue with a vertical mag stripe running down one side The Hanger that housed the sport model was like a typical airplane hanger with the exception of the angled doors that I mentioned before the hanger was equipped with typical tools and extensive electronic equipment it also had a machine with an x-ray emblem on it and an overhead crane rated at 2,000 lb equipment in this hanger was marked with a black number 41 with a white circle around it it was outside of this hanger that I saw
(26:32) the sport model tested now when the disc travels near another source of gravity such as a planet or Moon it doesn't use the same mode of travel that we learned about in our science lessons when a disc is near another source of gravity like Earth the gravity a wave which propagates outward from the disc is Phase shifted into the gravity B wave which propagates outward from the earth and this creates lift the gravity amplifiers of the disc can be focused independently and they are pulsed and do not stay on continuously when all three
(27:02) of these amplifiers have been used for travel they're in the Delta configuration and when only one is being used for travel it's in the Omron configuration as the intensity of the gravitational field around the disc increases the Distortion of space time around the disc also increases and if you could see the SpaceTime Distortion this is how it would look as you can see as the output of the gravitational field from the amplifiers becomes more intense the form of space time around the disc not only bends
(27:30) upward but at maximum Distortion actually folds over into almost a heart shape around the top of the disc now remember this SpaceTime Distortion is taking place 360 around the disc so if you were looking at the disc from the top the SpaceTime Distortion would be in the shape of a donut when the gravitational field around the disc is so intense that the space-time Distortion around the disc achieves maximum Distortion and is folded up into this heart-shaped form the disc can't be seen from any vantage point and for all practical purposes is
(28:05) invisible all you could see would be the sky surrounding it the program out at area S4 consisted of three projects project Galileo project sidekick and project Looking Glass Project Galileo dealt with gravity propulsion and was the source of all the information you've learned in this first section project sidekick dealt with a beam weapon that had a neutron source and was focused by a gravity lens project Looking Glass dealt with the physics of seeing back in time now I was not personally involved with the
(28:37) hardware of project sidekick or Looking Glass and those projects are beyond the scope of this video so this brings us to the end of this first part and which I'm presenting to you as fact at this point we begin our second part which is a section that contains what I call excerpts from the government Bible I call it that because as you can tell from part one there's a small segment of the United States government that Mak scientific and technological judgments from a knowledge base that is not available to the general public if
(29:04) the following information is true the United States government also makes judgments on a historical philosophical and even theological level from a knowledge base that is not available to the general public these are excerpts from some of that information as part of my indoctrination into the program at S4 I would randomly be taken into a small room which contained a table a chair and 120 or so briefings in blue folders I be left there to read for varying amounts of time usually about half an hour these briefings contained a wide
(29:35) spectrum of information mostly relating to aliens and alien technology these reports appear to be an overview of alien information which can be used to brief scientists from any field about the scope of the whole project and not just their specific field of endeavor the overview of project Galileo was accurate I read the overview and later witnessed evidence which proved it to be accurate so it is possible that scientists and involved with other projects could have seen evidence

that these other overviews were
(30:02) also accurate but I can't make that assertion to me these reports were simply words on paper so to keep from saying allegedly and supposedly in every sentence I'll relay this information to you as I read it since I've already put this disclaimer on it this technology that you've learned about thus far was brought here by some alien beings from The Zeta reticula 1 and two star system these stars are located in the constellation of reticulum which can only be seen from the southern hemisphere Zeta reticula is a binary
(30:32) star system which means it is two stars and is located approximately 30 light years from Earth these beings are from reticulum 4 which is the fourth planet out from Zeta reticula 2 this is the way star systems were referred to in these reports they simply designate the name of the star and the number of planets from the nearest to the furthest from the Star for instance our sun was designated as soul and the Earth was referred to as Soul three because we're the Third Planet out from the Sun a day on reticulum 4 is 90 Earth hours
(31:03) long the beings are 3 to 4T tall and weigh 25 to 50 lb they have grayish skin and large heads with almond shaped wraparound eyes they have very slight nose mouth and ear positions and are hairless any dates in the information regarding these beings were written in a six-digit number which began with 1623 since I had no idea what the six-digit number was for the present year I had no way of calculating when these beings are arrived or at least arrived this time these beings said that they had been visiting Earth for a long time and
(31:34) presented photographic evidence which they contended was over 10,000 years old there was an exchange of hardware and information in central Nevada until 1979 at which time there was a conflict which brought the program to an abrupt halt the beings left but were to return at a 1623 date and I don't know what that date is with the remaining hardware and information the US government started the back engineering program in May of 198 7 some scientists took an antimatter reactor to an underground blast facility
(32:02) on the Nevada test site to perform an experiment unfortunately for them their experiment required them to cut the reactor open which resulted in their deaths this explosion was explained to others at the test side is a previously unannounced low yield underground nuke test I was hired in December of 1988 to replace one of these men these beings conveyed information about the capability of affecting the human brain to anesthetize the human body body this is done without any physical contact from a remote source for this anesthesia
(32:34) to be accomplished the brain has to be in a relax State similar to that required for hypnosis if the brain is subject to any external stimulation like stimulant drugs or loud music this manipulation of the nervous system is ineffective these beings said that man was the product of externally corrected Evolution they said that man as a species had been genetically altered 65 times they refer to humans as containers yet I don't know what we're containers of as I'm sure you now know it was impossible for me to corroborate the
(33:05) information in the second section and obviously if this information is true the ramifications are far reaching and you don't have to be a nuclear physicist to figure that out so before I bring this to an end there are a couple of questions I should address for you the first one is how did I get into this program while working at Los Alamos National Lab in 1982 the local newspaper did a front page story on a jet car I built coincidentally Dr Teller was giving a speech in Los alos that same day we met and had a short chat about the jet car
(33:36) and I later listened to a speech I never met Dr Teller again but in 1988 when I decided to reenter the scientific Community I sent him a resume and inquired about a job Dr Teller responded by telephone and told that it was no longer active but just functioned in a consultant capacity he gave me the name of a contact to call in Las Vegas I made that call and things progressed from there until I got into the program I never got a chance to ask Dr tell if he remembered me from Los alos so I don't know if that was a factor or not if you
(34:07) use nuclear Fuel and not this possible nuclear fuel is these are interesting if you ever want to get that is an important and that's about all I can say all I have and what specific the fuel will be I think it might be F more probably Fusion is there any other nuclear reaction besides fion and fusion that you know of no anything look three you try to explore the things about which I only will have to tell you it is not important the waste of time above ploni look it is in my opinion not interesting I don't intend
(35:07) to answer it if you ask me that question on camera I will shut up I will sit

silent you're not going to get an answer me on that okay and if I ask you on camera if you know Bob wasar can you just say no I will sit silently the second question is that if all I've just presented to you is true and the government is keeping this a secret how can I make a video telling you about it well the bottom line is if there are any repercussions from making this video it would simply confirm that what I told you is true so what you do with this
(35:51) information is up to you [Music] remember not everyone who sees a disc in the sky is crazy so keep your eye on the sky especially here in central Nevada and thanks for listening for h
(37:29) [Music] [Music] hi I'm Bob loar during late 1988 and early ' 89 I worked on the propulsion systems of extraterrestrial vehicles for the United States government the hardware and Technology I was exposed to should be placed in the proper hands of the scientific community and it is the right of every person on Earth to know that there is physical evidence which proves that there is life elsewhere and that at least one form of that life has been here for those of you whose information about me is limited to this
(38:30) video I'll give you a brief background I'm a physicist I have degrees in physics and electronics technology I've worked in a number of scientific programs some of which require top secret and Above Top Secret security clearances of which the most easily verifiable is my early 1980s job here at the Los Alamos maon physics facility in Los Alamos New Mexico between December of 88 and April of ' 89 I worked as a senior staff physicist in what has to be the most secret project in history my place of work was a
(39:06) facility at an area known as S4 on the Nellis Air Force range in central Nevada area S4 is located approximately 15 Mi south of the infamous Area 51 installation at Groom Lake where the U2 and SR71 spy planes were developed for the duration of my employment at S4 I was paid by the United States Navy for the purpose of this video I'm going to segregate the information contained here into two separate parts the first part will deal with information with which I've had hands-on experience and personal instruction in other words not
(39:40) only did I read briefings and Not only was I taught the theories of these Technologies but they are demonstrated for me and I know they are true and accurate some of the points covered in this first section will be how vast distances of space are traveled by virtue of an intense gravitational field how this gravitational field is generated what the power source is and how it functions and general information about discs and the project at S4 the second part of this will deal with subjects on which I've read
(40:18) supporting information yet for the most part I had no other way to cooperate the information or ascertain its accuracy when we get to part two it'll be obvious why proof of some of this information could not be conclusive some of the points covered in the second section will be information about the beings that brought us this technology and how these beings have historically interacted with man I've been prudent in selecting what to expose here and I think that some of this information should not be made
(40:49) available to the general public this information is being conveyed to you as it was to me with the exception that in most cases I've simplified things for those of you with non-scientific and non-technological backgrounds so let's begin at the beginning of this first section I'm going to give you three short science lessons and once you've learned them you'll not only know more about Interstellar travel than almost anyone else in the world but you'll know the actual method another civilization
(41:16) is used to travel from another star system to the planet Earth now during the course of this I'm going to have to relate information that I've learned it us for the information that we're already aware of and when I say we I mean the general mainstream scientific community so it's not to waste too much time explaining estabished scientific facts and theories when I say we know this or we know that please feel free to consult any qualified scientist Professor or science teacher to have them explain my statements to you one of
(41:45) the most predominantly asked questions is how is it possible to cross vast expanses of space without exceeding the speed of light or how can you travel in reasonable time and economy between points that are light years apart now keep in mind that the speed of light is 186,000 m a second which translates into roughly 669 million miles an hour and a light year is a distance traveled in one year at the speed of light proximate centuri which is the star system nearest ours would take four years to reach traveling at the speed of

(42:22) light so up until now when we've examined the requirements to travel these distances is we've always had to consider the problems of traveling at a speed near the speed of life this poses problems with propulsion navigation fuel capacities and even when you consider the effects of acceleration on SpaceTime which include time dilation Mass increase L contraction and a whole host of other things it quickly becomes evident that this type of travel would require a level of technology that man has not yet achieved the truth of the
(42:54) matter is that traveling these distances does require a level of technology that man has not yet achieved but it has nothing to do with flying in a linear mode near the beat of light we know that the shortest distance between two points is a straight line so in our universe we've always assumed that the fastest way from point A to B was to travel in a straight line at the speed of light well the fact is that when you're dealing with SpaceTime and you enjoy the capability of generating an intense gravitational field the fastest way from
(43:23) point A to B is to distort or warp or bend the SpaceTime between point a A and B bringing point A and B closer together the more intense the gravitational field the greater the Distortion of SpaceTime and the shorter the distance between points A and B most of us think of SpaceTime as the void or as nothing and remember it wasn't that long ago that man considered the air in our atmosphere to be nothing yet with time we've become aware of the elements and properties of the air in atmosphere well indeed
(43:51) SpaceTime is an entity and one of its properties is that it can be distorted or bent by a gravitational field F we know that gravity bends or distorts space time and Light by virtue of the fact that we're able to see start which we know should be blocked from our view by the sun referring to the graphic here the solid line denotes the position of a star that's located behind the sun and the dotted line shows its position as viewed from Earth this is made possible because the sun's gravitational field
(44:21) distorts the space time and light around the Sun allowing us to view Stars which should be hidden from View we know that gravity distorts Time by virtue of the fact that if we take two identical atomic clocks and keep one at sea level and take the other one up to a high altitude when we bring them both back together they reflect different times the difference in this passage of time is caused by the fact that a gravitational field weakens the further you get from the source so the atomic clock which was taken to the High
(44:50) Altitude was exposed to a less powerful gravitational field than the clock which we kept at sea level the effect effect of a gravitational field on SpaceTime is something that we've been able to observe but not to experiment with this is due to our inability to generate a gravitational field and up until this point in time great Mass such as a star planet or moon was the only source of a discernable gravitational field that we're aware of so just as the gravitational field around great mass as a planet distorts space and time any
(45:22) gravitational field whether naturally occurring or generated distorts space and time in a similar manner now the great benefit of generating an intense gravitational field is not only can you turn it on but you can turn it off if we refer back to our original illustration of space-time Distortion we can see that when we generate an intense gravitational field we can distort the SpaceTime and in turn the distance between the point where we are and the point where we want to be we can then position ourselves at the point where we
(45:51) want to be and then stop generating the gravitational field allowing SpaceTime to return into its natural form in this manner we can travel great distances with little linear movement and this is how space-time Distortion translates into reduced distance now back to our original question how is it possible to cross the vast expanses of space required for Interstellar travel without exceeding the speed of light this is accomplished by generating an intense gravitational field distorting space time and allowing you to cross
(46:25) many light years of space in little or no time and without traveling in a linear mode near the speed of light the next question is how do you generate gravitational field up until this point in time I've used the term generate to describe the capability of producing a gravitational field but since I'm not aware of any way of creating a gravitational field from nothing a more accurate term might be to access and amplify a gravitational field and this is what I mean when I use the term generate to understand how gravity is
(46:54) generated or accessed and Amplified you must first know what gravity is there are two main theories the wave theory which states that gravity is a wave and

the currently accepted theory of gravitons which are alleged subatomic particles that perform as as gravity which is total nonsense well gravity is a wave and there are two specific different types of gravity gravity a and gravity B gravity a works on a smaller micro scale while gravity B works on a larger macro scale we are amiliar with gravity B it is the big gravity wave that holds the
(47:30) Earth as well as the rest of the planets and orbit around the Sun and holds the moon as well as man-made satellites and orbit around the Earth we are not familiar with gravity a it is the small gravity wave which is the major contributory force that holds together the mass that makes up all protons and neutrons gravity a is what is currently being labeled as the strong nuclear force in mainstream physics and gravity a is the wave that you need to access and amplify to enable you to cause SpaceTime Distortion for
(47:59) Interstellar travel to keep them straight just remember that gravity a works on an atomic scale and gravity B is the big gravity wave that works on a stellar or planetary level however don't mistake the size of these waves for their strength because gravity a is a much stronger Force than gravity B you can momentarily break the gravity B field of the earth simply by jumping in the air so this is not an intense gravitational field ating gravity a is no problem because it is found in the nucleus of every atom of
(48:31) all matter here on Earth and all matter anywhere else in our universe however accessing gravity a with the naturally occurring elements found on Earth is a big problem actually I'm not aware of any way of accessing the gravity a wave using any Earth elements whether naturally occurring or synthesized and here's why we've already learned that gravity a is the major force that holds together the mass that makes a prot protons and neutrons this means the gravity a wave we are trying to access is virtually
(49:02) inaccessible as it is located within matter or at least within the matter that we have here on Earth however the Earth is not representative of all matter within our universe the residual matter which remains after the creation of a solar system is totally dependent on the contributing factors which were present during the creation of the solar system this is true whether you believe that the origin of the universe was an evolutionary event or that a Supreme Being cause this event to happen the two main factors which determine what
(49:31) residual matter remains after the creation of a solar system are the amount of electromagnetic energy and the amount of mass present during the Solar System's creation our solar system has one star which is our sun but the majority of solar systems in our Milky Way galaxy are binary and multiple star systems in fact many single star systems have stars that are so large that our sun would appear to be a dwarf by comparison keeping all this in mind it should be obvious that a large single star system binary star system or multiple star
(50:04) system would have had more of the prerequisite mass and electromagnetic energy present during their Creations this makes it possible for these systems to possess Elements which are not native to the earth scientists have long theorized that there are potential combinations of protons and neutrons which should provide stable elements with atomic numbers higher than any which appear in our Periodic Chart though none of these heavy elements occur naturally on Earth 88 of the first 92 elements on the periodic chart occur
(50:33) naturally on Earth some heavier elements do occur in Trace Amounts but for the most part we synthesize these heavier elements in Laboratories generally speaking the stability of these synthesized heavy elements decreases as their atomic number increases but experiments the labed for heavy ion research in Germany have shown that this may only be true up to a certain point as the halflife for element 109 is longer than that of element 108 the point is that our observations and theories are accurate the fact is that
(51:03) heavier stable elements with higher atomic numbers which have more protons neutrons and electrons than any Earth elements do exist however up until this point in history there's been no physical evidence to prove this but now that proof is here the most important attribute of these heavier stable elements is that the gravity a wave is so abundant that it actually extends past the perimeter of the atom these heavier stable elements literally have their own gravity a field around them in addition to the gravity B field that is
(51:33) native to all elements no naturally occurring atoms on earth have enough protons and neutrons for the cumulative gravity a wave to extend past the perimeter of the atom so you can access it even though the distance that the gravity a wave extends is infinitesimal it is accessible and it has amplitude wavelength and

frequency just like any other wave in the electromagnetic spectrum once you can access the gravity a wve you can amplify it just like we amplify any other electromagnetic wave to demonstrate how a wave is
(52:08) Amplified we can use this oscilloscope and as you can see it graphically depicts the tone you hear as a wave as we amplify the tone you can see that the size or the amplitude of the wave increases giving us a more powerful version of the same identical wave and thus the tone sounds louder in like manner gravity a wve is Amplified and then focused on the desired destination to cause the space time Distortion required for space travel this Amplified gravity a-wave is so powerful that the only naturally occurring source of gravity that cause
(52:50) space time to distort this much would be a black hole this brings us back to our original question how do you generate a gravit ational field you must have access to an element which is heavy enough for the gravity a wave to extend past the perimeter of the atom then you can access and amplify it for SpaceTime Distortion to complete our three science lessons the last question is what is the power source for this type of travel well for those of you with limited knowledge about power sources I'm sure you can probably imagine the
(53:23) enormous amount of power required to cause a space-time Distortion for this type of travel after all we're amplifying a wave that barely extends past the perimeter of an atom until it's large enough to distort vast amounts of space time for those of you with extensive knowledge about power sources I'm sure it's probably even more puzzling as to how it's possible to have a compact lightweight onboard power source that can provide this much power for everyone to understand that I need to further explain a couple of things we
(53:53) briefly touched upon in the last question if you remember said that for the most part we synthesize or create heavier elements in accelerators and their stability decreases as their atomic number increases so what does this all mean well we synthesize these heavier unstable elements by using more stable elements as targets and a particle accelerator we then bombard the target element with various Atomic and subatomic particles at this point transmutation occurs making the target element a different heavier element this
(54:24) element now has a higher atomic number as the atomic number simply indicates the number of protons in the nucleus of the atom so this is what I mean when I say their atomic number increases what does their stability decreases mean the length of time which an element exists before it decays determines its stability atoms of some elements Decay faster than atoms of other elements So the faster an element decays the more unstable that element is considered to be when an atom decays it releases or radiates subatomic particles
(54:56) and energy which is the radiation that a Geer counter detects as you can see this Geer counter is detecting the radiation from this uranium which literally means that the Geer counter is sensing the subatomic particles which are being released or radiated as the uranium decays those elements in which nuclear radiation can be consistently detected are radioactive elements these heavy Elements which we synthesize in particle accelerators are of the radioactive variety and they Decay very rapidly since we're only able to make a few
(55:29) atoms of these elements and because they Decay so rapidly we're not able to observe much about them this is what I mean when I say their stability decreases however there are elements with higher atomic numbers which are stable even though they don't occur naturally on Earth and we can't synthesize them in particle accelerators these are the elements in the4 115 range which don't appear on a periodic chart Beyond Element 115 the elements become unstable again and in fact element 116 decays in fractions of
(56:01) a second this finally brings us to the power source the power source is a reactor which uses this element 115 as its fuel in this reactor Element 115 is used as a Target and is bombarded with protons in a small particle accelerator when a proton plugs into the nucleus of an atom of 115 it increases its atomic number and becomes an atom of element 116 which remember decays instantly what element 116 releases as it decays or what it radiates is anim matter what is Annie matter Annie matter is the exact counterpart of matter which has a charge
(56:41) in a spin that is in the opposite of all matter when combined with any matter in our universe any matter reacts and completely converts to energy and remember the rapid conversion of matter to energy is what we generally call an explosion to demonstrate the explosive power of any matter let's pick a random area where an atomic bomb might explode oh let's say Iraq and for demonstration and purposes let's say an atomic bomb would explode for instance in uh oh Baghdad well

if one of our older atomic
(57:13) bombs exploded in Baghdad the area of total devastation which is indicated by the Red Dot on the map would be approximately 2 miles this would be caused by a fishing reaction in which less than 1% of the nuclear material is converted to energy most of you are familiar with the bombs that were dropped on Japan in World War II this is the same bomb that was dropped on Nagasaki August 9th 1945 about the same time Dr Edward Teller who's known as the father of the hydrogen bomb figured out that a nuclear fusion bomb was possible Fusion would
(57:46) release even more energy and cause an even bigger explosion from the same amount of nuclear material much to Dr teller's dismay the Japanese surrendered we never dropped the hydrogen bomb and teller has been in a bad mood ever since but if a hydrogen bomb containing the same amount of nuclear material as the Nagasaki bomb were to explode in Baghdad the area of total devastation would be approximately 20 mil this would be caused by a nuclear fusion reaction which again less than 1% of the nuclear material actually converts to energy or
(58:19) explodes the other 99% of the nuclear material on this type of bomb is dispersed but is not involved in the actual nuclear fusion reaction now if a bomb was made with the same amount of nuclear material as the Nagasaki bomb and that material was an matter when that bomb exploded in Baghdad the area of total devastation would include parts of Africa Europe and Asia with the exact area of total devastation being very difficult to calculate this would be caused by total Annihilation reaction which is the complete conversion of matter to energy
(58:54) 100% of the nuclear material this bomb would explode or convert to energy we currently have no practical way to harness any matter into a bomb and generally speaking we can only isolate any matter in a particle accelerator and store it for a short time this demonstrates the enormous amount of Power released when you totally convert matter to energy which is what happens when any matter and matter are combined so back to our power source inside the reactor Element 115 is bombarded with a proton which plugs into
(59:25) the nucleus of the 115 atom and becomes element 116 which immediately decays and releases or radiates small amounts of antimatter the antimatter is released in a vacuum into a tuned tube which keeps it from reacting with the matter that surrounds it it is then directed towards a gaseous matter Target at the end of the tube the matter and anim Collide and annihilate totally converting to energy the heat from this reaction is converted into electrical energy and near one 100% efficient thermoelectric generator this
(59:53) is a device that converts heat directly into electrical energy many of our satellites and space probes use thermoelectric generators but their efficiency is very very low all these actions and reactions inside of the reactor are orchestrated perfectly like a tiny little ballet and in this manner the reactor provides an enormous amount of power so back to our original question what is the power source that provides the power required for this type of travel the power source is a reactor which uses Element 115 as a
(1:00:24) fuel and uses a total ation reaction to provide the heat which it converts to energy making it a compact lightweight efficient onboard power source I've got a couple quick comments about Element 115 for those of you who are interested by virtue of the way it's used in the reactor it depletes very slowly and only 223 gram of 115 which is just under half a pound can be utilized for a period of 20 to 30 years L 115's melting point is 1740 de C I need to State here that even though I had hands- on EXP experience
(1:00:56) with element 115 I didn't melt any of it down and I didn't use any of it for 20 to 30 years to see if it depleted so we've learned how SpaceTime is distorted by a gravitational field we've learned how that gravitational field is generated and we've also learned where you get the power to accomplish all of this now it's time to link all we've learned in our science lessons to the vehicle that utilizes all this technology and a few years ago I never thought I'd hear myself say this but
(1:01:25) that vehicle is a disc which is generally referred to as a flying saucer I had at least partial views of nine different discs out of area S4 but the one I'm going to describe to you now is the one in which I not only saw two of the three interior levels but I also saw it fully functional in flight and know unfortunately I didn't get to go for a ride in it this particular disc appeared to be in excellent condition and because of its Sleek appearance I nicknamed it the sport model the sport model is about 16
(1:01:55) ft tall and 40 ft in diameter the exterior skin of the disc is metal which is the color of unpolished stainless steel the sport model sits on its belly when

it's not energized as you can see the hatch is located on the upper half of the disc with just the bottom portion of the door wrapping around the center lip of the disc the interior level of the disc is divided into three levels the lower L is where the three gravity amplifiers and amplifier guides are located these are the things used to amplify in Focus the
(1:02:26) gravity a wave that we learned about in our science lessons the reactor is located directly above the three gravity amplifiers on the center level and is fact centered between them the reactor is similar to this halfs scale model the element 115 is machined into triangles like this and is then inserted into the reactor this piece of element 115 is the source of the gravity a wave as well as the Target that is bombarded with protons to release the antimatter both of which we learned about in our science lessons
(1:02:58) the center level of this disc also houses the control consoles and seats both of which were too small and too low to the floor to be functional for adult human beings the walls of the center level are all divided into archways at one point in time when the disc was energized one of the archways became transparent and you could see the area outside of it just as if the archway was a window after the panel had been transparent for a while a form of writing which was unlike any alphabetic scientific or mathematical symbols I've ever scene
(1:03:26) began to appear on the transparent Archway and I was never informed as to how all of this was achieved not that any of that would have required alien technology I was never given access to the upper level of the disc so I can't Enlighten you as to what the port hole like areas are other than I can assure you that they're not Port holes now before I go any further about the disc

BOB LAZAR BEST FRIEND INTERVIEW - YouTube
https://www.youtube.com/watch?v=Dv9u2a17_b0

Transcript:
(OO:02) Ah that's what they used to call me in St Louis I think it's followed me here to the network and we'll use that every once in a while in a moment an interview something I've been looking forward to for a long time ever since I heard him with Art Bell John Lear Our Guest so get ready on Coast to Coast A.
(OO:28) M [Music] John le is a retired Airline Captain former CIA pilot as well as the son of the famous inventor of the Lear jet he is a locked l1011 captain and is highly regarded in aviation circles he is flown more than 150 test aircraft and has won every award granted by the Federal Aviation Administration John also holds 18 world speed records and has worked for 28 different aircraft corporations and during the late 1980s into the early 1990s John began coming forward with startling Revelations concerning the subject of aerial phenomena and
(01:18) unidentified flying objects he is our special guest tonight on Coast to Coast John my pleasure how are you George it's an honor and a pleasure to uh be on the show with you and I'm great the uh disc closure briefing that I just heard that I played is that based on things that are or things that could be most of that was real uh in fact all of it was real there was if I had to make a change I'd make the change which isn't important about why they killed Kennedy there's so many reasons they killed Kennedy but uh
(01:52) one of the the main thing the reason they killed Kennedy he was insisting on inspections of Demona which was is Israel's nuclear um manufacturing plant and uh they couldn't have that and so uh mad in conjunction with uh several guys at the CIA one of which was uh um trying to think of his name anyway they got together and they they planned that thing and eliminated Kennedy now there's a few things that they left out in that uh briefing for art and uh one of them was that E3 who was captured in 1953 uh who they named
(02:36) jrod um helped them build their own flying saucers the United States government is that the one that that that Dan bur is talking about seen those tapes and at first I thought that Dan bur stuff was uh was not real until I saw the videotapes of him and I said yes yes that's real he was there I know the protocol and he he was there and and the stuff that he says is real and later in the program I'll tell you some of the stuff that uh he is going to be talking about is not it's disinformation but uh
(03:11) basically that's not his fault by 1962 we had vehicles uh while they could not perform the faster than light speed of the alien Vehicles we could certainly get

them to the Moon in about an hour uh regular trips to Mars uh we were making reg regular trips to Mars in 1966 Mercury Gemini and Apollo were all cover missions and most of the astronauts knew it and on January 27th 1967 a fire in Apollo one at top the spacecraft uh I think it was pad 39a um killed Gus chrisom Ed White and Roger chaffy and one other astronaut but this
(03:51) fourth astronaut was not one that we knew the fourth guy was one of the secret astronaut core that was formed along with the astronaut cores we uh knew about the difference being that uh the astronauts and the secret Corps were going to the Moon in 1962 while the public was watching the Mercury astronaut Circle The Globe oh really and after constructing various buildings and Mining facilities by 19566 we landed on Mars and six and um since then we have explored most of the planets in our solar system and found
(04:26) life similar uh to us on all of them now one interesting thing George remember Mars Rover a few years ago had the dust settle on the solar panels and it could recharge its battery right it looked like it was going to die yeah and then all of a sudden it was uh it was the the dust was gone and uh the batteries recharged and everything was normal right and they blamed some kind of wind uh dust devil that knocked it off or something well what really happened was that was our secret astronaut core up there with paper towels and wind Deck
(05:00) [Laughter] John you believe that one absolutely as a matter of fact the guy that told me that who was not uh living anymore when I had expressed disbelief in some of the stuff or you know not express disbelief I said you know I uh are you sure this is true and he told the Mars rover story he said yeah that's who went up and cleaned it why would all right here let me ask you this John and and we're going to get into a lot of interesting things with you tonight and you've got credentials all the way down your arm
(05:29) and I want everybody to understand that because I'm going to ask you some specifics of your life I want them to understand who you are who we're talking to tonight why would they even need Rovers there if we had astronauts already on the planet it's part of the it's part of the cover up Mercury Gemini Apollo the space shuttle it's all to keep our eye on that while the other stuff is going on a huge bigger picture no doubt huge huge bigger picture all right let's talk a little bit about John
(05:58) lir of course you know the son of the famous inventor of the the lar jet I I don't know if anybody's everever asked you John about your father and how he even came about inventing this jet that I'd like to know well in uh 1930 he formed what was known as Lear Incorporated and he built uh millions and millions of dollars of equipment for uh the armed services they were in the form of actuators crew Jacks fuel pumps all kinds of stuff and 1956 he wanted to design he wanted to improve an airplane uh which was a locky
(06:36) load star and he took he took the locked load star put more powerful engines on it cleaned it up cleaned up the wings uh retracted the tail wheel did a lot of other things and it became known as the Lear star they sold 62 of those airplanes as executive airplanes but the program was not successful uh there were several major accidents one of which killed Mike Todd uh over there in Grant New Mexico and one which killed the entire Board of Johnson and Johnson company and it was not not uh not successful uh in 1958 he wanted to
(07:13) design a brand new airplane and and oddly enough the new airplane was going to be a a pusher type airplane but it developed into the Learjet and at that time you know they um they say that uh he was the first he wasn't the first they had the um uh the saber liner and the jet star the North American saber liner and the locky jet star and he's he came along and he started building the Lear jet he went to his board of directors and they said no bill uh we're not going to go along with this it's not
(07:43) going to go and you're not going to spend our money so he sold his stock in Lear Incorporated to seagler corporation that became known as Lear seagler and he took that money 7 million and uh started what was known as The Swiss American Aviation Corporation in Geneva Switzer the reason he moved to Geneva he thought there was availability of engineering Talent availability of uh raw stock bi materials and that he could get the airplane built there but after a disastrous three years in 1963 he moved back to he moved to witch Kansas built a
(08:17) plant there and continued um the design and production of the lar jet there the rest history did he ever know Howard Hughes I would bet Hughes would have been all over him to get those Jets uh no he knew Howard Used they had a big beef and it's my understanding that the problem started with Howard borrowed an airplane from

uh dad and left it somewhere uh out of gas and never told them where it was and forever after they were uh not so much enemies but didn't talk to each other all right tell me a little bit about John Lear I mean
(08:53) because you grew up then in the aviation industry and it obviously had a lot to do with the direction that you took well I uh started uh I grew up in Santa Monica California went to Santa Monica High uh used to spend all my time out at the um Santa Monica Airport uh it just irritated my dad to know in because he didn't like Pilots oddly enough he was a pilot himself that is interesting but he didn't like pilots and uh he didn't like me getting into Aviation although he did provide the airplanes there was a
(09:21) Bonanza and an aero Commander out there and I used to fly them around got my private then my commercial then my instrument and I used to hang around at Santa Monica Tower and uh work worked a b position and then a position just you know just as a kid in in high school and uh it was a lot of fun and it just I that's all I wanted to do as a matter of fact in 1960 after I graduated from high school I was in his office there that was on 3171 South Bundy and uh he called in the plant psychiatrist and the guy's name
(09:53) was uh pla about your hopes and desires and uh and uh and um he was actually having me evaluated by the plant psychiatrist so we go off in another room and I talk with this guy he says what's what's going on with you and your dad uh John I said well I want to be an airline pilot you know that's what I want to do I love to fly airplanes you know uh dad wants me to be an attorney or a doctor and he says I can earn enough money to buy my own airplane I don't want my own airplane I just want to fly an airplane and uh dad says that
(10:25) that's just like being a bus driver and I said well you know so what's wrong with being a bus driver driver so anyway we go back into dad's office and dad said uh well did you guys get straighten out and uh pla says well Mr L I think he has some pretty good ideas for what he wants to do dad threw us both out of the office there well it was a love uh because I just by reading some of the the writings you've done John and your background it it followed you all your life into different facets as well I
(10:56) mean ending up as a pilot for the CIA would you do it again today if today's CIA said hey John le we need some help would you fly for them no it's different today it everything's different today I've been retired 5 years uh since two May of 2000 when kyok uh International went bankrupt I was flying the l1011 for them and um you know I had all my took all my licenses I had them laminated and frame put on the walls so I would never be tempted to use them again I canceled all my Aviation subscriptions and you
(11:27) know what George I don't even look up in the sky anymore um when I flew and I've talked to a lot of friends that flew when I when I was flying in the 60s and 70s and 80s I flew in the best of times I flew the greatest equipment and and flew the the most interesting missions but it's not like that anymore in in those days we knew who the good guys were and who the bad guys were right and this these days you don't you don't even dare get in the business because uh you don't know who the good guys and bad guys and I bet you
(11:58) knew all those you knew the Jagger you knew everybody during this era yeah and as a matter of fact while we're on that um I'd like to note the untimely passing of Scott Crossfield who was killed a few weeks ago he was a giant he was a giant friend in a weather related crash in assess 210 Scott flew the D5 the Douglas d558 Skyrocket to mark 2 and he also became the first man to uh exceed Mark 2 and flew the X15 to Mark 2.
(12:28) 97 now I want us to set the record straight Tonight George on who really was the first pilot to exceed the speed of sound and level flight Chuck jger has always been reported to be the first but Chuck was less than gracious acknowledging who really was the first and less than gracious regarding other Pilots accomplishments when Scott died a few uh weeks ago joerger made the comment that Crossfield has always Taking Chances a few years ago um joerger had this to say about the non-stop round the world flight in the Voyager by Gina Jer and Dick Routan and
(12:59) I quote a monkey could have done it oh man joerger has always been Relentless in his criticism and dislike for civilian test pilots even going so far as to say in one interview but as airplane drivers they really weren't as skilled as military guys now remember George this is the same chucker who personally crashed one of the only two locked NF 104s in the Aerospace training program he not only screwed up the clim profile this was the airplane that was built for the astronauts to test their skills in and it also was built to go over 120,000

(13:31) ft Chuck not only screwed up the C uh clim profile he not only screwed up the pitchover he screwed up The Descent so badly that he had to bail out with the loss of the airplane and the termination of wasn't there a segment of him in the movie was it the right stuff they glorified it too Chuck should have been fired personally I think a trained monkey could have done better but the person who really broke the sound Berry For the First Time In level flight was slick Goodland test pilot for B aircraft who built the X1 slick made 26 flights
(14:01) in the X1 before they handed it over to the Army and exceeded March one on at least two of those flights the Air Force however wanted to hog the Limelight and the glory and the credit so the data tapes were impounded and general Boyd who was head of the flight test center at what then was known as Muro chose joerger and even though there were other Pilots equal to or more qualified than joerger General Boyd pick joerger for the mock one attempt because he felt joerger was the most Expendable slick Goodland passed away last October never
(14:30) having achieved the recognition for his achievement mainly because of the Air Force politics and he just kept quiet about it yep he just kept quiet about it and you can go on the internet and look at uh slick Goodland uh uh there's several websites of his accomplishment now you you you you're quite the person John I mean here we are we're going to be talking about UFOs and some incredible thoughts and theories you have about that but you you also and I noticed this today with gold up over $720 an ounce now you own a gold mine
(15:00) don't you yeah it's in uh it's the one of two uh certificated permited gold mines in Clark County and it's out in goldb about uh 50 Mi east of Las Vegas and I love it out there because you know there isn't another person for 50 miles uh it's it's High Desert country 4600 ft uh it's old Indian country and I just to love to go out there and Weld and pound nails and uh get ready and we're just about set to start Milling in about two weeks think you're going to hit the mother load well it's a vein uh George
(15:33) that runs about a mile and a half and people have worked this vein for many years but uh it has various concentrations and we may make a little bit but you know basically it's an excuse for me to uh get out in the uh in the open air and enjoy myself how old are you now John 63 oh you're still young you are still young yeah well good for you now how did you because this started back in the 80s how did you get interested did I mean here you are you know a test pilot Airline Captain uh all of a sudden you're interested in
(16:05) unidentified flying objects UFOs how in the heck did that start I'll tell you exactly how it happened I was over at a friend's house across town that I knew for years and years I was walking through his living room uh on the uh table there was a book called missing time by Bud Hopkins and I picked this up and I kind of thumbed through it and I said uh the guy's name was Al new I said Al can I uh uh can I borrow this book He said said sure I took it home and George I don't know what came over me but when
(16:33) I read that book I said this this is real and then shortly after that we had a reunion of Southeast Asia Pilots here in Las Vegas and a friend of mine uh Greg Wilson who was a raven and you know who the Ravens were they were the people that were taken out of the Air Force a given civilian ID and they flew for the US ambass in La against the poet Lao and North Vietnamese and um uh a gung-ho guy and we got talking at this reunion and I said you know where all you been because he flew A10 he says oh different places
(17:07) you know I was over in bentwaters I said bentwaters well what about that incident 1980 where a saucer supposedly landed he said John I was there he said I didn't see it but I was confined to quarters but I know the guys who did and I thought well there's the second thing and so then I just got interested and started um uh researching and uh I once took a trip uh throughout uh well let's see Arizona New Mexico Colorado and I met the you know all the guys that were were in it I went there and talked to
(17:39) them I talked to benowitz I talked to Ernie Edwards Colonel Ernie Edwards uh Linda how and I went on a trip from um Albuquerque down to um Roswell to talk to Clifford Stone uh and when I came back I said man I can't believe it this stuff is really real and that's when I wrote that first statement that floats around around the uh internet that starts out with jordano Bruno and yeah okay okay did did you because of your background in aviation also because of your name strong name did that help you trying to open up doors to investigate
(18:15) UFOs or trying to talk to people who might not have spoken to you did that help I don't think so I don't think I'm trying to remember of any incidents where it

would the only uh one that it it did did kind of help me is I went to uh research the base at doy and Dy New Mexico and I pulled into town driving my old U GMC truck and I checked into a hotel and I had the name of Gabe aldez who was the highway patrol guy there and I called up Gabe and I said uh my name is John le I'd like to chance to meet
(18:48) you he said John we already met and I said we did and he said yeah 10 years ago you flew in here in a lar jet with Dean Martin's girlfriend and a loot of stakes for Dean Martin he was shooting a movie here that met you at the airport I love it so he came over to the hotel and his shift was uh 10:00 at night to 6:00 in the morning and I spent eight hours with Gabe Valdez you know uh in his patrol car roaming around the mountains at night around Dy and I'll tell you it was an interesting experience John you've
(19:20) got me interested about that Apollo one fire so when we come back let's talk a little bit about that our special guest tonight John leer I'm George Nory this is Coast to Coast AM I'll tell you about that song in a moment when we come back hey the uh the book that we put out with Bill Burns called worker in the light is available for pre-orders at amazon.
(19:41) com and the book comes out on September 19th I'm taking part of my proceeds and I'm going to give them back this is me now not through the network a little long but hold on the book comes out in a few more months but those of you who want to take advantage of the pre-order at a substantial discount you can go down to amazon.
(19:59) com you put in the search section book and then either my last name or worker in the [Music] light hey John I've got to ask you about that bumper song we played by the birds 242 Fox Trot was is that you in the background I heard that's me and uh mil and Haven was the co-pilot and I got to tell you a funny story here um cigar fishing a uh magazine in in uh October of 2003 made a uh big lavish story with many pictures it was seven pages long about the 40th anniversary of the first flight of the ljet now I read this story
(20:52) and I'll tell you for a magazine like cigara ficado uh I can't believe there was not one single fact in that story that was correct and I wrote Marvin chanen and asked him about it of course never heard about it but just let me read you sure what they wrote about uh they interviewed Roger McGuinn who was with the birds and they said well you know what was it like flying with John leer and and I'm quoting from Roger in in the magazine article he says John once gave us a ride from Los Angeles to Pensacola for a birds gig M mcin mccuin
(21:26) recalls I think it was fellow Birds members Dave Crosby Chris Hillman and Jean Clark and myself and we had Peter Fonda along we came into Pensacola at too high in altitude and John did a maneuver called the split s to get down I was sitting in the cockpit with him and and John was just a kid like us he liked to go fast he explained that the split s to me was a steep dive that would have us coming out upside down at the bottom I'm agreeing with him and I'm saying you better tell the guys back there to buckle up well says McGuinn who
(21:57) was feeling a bit ory that day I didn't bother the daring maneuver in the ljet 24 left the passengers in the rear a little spooked but otherwise unhe hurt they could than the man who created the Lear jet in the first place for the plan's dexterity and tight situations uh which has always been one of its attractions now George can you imagine a magazine like cigar fish in a printing a story like this about a guy who's flying Part 12 121 you know uh Airlines I mean it was just strange Okay so as a gag I
(22:30) wrote clay Lacy who who I was working for clay Lacy Aviation at the time uh and you know this was back in 1966 and so October 5th 2003 I said dear clay if you haven't seen the latest issue of cigara fish andado I am closing an excerpt I have kept this incident secret for many years but now that it is all over the news stands and I am retired I can finally tell the truth first of all we really were late letting down into Pensacola hell we were 30 miles past it but I'm getting ahead of myself first of
(23:03) all since I was going to try and make it non-stop from Van eyes to Pensacola I had taken the inspection plates off the front part of the tip tanks and topped them off by the time I got all the birds guitars and stuff loaded I was really beat we were so heavy that I leveled off at 37,000 set 77 on the autopilot and asked Center for Block 37,000 to 41,000 of course this was back in the old days when it was pretty easy to do I was letting each of the band members sit for a little while in the right seat when it
(23:32) was Dave Crosby's turn he offered me a to normally I try not to smoke dope while I'm on duty but it happened to be some incredible Maui W and I thought what

the hell it will probably wear off in about in the three remaining hours of the flight the flight went great everybody was having a good time singing and laughing and telling jokes until I became verly aware that Center was calling and asking if I wanted descent here I was at 60,000 ft the airplane plane was at 41,000 ft and it turns out we were 30 Mi past Pensacola I thought
(24:04) the best way to reverse course and lose altitude was to do a split s so I asked Center for lower and permission to reverse course which they approved unfortunately in all the excitement and the fact that I was still a little foggy I started the split s but forgot the half roll at the top what I had done in fact was the first half of an outside Loop which is why I ended up upside down at the bottom of descent of course I told McGuinn this was the way uh it was done and he didn't know anything about it anyway I flipped the airplane right
(24:35) side up and landed without further incident of course the rest of the guys in the back were in fact a little spooked heck I was spooked and I was flying the G darn thing but nobody would actually hurt and I did thank dad for making the airplane with great dexterity in tight situations to save me sorry you had to find out about it this way clay your friend and admirer I love it I love it what did he do what did he do when he got that nothing I called out to the the guys that that knew him and U he made just one under uh under his breath
(25:07) comment he said that's a lot of bow hey John there's so much to talk with you so little time but I I I want to get into your thoughts about planets and that they're inhabited and definitely I want to talk about Apollo 1 but also some time ago uh you had an opportunity to meet Bob Lazar I want to get your take on what you think of Bob Lazar I mean do you find him to be credible do you think he's legit absolutely 100% 120% what anybody ever says uh you know about Bob disparaging Bob I can tell you I was the
(25:40) guy that was there I was the one that he took to see the uh know he took me to see The Flying Saucer he knew exactly when it was going to fly um uh he's the one that got a hold of the 115 uh I'm the one that saw the experiment uh him and Joe vanetti and myself made the experiment and the 115 being the element that the that powers the sauc that powers the saucers okay and what we did is we took a bell jar and uh we put a piece of dry ice and we put the 115 on the dry ice then took a Coleman lantern uh one of those little um um what do
(26:16) they call them the little Lantern P panels or whatever they are that uh um that shines light and these are partially radio reflectors yeah uh they are partially radioactive and they're the ones that that caused the light in the lantern to to be so bright all right and they shoot out Alpha Rays now the alpha rays are supposed to go out into space that uh you know the speed of light but we have videotape of that of the alpha Rays being you know pulled back down into the 115 so you know the bottom line is Bob was real um you know
(26:47) the whole incident was real everything happened exactly as Bob said it did and I said it did I've seen the Dan burish tapes um as far as I know he never met Bob but the stuff that he talks about uh certainly indicates that S4 is real and and that it's there and to some people who do not know who Bob Lazar is he was a selfy styled nuclear physicist he worked at the S4 test site which is very close to Area 51 in Nevada uh back in I guess 88 to '89 88 and '89 I met him the summer of 88 and uh he came over here
(27:25) with Jean Huff and Jee Huff was a a real estate appraiser and Gina called me on the phone and he said um you know I've heard about all your stuff I'd like to get some of your tapes and at that time you know I had just been totally swamped with people that want something and and I I wasn't too interested and he said I'm a real estate appraiser and at that time I was looking for to get my house refinanced I said okay I'll tell you what if you come over and appraise my house I'll uh give you all the stuff I
(27:53) had so he came over and the guy that was holding the helping him hold the tape to measure the room was this guy Bob Lazar he was helping the appraiser yeah and so we sit down and talk and we're talking about UFOs and Bob is rolling his eyes and he says look I have to tell you guys I worked at Los Alamos I had the highest clearance you can get and he said if there was anything like this I would have known this is all pure BS well over the next four months and that would would have been uh July August September
(28:23) November uh October uh we gave Bob some information uh that he could check out with his friends at Lo Los Al right one was the existence at the Y y-2 facility was which was really secret now we were told that that was where E3 was kept but whether he's kept there or not the fact was that Bob found out that yes that place

did exist and a number of other things he found out and he decided to reenter the scientific community and that's when he called Dr Teller and I was there when he called Dr Teller and
(28:54) uh he said I'd like to reenter the scientific community and Teller says do you want to work at UH in Las Vegas or do you want to work at lawence Livermore with me and Bob said I want to work at Area 51 and Teller said well let me see what I can do and so then a few days later Bob gets a phone call from uh some guys at eg&g and he went over and over a period of two or three weeks got three security inter interviews and on the second security interview and of course he told us all what they asked him uh
(29:23) the first question was do you know John le and what's your opinion of him interesting and he said yes I know John and uh I believe he sticks his nose in places where it doesn't belong and Bob said what I didn't tell them is I also like to stick my nose exactly it doesn't belong so then the first thing you know the next thing I heard is I a disc today and I said what he said I saw a disc today and I said you went up to Area 51 he said yep and I said then what are you doing here I said they're probably
(29:54) following you why don't you find out what's going on and then come back and tell me he says no John you've taken so much Flack over this stuff I want to tell you that I saw it and it's real and that's how the whole thing started oh my God how did he describe the craft to you he said that he walked in the hanger they let him in he's always had two guards one on each side they let him through the hanger door or the hanger door was open and he said he walked by it and he saw an American flag and he
(30:22) thought well this is what this explains it this is just stuff that we have and he said he put his hand on the on the um on the disc and he said It felt cool to the touch and he said only later did he realize no this can't be ours because when they gave him access to the inside you know the chairs and everything were you know for people that were like 3 feet tall he said this is nothing that we could fit in that had to have been quite a sight for him it was and it was uh quite experience for me I'll never
(30:51) forget those two years they were the most exciting in my life I wouldn't trade them for anything I never thought in a million years when I started to get into this UFO business cuz you know you just can't get any information I never thought I'd get you know that close to to what was really going on and at that point you got to know our friend George knp who is doing some Fillin hosting for us uh I did an interview with George uh John was several months ago and I said you know what George I'd like you to
(31:20) fill in for us once in a while and uh he did one show for us did a great job and because he is such an expert at what he does uh he's a perfect mix for us as a team absolutely and how George namp got in it was that the um I won't go into there was three times that we went up to the test site with Bob to watch the saucer the first one was May 22nd uh 8 889 then the next one was a week later uh that was the one that George went and filmed and then the last one was April 6th a week after that and that's when I went up with Bob his wife
(31:54) his wife's sister and Jean Huff and that's when security caught us and the next day they haed him up to U Indian Springs which is the head of all security for the Nevada test site and they said now Bob when we gave you this clearance and showed you the flying saucers it didn't mean you were supposed to tell all your friends about it now do you want to work here or not and uh he was non-committal at that meeting but a few days later he decided not to go back and the reason he told me is because um
(32:25) the last few trips when he went up on the 737 there loading at the terminal uh and the terminal used to be over there on Sunset um he said John I could remember getting on the airplane and I could remember getting off it but I couldn't remember anything I did up there and he said I didn't want to work under those conditions yeah never again so coincidentally about that time was on Sunday I had done a show with George knp called on the record and George called that evening he said John we have had thousands of phone calls what can I do
(32:55) for an encore and I said well let me make a call so I called called Bob and he at this time he decided to quit and I said do you want to go uh and do the George naap uh news tomorrow night and he said yeah as long as they don't show my face so that famous interview of of Bob was done in my driveway uh against the Sun so they couldn't see his and that was a dramatic uh documentary that whole program yeah and then the next night George uh had Bob sto out come up Bob was the head of channelate

and we sat around the table uh and Bob you know
(33:26) asked us a bunch of questions and G wanted to do you know a long six-part series and stoow didn't want to go with it without being convinced and uh after he talked with uh Bob and found out the whole story told je uh George go ahead and that's where the six-part series came from you've touched a lot of lives and careers in this in this field lots of them Apollo one of course January 27th 1967 horrible tragedy uh when a flash fire occurred in the Command Module killing what we always thought then John were those three
(33:59) astronauts Gus grome and Ed White and Roger chaffy but you say there was a fourth was he I the capsule didn't have room for four where whereabouts would he have been let me quote from the book Apollo The Race to the Moon by Charles Murray and Katherine black it's interview with Joe Shay Joe was the head of aspo which was the Apollo space program office and Joe in is lamenting about the fire and and not being there and so on and so on and Page 223 says for Joe Shay's um the accident syes achieved a dimension of tragedy consider
(34:36) the Paradox in Shay's narrow Escape when only a technical hitch kept him from being in the spacecraft during the fire so lucky for him at first seems that they couldn't hook up the headset in time so morbid of him it first seems to wish occasionally that he had been in the spacecraft after all and yet if Shay had been in the spacecraft he would have been sitting in the bay beneath the astronaut couches okay down by the ECU and The netting that probably first caught the fire now I've got all kinds
(35:06) of books and drawings on Apollo and there was plenty not plenty of room but they used to have a fourth guy down there that would you know Monitor and uh you know check out things and you know be uh you know for various reasons during these uh practice countdown tests so there certainly was room there what do your sources tell you that there was a person there my source is deceased now he he was a George A True True Insider and uh he didn't tell me much but he did tell me a few things and one of them was
(35:42) he said there was a fourth guy in that fire he said I was brought in uh immediately afterwards he said I went up to level eight and he said the National Security Agency had uh cordoned off the area right after the fire and they spent 45 minutes removing that body and then uh then they let NASA go in there and remove the rest of the bodies and so I thought that's pretty interesting so I started doing research and just one little thing after the other points to yep by by George there certainly was one now George is happened
(36:12) in 1967 you figure there might have been 30 maybe 35 controllers in that room uh they were all between maybe 25 and 35 years old some older they're between 70 and 75 now they're still some of them are still alive so if they're listening to the program I would appreciate if you call in and say you don't have to identify yourself just say yes the story is true I can't tell you any more than that but there was a fourth guy and if they want to do this they can give me the first letter of the last name of the
(36:48) guy which I know and of course I can't I'm not going to reveal it but if they'll just give me the letter the first letter of the last name of the guy then we'll know that that guy was there okay now if if he was there and they're covering it up again why would they do that why don't they simply say well we had uh three astronauts because they they would have had to explain who he was and they would have had to explain who he was what his background was and he was part of the secret astronaut Corp
(37:19) and that would have that would have exposed the secret astronaut Corp and they couldn't afford under any circumstances to expose the secret astronaut tell us why why the secret astronaut Corp because George we have many things going on as I told you we've been going back and forth to the moon since 1962 we've been going back and forth the Mars since 1966 we have programs going on that are unbelievable all the rest of the stuff is cover up uh the shuttle uh you know all this stuff is just you know it's it's it's cover up
(37:51) for what is really going on and as hard as that is to believe I'm hoping that uh sometime someday uh you're going to find out this is true I want to get your thoughts on that John when we come back at the top of the hour about what really is going on he's got some incredible things to say also believes that the planets in this solar system inhabited by beans much like us we'll get John Le's take on that as well John doesn't have a website so I don't not have one for you to uh go and take a
(38:19) look at he does not have a book to sell he doesn't have anything to sell

here he's just here to talk about uh some of the things that he knows that we are sharing with you tonight on coast to coast and our special guest tonight John le much more to talk with John AB we'll be back in a moment on Coast to Coast A.
(38:46) M [Music] John I have always heard For Better or Worse that our government cut a deal with extraterrestrials for knowledge for technology and gave them the uh the abductions primarily because they figured they couldn't stop them anyway so they might as well get something out of it have you heard anything like that yeah they uh they cut the deal and uh they got the technology but they had no idea that they didn't have any you know that uh there was nothing they could do about it anyway and they cut the deal
(39:32) saying well we'll only let you abduct this many well of course that uh the fact is George Earth is not so much of experiment as a farm they uh whoever they are if you want to call them aliens or whatever they use this as a farm they harvest they manufactur souls and we are just containers this information comes from the yellow book at Bob read at the test site and um that's the deal now whatever they have to do to keep us in line if they have to uh go to the government and say look we want you to help us keep our
(40:09) secret and what we're going to do is uh give you some technology and of course we'll limit our abductions but you know that's just the story how many do you think they've taken from this planet John uh well I used to say one and 10 I don't I don't know whether it's any uh any more or any less than that it's still a lot of people when you're talking about you're talking about one and 10 on this planet right no they're not taking them I understand they're just monitoring them they you they they
(40:36) take you once when you're uh about three once when you're about seven and once when you're about 11 or 12 and then usually that's it now what they do I don't know but uh that's when they just take and monitor you what did you mean by Soul harvesting uh it's my opinion that uh that they manufacture the so the soul is a little electronic device that's uh installed in each human being as as they're born and it record records all the emotion uh all you know all the uh senses uh color sight sound all that
(41:11) stuff and it records all your your life and then when you pass away when you die that Soul uh goes up to the moon and um there is a big uh what we call the big Soul Machine on the moon that's the picture that hogland has that came in U um lunar orbit of 384m I got a picture of it right in the middle of sinus Medi as you know the Moon is in rotational lock the same face points towards Earth at all times and right dead center is a is a plane called the sinus Medi meeting middle cavity and right in the middle of
(41:46) that plane is a huge structure about 7 miles tall it's a it's sits on it's a cube sitting on a tripod now the tripod appears to be about 3 or 4 miles uh tall and then the cube itself is about one mile on a side and I think that's where the soul goes after you die and then whatever they do with it whether they send it right back whether they wait a couple of weeks whether they wait a couple of months it's sent back into a newborn baby and and goes through a whole life cycle again now each one of
(42:17) these Souls records the entire human emotion of a lifetime the problem is for us is we can't remember that we can't take advantage of mistakes we've made it just keeps recording on one Soul there might be a thousand lifetimes now if you go back and um in history you'll find there are people that uh for some reason uh aren't don't have their memory blocked and they can remember back several hundred years ago I remember this lady went back to England she remember her entire life there she could
(42:50) tell the people uh that were there they went to the gravestones the whole thing she remembered everything and that happens occasionally to people but in fact this all records you know all all the particular lifetimes that it's been through John I I know that Richard C hogland has been very important to you and some of the work you've done and uh so I'm bringing him online for a little bit to chat with you and us as our advisor here uh of some of the we'll do a mini Round Table discussion for a
(43:17) little bit right now hey Richard how are you hey good evening George good you know Richard I wanted you to be part of this uh uh primarily because I've always heard that you've been very important for John and some of his work in research and years ago when you started talking about some structures that you believed were not on just Mars but on the moon that uh I think John and I'll let you speak for yourself on this how influential has uh Mr hogland been for you well very influ

influential when I
(43:45) saw the moov Mars connection I was flabbergasted this was the most interesting thing I ever saw in my life and that's what made me start uh looking for this stuff and I happened just by accident to get two photos out of NASA that were unretouched one was the North Face of uh the crater cernus and the other was a photo taken by um Lick Observatory in 1947 and uh I want to make it clear that I do not believe that hog that Richard believes any of this stuff about souls uh that's my idea not his what I'm
(44:23) saying is Richard found the uh uh that uh thing in the in the sist Medi and found the picture of it which uh well I have a little surprise for you John tonight I just uh earlier this evening got off the phone with my assistant Carrie Carrie Clark who was a photo expert in New York and she did some of the early work on the original Apollo data that we procured out of Houston out of the LPL out of the Gard National Space Science Data Center and she has found print for you of the several Mile High my glass tower this ruin that I
(45:01) found on 84m which is one of the lunar orbiter shots taken back in I think 1966 so you will be getting that um fantastic you're making good on your promise that you made four months ago right well she's been looking she's been on the road and she we have this incredible archive and we we kind of distributed it around the country you know Steve Troy has parts of it I have parts of it other people have parts of it Carrie has parts of it and we had to go finding cuz these are all analog prints there's nothing computerized
(45:30) nothing digitized these are the original analog uh images that came down from both the the unmanned lunar orbiters in the 60s and as well as the Apollo Hasselblad another film from later in the 60s and the early 70s so you will be getting that now George I have something to announce okay go ahead this fall in Southern California just about two hours East of Los Angeles I'm going to be doing the first of an experimental series of Retreats where we're going to have like 4 days to get people together and really go through where we are on
(46:06) the eve of some major breakthroughs that I think are coming and I'm going to be revealing and publicizing and unveiling some absolutely mindblowing lunar imagery that unquestionably answers the question that one of your callers in the first hour had did we go to the Moon yes ma'am we went and we got the photographic proof and John it is going to blow your socks off when you see what it is we found I can hardly wait and it is in color it is corroborated it is in the official database it's available for anybody to
(46:39) go check and it it raises so many profound implications as to who has known what and when and I I appreciate that you kind of separate me from your theories as to what all this stuff means but in terms of the evidence gentlemen there is no question that NASA has been hiding not only the stuff on Mars but an extraordinary ancient set of ruins right next door on the moon and I fully concur with John that there are two space programs there is a secret program there's the official program which is the cover and when you say well why
(47:12) would you spend $6 billion a year on a cover well it's not their money it's our money don't care how much they spend as long as they keep us in the dark well why don't we see those rocket ships going up for the secret program because they're not Rockets George come on what their electrogravitic anti-gravity spacecraft that you know T Ventura and I have been discussing which the Russians are discussing in the open literature which are visible on the STS 80 and 48 videos that I have provided to Art and I
(47:43) guess you probably seen them too I've seen them Whitley you know used one of them I think on his NBC program some years ago um there's a concurrence between the two programs but I mean my own Intel sources of which I have few and they're very reliable have unquestionably verified that there are two programs now this britisher this Gary McKinnon who was he's the hacker the hacker the computer hacker yeah who who broke into NASA computers he found years ago pilot lists officers lists the Squadron names the names of their ships
(48:19) all this stuff and that's why we're throwing the book at him and we're going to give him 70 years key and this is I mean this is treason this is a National Disgrace and I'm so glad that John is on the show tonight talking about it because the more of us that talk about it seriously and point out that there are two programs and all the astronauts risking their lives in this rat trap called the shuttle are basically doing it because they believe in God and Country and how the hell they wind up
(48:47) going up on that thing when there is real technology to go all over the

solar system it it has to be because someone appeals to their higher patriotic purpose and they say mankind need you to do this well mankind doesn't these Rogue groups are running the program and even Ed Mitchell you know the PO for National walk to the moon has said again and again and again that the Rogue groups have taken over the programs and they're running the show you agree with all this John le absolutely Richard is right on
(49:19) right dead center you know it's pretty startling I think just to even imagine that this could be going on well we had so much evidence over so many years and the Really pernicious part George is you got to ask yourself you know they used to say that the only differ we men and boys was the price of their toys yeah these are very pricey toys then you have to ask the question if they're secret and they're in the hands of people that have no accountability and we just saw today what happens when you have government
(49:48) agencies running loose with no accountability every single phone call recorded since since 2001 by the NSA do you believe be because I I got to get into this with John soon about his belief in life on the planets in the solar system but do you Richard believe that these structures on the moon may have been the ones that Ingo swan has always said that he saw during his remote viewing episodes yeah because he saw things on the moon and on Mars you know and some of the things on Mars remember even even Dame says some
(50:18) of the stuff on Mars is still quote alive meaning it's ticking it's technology that's still functioning and our models cover that you know hyperdimensional physics says you can produce technology that will last you know hundreds of thousands not millions of years because you're not using any known power sources the stuff doesn't have friction it doesn't wear out it doesn't corrode so yes you can certainly Envision robotic Implements of things that are still active we see in these
(50:45) photographs ruin after ruin after ruin I mean when I when you come to Joshua Tree and on the Columbus Day weekend which is a 4-day weekend we're going to do this up really well in the desert with a lot of of interesting material with enough time to go through it I am going to show you stuff on the moon that will knock your socks off all right all right John le what about the propulsion of these vehicles then if there's this other program underway where are they taking off from 51 uh no I the only place that
(51:16) I know for sure is Sandia uh there uh north of Kirtland Air Force Base I've also looked to the Outback of Australia gentlemen in the middle of a continent which has only 13 million people people and most of them are aborigines yeah you know you could you could do you you could create entire cities George in the middle of of Australia and no one would ever know but we do have reports Aboriginal reports of very strange things happening that's where Pine Gap was located remember that facility um I think Australia is the place because
(51:48) it's literally on the opposite sides of the planet from 535 people who are supposed to be mining the store and have been looking the other way for 50 years all right Richard well get those pictures to John cuz I'm sure he'll love to see them thanks Richard all right Richard thanks I appreciate you being part of of this you know John I guess Common Sense would tell you this can't be I guess don't you think that what that that this can't be there can't be another program out there that's been so
(52:17) technologically advanced my mind just doesn't want to believe it well let me tell you this in 1956 my dad was heavily involved in uh Antigravity research as a matter of fact floating around the internet there's a 2-minute film of him giving a lecture at the uh bonson Institute and behind him is a Blackboard and he's explaining how flying saucers fly my mother is standing next to him and then in this two-minute film uh for some reason there's a calendar something is very very important and they're marking off the
(52:50) days and then they have a picture of a lab and they have um very flimsy type tissue paper and balls paper uh constructed models of flying saucers and I don't know what that's all about but I do know this when in the last 35 years have you read in any technical Journal any Aerospace Journal any airplane Journal anything about Annie grab you haven't read anything and the reason is is because they've already solved it all I heard was when I was in St Louis and at one time you know it was the headquarters for McDonald Douglas before
(53:23) they got bought out by boing I had heard that they were working on some kind of anti-gravity device somewhere maybe out on the west coast but that's it and what year was that um that would have been about 99 I think I would have heard the story

they had all this completely solved and and ready to go in the early 60s and uh and they've had it since then but you're not going to see anything in uh Aviation week you're not going to see anywhere else any remotely discussing the subject of Annie grab because they've already
(53:56) got it what about the whistleblowers how come they're not coming forward no well I'll tell you there's there used to be whistleblowers but there aren't anymore George you know in 1989 1990 uh when I first got into this there was guys coming from the black areas up at at Area 51 and they knock on the door and if I wasn't there they'd tell my wife they'd say um I work up in a black area I just wanted to tell you your husband is right on and then about 1991 it stopped somehow they figured out how to
(54:25) keep a secret and I haven't heard a decent rumor since then do you think anything happened to these people no uh well maybe they did but there was four or five of them that used to come by and give me little tidbits but uh that ended in 1990 1991 they about and they just stay away from you now oh yeah they uh somehow they've they've learned to keep a secret it could be mind control you know whatever it is but but a secret is a secret now and it's very difficult to uh to F to uh to find out the only way I
(54:57) get information and and I had two sources they're both dead now they were in the program they had been in the program forever all their lives and they were about to pass away they're about to die and I had a chance to sit down with them and talk with them John if you had friends or colleagues people who've been pilots who have called you over the years saying you're right on John we've seen things I mean do they come out and support you or do they run away from you no usually they don't talk about it but
(55:26) just t night I heard a really funny story there was um there was an old Cargo Airline I used to work for it called Rosen bomb and they were doing a cargo flight about 1:00 in the morning from Chicago to Seattle the guy who told me this was uh was the flight engineer Mike tidal and they're flying along and they're looking ahead they're they're up about 35,000 ft they're looking ahead because air traffic control would give them giving them a a FedEx um you know 12:00 20 mi and of course you always
(55:56) look to see the airplane to be sure that you know your you're the spacing is correct and everything and they're looking ahead and behind this FedEx this huge circle Globe lighted Globe comes whizzing toward him I mean at like a 10,000 mil an hour just when it gets between FedEx and uh these guys airplanes it heads north towards the North Pole and they watch this thing I mean ZIP as far as the eye could see it was it was huge and it and as it disappeared there was a total silence for about 5 seconds and then the
(56:28) co-pilot says now there's something you don't see every day it was hilarious everybody started laughing I love it I love it I mean real lowkey now there's something you don't see every day you know why don't you have a website by the way um I don't know I just uh I mean you don't have anything to gain here tonight Sean no no and and you know I'm so busy I wouldn't have time to keep it up and also there was a uh I guess what a 10-year Hiatus before you came back to talk uh on coast and yeah what over that
(57:05) span why did you stay away and then what made you come back well uh I don't remember exactly the reason I think it may have been let's see that 10 years I think they started 92 or 93 I don't remember exactly what what kicked it off but you get to a point where you you just you don't learn anymore and then you get tired of it then you don't want to hear any more stories and you just walk away you're busy I I was busy flying that was towards the end of my career and U I was busy with a 10-11 and
(57:33) different airlines and uh um one night uh art called and and said you know man I want you to do a show and everything he more or less talked me into it and and so I got back into it he has a way of doing that yeah he sure does stay with us John back with you in just a moment on Coast to Coast Dam well now it gets really wild John leer believes all the planets in the Solar System are inhabited by beans much like us will get his take on that and I got to tell you what a fast program tonight I think we have a new propulsion system behind us
(58:05) this may be one of the fastest shows I've ever participated in back in a moment with John leer on Coast to Coast AM we're going to take phone calls next hour with John Lear and one of the things John would like you to do if perhaps you have some inside information on that Apollo one fire if you want to be able to tell him some information uh John believes that there might have been a fourth astronaut

fourth person involved in that horrible tragedy and he's going to ask you to give him the initial of that person that person's
(58:50) last name uh and maybe as a test to see if you really know what you're saying and uh if you're above board with us uh when you make the call John all planets in the solar system inhabited by being like us I believe so and and let let me say not might have been a fourth guy there was a fourth gu okay so you believe that entirely Absol all right and before we get too far I just want to be uh say hello to my friends at the Nighthawk Zone uh bad boy and at the Fantastic Forum Spike Mike and all my friends there good for you they they are
(59:20) great people now as far as the planets being inhabited Mars the population uh I think is 660 million at this time most of them live underground when Bob Lazar worked up at the test site he was shown photos of Sidonia region very close-up photos uh of the Sidonia and those pyramids had doors and windows there was no doubt about it I mean it was uh it was very clear Bob and I went down to uh uh JPL and met with the head of um um I'm trying to I'm thinking it was Mariner but I'm not sure I forget the
(59:57) guy's name but we asked him they uh they said were there any more photos taken of Sidonia other than the two ones that uh hogland and B Petro have and uh he said no and then Bob said uh did you ever take the spacecraft to a lower orbit and the guy said yes but we didn't take any pictures now here's how secrecy Works here's the guy that's the head of the program and he knows that it went into a low orbit but he didn't know that they took extra pictures and Bob saw the extra pictures that they saw of Sidonia
(1:00:33) that's how compartmentalization works you might have a certain uh uh clearance but that doesn't mean you get to know everything at that level no and I want to make sure that I understand this too John when when we say all planets in the solar system are you are you talking about just the ones that are close to Earth or we talking about Jupiter NE Mars Jupiter Saturn Pluto Mercury Mercury is not as hot as everybody thinks it is uh and I don't know whether they live above ground but I believe that there's people from each one of
(1:01:02) these and we're fed so much BS you know I you know there's so much methane that NASA puts out you know I think they generate the methane themselves that they say that all these planets are covered with but it's just it's just a scam it's a Roose uh so that we don't think that there's any that we're the only ones there but there certainly are people on Venus there certainly are on Mars uh interesting thing I did a uh remote viewing class I went to a class with uh Angela Thompson Smith and uh it
(1:01:33) was very interesting I was shocked I went to the the remote viewing course because I was interested in it and but what I wanted to know is I'm not the least bit psychic I can't tell when the phone's going to ring I can't tell when the doorbell is going to ring I don't know when anything's going to happen I wanted to see if I could do it and I'm telling you George after the second day some of the stuff I was doing absolutely shocked me sure but at one point um each member of the class got to task the
(1:01:59) other members into doing something uh or going somewhere so I tasked the group when it was my turn to go to Venus now I didn't frontload him with anything any of my ideas or anything just said you know the target is Venus and so then there was the the normal cool down period then they go then they come back then uh cool down again and then the the thing right out of their mouth was every single one of them said my gosh that's beautiful I had no idea you know and then one of them said boy that's like
(1:02:29) South Africa you know was green and beautiful and uh just all kinds of you know uh uh beautiful scenery there it's not like you know the sulfuric acid covered uh 90 bars of pressure volcanic spew I think that came about in the late 50s when it was decided that we should not know that there's anybody on Venus and I can imagine a general sitting around with his staff and saying now folks uh gentlemen uh we have to make Venus as unpalatable as possible I need some ideas here and so one guy says well how about we make the atmosphere
(1:03:06) sulfuric acid great great that's good let's have some more ideas here well how about we make it to it's too hot how about we make it to all volcanic uh lava great great come on let's think outside the box here come on let's hear some more ideas well how about we make it uh 100 bars of pressure and the general says Nah bars down in little phony how about 90 bars and they says yeah yeah okay that's good we got a planet here now what else and they said uh they probably said well why don't we say that

(1:03:36) everybody that prints a picture of Venus we use the false color of gold or yellow that'll get everybody to thinking you know that it's mol lava and that's exactly what happened now we're supposed to believe all that I can't believe it how did the veneer land did the parachute you know landing and uh floating a a parachute down and 90 bars of pressure would be like floating a parachute in the ocean I mean it's just not going to happen why John with my very open mind and it is and you've
(1:04:04) heard the program and you know I have an open mind about a lot of things why can't I accept this that there are other human that's or or beings much like us on planets in our solar system I just I'm holding back on that it's just too much to accept and you know it takes years uh you know to get into this stuff and I can tell when I talk to to a person I'm so tempted to tell them everything I know and I can tell the instant that I've gone too far because their eyes glaze over and you can tell
(1:04:35) oh that's it that's as far as he's going to go and the mind just shuts down they don't want to hear it they they just can't accept it anymore and the only reason I it's easy for me to accept as I've been in so long and I've seen so many things happen and you know absolutely nothing surprises me um I was just taking a check on some of the forums uh on the internet and the big soul machine on the moon which we refer to as the the tower that Richard found I mean that shuts a lot of people down
(1:05:01) they just disappeared they don't want to hear that it's just too far out for them well we've got this new Fast blast system that we've had for a couple years and it gives me instant feedback from people so I've got some questions that I can roll off for you from some of our listeners as well and then next hour we'll just open up the phone lines for you John and sounds good and then briefly George I just want to say that uh uh on the Fantastic forum last September I posted a thread called I
(1:05:28) intend to POS uh I intend to expose NASA's biggest lie and that thread in a period of less than three months attracted 65,000 views and what I did is instead of just telling him what the lie was I made him research the information that led me to find out what the lie was and I made him research U Neal Armstrong's speech at the White House 25th anniversary I made him research the neutral point between the Earth and the moon I made him research uh Alan Bean's uh comment that the uh the sky was as black as a
(1:06:06) pair of black patent leather shoes I made him research Ed Edgar Mitchell's comment that he just can't remember can't remember what happened on the moon all that stuff and at the end uh I I tell exactly what the biggest lie was and the biggest lie was that the sky uh is not black on the moon uh during the daytime it's blue just like it is here yep just like it is here just like it is on Mars sky is blue on Mars it's not red I've always heard that when Neil Armstrong set foot on the moon he saw
(1:06:40) huge alien Craft on the other side of a crater he did and and uh the closest he ever came to to uh uh acknowledging that you know Neil Armstrong's only made about three speeches since he came back yeah he had a little conference a few months ago but you you're right he and I want to tell you something there's a very interesting notation in a book here and the book is called the moon landings and it's by Reginal turnel and on page 239 there's a very interesting sentence and it talks about uh Neil uh and and
(1:07:14) just before they blast off and it says quote he may have had in mind the 12 men already sealed inside the lunar receding laboratory ready to share with the crew their strict 21 days isolation starting from the moment when it was hoped they would lift safely off from the moon now think about that we never heard about 12 guys in the lunar receiving laboratory who were those guys those were the guys that told Neil and um buzz and Michael uh that they weren't going to tell what they saw you know on the moon and it's
(1:07:49) spent you probably spent 21 days and uh there was probably some fisticuffs going on but whatever happened there Neil never said anything other than he did the one talk after uh after they got out of the uh lunar receiving laboratory one at the 25th anniversary and then he did the one at UH 60 minutes and basically what happened is when he was to uh he couldn't pull up but he actually extended where he was going to land so none of the cameras got the uh the pictures of the saucers there and I thought it was really interesting on 60
(1:08:24) Minutes uh when they're in interview him I think it was Mike Wallace and he brings this up he didn't have to bring that up he could have brought about up anything else but he said yeah those that field of Boulders was really big and for

those of us that know you know what that field of Boulders was you know was a field of Boulders a bunch of saucers and he had to go to a you know a little place a little farther under and that's why he burned so much fuel one of the keys to all of this to to this
(1:08:51) entire theory of why they're not telling us why they're withholding I I think uh was buried when wner Von Bron died when Werner passed on I think he knew a lot of things uh may have told some people did you hear anything John about him no I've read that he was at Roswell and interestingly enough before I ever got involved in this UFO stuff which I told you was 1985 right when I was flying for uh an airline called uh Air Club International I had a trip to Bahamas and we were there for a couple days and
(1:09:26) I signed up I had a scuma diving card and I signed up for a dive and guess who my dive partner was son Bron Von Bron now you know I wish i' had have known you know enough then to ask him some questions just like you know my dad died in 1978 he used to talk about sausage but but not that much and it turns out he was right in the middle of it I mean he was on the board of uh love lace Clinic Randy love lace was the um was the Air Force surgeon that moved from was transferred from rri Patterson to uh Albuquerque uh in 1947 and love La
(1:10:06) Clinic was the place where they did a lot of the autopsies or many of the autopsies my dad was close to Jimmy dittle jimy to little was wrapped up in this thing um the uh former head of the second head of the CIA I'm trying to think of his his name um and he was part of mj12 uh he had a crush on my mom these guys were all around around the house was that Alan dullas no no no it was um I'll remember the name I'm getting into Alzheimer's here and I can't recall any of course you know the guy who jumped out of a window was
(1:10:35) forestall forestall yeah and um but anyway all those guys were around the house if I had have known anything then you would have been great I would have loved to ask him some questions but uh I didn't get interested until 1985 where does this all lead us John what what's going to happen I mean are we going to ever get disclosure or or what I thought no up you know when I did that Art Bell disclosure thing I was firmly against it and now I've heard some of the stuff that Dan burish has come out with and an associate of uh uh
(1:11:07) not an associate but somebody who did the videos a guy named Ron Garner and he showed me some of those videos and told me some of this stuff and it it appears like mj12 which now apparently has 36 members wants the information out but they don't know how to do it and they want the information out but they want to put their spin on it in other words when I say that uh we're just to uh experiment that it's a farm it's harvest they don't want bad story they'll go ahead and admit that jrod is from Zer
(1:11:42) ridic too their story is the story that the if you've read anything about project Sero that spin and that spin is yeah everything is hot yeah they play soccer yeah they tell time with the sundow but you wouldn't want to go there because they don't e the stuff that we do and they have families and this you know and that's all there is to it and of course that's a spin that's not the truth uh and the way that you spin something is use a little bit of the truth and a little bit of what you want
(1:12:10) people to believe the fact is they do come from Zeta ridicul too but um they don't have families they don't reproduce their their cybernetic organisms they're stamped they're robots they're here to carry on the experiment which is somebody else's experiment what do you think of this serpo group uh where they claim that we sent astronauts in an exchange program with we sent astronauts but not 12 of them we sent three of them and uh and that part of the story is true did they come back uh
(1:12:41) three came uh let's see uh two came back one was crazy one was normal and one was dead and I don't remember whether the Dead one came back or they left him there at least that's the story these are Americans yeah all right well the the serle website which had been down for about a month is back up again and it is as bizarre as anything I've seen joh yeah that's that's the spin is there is there a lot of disinformation out there all of it is disinformation I mean you hardly can get any true information uh for instance the
(1:13:14) other day somebody said uh hey I heard it somebody told me that 80% of the saucers that the public sees are ours and I said yeah they are I said you know we've had themel again since 19 uh uh 60 I mean we've had it all of those things are ours there's there's a few of them that are alien saucers but most of them are ours most of them are ours yeah but we uh were given the technology we didn't come up with it

on our own no I think and we weren't given uh like I said we don't have the stuff that can go you
(1:13:47) know hundreds of times faster than the speed of light because that has technology that Bob Lazar worked on uh for Dr Teller and what they were trying to do is figure out if we could duplicate it any way and we can I mean there's you take uh Element 115 um and a little chunk of it an arrowhead chunk of it uh pump in protons bump it up to 116 there's an Annihilation and the annihilation uh throws off two things the gravity a wave and antimatter the antimatter is mixed with matter to create heat in a thermionic generator to to create power
(1:14:21) for the craft and then the gravity a wve is siphoned off to use for the gravity generators Which pull pulls it through space and that's stuff that I I mean so far ahead we don't have a hope of uh of being able to duplicate that stuff we just don't have the materials element 116 unon hexium I know that one okay that's the only one I know okay ununennium is the 150 and if you pump a proton into ununennium which is stable it makes it6 816 is unstable and a and it decays and when it decays it it's a
(1:14:55) total Annihilation and it throws off two things the gravity a wve and anti man are other governments part of this or is it just us um a lot of them are the C we're closest to the Canadians uh on this and as I I you may remember the story I told Art Bill years ago the guy that came to my house and he was a he was on he was Air Force photographer uh stationed in Honolulu and he got TDY temporary Duty assignment to Norton when he got to Norton he was put in a limo with a windows blacked out and taken somewhere near 29 PBS and um
(1:15:35) it went down in an elevator the car went down in an elevator he got out they told him to change in this uh change room he put on um a smok uh a a cap and booties and they gave him the camera and he walked into this hanger and there was a ladder up to a saucer which was maybe about he says 35 35 40 ft in diamer diameter he went up the ladder and he said he poked his head inside to put the camera in there and he said John he said I couldn't believe it he said when I poked my head inside I could have thrown
(1:16:11) a football and not hit the edge of the saucer he said it was so big and he said I stepped back out on the ladder to see if this thing was really you know like 40 ft which wasn't all that big and it's 40 ft and he said I poked my head back in and he said it had to be 200 ft to the edge of the thing and he said one of the SC scientists he had a Canadian accent said come on guy we've got to you know get some pictures here and so he went in and he took pictures as they put their hands over consoles and it would
(1:16:40) go down and go up and that kind of stuff I sometimes think we're on the verge of breaking the biggest Story of All Mankind John I mean it's their force it it could be I mean that they I don't know it' be interesting stay with us we're going to take phone calls now next hour in this rapid program I'm George Nory this is co well I don't know why we gave the phone numbers the lines are already jammed we'll be back in a moment John Lear Our Guest will take your phone calls on our next Coast to Coast program
(1:17:12) by the way tomorrow night will be our Friday in the Saturday night open lines but for the first hour I'm going to talk with someone by the name of anonymous about that very strange box called The diic Box so get ready for that one but we'll be back in a moment John le your phone calls next on Coast to Coast [Music] a.m.
(1:17:53) did you ever come across anything uh John which would show that during this episode with extraterrestrials uh that there were fights involved I mean did you have any pilot friends or anybody tell you about that no I didn't but I've read all the uh the um incidents about the incidents of um of when we tried to shoot things down and I think we lost about 200 aircraft like I remember art once a couple years ago was talking about an incident that he said he heard that involved a drilling project near 51 and he said they drilled down some 200 2,000
(1:18:29) ft and as they brought the drill up it apparently pulled up human flesh bones and things like that that's a bizarre story well that's you know uh the fact is is this is just uh an experiment a petri dish so to speak in every 25,000 years I mean it's proven uh by historical geological records that uh every 25,000 years years or so on an average uh the the uh the Earth is is mixed up it's it's turned on its axis rotated on its axis and everything is wiped off and they start over again let's go to the phones now before we
(1:19:08) let's slow down then what I just want to tell you that I remember the name of the mj12 member that had the crush on my mom his name was Hoy Vandenberg General Hoy Vandenberg Vandenberg and uh he was um the um second Chief of Staff for the Air

Force and uh air for venberg Air Force Base was named by him and as these mj12 members died they the the the rest of the group found somebody else to replace him right correct and now there's 36 members still going strong yep wild card line you're on the ear with us hi there
(1:19:41) hi uh having an interesting night tonight aren't we it is indeed and where might we be I'm Jackie I'm from uh well North Los Vegas okay Jackie go ahead okay uh John I'm hoping you can solve a 27-year-old mystery for me uh do you know what was going on in 1979 uh where well on Mars no okay what was going on in 79 on Mars well I I used to work at Nasa during that time and uh handling down L Petry and what not on our video monitors while you know the uh little Viking Rover was uh running around I see two men in suits not
(1:20:27) necessarily space suits I mean they look protective but uh they didn't look like the bulky things that you know I not use but they came over the horizon walking towards the uh uh Viking Explorer and uh our vision got cut off I didn't see what they did with it or anything else they were probably making repairs well that's why I was wondering if they were our guys or not because you know what kind of Suits they wore pardon do you know what kind of Suits they wore in well they wouldn't have to wear very
(1:20:58) much I mean the atmosphere is U there's enough atmosphere to walk around without a space suit on Mars same as there is on the Moon I mean there's not it's like about 15,000 ft on earth now you can go through a 24-hour climatization uh program on the moon and you can walk around uh without a space suit uh same thing on Mars you don't need a space suit if they had one it was just minimal did you have any other WT is there while you saw this well there's about a uh well out of the workers there's probably about a half a dozen of
(1:21:31) us uh because we were you seen the typical NASA things where they got all the monitors oh yeah yeah so you had a few people out there monitoring the monitors yeah you got about you know the people that were up there and then there's about a half a dozen of us downstairs cuz you know it was just maintaining the uh equipment because if anything went wrong we had to get it up quick so it didn't miss be Telemetry you folks must have been amazed at what you saw I yeah because you know uh when we saw that and they
(1:21:59) cut off our video downstairs of course we ran upstairs and and uh you know they've got uh on those side doors upstairs they have those little windows I don't know if you have you been there I have not no okay well they got the side doors going up to the to the back or what we call nose bleed section in most stadiums and stuff but anyway uh you come out there and uh we could look through the little window in that because they had just locked the door and they normally don't lock it on us but anyway they just lock the door and
(1:22:29) then they came you know we saw some more on their monitors and they came over some paper taped over the door they clipped it can you imagine I appreciate you calling and telling us that story it is great and it just confirms what what's going on can you imagine that John there they are looking at their Telemetry and they spot the monitors and they're looking at the Rover piece of it and all of a sudden they see two human beings walking into the scene yeah absolutely they were going just like Mars Rover cleaning off the dust they
(1:22:56) had their paper towels and wind decks and it cleaned off so it could receive the signals first time caller line you're on the a with John le on Coast to Coast hi there hello yeah hi go ahead sir oh hello Mr Nori and uh Mr Lear nice talking with you I'm sure my sister in California will be talking about this show tomorrow uh my name is CLI I'm in Dallas and uh it's just one thing about the whole scenario here um I'm I've been hearing about you know we have these uh the Hubble we have the uh spacecraft and all
(1:23:34) these different things that we sent out into space and I'm really it it boggles me to know to think that none of our spacecraft or our satellites or anything out there in space uh has ever been destroyed by any of these aliens if they are maybe I know we have some that are hostile we have some that are that are not so hostile but I mean we're able to land on these different planets and including Mars and and and take off and come on back home to Earth and I'm just really trying to understand how
(1:24:09) come we have it because if we land on Mars and there is life on Mars wouldn't that be like an invasion or coming onto their land like if they come on to Earth well how would they perceive that Mr Lear no we're we're pretty harmless and I'm sure we have some kind of agreement and by the way there's not one Hubble there's two there's a secret one and the one that the public knows about okay I

didn't know that I hope there I hope one of them exists after a while huh y all right thanks do you think we have shot
(1:24:41) down or they have shot down any of our satellites let's see have they shot down any of our satellites I don't know there was the you know the um Russian probe that uh got the beam out of Phobos uh and that was Zapped something happened there and some of our stuff has been Zapped in Mars but of course NASA tells some of it zap because they don't want to share any information they said whoops it failed you know and then they can get the information without telling us what it is and it's still up there
(1:25:11) doing whatever it's doing sure I always suspected that sometimes same thing with Clementine when it went up to take those fabulous pictures of the Moon you know and uh and then after it got done it you know uh went out of control and we couldn't get the pictures and da first time east of the Rockies we'll go to you first here on Coast to Coast hi there hey George good this is John from Springfield Illinois wtax yes yeah John you're one of my favorite guests on the show I'd like to tell you that thank
(1:25:40) you my question is what percent of astronomy taught in our schools like colleges is uh is actually correct in your mind uh as far as totally correct as far as you're saying what's actually going on on these on the planet surfaces and the atmospheres what is your percentage that you think that is correct that's actually being taught in our schools probably 5% really uh the orbits are correct but all the rest of the stuff the composition of the planets and you know what's on there and the the gases surround and that's
(1:26:13) all BM is it because the professor probably just doesn't know John uh no he he he is U main line I mean to be a professor and to keep your credentials you better tow the line not not be talking about anything anything strange well but what I'm saying is though I don't think he believes there's anything strange a lot of these guys probably aren't in the know yeah well west of the Rockies you're up on Coast to Coast hi there hello hi George hi go ahead this Richard from lale California hi Richard go ahead you're on
(1:26:50) with John leer hey John yeah I used to work at your dad's company lyics in Santa Monica oh really yeah from uh 91 through 99 that was when it was SE pardon me that was when it was seagler right right then it went on to Marone and and of thee systems but uh we were uh the owners went called for a meeting in the conference room one afternoon and I went in there me and a coworker we were the first ones there we're waiting for the others to show up and at the end of the table there's a projection screen
(1:27:29) just just went up on on its own and he and I looked at it we looked at each other sticking our heads and uh what happened to the screen it just shot up by itself maybe it just had a shorts or something well at the end of the meeting I talked to my supervisor we were talking about it and he said yeah this was uh Bill Le's favorite room had a had a tucked in coffee machine you know used to kick back in there I guess oh that was John L's father's favorite room you're saying right oh okay well that's interesting a little tidbit for
(1:28:11) you there John le interesting okay thanks Richard appreciate you being on the program next up Wild Card line you're on Coast to Coast hi there hello yes take it away yeah this is Jeff I'm a truck driver going across the Montana here all right uh I used to work at the Livermore labs when I was in high school a kid I was wondering how involved were they in uh these programs they were at the top Dr Teller headed Lawrence Livermore and Dr Teller was head of the UFO program okay I I when I was working there uh yeah I
(1:28:50) started out as high school it was part-time I they sent me down to the salvage yard and we'd separate material down there and there were several times that they would bring really strange stuff in there and uh there would be like a group of men bring things into the salvage yard we weren't allowed to go over there until they were done taking what they needed out and then we'd go over there and dismantle it and put like the stainless steel in the wiring and different Hoppers so they could be recycled yeah and I was just you know I
(1:29:27) know that there was a large underground complex there between there and Sandia across the street but uh I developed thyroid uh disorder and uh I was curious if there would be anything that could tie tie that that radiation lab now that's really interesting that there was a place across the street called Sandia tell me about that place or is was straight across the street from uh uh Lawrence Livermore Labs is what they called it I was in there in uh 7071 what was in Sandia I have no clue see I was only cleared to work at the

(1:30:09) the Livermore radiation lab okay thanks George the reason that's so interesting is one of the one of the ways they keep things secret is they named different projects the same name for instance Sandia was the original name of the uh the operation there at Kirtland Air Force Base okay and then Sandy is also the name of the uh Secret runway facility up at the piute Mesa within the test site and uh then now there's another Sandia so it's pretty interesting they sure like that name so you'd be totally confused whatever they
(1:30:42) were doing right if the San die comes up accidentally you know somebody would think oh yeah that's just that place over at and off they go let's go to our first time caller line welcome to the program hi hello George yeah go ahead sir okay John you're blowing me out the door listen I um I talked to an engineer that worked on the capsule that fired up on the pad and burned up the astronauts yeah and he said that the wiring on that thing was atrocious yeah and he almost lost his job over fighting him that it
(1:31:14) wasn't fit to take off right and I don't know if you know how many people knew that but I think that's a plug against NASA for sure yeah well this the story is that uh while NASA didn't specifically cause that accident they certainly were complicit in letting it happen you know Gus Gom was very outspoken as a matter of fact only a few days before the fire he had made the comment this thing ain't going to the Moon in two years this thing ain't going to the Moon in 10 years yeah because he
(1:31:45) was so disgusted with the workmanship so anyway that's one thing but another thing I want to say I saw a spaceship go in front of the Moon one night and it had to be about 2,000 ft long it was the hugest thing I ever saw in my life and it was in orbit around the Earth I know it was yeah but the thing that blew me out the door was that the the thing was so vivid it was the vividness of it seemed like you could just Reach Out And Touch it yet I know it was in orbit was it one of those huge triangular-shaped
(1:32:16) objects no it was a cigar shape but it was pointed on each end I sometimes get some incredible calls John from people who are looking at a full moon and they see something go right past yeah this thing had a very thick body and pointed on both ends so I know it wasn't space junk okay thanks for the call John what do we hear about these large triangular-shaped objects uh those are probably ours and um you know they they show up every once in a while a lot of them are seen near military bases so I'm beginning to think maybe
(1:32:47) there's a big hanger out there or something like that yeah well once you get well no they're not hanger everything's underground now everything and U these neat Landing strips they have they uh what they do is the pilots uh say that you know when they're Landing they're vectored by radar and when they get to about 500 ft that the runway unzips like a zipper on a purse and it in front of them is revealed the runway they land on the runway and an elevator takes them down and then the terrain whatever it is
(1:33:18) Desert or Orchards or cotton fields or whatever Zips back up and it just looks like a regular regular terrain um I remember a few years ago two friends of mine Jim Goodall and John Andrews had a report of a 10,000 foot strip 35 miles Northeast of almagordo and they spent two weeks they each got their vacation simultaneously and drove around the exact spot for two weeks trying to find that strip and I couldn't find it you still flying these days no oh wait who's it you no not at all not even for fun no
(1:33:52) I retired five or six years ago I had my pilot's license laminated put on the wall okay all right I thought you were still at least playing around you know part-time for fun or something no okay let's go to our Wild Card line you're on Coast to Coast hi there hi there sir is hi this is Mike from New York how are you good Mike go ahead good morning um I'm just a little bit astonished about if you don't mind maybe asking one or two questions I'll give you one before the break go ahead okay it's just about asking how
(1:34:24) have all the astrophysicists made mistakes about the planets and how come all the astronomers that we have at se have not picked up a single transmission from all these inhabited planets this is beyond the pale it doesn't make sense and this is not a personal assault I'm asking you an honest question how they've not picked up at least the serious people from SEI the astronomers the astrophysicists got it all wrong and not one has picked up a transmission and I'll listen to your answer on the radio thank you John okay
(1:34:57) take it away John I don't know it's as simple as that it just is it just is okay well we're going to continue to take phone calls we've only got a half an

hour left with our guest John Lear tonight so if you want to just jump on board if you can get in because I will forewarn you the lines have been busy all hour if you need to email me that's simple George coast2 Coast to Coast am.
(1:35:25) com we'll be back in a moment final phone calls with our special guest tonight John leer right here on Coast to Coast a.m. we're going to take your calls but we're going to wrap up this hour again with the Lear disclosure it's it is a classic and I want you to hear it one more time I also would like you to pick up the after dark newsletter where we'll send you a complimentary double copy of the after dark CD Bumper Music ghost stories phone calls to the show a collector's item of $4.
(1:35:53) 95 retail value it is complimentary when you order the after dark newsletter call 1 18727 5505 or go online at Coast to Coast am.com [Music] and welcome back to Coast to Coast George Nory John Lear and your phone calls John I'm going to play your disclosure project once again at the end of the program okay let me tell you a quick story it relates to you not being able to believe that there's people on other planets okay sure Bob sitting with Bob Lazar and I'm showing him the pictures of the buildings on the moon
(1:36:45) and he's trying to make it out and he says you know I'm going to kill myself if this turns out to be true so I had him sign a statement and I have it in front of me it says Bob Lazar promised to kill myself if any of John's Moon stuff is true signed Bob Lazar August 23rd 1996 when only showed him enough pictures that it was absolutely obvious that there are buildings up there I said now Bob your promisees you you promis to kill yourself and so he signed the following statement dated August 5th 1998 I Bob Lazar in return for not
(1:37:19) having to honor the commitment to kill myself if any of John's Moon stuff was true do freely admit that the object in the crater cernus on the moon is a box which I don't know what is doing there sign Bob Lazard I love it I love it back to the phones we go west of the Rockies you're on the year with John leer hi there hi uh this is Al from Anaheim hi there Al hi hey John one of the things you have said tonight have really pqu my interest uh especially some of the stuff on the moon um it's not the first time I've
(1:37:52) heard I've heard from a couple of others sources you know various things going on including Felix Bach and others but um my what really Peak my interest was this what you said earlier about souls um they're harvesting souls or something like that or and I'm wondering how this uh number one how does this is this some kind of an electronic or electromagnetic device or something that's implanted in order to get these experiences and record them or is it something else and also how does that how do you how do you
(1:38:24) fit that into your idea of a our own spirituality or if we have such a thing as spirituality well that is our spir spirituality it is a little uh it's like a little recorder smaller than you could imagine and it just records everything and it is zipped back and forth and uh records every Lifetime and would that account for I know there's people that have done studies on uh you know weighing right after death and so forth and does that have anything to perhaps have to do with that or not uh I don't know uh they I hear that you
(1:38:57) know the end of the or end of your life you see the white light in the tunnel that's probably part of the program to make you feel good about everything but the one of the ways that I figured out where the souls were going is mcmonagle who was one of the uh original remote viewers was tasked to follow a soul uh and the Army tasked him there was somebody who was killed driving south of a San Francisco and he followed the soul going towards the moon and he said as we were getting closer to the Moon uh whatever it was the soul was getting
(1:39:26) wrapped in something and he kept hearing this is not your place you may not come any closer to the point where when he got closer to the Moon he felt MCM mono felt that he would die if he went any closer because they didn't want him to follow to where the soul was going to very interesting and that's in MCM Monical's book W great thank you all right Al thanks appreciate you being part of the program first time caller line we'll get you in you're on Coast to Coast hi hello Nighthawk how are you good thanks
(1:39:57) this is Rick from De Mo yeah Mr Le sure uh the other the previous caller not this last one but the one before the break had mentioned seti and what I'd like to know is private and amateur astronomers for the past 50 years have said nothing have seen nothing have produced nothing and how come why is that I don't know about about anything that you claim excuse me about anything that you claim they have not seen produced or talked about anything that you claim okay what what uh particularly what are you talking about you mean about saucers

(1:40:42) or I'm talking about anything that you have claimed so far I just don't have an answer for you okay the other thing is if this if say anti-grav has been around for 50 years how come they can't they meaning the Black Ops that you're talking about or however you want to word it how come they can't give a a little bit to the human race and say here this is for the betterment of the human race uh anti-ra uh electric cars I mean why are we walking around like ants if all this stuff actually exists that's the big
(1:41:24) question that's a good question what's the good answer I don't know what the answer is okay Mr lar the last thing is you talk about stuff and people's eyes glaze over they glaze over because of the last two answers you just gave me you have no proof of anything it's your word and you know what uh Mr hogland has started to disappoint a few people including our Bell by talking about weather manipul manipulation and now he's siding with you and this whole thing is getting a little ridiculous you don't believe in
(1:41:58) weather manipulation sir the Chinese don't believe I don't believe in anything he hey hey hey hey hey the Chinese just had it rain almost an inch over Beijing oh come on silver silver isn't that weather talking I'm talking about with uh isn't that weather manipulation okay I'm talking about harop you know what I'm talking about I'm not talking about I'm talking about what uh hogland believes moving a hurricane you going to do with that with that with silver cyanide iodide whatever are you gonna
(1:42:36) are you gonna do it with that not with that but who knows what they have apparently you seem to know what they have since 1962 Hogan was concrete's Big Buddy in 62 and you're telling me he didn't know anything you're telling 10 million people on a bunch of crap well and that's the word that gets you tossed off the air god see he doesn't have an open mind John well yeah I don't have an answer for that we've got time for just a quick one before we take the Lear disclosure east of the Rockies you're on Coast to
(1:43:12) Coast but it is Lively I like that yeah hi hi this is Steve from Oklahoma Steve a minute for Mr it's a pleasure to talk to you uh I'm a pilot and flight instructor and my question is this uh for years I've been teaching my students that bui's principle is what creates uh how the wing creates lift on an airplane and I had a aeronautical engineer one day come up to me and say that was a uh uh that wasn't accurate all the textbooks were wrong that that Bern's principal really only accounts for about
(1:43:42) 10 or 15% a lift not 75 or 80% as the textbooks say and he'd been trying for years to get that changed and uh I've seen some stuff on the internet that kind of collaborates what said but when they try to explain how the wing really generates lift it's kind of above my head 30 seconds John I got to cut in but can you give him a quick one on that I've heard that argument too it's interesting I'd like to know what the answer is all right John I'm going to play your disclosure project you can
(1:44:09) listen to it at home if you want no sense you hanging on for 10 minutes here and first of all I want to thank you for an enlightening fascinating discussion okay it's been great talking with you George all right that's John Lear it is an interesting one I'll tell you that I'll be back in a moment but first let's let you listen again to the Lear disclosure 2 and 1/2 years old when he was talking on Coast to Coast AM about what could be okay let's say the government chose me uh they were going to use me as an
(1:44:43) outlet to release this information let's just say they did that and they took me to a briefing then what John okay we whiske you to or they whisk you to Washington DC you get limo to this building beautiful building you go up into this room uh they say art you're the guy um if you give us the go-ahead we're going to release everything we know to the public and if you decide to go ahead all major networks will be provided with information on all aspects of the coverup no type of information will be
(1:45:17) withheld because of the deal for immunity for all participants of the coverup provides that nothing no AR fact no piece of information be withheld so here's what happened art and of course this will call we'll use some videos and stills our first UFO recoveries were in the late 30s we made a couple in the beginning of the 40s and then came Roswell which the public found out about we got two live aliens from Roswell one died shortly thereafter one lived until 1956 and we found out that so far there are 18 different alien species that we
(1:45:51) know about monitoring Earth some are good some are hostile most are indifferent uh we found out that we are the experiment or product if you will of an alien race who we never met and really don't know who they are all we know is that

the Grays are cybernetic organisms glorified robots if you will who work here at the behest of their employers monitoring us through abductions uh we were never able to find out what the experiment is all about except that we have been externally corrected about 65 times and they the
(1:46:21) aliens refer to us as containers there's been speculation that the souls our bodies contains is the reason for the experiment but nothing has been proven or determined since 1938 we have lost over 200 aircraft to UFO hostilities and thousands of soldiers and all kinds of different kinds of action with aliens since that time several hundred thousand civilians have disappeared with no Trace several thousand were eliminated by us because of their chance encounters with aliens which we could ill afford to have
(1:46:52) public a slightly more frightening phenomena known as human mutilations have occurred on a regular basis and are similar to the cattle mutilations in that the humans are H are taken from the street so to speak and returned to the same area about 45 minutes to an hour later where their rectums CED out their genitals removed their eyes removed from their sockets and completely drained of blood in all cases it appears that the mutilation procedures occurred while the persons were still alive and conscious one of our scientists speculate that
(1:47:22) apparently the human specimens had to be alive for the samples to be worth anything abductions occur on a daily basis throughout the United States to at least 10% of the population and when we first became aware of this we protested to the little gray being that we held in the Captivity at the yy2 W-2 facility of Los Alamos but a deal was struck that in exchange for advanced technology from the aliens we would allow them to abduct a very small number of persons and we would be periodically given a list of those persons abducted we got something
(1:47:55) less than the technology we barken for and found that the abductions exceeded by a millionfold what we had naively agreed to in 1954 President Eisenhower met with a representative of another alien species at Mok test center which is now called Edwards Air Force Base this alien suggested that they could help us get rid of the Graze but eyes now turned down their offer because they offered no technology at this at this point it became apparent to all involved that there was no such thing as a god at least as the public perceives God
(1:48:27) certainly some kind of computer recorder stores information and an occasional Miracle is displayed by the aliens to influence a religious event so this this so unnerved Eisenhower that he had In God We Trust put on paper money and coins and put into the pledge of allegiance to reaffirm the public belief in God shortly after this it was determined at meetings between the US and Russians that the situation was serious enough that a cold war should be manufactured as a Roose to divert attention of the public away from UFOs
(1:48:58) and towards some other scary threat the hbomb W it was also decided to keep the rot secret from any elected or appointed official within both the US and Russian government as long as uh as it took so long to vet these uh officials and the root was easier to manage if the top people didn't know about it in the late 1950s NASA was formed to compartmentalize containerize and sanitize information from all space platforms and vehicles we sold NASA to the public claiming that all information would belong to them
(1:49:30) actually they got very little and even that was highly sanitized our first efforts were to keep the public from learning about penis uh and that it's a similar planet to Earth and its population is very similar to us but more technologically advanced uh we have learned a lot from them starting with the Russian venira 1 and US Mariner 2 we made Venus look like a lead melting volcanic surface spewing sulfuric acid into a pressurized atmosphere 90 times that of Earth and was often the case we overdid it and
(1:50:03) wondered why no one ever asked how a parachute survived a descent into 800 air we set up operations in Pine Gap Australia to preclude any prying eyes trying to figure out what we were up to we regularly eliminated through extreme prejudice anybody who was part of the operation and made the least little tiny threat about disclosure or satisfaction with the operation any space mission that included Mercury Gemini Apollo Mariner Voyager Clementine and all the rest all data initially came transmitted to Pine Gap and then it was relayed to
(1:50:38) JPL or wherever uh after the sanitizing we had a little trouble with amateur radio operators uh but we figured out when they figured out how they could intercept these signals but we managed to deal with that when the Russian threat began to fade we introduced Vietnam which kept the public occupied for over 10 years the cover up and the Personnel to run the operation began to get bigger and bigger

and required more and more money we were enforced to inflate the defense budget which soon was not enough then we got into the drug
(1:51:07) business which was still not enough we were the ones that looted the Savings and Loan industry and Wall Street to boot it is so out of control now most people want immunity and want out there but there is so much secrecy and so many double and triple blinds in place that is unlikely that this thing can ever be dismantled and even if you give us the go-ahead to Spill the Beans to the public it's unlikely they will get anything more than yes we recovered a flying saucer and yes there was an occupant but that's all we're going to
(1:51:37) tell you so go ahead and roll the tape for Mr Bell uh what you see here are are the human mutilations uh look like that one was a male about 27 years old uh now that film is of dead aliens being pulled from the wreckage of their craft that crashed Elantra California in the ' 50s that craft you see over there is was over 250 ft in diameter and had to be buried on the spot uh that site is in Utah near Doug way Proving Grounds the object that you're looking at now is the kbur acorn which was brought to right Pat in the
(1:52:10) middle 60s there's Frank Drake trying to force information out of a being tied down to that stretcher he was supposedly from to City these pictures you're looking at now are the structures on the moon that's the tower and sinus meta it's over 7 mil uh tall and that thing there is what we call the Colossus of aurum in Mari casum we don't know what it does but the machine itself is bigger than Brooklyn New York now those are videos of the domes covering the craters you can see that some are in a very
(1:52:39) Advanced State of Decay now these are 5c slides of the 18 different alien species we are looking uh at that one there is the most gruesome looking the guards at one facility are carefully indoctrinated over a period of several months being shown pictures similar too but not exactly like the alien only when they have been acclimatized so to speak of the horrible looking beings or are they allowed to stand uh in security positions before these acclamations were done we had two guards die of a heart attack as these aliens came down the
(1:53:12) hallway unexpectedly and this last clip is of the Kennedy assassination you've heard of the second G Theory well this is the second camera that recorded exactly what happened we had four gunmen at and the bottom line was Kennedy had to go he insisted on releasing what little alien information we had told him about and he was trying to withdraw troops from Vietnam which we were using as a diversion for the public after the Kennedy we never told any president anything Nixon knew because he was briefed as DP in 1952 that's how he knew
(1:53:46) where to take Jackie gleon to Homestead airports base to see the alien bodies we had storage there and that's about it what you are B weef the public yay or nay yay or nay pretty astonishing stuff huh for Steve Carr Dan galante Tom danheiser Lisa lion Lex Lon Hood Sean lur Ross Mitchell Le and punet and Art Bell I'm George nor somewhere out there on Coast to Coast AM I'll see you on our next Edition until then for

Transcript:
(OO:10) the UFO Channel you saw the craft inside not only the test but you got in it yeah later on later on it was uh again you know we have to look at at everything we're trying to figure out how uh this device works from nothing so uh and its technology you know we can barely grasp so uh you know obviously the placement orientation of the components and subcomponents might be critical to the operation of it so um I was l in uh one time there were several other technicians in there doing their own thing I don't know what they were
(OO:51) working on but we wanted to see where the reactor was how it you know how it was positioned um you know where the amplifiers were and this is when you know I described to you there was uh access to a lower level to where the uh emitters were which was a a small hexagon shaped area that had a what I thought was a really creative collapsible uh doorway and um I guess the only analogy is if you take a oh you know a six pack of beer that comes in bottles and you take out the little divider there it's if you stand
(O1:31) it up by itself it's really strong it'll hold a lot of weight but you can

easily collapse it flat by the side um this is essentially a metal version of that and it was in a hexagon shape with a little hole and you can walk on it but you can just put your finger in the hole and pop it and the whole thing snaps over to where you have a you know hole you can kind of stick your head upside down and which is what I did I just leaned in there and they wanted to me to see how the specifically how the arms that held
(02:02) the uh emitters connected to the bottoms of the amplifiers and those in themselves were fantastic technology describe the interior what it looks like it's very very Bland if I uh again was to give you an analogy I would say it was if you put all these components in there pretended everything was made out of wax heat it up for a bit and let it cool off there was never a sharp angle anywhere anytime something sat somewhere perpendic to it it had a radius of curvature to it um everything had a smooth curve everywhere it was all one
(02:39) color um was it all one piece it it looks like it was one giant injected molded thing but there was not there was not a seam there was not a rivet there was not a Fastener it was just all there any buttons any no place to put in the key and no and there's no wiring you mentioned about I I'll use the term Furniture because you got a lot we both got a lot of grief to Furniture yeah well that was because I was you this was I think the first interview on TV and I was well I was frighten for a couple of reasons first
(03:15) of all I wasn't supposed to be saying anything and the fact that it was on TV and I didn't know what kind of big mistake this was and um so you asked me what was inside or describe and I was trying to work think of the word seats and I couldn't in a million years get that out of my mind and all I could say is there's Furniture in there and I know it sounded ridiculous and everybody said well that guy can't be a scientist he doesn't even know what the word CA you know it's just stress does that to you it was the size
(03:45) of it though it was small yeah was Yeah well yeah that's that's that's quite a critical point everything was very small it looked like uh well maybe that's where the it popped into my mind because I was thinking of uh you know the children's furniture set or tea set you get for little kids that have you know the little molded chairs and little tiny but that's exactly what it looked like it looked like a little furniture set for for kids so um and obviously it was uncomfortable to to walk around and when
(04:15) you first come in the side you have to hunch over the only place you can stand up comfortably is you know right by the reactor in the side so whatever built or used the thing was obviously smaller than than my stature I'll come back to the term the kids over there uh so somebody did the test somebody was in it they must have figured out a little bit of how it operates yeah obviously and the in the sport model the one that I went in they removed one of the uh amplifiers which was really shocking to me um none now the reactor and emitter
(04:50) all those were in that one so these must have that must have come from another craft which made me at least partially to believe that these all may have the same Power Systems in them which you know really makes you think that's so the one you had in the lab that you were working with yeah the components had to come from same one that was in the in the sport model yeah but wasn't the sport models so at uh you know you can extrapolate and say they all like yeah it's can kind of like a Chevy they all
(05:25) have the same kind of engine and a different uh but I don't know it's all conjecture let's talk about the fuel it's a big um it's an interesting part of the story and a bone of contention for a lot of folks Element 115 how did you know it was 115 describe its properties describe its properties why what does it do what why is it so miraculous well I it let me put it this way the uh we weren't given the task to say you know analyze the fuel find out what it is and you know they just again
(05:54) the thing was and there was a lot of push to it was to what is that and do we have any and um you know that's that's it and these guys really do talk and think like that it's just you know what did you guys do today we just looked at this the other day but um you know I mean we you if you remove the top of the reactor there's a little Tower in there with a cap and there's a uh triangular piece of fuel in there what we called the fuel cuz if you put that in everything starts to work we analyzed what was there now somehow
(06:36) again we didn't have access to all the information but somehow Los Alamos had something to do with either keeping or storing the fuel now it's uh we did all kinds of tests on it not just us we had a s all that equipment isn't there we don't

have you know all kinds of interesting Spectre graphs but um we had it tested we just wanted to see where this was in the Periodic Chart what kind of Peaks we get off of it and you know maybe it's just you know a unique fuel maybe it's just some you know blend of a nuclear
(07:11) material but when it became obvious that this isn't even on our usable Periodic Chart you know that's that's essentially where we stopped you know and said we weren't going to analyze the material and see if we could make it we just wanted to know if it was something that we could possibly use and it wasn't you told me that we couldn't make it why why couldn't we make it well just like any heavy element or super heavy element more specifically um you know the only naturally occurring heavy elements uh
(07:40) uranium I mean as soon as you get anything heavier than that you know a larger number of protons you have to make artificially and that's that's a difficult job because you either like to make plutonium which our country loves you know you have to take um you know other materials put them in reactor let it run for a couple years and then you can in the case of plutonium you can chemically separate out you know the small quantity of that now even heavier elements you have there's more difficulty obtaining um you know
(08:15) extremely heavy ones like 110 you I mean you have to make that on an atom by atom basis in an accelerator where you're you know slamming accelerating single atoms or beams of other atoms uh you know near the speed of light smacking them together and it doesn't make a usable quantity I mean you may get the interaction you want and it flies off and hits a detector you know in a fraction of the speed of light and you go that was 115 and you know that's when they say you know we synthesize one that's what it is it's not like a cup
(08:48) pops out and we' we've got some you know it's a it's just a you know a particle comes flying out and we goes well at at these angles at this Magnetic Moment at that speed it will be 115 and if you get a peek at that you know boom it comes off it's a little display on a thing and right we we made 115 but you know to actually make usable quantities forget it would take you know the entire res resources of a country forever you know to get a grammar so how much was up there well they say there
(09:18) was 500 lb of the material now was that recovered in a craft was that separate they certainly didn't synthesize it but you know where it came from I I have no idea but but again Los Alamos had something to do with it because they they renamed it La 1000 I know there are shipments back and forth there but I I think it had to be from what I understand it had to the if you assume a cylinder of this material it has to be machined into a cone and that cone sliced uh well it has to be stacked first like a bunch of quarters stacked on top of
(10:00) one another then machined into a cone and then sliced to be usable in the reactor now all of that had to do with the metallurgical guys and we weren't even allowed to know why but I knew that was necessary for whatever it's worth reactor doesn't work with that 115 did you ever do an experiment to try some other kind of fuel no no I mean we I mean quite honestly we really didn't know what was going on there I mean we had a basic idea of at least we thought again we just had a report to was going on so it's not
(10:31) like you can ever say you know we really don't know we've been working on this two weeks you better come up with something so it's uh you know look we think it's a we think it's an accelerator and you know we we've identified that that's you know4 115 16 it looks like it's 115 it's an element and you have to explain this stuff to guys that absolutely have minimal scientific background and just try that when you're dealing with stuff that's not even you know from the earth so how does it
(11:02) work I mean how does it work um what you learn you you get a piece of it a triangle it's in and and how does it function really you just put the I I wish I had that model that uh it's in my car Jo me is it really okay um you you you just put the the fuel in there you there's a there's a little cap that sits on top and then as soon as you put yet nothing happens but as soon as you put the lid on it turns on there's no on switch Yeah it's just it's like it attains resonance or something it just
(11:35) is on which makes you wonder how does it work in the craft because no one's taking the lid off because in the craft it sits on the ground and there's a conduit that sits over it and goes to the top of the craft so but it's not clear how anything works in the craft and it generates gravity oh yeah yeah it generates its own gra artificial gravitation field and that lifts the craft off the ground we've

had conversations uh in private about how this accounts for some UFO cases I mean it it in effect achieves invisibility in
(12:15) a sense you can be yeah absolutely yeah because light it will bend it around there and I'm sorry I didn't leave out that pretty important observation when the craft was up I mean you could walk underneath and look straight up and you can't see the craft until you step to the side and it becomes visible again it's quite it's quite amazing you know so it it B well it bends it bends light just like uh you know you could see on a a hot roadway in the summer time how how heat would affect that coming off of uh you
(12:49) know but here you're you're in a much more controlled situation and the way the shape of the gravitational field the artificial field around the craft if you look at that and then we're able to stand at different Vantage points you can just look around it now this isn't something new we know this from you know looking at far away Stars uh they call it gravitational lensing where a star might be over here but because we're looking around another star at Bends light and you know but here again here is an artificial Source
(13:22) a machine that does this and that's everything but yeah like I said all the science fiction Things become reality there's your invisibility cloak there's your you know impenetrable force field here's your field propulsion system and you know here's you're even beginning to tamper with you know potential time travel it occurs to you hey this could work not only in space but underwater maybe that's why the Navy is interested running the program I mean that it's odd isn't it that it's a US Navy running the
(13:53) program out there you know that never occurred to me no I never I swear to this I never even thought about that thing operating underwater Wonder work just fine though wouldn't it I guess I I don't know I don't I mean yeah I don't understand why I wouldn't but um it'd be interesting to see what the water does you had said I remember I could barely get my pointy little head around it when we were first talking about this but that uh if somebody had one of these and were out in space and wanted to come to Earth in
(14:27) essence they're not propelling themselves toward Earth it works differently right yeah yeah in fact the two modes that the craft operated on are um they label Delta and Omron configuration Delta meaning using all three uh amplifiers and Omron obviously meaning just one and the way the craft would work is um let get rid of my reactor here now I'm going to draw really bad flying saer all right so normally the um you would have the three amplifiers hanging or the three emitters hanging down in Omron mode a single one
(15:29) would sling swing sideways and you would have the other two sitting like that now what happens is the two that are facing straight down essentially act like a pedestal where they just keep the craft steady the one swung out to the side um creates a gravitational Distortion off the edge and these in in Omron configuration these things really fly unstable they they do not look like uh any sort of Hightech uh technology it um to give you an example if you put a bowling ball in the middle of your bed and two feet away
(16:16) you take your fist and you push it down the bowling ball rolls towards it that's exactly how the craft operates it focuses the single emitter and creates a gravity Distortion essentially a divot in SpaceTime and the craft rolls forward you know in the Distortion so that's basically how the thing moves around so and this is opposed to our conventional uh propulsion whether you're using uh you know a jet a rocket a propeller we always take something and accelerate it out the back using the action reaction principle and you know
(16:52) push forward and these guys are doing it exactly opposite they're creating a distortion in front and tucking towards it um when Element 115 of course when you're talking about this stuff it did not exist we're still years away from it but you you had told me in that first interview look uh we believe that there was an island of stability somewhere 115 116 somewhere in there uh and and you know maybe someday we'll be able to make it it didn't exist then but they've made it since tiny little piece as you said
(17:21) when that news comes out people say some people said aha Bob was right others people say aha Bob was wrong cuz this isn't 115 at all it doesn't behave anything like what you said there's not 500 lb of it that's for sure so you know there's not 500 lb of it I mean like they had up there we couldn't make 500 lb of it no no obviously not and well look I mean you're talking about physical quantities and also you know atom quantities from fabricating it but um yeah I mean the the island of

(17:50) stability isn't something that we came up with I mean that's been theorized since probably the 50s that it you know it just looks like in the uh um you know physical makeup or just the geometric stacking I guess of protons and neutrons it's certain combinations they're stable and other combinations they're not well it you know it looked like further up in the Periodic Chart what if we have ever had anything with 115 protons or something in that range it looks like that might become stable
(18:22) and you know that was actually in Our Minds when we're trying to identify I said boy this thing is off the charts you know is it are we looking at the island of stability and um I'm beginning to get lost here we going with this the4 that was synthesized oh yeah so the 115 again you know I think they what did they whack together uh calcium and uh uh I don't know bismuth or something like that but they did a they did a unique Collision in accelerators and they made yeah a few atoms of it and they went this is you
(18:53) know 115 and it decayed now obviously this is a stable material but um a different isotope yeah it's like I said there's uh you know we have hydrogen that's uh you know one on the Periodic Chart just like 115 is 115 has one proton 115 has 115 protons well there's hydrogen which is prodium which we're all familiar with hydrogen gas it's flammable it's stable it doesn't you know Decay but there's you know two other isotopes of hydrogen there still hydrogen is still element one and you
(19:26) know one we call dyum as two protons it's uh it's also stable um but it's different it's heavier and there's another one called tridium which is radioactive and it decays about half life about 12 and a half years um again they're different isotopes they have different numbers of neutrons they have same amount of protons so it's the same thing no doubt 115 has the God knows how many Isotopes um we know at least one is stable there's probably you know several that are unstable and you know again
(20:01) they if they keep playing around with it and I don't see why they wouldn't I'm sure they're going to find a stabil isotope and whole idea of um anti-gravity propulsion I we've heard it from scientists that guy does Lazar doesn't know what he's talking about that's impossible it violates this it violates that you you've heard that you've dealt with it I mean yeah I was one of the guys that sayage violates this you would have said that before yeah and you would have said things about UFO people this
(20:29) can't be I mean you were pretty dismissive uh about which is the way I shouldn't be you know and I I give a lot of people you know crap about that too because you know look if you're going to if you're going to work in a scientific field you're going to be a scientist and you know in any capacity the most important thing is to keep an open mind because uh you know look back in time they said you know 30 m an hour is the fastest a human body can possibly take and that was written as a scientific
(20:58) fact I mean I mean that's what ti just believed in and they all agreed on it and you know how many other things have we you know they said this is the way it is you you cannot do that you know you have to keep an open mind look flying saucers I used to laugh at John le and have a good time of it I still do but that's a different story but um you know but um I have to give him credit you know he was talking about you know they have flying saucers up at Area 51 really John you know I just being an adult now but um
(21:30) you know the there's a lot and as far as the technology yeah it violates a lot of what we know which concerns me because some of the things we know are laws and the reason we call them laws and not theories is because they've been verified time and time again you know with experimental proof and you know that's supposed to be cast in stone so you don't want to see anything that violates the law do you see any aliens up there I know several of the people who submitted questions wanted to ask about aliens I mean the only you did see
(22:06) you know this this came from yeah the now the diagram you want to call that seeing an alien the only other time and I know it's because this one incident I told that one time I was being led in and dragged my hand across the Craft um we went in that door there's a corridor to the right and you immediately turn to go to the labs well as you turn to the right there's a door and it has a small you know window on it that has the little wires running through it I peaked in there as we turned the corner and
(22:38) that's when I saw I I've told you this before there were two guys there and a little tiny thing that they were looking down at you know and and I just walked by

told to keep my eyes forward and you know I I think I told Jean that and a couple other people and I said well you probably saw well not the Jean said that but you know well you probably saw an alien or whatever I don't think that was the case I I think even to this day I think they they had a little doll or something because they were trying to
(23:06) find out you know whatever size creature would fit in the craft and you know do you recognize the term the kids did you ever hear the term the kids yeah and that's referring to the creatures that ran the craft so the they called them the kids wherever these craft came from but you never got an answer how we got them or no that was just incidental talking that you know so had nothing to do with me you you know you've heard all the stuff over the years they of those who don't believe your story they believe you're
(23:37) either making it up or it's disinformation that you're working for them out there that's spreading the story not so you're making it up no no sorry could you make it up no really no I'm sorry that's way too much for me to handle um no really I don't and I know look a lot of people people are into you know UFO stuff and I just kind of exploded onto the scene and said hey I don't follow UFOs I don't follow reports I don't know who's researching what I don't know the names
(24:11) of people involved and um but on the other hand you know I know people make their living doing this sort of thing and um you know if I just pop in one day and say hey this happened to me I did this and this and this but you know I'm I'm out I'm not part of this um I can understand how that can interfere with their you know income stream or their belief system or whatever and they need to attack me but look I'm s this what I said happened absolutely happened period that's [Applause] it you know I've been speaking about you
(24:52) for a long time a couple times a year I'll go explain the story from my perspective and and defend because it deserves to be defended and I believe the story as as it's been told but you know you go out there and you hear all kinds of of of crazy theories about uh what you're doing and who you work for and everything and and um there are those who have a lot of trouble with it um I can understand that look if the tables were reversed I honestly could not say I would believe my story look there's not enough I can't provide
(25:24) enough information and some in some cases won't to you know to back up my story and um you know if the tables are reversed I I have to take that other side and go look guy unless you can you know provide more proof um it's I just can't say that you know I'm behind it and I I have to agree with that so why did things go south for you it seems like the a scientist dream to work on a program like this why in the world would you walk away from that or tell anybody else about it do you were you picked because they figured you
(25:58) would tell somebody about it no I mean that that doesn't make any sense um I mean well what happened was I mean it was kind of more of a personal nature between my wife and I at that time now it's not like I had a 9 to5 job and they said you know come out at these hours it was it was really a sketchy setup that they would call me um the place at eg&g by the airport what what was that it was on Sunset Road or yeah I I think it was called something I can't remember anyway they would call me and say you know it's now
(26:38) 8:45 by 9:15 we expect you to be you know at the building and and board the craft and you know the airplane not the yeah so um and it would be at a at a moment's notice like that well and like I was so really thrilled to be part of this project um I was keeping with the whole program like I couldn't talk to my wife you know I said look I'm working at at the test site there it's on I said it's on secret and nuclear stuff you know and that's it um but again I get calls in the middle of the night she can't hear
(27:14) who they are and I said I got to go it's work you have to go to work at 8:00 at night and you may not be back you know until the middle of the night or the morning I said yeah that's just the way it goes and that happens you know time and time again and you know if the phone picks up and you know my wife picks it up they hang up you know and um you know until so then they call back I pick up the phone yeah it's Bob here and um okay 2 hours I'll be there well after a while that seems like something else in fact
(27:43) maybe not after a while but pretty quick and um you know I mean it's something I could laugh at now but it it was not funny then and um you know I um I kept with the program never said anything to her and um you know she thought I was having an affair and you know as time went on going back and forth um she she really didn't have a job or anything to do so I started since I was making money from here

now I got her flying lessons down at McCaron airport and to give her something you know to do and uh anyway she started having an
(28:26) affair with the flight instructor ctor so um you know I had no knowledge of this but you know part of the requirements of the project and the security requirements really were to have my phone monitored now I'm going back and forth to work and now they are listening to the safair progress on the phone that I know nothing about and you know one of the things one of the main things is that you be you know mentally and Vis stable and uh they're really concerned about that so it reached a point one day where they
(29:11) didn't call and they were kind of in a quandry at that point going they you know what are we going to do with Lazar we got to see either this you know Affair Fizzles out or they break up or whatever so you know that I just stopped coming and stopped getting calls I call Dennis I don't get return calls and you know days are going by and you know now Tracy's going back and forth and flying and doing stuff she's busy all the time because you know she's got a boyfriend and you know I'm beginning to get now
(29:45) I'm beginning to get really concerned I mean these guys are so over the top with security and you know we want to know everybody that knows this material we want to know where they are 24 hours a day so on and so forth so they're not even calling me what's going on and so I started getting concerned and it reached a point where I don't know where the breaking point was but I I think it I'm pretty sure it was Jee Huff the first you know guy that you know I talked to and um and said you know kind of spilled my guts hey look
(30:16) this is what I've been doing out there and you know told Tracy too and um hey let's go see him yeah well I I had I also had I know we're skipping over lots of stuff but I had um there were you know charts of the test flight days and which days that they were going to go over the mountain and do that what they call hyperformance test so those days statistically on that Highway they went by the lowest number of Travelers was on a Wednesday night so Wednesday night I think 8:00 was like the test night so that's I knew how long
(30:49) they were going to be in there I know all that stuff just from memory so I told these guys I said this is going to be an unbelievable story but this is what I've been doing you know I I go out there and show you guys but I'm starting to get concerned that they don't like me anymore for some reason and they're I'm just going to like disappear um so I just want somebody else to see what I had done in case I'm just gone one day and at least you guys have a story H so we go out there take
(31:18) everybody and uh well you know the story we go out it's yeah 8:00 everything happens like I said and um you know it lands and then uh you know now it finally hits Tracy oh my God he wasn't having an affair and so you know she breaks off the affair reason you know and it it is just a giant mess it's embarrassing BR this stuff up but I mean it it is the human side of the story that that the other Human Side as I alluded to it in my talk is that there's stuff that happened to you in that period after after they caught you the
(31:54) third time they went out they got caught and so they want to talk to you and they're very upset Dennis in particular the guy oh yeah so they want to talk to you and and then a whole series of really bad things started happening share with us a little bit about what that period was like cuz it's hard to it's hard to convey it and that it was really going on but it was real yeah was um the uh well I guess it started when we got caught you know when we got caught that time um I can't quite remember
(32:29) which time that happened but you know we had we had gone out again with the test flight data two times and been there on Wednesday nights and Jean Huff and we had an ever increasing amount of people that we began to trust to go out there and uh which was getting really ridiculous I think we even brought a motor home out there and we're parked out on the road because nothing uh no you know once you start getting away with something you get a little cocky and think boy they can't CS so we're out there and you know Jean and
(33:04) I kind of joke around sometimes and say stupid stuff you know pretending that someone's out there listening so we're sitting out there on the dirt road the test flight time is coming up we're sitting leaning on the front of the car and you know I gan says something to the effect is well I hope they out there they don't realize that we've got those other 150 you know team members out back with you know automatic weapons and everything and they're getting ready to storm the base and I said they can't possibly know
(33:35) about all those guys you know and so right after we said that not now it's

pitch black you can't see your hand in front of your face not 50 feet in front of us you saw a little green thing fall on the ground and roll to us and every us there what and as it turned out there were a whole bunch of guys standing there in the dark watching us through night vision scope and after I said that a guy dropped one and it rolled over to us so they uh they turn on you know turn on the lights okay everybody come with
(34:07) us and you know that uh and I had told the story about the Breakin the car I mean they I remember going to your house after a Breakin and you had to Uzi out you're ready to shoot somebody and then the break in at the car at the gym that stuff really happened it was really going on oh yeah that was with Mario the guy um it was a a truck driver now he um was going to uh and we were just working out at a local gym near us and I was at that this was at the probably the highest paranoia stage and I had a you know an Uzi in the
(34:44) the front and you know Mario and I got to the place and they said okay if it's loaded here we're safe to go outside and we open the car doors we close them and we may even make a joke about it we lock the doors we try open them okay okay the car is secure we go in there and you know joking you think we'll be safe for half an hour and yeah I think we can do it and we you know we come walking out there's all the doors the trunks open the uzi laying out there in my wallet you know and we just looked at each
(35:13) other this is impossible you know but uh yeah that that happened Mario tells that story probably every day you uh some point you decided to talk to me you know we did that interview in silhouette I can't quite remember why what that how that happened there was just too much going on but I know at some point and that was really again uh Lear was making a a big deal he started naming off the people that he knew that suddenly disappeared and he said you know unless you talk to this guy George neap you know and if you go out on the air
(35:45) they'll you know they'll be afraid to talk to you I said John they're not afraid to to do anything you know it's but uh I called you anyway or he did and then it kind of hits the fan they're really mad at him and and then that's when our a lot of really bad stuff started happening and then we we decided to record an interview just for safekeeping the UFO channel is asking the public to send in their UFO UAP videos to be displayed on the UFO Channel with your contribution you'll be
(36:17) helping us bring full disclosure from the government about the alien presence on Earth don't forget to write a comment and don't forget to push the like and subscribe buttons for the UFO Channel regardless of what any publication or anyone says only the truth matters

1998 01 15 Coast to Coast AM with Art Bell UFOs John Lear and Bob Lazar - YouTube
https://www.youtube.com/watch?v=-hQoEbRmhCk

Transcript:
(00:03) Lear studied the industrial studied rather industrial design at the Art Center College in Los Angeles and was a state Senate candidate in Nevada in 1980. he has written extensively about airplanes and other subjects was Middle East correspondent for combat Illustrated between 1975 and 77 while stationed in Beirut he is an amateur photographer and astronomer has won several photography awards for pictures taken during his worldwide travels in the early 70s John layer owned and skippered the 12 meter America's Cup
(00:42) boat Soliloquy out of Marina del Rey his interest in UFOs began after reading Bud Hopkins book missing time then a chance encounter with U.S Air Force pilot who was at a base in England where an extraterrestrial craft landed in December of 1980 in 1988 John met a government scientist who worked on a back engineering program of recovered extraterrestrial flying saucers for the Department of Naval intelligence at a secret base within the Nevada Test Site known only as S4 this scientist not only explained how these craft traveled many times faster
(01:24) than the speed of light but in March of 1989 took John to a remote Desert location to watch the Navy test fly one of those extraterrestrial craft John who no longer gives lectures on the subject of the subject of UFOs and has no plans incidentally to write a book is currently a dc-8 captain with a major Cargo Carrier has four daughters and lives in Las Vegas with his wife Merril Lee so that's a pretty full plate for anybody's life I would say and a little Fuller than mine has been certainly and I I think most

(02:08) in just one moment we'll get to John Lear and I think you'll find him uh more than just a little fascinating Now ladies and gentlemen Here Comes John Lear John well wait a minute let me put you on hold there and bring you up here John it's been a long time since we've had you on the program welcome back well thank you yeah it sure has been it's been what over a year at least that long john and uh the network in that time has grown uh magnificently I think we've gone from about 28 stations to about
(02:41) 120. wow yeah yeah we've come a long way baby well anyway um John you've done a lot in your life haven't you uh yeah a little bit here and there it's been awfully busy I mean this is quite a resume you've got and uh and that's a lot to do in a life and then all of a sudden at some point you decided to mix into all of this which is enough for about two people normally and you got involved in UFOs yes involuntarily I might add involuntarily well look we'll get to that you've done something kind of
(03:20) interesting you've given me this timeline and I do appreciate it I would like to go back over the history a little bit uh with you John and pick your brain about what you know about the incidents that you have listed for me did modern UFO ufology really begin about 1947.
(03:41) yeah it really did with the uh the Ken Arnold fighting but now there's been a lot that happened before that there was uh a recovery uh I think in 1941 um I think in Arizona and uh there was a lot of activity during World War II but but really modern ufology uh started in 1947 with the recovery well first with Ken Arnold signing up in uh Seattle I think it was and then uh and then the recovery of the uh of the craft in Roswell New Mexico well I'm not familiar with the Arnold sighting well King Arnold fighting was when he saw those nine uh discs uh uh flying
(04:21) through the areas out on a search and rescue mission and he saw these discs and when he landed the reporters wanted to know what he saw and he said well they look kind of like saucers and that was the that was the first coining of the term uh flying sausage ah and this happened like in late June of 1947 and in coincidentally just you know like a week later was this recovery of the uh of the craft in Roswell well I say modern ufology uh really there have been sightings I suppose for as long as man has been around to record
(04:55) them haven't there yeah at least there's just hundreds of references in the Bible and and before that uh Chinese and uh and Indian records record uh it's authors you know up to four or five thousand years ago okay uh now to Roswell very quickly I interviewed uh uh the author of the book uh the truth about the UFO crash uh at Roswell the other day and he did a pretty good job of documenting um what I guess is would you say it is the best uh documentation of something that has happened yeah it probably is rather than uh of
(05:34) course uh well no that's right it is it is and uh I know you've looked at Roswell I guess it's probably one of the first things that you studied when you jumped into all this what kind of conclusions did you draw about it John well at that time in 1985 when I first got in is this I think there was then there was over 200 witnesses that were still alive that had either touched or loaded or seen uh the craft and the bodies and uh good portion both people are still alive now but uh it was just overwhelming uh evidence that this
(06:09) occurred what actually supposedly happened was there uh what is the best guess was there a collision did it blow up does anybody speculate about what happened to this craft there's theories and I don't think it's so much so important as what happened the fact that it did happen now some people say there was two crafts and One landed and one crashed on the Magdalene the flats about 100 miles east of Roswell and then there was a craft a portion to the craft that landed on the Brazil Ranch uh there near Corona
(06:42) whatever did happen they certainly collected a large amount of debris and there was a lot of people involved involved in this effort but what was so interesting is the preparedness for the military to deal with this there was no confusion uh they knew exactly what to do they uh they knew exactly uh what they had and that it must be kept in secret uh and they were very well prepared for this um so that would indicate to you I guess that they had some knowledge of what was going on or some interaction Advanced knowledge that that there was a
(07:17) probability a possibility that this could happen and they were very well prepared for it all right also in that same time timeline 1947 The Establishment uh the original establishment of mj-12 uh and the mj-12 documents which I've seen John do you view those as legitimate the information is legitimate not necessarily the documents uh President Truman certainly formed md-12 uh on September 24th 1947

there's enough evidence uh in government documents they did have a meeting uh with certain people and did form this this body which
(07:59) of course uh has been in charge ever since what what was the job of mj-12 did it have it had a charter right what was it supposed to do the the charter of mj-12 was basically to uh research the craft uh determine uh what it was made of whether there was a threat to this country uh Anthony German uh What uh should be done to tell if at all uh the public about what was going on [Music] so they kind of were the overseers of all this yeah they were and they already the original 12 [Music] that died I think it was 1983 and then
(08:42) the sick Poland Secretary of the army Gordon gray he was the last member as to who is involved or a member of mj-12 today we can only speculate uh I really don't know but uh well since that time there must have been many members in other words people die people retire people get sick all kinds of things so if it's are you are you saying it's still in place today yeah certainly is in place and uh they have you know they would have had to replace the uh the original 12 uh I don't think it would be
(09:16) more than uh 30 were probably ever involved people people talk John about this current Administration the Clinton Administration and um how open they've been with the nuclear you know the tests that were done the awful things that were done uh and they have hopes that they will also be open about UFOs and maybe tell us what's going on what do you think never uh when I first got into uh what they call eupology and I think it's a dumb name but uh when I first got interested in this and realized uh the
(09:51) uh overwhelming impact of what was going on and the cover-up that that had been in place for so many years I got up on my soapbox and did lectures and said hey you got to listen to me there's there's something going on here that we should all be aware of and then that was like 1985.
(10:12) and now in September of 1994 I believe the government was correct to cover it up and uh as as short as uh uh for three or four years ago I still thought they were planning to gradually release the information uh so that the public would uh you know not panic but accept this and now I don't think they ever had any intention of doing that and I don't think they have today and uh his daughter that they found I I uh I kind of go along with it I believe that they really the public does not have a need to know uh they don't certainly don't
(10:47) have a right to know uh there's so many uh aspects to this thing uh that would uh that would really disrupt with Life as We Know It that that I don't think they had any intention of doing it the only reason that they would maybe be forced to do it is if there was a crash or a landing that absolutely could possibly not be denied and they have the facilities and teams in place to uh to prevent things like that ever happening there have been uh doctors that have crashed very very near the cities and it's been completely covered
(11:23) up they have teams that go out and it's their business to be sure that the that the public never finds out and if this includes uh reloading relocating Personnel or even terminating Personnel that have uh seen this unauthorized either accidental or on purpose uh they go to that extent well I do know this there have been crashes here near us John I'm to the west of you and you know what I'm near yeah and um there have been crashes out here and it's true the the public would never know they get
(11:57) these areas quickly cordoned off and you don't get anywhere near it and you know it's wreckage and it could be anything and so who knows if a saucer did come down they could get control of it very quickly just like that couldn't they uh exactly I heard one of one that uh that land that didn't crash that landed just maybe a few miles outside of downtown Albuquerque and these teams are located all over the United States they're in underground facilities they have helicopters uh they have people who are
(12:28) uh technicians and heavy equipment operators who have uh passes an authority to go to any civilian or military base and uh and drive right off with this heavy equipment and their job is to go and and keep us from being seen and one of the first things they do is they have these portable walls that are put in place uh and then they secure the area uh if it's like near a freeway what they can do is they have a heavy truck uh purposely uh have a wreck right there to block the freeway several miles uh uh from the uh
(13:07) crash or the landing uh they can also start fires they do uh really uh interesting things to keep the people completed anyway they elected the the wrecked these uh uh portable walls around this thing and everybody stood around trying to

figure out what to do I think it was there for about five hours and then all of a sudden it just left huh and nobody got out uh there was no communication and it just left all right uh you know we're very efficient in this country at doing this kind of thing uh and I don't doubt that for a second I've
(13:40) seen it myself but John they come down all over the world uh or at least you would think they come down all over the world so what about other countries less prepared to make it all a big secret we go in and with uh money uh we say you know we need to have this craft and here's so many millions of dollars be sure that nobody ever finds out about it we had a recovery in Bolivia one in Argentina uh one in South Africa just a very few years ago uh all over the world except for Russia we didn't have any
(14:13) control over those and I don't know how that happened uh I I mean I don't know what happened in Russia if there was any crash if there if there's any recoveries there so what uh in 1948 the Aztec recovery a possible ebe1 what what does all that mean The Mantel incident as uh Aztec recovery was the sponsor Creation in the Aztec New Mexico and uh they recovered a few bodies from that one it's not sure where they got their first live alien but they were called they were named EBT biological entities by Dr detlef Brock
(14:52) who was one of the first members of uh mj-12 um at some point in that uh 47 48 49 they recovered their first uh live alien uh The Mantel incident is separate from that that was the P-51 crash uh piloted by Thomas mantel uh over uh uh trying to think it was in Kentucky uh and he got up to about 30 000 feet he was on uh clear communication and he said I have it inside it's enormous a thing of tremendous size and then the next thing they knew this P-51 crashed in the field uh it was completely disintegrated there are stories the
(15:34) mantel's body was not in the crash uh but I don't know for sure but that was the man talented and then that occurred in the same year as the Aztec recovery how many bodies totally do you think they've recovered from between uh 50 to 100 representing at least five different civilizations uh they're all on uh in cryogenic storage uh one of the interesting things here is the 1972 the only civilian that I know that ever got to see the bodies was Jackie Gleason and he was a very big uh supporter of Nixon's and they were out
(16:11) playing golf down there in Miami in 1972 and Jackie Gleason is not many people know was one of the uh he had a tremendous interest in flying foxes and he had one of the biggest civilian collections of books and memorabilian pictures and stuff like that no I didn't I didn't know that in update New York his uh House was built in the chair in the shape of a doctor and he called it the mothership anyway he had conversation with Nixon he said uh you know with any chance of getting to see the bodies and uh Nixon said yeah
(16:47) sure and while they finished their golf game they went over and got in the presidential helicopter and they went to Homestead Air Force Base which was right near the um where they were playing and uh golf and he was showing the Barney's uh John you were talking about Jackie Gleason and said that Richard Nixon uh took him from a golf course to go see the aliens right at Homestead Air Force Base and the reason we know this is his second wife wrote a book describing the incident how he came home at night and
(17:18) he was all pale and she said my God what's the matter and he said well get me a drink and I'll tell you so she got him a drink and he sat down he said the you know the most uh interesting thing happened to me today and went on to relate the incident about how he had seen the bodies and this book was never published but in the manuscript this is how it was wow and so he actually got to see the the bodies at Homestead homes today report face right that was one of the places that they had the cryogenic
(17:50) storage uh and displayed for uh people who were authorized to see the displays like certain world leaders uh certain uh political people are they still there now I don't know I don't know well surely we do still have bodies don't we certainly you still have them all uh and no idea where they might be no I I have heard some rumors lately John that there might be some bodies here in Nevada somewhere not uh you know area 51-ish but somewhere else here in Nevada have you heard that could very well be
(18:25) there's a lot of things here in Nevada and uh there's a lot of uh secret places not only uh the Nevada Test side but there's a lot of other places uh right close here at Dallas airport space there's uh a place they called area two which is a nuclear bomb storage area but part of that area is called uh I think they call it the Q area or uh area q yeah there's a lot of uh pieces and bits and parts stored

there area q that's one I've never heard of um I if there are so many incidents we
(18:58) could talk about uh there was one recovery I guess in 1950 in Mexico across from Del Rio is that right right crashed about 30 miles across the border and we went over and actually dragged it 30 miles to uh Del Rio and up until maybe 10 or 15 years ago uh people that had researched that incident said you could still see the drag marks of where they had pulled it across wow uh then and I've heard about this before John in Washington DC it is true then that for a couple of weekends in a row back in 1952 they actually had flying
(19:39) saucers over Washington DC they were photographed by the Press yeah they were photographed and uh they saw them both on FAA radar and airbrush radar as a matter of fact you couldn't go down the library and pull out uh those weekend editions I think of the Washington Post and uh there's stories all over it uh and then I think the third weekend uh the Air Force released uh Astoria and I think it was the largest press conference uh of the decade uh and they said that it had been a uh uh a temperature inversion which caused this
(20:15) naturally the Press bought it and uh well it says here the Prescott photographs how do you photograph a temperature inversion well that's a good question so um I've never seen the photographs what do they look like well the photographs were of course confiscated they had a very good machine in place for dealing with the prez and regaling anybody who had photographs they still do now once in a while you'll see a photograph of a you know a bright light in the sky but uh you won't see any real good photographs because somehow they
(20:49) get all of those uh then there was a recovery near Johannesburg South Africa uh back in 53 and I sort of vaguely remember something about that John what happened well there was the one then I don't know too much about that but there was one also probably several years ago that uh yeah maybe that's the one I remember it supposedly crashed and we sent one of our uh they have the recovery games with the Sea by days and they go over there and they load it up and bring it back to wherever some say Ray Patterson some say
(21:20) uh out here at the uh at Grim way all right and then the first official meeting in 1954 supposedly between Eisenhower and the aliens at Mira dry lake is that correct yeah and as ridiculous as this may sound there's there's very good evidence that that did occur and murag was the original name of uh Edwards Air Force Base it was later uh uh named uh after Glenn Edwards right I think crashed in a flying wing there but it was called the muraki and uh Eisenhower was vacationing at the time at Palm Springs and uh he was called to Edwards
(22:00) uh by the military and the Press was given the story that he had to attend a uh an emergency uh session with a dentist uh as a Carver but as in fact this is when the meeting occurred and Eisenhower essentially told these people that the world was not ready uh to see them or be aware of them and that's where that's where it stood until the Holloman Encounter of 1964.
(22:31) but later they the the dentist was interviewed and said no he didn't have an appointment with me so the cover story was started to unravel all right uh by 1956 uh with more recoveries haven't haven't been done uh the first human mutilation occurred is that correct yeah well the first one that uh they knew about and that was in The Grudge 13 uh report that uh Bill English read and it was uh Jonathan P Lovett who was a tech sergeant out on the Holloman range uh and he and a captain were out there recovering some missile debris about three o'clock in
(23:08) the morning and as The Story Goes uh uh love it went over this hill to where there was kind of a bright shining light and the captain called after him and didn't hear any response and uh he went up to the to the hill and saw this disc with uh with kind of a snake-like arm coming out of it and it grabbed Lovett who was digging and screaming and dragged him in this uh saucer the captain who was petrified Rand got back in his Jeep and went back to the base and he was in fact charged with murder because there was no body
(23:46) but about 10 days later they recovered the body it was about 10 miles downrange and I won't go into the details but it was horribly mutilated uh just use your imagination of how bad it could be and it was worse than that yeah um in 1957 John you say there was the Prohibition of the word space in the media for about 10 months uh the media was not uh allowed to use the word space uh in any of their uh uh in any of their stories why that was they were they didn't want the the public to be thinking or be aware about anything in
(24:27) space this was before a Sputnik uh had gone up and uh they were he happened to stand at that time the government was just petrified about this whole thing with human mutilations and sausage creation all over the place they didn't want the

public thinking about the possibility of anything other than uh terrestrial stuff John while we're on the subject of mutilations Linda Howe who does this show with me on Sunday called Dreamland concentrates a lot on animal mutilations and um I just got an article from somebody
(25:01) uh in it it came in the um it was Associated Press article and with a local uh kind of angle to it in the Albuquerque Journal dated uh Sunday August 14th so it's brand new there are cattle mutilations um going on like crazy right now in Northern New Mexico and they really are odd John high heat used uh genitals into tongues and so forth and so on removed all that sort of thing going on and it's going on massively now in Northern New Mexico are the cattle mutilations related in any way to the human mutilations uh I don't know but they uh
(25:41) they do the same thing they they core out direct them they uh they take the genitals they are the eyes out uh they follow the fainting pattern we had a very interesting incident happen here in Nevada if you'll remember in 1990 there was a big story about 110 28 sheep that were found dead in central Nevada yes I recall well the interesting thing is is that area was sealed off from all reporters and researchers and no pictures were ever released and no independent inspection was done and after the initial interest there was
(26:17) only one story done by a reporter in Reno this reporter never went near the horses or the site but relied mainly on unsubstantiated reports from the authorities and he wrote that the horses were killed by rifle bullets fired from persons who were charged but then later released for insufficient evidence right and this reporter received the Pulitzer Prize for his reporting huh um if you have the hazard guess with regard all these cattle mutilations what do you think's being done I I don't know it has it has to do with
(26:56) genetic experimentation those particular uh parts of the body uh I think they use it hormones secretions that kind of thing for whatever their experiments are well there are people who suggest that it's our own government you know that our government is somehow doing it but it wouldn't make sense to me that our government wouldn't feel a need or would even have a need to raid anybody's uh a cattle farm well certainly there was our own government uh they would do it a little bit more discreetly there's no
(27:28) question in my mind that we do some of that but uh The major portion of it is done by someone else well you'd think the government could get cattle if they need cattle certainly they could have a farm and uh they wouldn't leave the uh the bodies lying around just to invite speculation all right uh the explosion over Nevada that you talked about then a recovery of a craft in New Mexico in 1962.
(27:57) now I was just trying to find a copy of that uh of the uh of the Las Vegas Sun had a front page story uh of this explosion and it occurred uh well it was seen all over Nevada but apparently a part of it crashed in Mesquite and apparently that was one of the first test flights that our government uh made in in a recovered extraterrestrial craft and because of the disastrous outcome of it uh there was no more testing until 1972 but apparently that was us trying to fly one of the Extraterrestrial craft okay is that one of them that had crashed or was one turned over to us uh
(28:38) in some way or all I can tell you if it was acquired now whether it crashed and it was good enough working order to fly or whether it was turned over to us is is one of the ones that Linda Hound talks about uh at kill Air Force Base in uh Utah everybody wakes up one morning and there's one just sitting on the ramp the doors are open it's just sitting there and that was one of the cases where we had to quickly cover it up and take it somewhere but it was just sitting there on the ramp now who gave it to us I don't know but it was just
(29:10) there hmm uh boy it's so hard to fill in the blanks sometimes uh the Holloman incident in 1964 an agreement in the late 60s the building of Dulce recovery near Fort Raleigh Kansas that was a busy year yeah that was uh the Holloman incident was documented by uh uh Sandler Productions the film that came was uh released in 1973 and Matt was actually supposedly the first attempt by the government to release information to the public and they approached sand or film who was the CIA front uh in Los Angeles to write a documentary uh uh
(29:54) outlining the history of UFOs uh and to end it uh with the actual film of the actual landing at harlemen and that was going to be the the uh the final part of the film well they got all everything done uh emanager himself Robert M major who is the close friend actually had 800 feet of this film in his house uh he did not do the film but he was giving it to by Paul schartel who was head of the audio visual Department uh at Norton Air Force Base and sure it'll watch the film and it's

entirety uh and he says there's no question that
(30:36) it was a real film uh and that it showed these three software is coming down one Landing the other two going away and then three people coming out uh they were humanoid but uh slightly different than us they had a weapon uh and this this film was supposed to be shown uh at the last part of the the actual documentary was called UFO's past present future at the last minute the Pentagon withdrew the film and said we want you to not use this film but depict the end uh in terms of it may have happened and so if you ever see a copy
(31:13) of this you'll see Rod Serling who does the narration say let's consider an incident that could happen in the future or or already may have happened in the past and in fact it had happened uh and that's how the film got released but uh that was the incident the Holloman incident that that they talk about all right what is what is Dulce the building of Dulce Dulce was an underground base uh that that steel active is on the channel it's on the Colorado New Mexico border in the near the town of Dulce uh
(31:46) it's it's completely underground it's my understanding it's about uh a thousand fifteen hundred underground and it's where supposedly the CIA and the aliens do joint genetic experiments Dolce I talked uh with Gabe Valdez who was head of the highway patrol New Mexico Highway Patrol and his area was builty and I spent two evenings with him driving around the entire area heard all his stories about all the craft he'd seen and the evidence that Dulce was in fact there and there's no question in my
(32:20) mind that it was there and that it still is there and there's a story that'll come up later the What's called the dolphin incident which happened in 1979 when we get into that part of the timeline all right and a recovery at Fort Raleigh Kansas uh yeah there was the either recovery or a landing on several the soldiers who were there uh wanted to come down then one near Kecksburg Pennsylvania that's a very famous design it's covered in a lot of these uh things like hard copy and uh Entertainment Tonight
(32:55) there was a recovery there of an acorn Shake uh object and it'd be quite a lot of evidence for that boy we must have a lot of artifacts stored somewhere not just bodies but discs and parts of disks and all the rest of it we have no we do and I was just reading a story here from one of the researchers uh Stringfield uh talked about four uh military personnel who were engineers and they were flown uh one night uh four hours I think they lived back uh near Wright-Patt they didn't know where they were being flown
(33:34) they had to find Social Studios uh they say that after four hours they landed and they were blindfolded uh they were taken out they said when we stepped out it was like being in the desert they weren't allowed to lift their blindfolds up they went into this Hangar uh and the lights were turned on they were they blindfolds taken off and they said this whole thing thing was full of all kinds of artifacts and there was a a quote a curator there and they were allowed to inspect and they were there for four days to inspect and speculate on what
(34:08) these items might be uh and then after the four days they said they could come back anytime they wanted if they had any fresh ideas but they were not to discuss this incident with anybody how intriguing um then there's 1967 this one's close to home a big disk a large disc hovers Over Las Vegas school it says and children are sent home really yeah a friend of mine uh as a matter of fact Tabitha was I think one of the students there and uh they this discovered over the school and the children was sent home and they remembered this incident
(34:45) quite clearly I'm not sure whether it was her or somebody else but uh that that didn't happen in 1967 and along with that there was uh a landing at known surfboard space where a uh saucer landed uh and people got out in a kernel who was there drew his weapon and the colonel was paralyzed in place inoperative and a few minutes later they took off well John um we're about out of hour here uh out of this hour but I I want to ask you you have flown and flown and flown and flown you've been in our skies
(35:24) looked more into the skies than probably most of us in all those zillions of hours how many hours do you have now John do you know 17 000 hours yeah in seventeen thousand hours one would think if they're up there you would have been one of the guys who would have seen one of them well let me tell you about flying you don't you're not sitting there looking out the window you're looking at your instance uh particularly when you're flying jet aircraft now at night when it's more likely you're going to see
(35:55) something you can't see outside because you've got the glow of the

instruments inside and you have to put your face up to get rid of all the cockpit Reflections to do it and it's just it's something that doesn't happen so then unless it was close and bright you probably wouldn't see it no you really wouldn't and the only time that I ever saw anything uh and it's still interesting these days when I think about this incident it never occurred to me I was in a Lear jet it was in the afternoon I was sending
(36:23) from over Palm Springs I was on a flight from Wichita to Los Angeles I was spending through about 18 000 I see how high would I been John John I've never heard this story um so hold this story we're now at the top of the hour when we come back we'll tell the story once again my guest John Lear uh who has flown in jet aircraft for many many thousands of hours and uh pressed a little bit now recalls one incident where he saw something or another anyway John when was it what did you see well it was like 1966 or so and
(37:00) uh I was defending in a Learjet from uh I was on a flight from Wichita to Los Angeles and uh descending to be like 30 000 feet and from my I was headed Westbound and from my left to my right I saw what I thought at the time was a NASA lifting body that at 24 or one of those type things remember the one that the Six Million Dollar Man crashed in I do yes and that's what it looked like and it went by and uh I uh mentioned it to the co-pilot when I landed I distinctly remember calling Hank beard who was the chief
(37:41) test pilot at Learjet and I said man you'll never get what I saw today and he said one I said a lifting body passed me and only after you know 25 or 30 years I look back and say how ridiculous that was because under no struck to the imagination would a lifting body be in the main approach Corridor for the Los Angeles International Airport Heaven's new so uh I don't know what I saw but you know in all my thousands of hours I guess that's the only strange thing I ever saw that's it huh all right um
(38:14) there's so much history to go through here John um I guess let's jump up to um a violent encounter supposedly between UFO humanoids and the U.S military at Lumberton Ohio yeah there was two there was one that happened in Cambodia and one that happened in Xenia Ohio uh the one at Dania Ohio uh was an encounter between uh the ark defense of an alien craft and a U.
(38:41) S military Detachment and there was 11 American casualties and an unknown number of alien and uh one of the people one of the researchers met a guy who worked at the off limitary at Wright-Patt who claims to have seen bodies on litters arriving at the base during that time frame oh you know as I go through the history it is interesting in in one respect um all of these occurrences all of these Witnesses all of these bodies um how can it well of course it isn't really kept secret because here we are talking about it but still the official
(39:16) cloak of secrecy remains how can that be it's great it's uh they can keep a secret if they if they want to well you know that's really true and if anything uh the revelations about the uh uh the nuclear testing I think prove that um you know how I I can't imagine how our government could have kept secret the fact that they were feeding radiation to children that kind of thing yeah but they did all right um you mentioned uh Cambodia a fire fight between U.
(39:51) S military and small gray humanoids yeah that was uh in April of 1972 and uh what happened is uh uh members of the U.S army Special Operations group were involved in a fire fight with the occupants of an identified alien craft uh there were several alien casualties in a single human death both were burned by an unknown weapon and what happened was this platoon happened on a group of aliens who were sorting human body parts into large bins and sealing them a firefight ensued and thoroughly aliens were killed and through headshots because the suits
(40:29) that they were wearing were essentially bulletproof and as the soldiers pulled back several of the alien quickly packed as much as they could I got in this craft and it took off uh the unit was interrogated originally by military personnel and then by civilians who were identified as representatives of magic and they are part of the Majestic group that go out and help cover these things up all right looks like we're going to jump into the tough stuff early why John would they be packing up body parts well
(41:02) he got me you know for every every answer I've ever gotten in uh all this research I get 10 more questions posed so if you're looking for answers well I think this though goes to a pretty awful area I mean uh you have not ruled out the possibility have you that we are for them food no but it's kind of far out I did make that statement once in a in an interview and I regretted it ever since because it sounds so outrageous uh I'm not sure that uh listen uh let me stop you John um it

really did sound outrageous then
(41:42) but you know something I've been interviewing a lot of ufologists scientists uh Scholars people who have said things that when they say them John they suddenly hearken back to some of the early interviews that I did with you and also and I'll say to myself sometimes out loud I'll be damned you know I remember John said that and a lot of people go forward and uh and here here we are I mean a lot of that stuff that you told me John has been coming back recently yeah and a lot of investigators John are
(42:19) beginning to go down some of the same roads you did back then you were one of the only ones saying look these guys are not letting necessarily warm fuzzy nice people who wish us well and you were almost alone then but now let me tell you John more people than not are beginning to join you in that uh in in that view yeah uh at any rate um the Dulce incident okay now with both the incident I first heard about in 1986 or 1987 when I was invited to be uh part of a group of researchers who met at Crystal in Colorado and we just traded information
(42:59) and I was handed a letter by one of the guys who knew who had gotten this letter from a person who lived in Las Vegas and said why don't you research this and it talked about this underground base and it was founded so far out but I met with this person and uh and she had known uh one of the uh officers who had worked inside this this space and originally told about the the massacre uh at dolphy I further heard a story by a guy named Paul benowitz who lived in Albuquerque was involved in this and he told me about it
(43:37) also and the story went that in 1979 we had 44 scientists who were being instructed why the alien in some subject I don't know what it was but uh they were being instructed uh at dolphy and for some reason uh it was agreed that that uh that our security Force our Delta Force would not carry Conventional Weapons at any time in this uh classroom or around this area and for some reason one of the authors walked in with a conventional sidearm and the alien killed him outright now how that was done I don't know but uh on the uh on
(44:15) the video on a monitor uh his compatriots or the Delta Force father he was killed and they went down on Mass to uh to exactly bench and it ended up at all 44 designers and about 66 of the Delta Force were killed it was just a complete Massacre so I just put this in the files in an aristic story and uh it didn't come up again until Val Bazaar who worked at the uh at his score and we'll get into that later weather report that documented this massacre now the only thing different about the report that he read was that uh it in the
(44:54) report he read the massacre occurred somewhere around Area 51 or Groom Lake is there any indication of how they were killed John no just head wounds in the report it was said that they died head walls again um that's a lot of relatives uh who are going to be requiring explanations and that sort of thing how was it all explained well now remember this is this is just you know speculation how they handle it we've we've realized now that that most of the people that get in this program uh do not have relatives for
(45:27) runways or another either they're orphans or or their families uh passed away or whatever and it's essential that this kind of thing happened uh or kind of go this way because they don't want to have to take the time to explain away the death of relevant so the people the people who do these things are uh screened specially for this kind of work which includes not especially but they also have other methods they can go to the family and say look we're going to uh give you a um you know a annual or
(45:59) monthly uh stipend uh but this is the you know National Security and it's for uh God and Country and so yeah so sign this and uh it'll be done yeah I understand uh then I think it was an incident that had a lot of influence on you didn't it uh bent Waters in 1980. yeah bent Waters occurred uh during three days in the end of December uh we have a United States Air Force Base about 70 miles Northeast of London called bent Waters uh at that time I think it still is an A10 base uh the uh warthog Tank Killer and uh very strange
(46:41) things happened during those free days culminating with the uh it wasn't a landing it was an appearance of a very weird aircraft witnessed by General Gordon Williams who was the base commander uh major Ted Conrad Colonel Chuck called uh Larry Warren and a few others uh but at any rate the the incident uh did occur but it was a story as far as I was concerned many Pilots had heard it and in 1985 I ran into a friend here in Las Vegas an Air Force brand that I knew in laws and he was transferring from the regular Air Force to the guard and he
(47:17) came over to the house and started talking about stuff and I mentioned you

know I asked where he'd been based he mentioned pent Waters and I said oh that's supposedly where that uh Foster land in 1980 said no John not supposedly it did he said I didn't see it because I could find the quarters but I know those guys who did and he and he said I'll give you their names and I said wait a minute you're telling me this stuff is real if there are flying foxes because at this time you had no no real interest in this
(47:46) stuff my interest was in spy planes SR-71 you do uh I understand what about your dad John I know your dad had great abiding interest in all of this didn't any of that rub off on you or did it was it self-ignited no because there was this there was no proof he was certain that they existed and now that I look back it's because of who his friends were he was friends with uh uh General bannenberg who was first head of the CIA and the original member of mj-12 he was very very close friends with Jimmy Doolittle who was up to his eyeballs and
(48:20) uh in his alien stuff uh but you know he never let on to me and and it was just not a part of my interest sure you know everybody's interested applying sausages but you know unless you've seen one or have hard evidence it's just not a part of your life but in 1985 it became a part when Grace said yeah it's true that's going on and that's what involuntarily I might have launched me into this research okay so that was then really the beginning of your interest right all right um uh in 1983
(48:58) uh you you have written second attempted public disclosure Linda Howe mj-12 and something about HBO what does all that mean this is when Linda Howe was contacted by mj-12 in order to do a documentary and they said that they would make available to her many many thousands of feet of uh saucers and whatnot and they wanted her to write a documentary that would be presented on HBO and she contacted HBO and HBO said we'll do it but before we air it we want uh we want the filmed uh uh interview with the president his chief of staff in
(49:39) his National Security Council saying that this is true and mj-12 essentially led her on a uh round robin so to speak of different bases and different facilities and all kinds of things for about eight months uh at the end of which it was it was just terminated she never heard anything more well that must have been very frustrating I'm going to have to ask her about it there was no more contact and only a few years later did she run into somebody who was involved in that and they said I'm sorry it turned out the way it did uh Linda uh
(50:15) but we had no option there was no further explanation wow she told me of where they took her and the things she thought just absolutely fascinating and of course Linda Howell is very articulate very knowledgeable it keeps voluminous notes so uh you know it just wasn't just some story she was telling by the way John uh again on the subject of Linda Howe I talked to her earlier today and uh she said she's going to be on the way to New Mexico she's had enough there's too much going on down there so she's going to be
(50:47) on her way to New Mexico and we'll be reporting to us from New Mexico well she was the leading Authority on uh mutilation she did that uh documentary for the agency affiliate in Denver in 19 I think it was well what was it in 1980 right I believe so and then her and I uh after the crestone meeting drove down to see uh drove down to Roswell and oddly enough here we are driving out in the middle of the desert just about 15 miles north of where the first UFO gray and we're on this little Bikini Road is a
(51:20) dirt road about a million miles from nowhere and we're driving along in this truck and we saw a dead cow and I thought well here I am with the world the leading Authority on cattle mutations and we see a dead cow so we get out there and there was none of the classic hoodie cookie cutter uh uh incisions but we started looking around and we saw three others and then we saw two others and then I stood up on the the bed of the truck and I think we counted 34 cows wow and so we went to uh found the nearest rent and asked the guy
(51:56) if he knew about the cows and he said yeah he said they were they died of some disease well Linda Howe checked in with a veterinarian on this whatever the disease was and I don't remember what it is now but the veterinarians said no way he said If that had been that disease that place would have been cordoned off within 100 miles uh-huh just a very odd one of those unexplained it is and I've heard Linda Howell say uh tell exactly the same story John uh so I guess that's the way it happened that was like in 1986. all
(52:26) right all right um she's still trying to get it out to the public uh today and that's uh What uh well over a decade now yeah and then the Eisenhower breed E4 um leaked to Hollywood producer in front of Bill Moore yeah that was Jamie Chandra

and uh one day he received in the mail uh this film which was undeveloped which he had developed and it was uh it was the Eisenhower breathing as as we've come to know it and it was supposedly the briefing that Eisenhower got when he became president on the alien situation
(53:02) and told the members if I told about the Roswell crash she told uh what there told the original members of mj-12 and what they planned to do it it was a very interesting now people saying and I say the information was definitely true not necessarily that the document itself was uh was a legitimate document all right um then uh you say 1985 my interest begins uh actually it began a little earlier than that what what made you write that John why 1985.
(53:35) that's when Greg Wilson came through Las Vegas and uh and told you the story yeah okay see then 1986 uh and I remember this one very well Jal 747 Captain is followed by UFO three times as big as an aircraft carrier and I remember that it was an enormous uh enormous graft and it followed him for an hour he was on his way from uh uh Catholic Iceland to Anchorage fuel stop and Anchorage and then on to Japan and uh about an hour out of uh Anchorage at uh 33 000 feet this night uh this thing appears in front of the aircraft and it
(54:18) was not a passenger flight it was cargo and so there's only three guys in the cockpit but they all saw radar had it returned to be sure it wasn't at some gigantic reflection of some sort they uh they went down to uh 29 000 feet to see if it was wrong and it did uh and then after about an hour it just left and they landed gave their FAA report and other than a few comical news stories he ignored by the Press specifically by Aviation leak and space technology who is our Premier Aviation magazine doesn't
(54:49) give it one word not even a cent well for all your flying John and the one incident you have had that may have been something like that you must talk to all kinds of other captains lots of friends in the industry do they talk about this John uh not unless of policy and character that he could bring this up uh unless I've been with the crew for a long time and unless it seems appropriate and I uh but you find out that maybe a third of the uh the pilot have seen something all right um we're getting up toward the modern day
(55:26) here uh but first let us look at 1987. and particularly the Gulf Breeze sightings because that's still going on John uh it's still going on we're getting photographs there have been recent photographs one or uh which is a varying picture a lot of people are following up on that right now and um the same gentleman at Gulf Breeze uh continually seeing these craft what is your assessment of what happened at Gulf Breeze well I first uh heard about it in 1987 when the channel four I believe it was down there put out the documentary
(56:04) and it added Walters film uh that he took out the back door of this craft uh hovering behind the tree line there just over the tree line and it was tremendously interesting and there was no doubt in my mind that uh that from the videotape that this thing occurred but there was so so many people jumped on it as a hoax and uh they just did back flips to try and prove it was a hoax but that's right in my opinion it was not it was the was the true thing and uh Ed Walters uh just took out a tremendous amount of plaque over the
(56:42) years for uh showing this film and for saying the things he did but I believe him 100 percent uh he's uh not easy to get as an interviewee um I've tried to get Ed Walters a few times and uh he's uh somewhat cantankerous and uh not very interested in publicity is that your time I would be too if I under had undergone what he did I mean he just took uh it was worthless um wasn't there something about somebody who supposedly found a model in a in a house that Walters had rented or something or another I can't he sold his
(57:21) house and the people who moved in found in the Attic a a model of what he had videotape made out of uh I think he's a designer and architect out of some architectural drawings uh that he made unfortunately the people who tried to hoax this used architectural drawings that were dated after substantially after this incident ah and it was just a complete setup from beginning to end oh well and yet that and the guys who trumped around the field in England and any other story weak as it may be John that seems to um
(58:00) make people laugh at all this and say aha see what a hoax those stories stick Like Glue yeah 50 people can look up in the sky and see a saucer or see a craft and uh and one stupid story comes along and it blows away all that good uh how come why is that because the disinformation is so firmly in place after 46 years that there's just no way if they've done a fantastic job with you of uh disinformation what is the uh John Lear hypothesis uh that was the hypothesis that I

wrote in December of 1987 when I felt really
(58:43) strongly that people had to know what we're here and and uh they have a deal with our government to uh to provide um uh help in the uh in the security and the secrecy of the overall program in return for uh advanced technology some of the weapons some of that other technology and it was just something that I wrote then which became known as the John Lear hypothesis since then I've you know modified several of the views but essentially it's it's the same so by 87 you were deep into it deep into it
(59:17) and that's when I gave the lectures at uh uh at the Spring Valley library and that's when I usually I think they had seating capacity for 300 and they never had a speaker that Drew over say 40 or 50 maybe 60 people and they had uh 700 people show up every time I came to speak wow and uh it was then one of the guys who attended the lectures I wanted to borrow some tape and came over to my house and brought with him a young scientist named Bob Lazar and Bob Lazar that formerly worked at um that uh in New Mexico at the lanl
(1:00:01) [Music] what am I trying to say there with what uh laboratory San was it Sandia no not the idea I don't know how I could uh forget that name but he worked there as a scientist and uh he just didn't believe in uh UFOs at all I mean it just it was it was a joke to him and uh we watched some tapes and I loaned him some tapes uh and uh uh over a period of of a few months he became more and more suspicious not so much of the evidence of the existence that he opposed but of the the strange way in which the Government tried to
(1:00:42) cover up or suppress some of the information uh at any rate there came a point where uh he had not been in the scientific Community for uh working with it for several years and he decided that he'd try and get in and see if he could you know find out if it was really true uh so he made an application to uh first of all he called to Dr Keller who he had known from uh New Mexico that's the SDI teller right and uh and the father of the uh the h-bomb uh Drew teller he was uh given uh interview at EDG and over process of I
(1:01:28) think it was a couple of months uh he was invited to go to work up at the test but I know the person now I knew that he was getting interviewed but uh I didn't know when he was going and then uh in December of 1988 uh he came up to my house and uh I'm right now in some checks and he's sitting in front of my desk and I said what's going on Bob and he said it was like about 7 30 or 8 in the evening he said I saw a disc today yeah I thought he didn't hear him clearly I said what he said I started this today and I said
(1:02:02) Bears or ours and he said bears and I said oh my god did you go to the dirt bike and he said yeah I just got back and I said well then what are you doing here I said obviously they borrowed you and you're not supposed to be tight why don't you work up there for a while and then tell us what's going on he said no he said you've taken finally a lot of flack over this that I think you deserve to know and then he launched into what he had seen uh during the time he was up there which included a disc and some of
(1:02:30) the technology and a lot of the briefing report and we talked for about three hours as a matter of fact it was three hours and 17 minutes because when he got home there was a knock on his door and there was two security guys there who asked him to come along that they had some questions they took him downtown to an office there and they said what were you doing at John lear's house for three hours and 17 minutes and we had already cooked up a story where I was filling out a log page for his wife who was the
(1:03:03) pilot and uh and uh it went from there anyway he worked up there for about four or five months and would occasionally come by and say what the he'd seen what was uh Bob's job Bob's job at s Ford was to a scientist he was the back engineer uh one of the Extraterrestrial vehicles in other words his job was to back engineer with a propulsion uh of the saucer find out how it worked and to find out if we could duplicate it but he said the result only about 20 people maybe 15 or 20 people working up there and they didn't really
(1:03:45) have the resources or the equipment to do a proper job and one of the reasons he went public was his disagreement of how the project was being handled he felt that it should be more spread around that people with with the actual talent more people with actual talent should be allowed to participate in this project so it was very compartmentalized very compartmentalized as all things are but at any rate on March 21st uh 1989 I was going to his house and it was a Tuesday and that John they're going to testify
(1:04:19) one of the crafts tomorrow do you want to go see it I said how can we do

that and he said well I know a place near Groom Lake we could drive and we can not be within the confines of the restricted area and we can watch it so he and I and uh I think his wife and Gene Harper was the one who introduced me to Bob drove up there and I said you know when do they test he said well right at Sunset and it's always on Wednesday evening because statistically that is the time of least travel in in that particular area uh Highway 375. so
(1:04:56) we go up there and uh unload the we had my motorhome and I had my Celestron a telescope which is a very powerful telescope and we were unloading it and here this thing comes up from behind the mountains and they're watching it and I'm trying to focus it in and uh very difficult because I had the 90 degree objective in it and Up Is Down and left is right but finally I got it and there was no doubt in my mind I was looking at a real flying saucer was a kind of yellowish orange and it was radiating something and it was glowing and it
(1:05:29) settled back behind the mountains and for all the people that try and discredit Bob and say no he didn't work there no he's just making this all up you know the fact is he told me a day in advance exact would fly uh within you know plus your mind is not for myself so unless you think I'm in on the hoax uh you know he's telling he did work there well uh of course he's been way out of um you know there's been no remuneration that I'm more yes you there is some kind of a movie underway though isn't there
(1:06:03) John yeah they're making a movie on his life story on Bob lazar's life story yeah I think new line Cinema sure I think they're they're well Advanced at the project I think they've finished the script I don't know too much about it but uh have you been involved in it at all no not at all not at all so through all these years of doing the interviews with you John as as you've investigated and I've done radio I have yet to see you be involved uh in in any profit aspect of this and you just
(1:06:37) haven't gone after it and I'm sure you could have I mean your name is everywhere and UFO journals and you're have been at the very center of it so you could have capitalized on it at any point no I just wanted to find out what the truth is if that was possible uh just for my own uh interest you know I I love flying and that's my business and I do it you know 18 days a month and I have no 10 12 days off and I go out and uh on my days off and take care of my lawn and the rest of things I have to do
(1:07:07) I'm not you know totally absorbed it's very easy to get in this field in your whole life is consumed with chasing down every little lead you know I think I got to pretty much as much as we're ever going to find out uh and that was enough for me all right um you were working uh flying then of course as you always do right and this whole thing got you fired didn't it yeah I I was the senior Captain with uh a very large charter company called American transfer uh the senior captain on the Lockheed l1011. I have been there
(1:07:43) for six years I was a Check Airman uh and July 7th they called me to Indianapolis and I I really didn't know what it was about and I walked into this room there was the uh vice president of operation the chief pilot uh an attorney and a guy from human resources and they held up an article that had been written about me and they said John is it true that you believe in flying firesters and I said yes and I said why and I gave him you know about a 10 minute summary and they said John there's just no possible
(1:08:16) way that anybody who believes in flying saucers could be a captain for American transparent uh your hired you're fired just like that I said when I look I said if it's you know I tried not to involve the company at all I said how about if I just not give any more lectures and we take a look at this maybe 90 days down the line and you can see that you know I've been through to my word and they said no this is it and uh so they gave me three months pay if I would sign a statement that I would never sue them uh which I did because I
(1:08:49) couldn't afford to go very long without a paycheck sure and I went to work for another company as you look back on your career now John uh how much effect other than that particular incident has there been uh I lost another job that I really would have liked to have had uh that involved the Air Force and NASA it was a project that I really wanted to do uh and I was actually hired by the contracting company uh but they called me up one day and the Contracting officer said John I don't know what you did uh to irritate the Air Force in NASA
(1:09:27) but when we submitted your name as one of the pilots they said not only no but hell no so there's there's been plenty of effect then yeah I don't I don't give lectures anymore I never wrote a book I don't intend to uh this is really the only

only thing that I ever do is whenever you call because uh you've been uh really fair with me and uh over the years and it's just kind of nice to come on and uh and chat once in a while yeah it has been a lot of years now all right so that's a pretty complete history of
(1:10:01) your involvement and of UFOs in general uh I've got a fax here and anybody else who wants to fax us with a question by the way you're welcome to do it uh at area code 702-727-8499 and I'll get I'll give that number again but but here's a question for you John it's a classic uh art a lot of people speculate the reason UFOs are kept secret is that it would conflict with religion personally I think UFOs and religion can cohabitate in a reality with no conflict I'd be interested in what John has to say on
(1:10:36) the subject uh you know are you're clear totally clear of any religious aspects of this because all it does is irritate people so it really does I know and so I thought thought I'd just go ahead and get it out of the way with that question but the answer is yes what the the overriding reason is religion and before we go to the phones if that's what we're going to do right after the top of the hour dude uh right after the top of the hour we'll go to the phones okay well then give me time to ask five
(1:11:10) questions and answer them to avoid having people call up and ask the question all right good let's uh you want to start on that now okay all right go ahead if they're here why don't they contact our president well I think we all know the answer to that concerning our current president but let's assume he had another president and the answer is this when you visit an ant farm do you just talk to any old aunt or do you find the queen and talk to her hmm I'm not sure I like being thought of as part of the ant farm but I guess I am
(1:11:42) huh here's the second question if the government couldn't cover up Watergate how could they cover this up for 45 years well the water deed episode was an inside job to get Nixon out of office uh just as the assassination of President Kennedy was but with a little more but not much more attack now that doesn't mean I agree with Nixon but but there was an inside job the fact is the government can cover up anything they want to if it's important enough and I can sure assure you that if you are a
(1:12:12) reasonably well informed that you only know about five percent of what there is to know I used to wonder about that John myself but I I too have joined the club of you bet they can keep it secret so yeah now let's see if if what you have to say is really true John Lear then why doesn't the government stop you number one it would only add credibility to my story and number two I don't reach enough people to work to make any difference the belief systems are too well locked in for me it could be of any
(1:12:41) great threat at all without Hardware there is simply no proof regardless of the number of eyewitnesses it's true uh why wouldn't any of the astronauts or Military Officers come forward to tell the truth the answer is for the simple reason that all of us are dependent on money whether through current employment or retirement pay for our very existence for astronaut or military man to come forward with the truth would net him three minutes on hard copy and the rest of his retirement working at his 7-Eleven yeah for what yeah I agree
(1:13:12) although there was a recent statement by Neil Armstrong that uh would cause your teeth to Rattle are you familiar with that at all what did he say I uh rather than paraphrase it John I'm going to dig it out of my computer during the top of the hour and I'll give you the comment let we'll see what you have to say about it it's fascinating anyway do you have one more one quick more is uh what about the news media you're Dan rathers and your Tom brokaws and your Ted Campos why wouldn't they
(1:13:37) come forward and tell the truth and for the very simple reason that they are glorified teleprompter readers they have very little to say about what they are going to say they can't come in uh one fine day and say tonight I'm going to expose the UFO cover-up there are just too many people over him with vested interest such as the station license to let him do that notwithstanding the fact that all he has is words and no Hardware so we've got rid of those five questions uh we have but uh without fail John I
(1:14:09) would bet at least four out of five of them will be asked before the night's over have you heard this story about the mysterious ocean noise the thumping or the heartbeat sound yeah uh they say they think it's man-made and they're sending down divers and they say it might be a a ship you know even thousands of miles away these things do travel underwater but on the other hand it might be something else

well yeah that's I don't have any opinion on that he did it on his own because of events
(1:14:43) that we've just documented over the last couple of hours yes sir all right um Neil Armstrong on the occasion of the anniversary of the uh Apollo mission of the moon was at the White House about uh three weeks ago now I guess four weeks ago something like that anyway uh Neil Armstrong rarely does public appearances rarely has anything to say but when he does wow what he said and I took this quote directly from the NBC Evening News was as follows quote and he said this at the White House quote there are great ideas
(1:15:19) undiscovered breakthroughs available to those who can remove one of truth's protective layers there are places to go beyond belief end quote Neil Armstrong what do you think he meant John that sounds like a brief prayerful statement uh you know both Neil and Buzz Aldrin and most to be asked and all of them have seen something and they've all seen incredible things and they've been challenged by NASA and over the years you know it kind of wears that and they'd like to get it out but uh they can't be as blatant to say yes I saw
(1:15:56) this and yes I saw that so I think that's basically what he's saying and I've heard some of the astronauts come out very uh but seriously and say listen to me carefully there are no UFOs do you understand what I'm saying no UFOs and what they're saying is no there's no unidentified playing obviously they're all identified yeah um the astronauts uh particularly the ones that went to the moon uh the early astronauts have all had big trouble John psychological troubles a lot of divorces
(1:16:33) a lot of drinking a lot of trouble period and one source of that trouble one might speculate is that they have knowledge that they can't talk about that's eating away at them could that be so definitely and that's one of the ways in which they they keep this secret is uh through a it's called pain drug hypnosis uh where when they tell you this stuff they give you a briefing and and it involved pain it involves drugs it involves hypnosis so that it doesn't bother you that much but it doesn't always work on everybody
(1:17:12) and they know they have this knowledge and and they're like it's hard to know something with this you know with the Ramekin ramifications of this kind of thing yeah it would eat you alive I suppose uh John um just before we go to the phones uh you have said and this really is very different than a lot of uh uthologists today that you've come to the conclusion that while you're digging in earlier years so that the world might know you now don't think we ought to know or that we have a right to know or that it would
(1:17:47) be good for us to know or how do you explain that and why well it has to do with religion and and no people should not know this this is uh this is something that uh is irritating as it might be it's none of their business there's nothing they can do to influence or modify it in any way it's best they just go on with their lives and uh pay their taxes find something they enjoy voting sailing growing lawn or something like that and get on with their life because there's no reason to know this and and if they
(1:18:20) knew that the the true ramifications of this uh it would bother them it would eventually uh would eventually result in the breakdown of society so the breakdown of society how much do you know John without telling me what you know how much do you still know that you haven't told that pretty much I told you much of this stuff you know the stuff I'm not talking about is religious stuff and if you think a while you can figure out what it's all about you know it's uh I told you most of the stuff but maybe not all no not all because
(1:19:02) there's a lot of a lot of sensitive very sensitive stuff we regarding religion all right uh let us take some calls uh John and I want to remind everybody the uh toll-free line is east of the Rockies only at 1-800-618-8255 and let us Venture forth hi there on our east of the Rockies line you're on the air with John Lear hello there uh no you're not on the first time caller in line you're on the air with John Lear good morning hello John this is San Diego San Diego yes sir all right uh great chill question uh sounds like if
(1:19:37) the U.S has some of this technology that it really wouldn't be too big of a problem being confronted with other nations like Russia with uh their Tech military um do you think uh this type of Technology can be implemented and such cases like war or anything like that all right um what about it John well it certainly can and this may be the result of of the the breakdown of the Soviet Union maybe we told them what we got and what direction we wanted to go in I don't know that for a fact but it's possible

(1:20:08) that happened our technology base is about 30 years of where everyone thinks it is when you look at the Space Shuttle and all the the the satellites and then each stuff we got going our technology base is 30 years ahead of that 30 years ahead of that just to give you an example of what I'm talking about about 25 years ago uh you read in the paper about Talking Rock technology yes and what that was was they put a rock in an analytic chamber and gave it a pulse like hello and the The Rock absorbed vibrations and by measuring the
(1:20:46) vibration by a half a second later uh measuring the vibrations they could pull out the word hello well in 25 or 30 years later what they have now is a means to beam into a room and pulling off measuring vibrations that have been given you know any of the crystal structure like clouds or Windows or anything like that right and pull out a conversation that was held seven days ago wow wow that's some technology on our east of the Rockies line you're on the air with John Lear uh good morning hello hi where are you sir in Leavenworth Kansas
(1:21:21) Leavenworth all right hello you're on the air go ahead I was wanting to uh talk about Project Blue Book all right I was wanting to find out whether it's still being researched or if you've even heard of it well of course uh we've heard of it uh John any any comments on Blue Book it was it is no more or is it now going on below the surface it was established in uh 1948 or 49 and it was brought to a halt in 1969 by the convent committee and what they said is based on all their research uh uh flying foxes did not represent the
(1:22:04) threat to National Security now they didn't go as far to say as they didn't exist what they said was they're not a threat they're not a threat but uh project actually uh the uh the uh the actual project was called Grudge the research of different sightings and yes that still goes on uh project Grudge is an active project that's an interesting conclusion uh to not rule out their existence but State they have no uh they're they're not a threat to uh National Security doesn't make sense to
(1:22:36) me if they exist they certainly would be of Potential Threat yeah well they got away with it yeah on the uh toll-free line you're on the air with John Lear good morning where are you calling from please uh Kansas City Missouri all right okay uh what I want to say here has to do with the religion aspect if that's okay with Mr Lear sure okay uh here's my opinion this is just my opinion now so this could not might not mean anything to you at all but I am a Christian and uh what I have gained from this is that uh this
(1:23:08) is my opinion but the UFOs have actually been built out of the watchful eye of the Illuminati does that make any sense to you yes I've heard that before what do you think about that uh choose your words carefully huh it's it's possible for the reason to explain do you believe in the Rapture at all I don't mean to make this into a religious show yeah please please don't uh okay please don't uh in other words John um believes there is a connection uh between religion and UFOs can you please
(1:23:46) expound us that you would not find agreeable in which he would rather not expound on I think um John no I I if it's all seemed to you I do not want to expound on my religious gift all right uh it's it's kind of like uh when you say this I and I I guess we had to cover it John but uh when you say this it's like putting a box on the table that says do not open this box and then just leaving it there and everybody who comes past will inevitably uh open the box and so they want to open the box I understand that uh but perhaps some
(1:24:21) boxes are best left unopened right on the uh Wild Card line you're on the air with John Lear good morning hi uh I'm calling from the Bay Area San Francisco Bay Area yes sir I can prove right now that what you uh what Mr Lear is saying is the opposite of the truth because the US government is not covering up information about existence of extraterrestrial life um government intelligence agencies have been spreading the rumor that aliens are among us the UFO researchers and this has been documented by Jacques Clooney
(1:24:57) in his book Revelations for example uh in 1983 the uh proven disinformation agent uh uh Richard Doty at uh Kirtland Air Force Base invited Linda Howe to uh that Air Force Base and children these alleged secret documents claiming aliens Among Us Then in 1985 Jacques valet J Allen hyena were invited to Norton Air Force Base by some generals there and told that aliens are among us and and I think it's all a lie and I have a reason for it well all right uh give that to us you said you had proof sir so go ahead and lay it out
(1:25:40) the proof is what I just told you when you just get Jacques filet's book Revelations that proves that the government isn't hiding it is it's pushing it on

UFO researchers and the reason for this reverse psychology disinformation campaign was stated by Stanton Friedman when he said that a belief that alien life to cause people to lose their faith in the value of nation-states and lead to the acceptance of world government which is exactly what the power elite to control the government wants since their
(1:26:09) multinational corporations have most gain from globalism all right uh so there is Johnny lays it out it is something he's charging uh to lead us toward the one world uh government that sort of thing well I certainly respect his opinion and uh since I don't have any hardware that I'm certainly not going to be able to prove you know what I say uh John at one time can you tell the story about element 115 yeah Element 115 is is the power source uh for these extraterrestrial craft uh we've been able to
(1:26:50) synthesize up to like 106. uh but there is an element on up the line that is 115 and by pumping protons into 115 it becomes 160 which immediately decays and uh what's the what the result of the Decay is is any matter and when any matter is mixed with matter it's a 100 conversion of matter to energy which is is a very very large explosion what they do is they control this explosion to create Heat also out of this this reaction they pull off the gravity a wave with with uh without going into details they use to Prevail themselves
(1:27:38) uh across the universe that speeds hundreds of times faster than the speed of light uh at one time um and I I you tell as much of the story as you can or tell me to go fly a kite but you had your hands on some 115 didn't you yes Bob Lazar had his hands out to 115 we did some experiments which proved it was exactly what he said it was and I believe it was the evening of the George Knapp uh UFOs the best evidence uh we kept very close watch on this now but since we had it four or five months we became a little careless
(1:28:18) and was left out and that night they broke into Bob's house and took it so you no longer have it but that's about as close as you've come to Hardware that's correct all right on the uh toll-free line you're on the air with John Lear hello hello there no you're not on the first time caller line you're on the air with John Lear good morning hi Arthur Randy from Leavenworth Washington hi Randy I'm calling to ask Mr Lear about the uh three different kinds of aliens I have I get a subscribe to a newsletter and it
(1:28:51) talks about all the government research and the different type ships are different aliens from different sectors in the universe and there's the uh reptilian form the insectoid and the human type well there may be a lot more than that John how many are there well you know opinion and this is only my opinion uh there's about 70 types that are visiting Earth at one time or another with various agendas some of them don't have anything to do with what's going on here they're just coming down to take a look but uh they're all
(1:29:23) different types and some of them that if you had a chance to look at it you would actually die of fright because they are so alien to uh to what we are used to how's that caller that that sounds good all right thanks uh you would die afraid uh are they able to appear to us uh in in a form uh different than that which would cause us to die and fright apparently some of them can do that but according to some of the abduction stories uh they hide themselves you you can't get a look you can see their their
(1:30:02) shade but you can't see their face and that's prevalent if you've read uh John Mack's book that's prevalent throughout all the abductions that they cannot see the phase yeah it's true I had John Mack on the program about uh three weeks ago uh John very interesting guy and I really enjoyed his book it was more of the same but it's interesting stuff uh it is uh you know about the incident in which uh some young lady apparently set him up yes I thought that was uh really disgraceful and but it's just media
(1:30:36) tactics um you know I don't know what she gained by that you know it just uh or what agenda or whose agenda she was serving by doing that it was just an unfortunate incident uh on the east of the Rockies line top of the morning you're on the air with John Lear where are you calling from We're Texas okay Mr Larry you see there are things you don't want to talk about for religious purposes but I wanted to tell a story that I believe is true all the cosmonauts reporting seen these uh huge Angelic like beings with their arms
(1:31:13) crossed and a smile on their face like they knew something was going to happen and that was before it's your Noble blue eye and John Glenn reports see something completed by the fight yeah it's it it really is true uh with regard to the Angelic beings uh John I also remember that report uh do you yeah when they had

their arms crossed and they were smiling they were smiling because Chernobyl was gonna happen okay now what kind of an Angel is that Russia now with Bibles in their schools yeah all right man thank you that's no
(1:31:50) Guardian Angel is it John uh what I'd like to have uh I wonder how she could conclude that uh it was because of Chernobyl that's that's really uh that's really strange on the other hand I recall you saying one thing to me John that has haunted me for years and haunts me today yeah um we have had a number of guests on this radio program about life after death inevitably in every warm and fuzzy life after death story people Rush toward the warm inviting light down the tunnel into the light and once
(1:32:30) you said to me John don't go toward the light it's a trick though toward the darkness well now remember I I qualified that by saying that's what Whitley strieber told me well it still bugs me to this day John because what if I had to make that choice well right now I'm going towards the darkness you are huh yeah I don't know oh boy that really drives me crazy on our toll-free line you're on the air with John Lear good morning where are you calling from please I'm calling from Kodiak Alaska Kodiak Alaska
(1:33:02) yes sir yes Dave I've heard John talk about time travel and I'm convinced that uh time travel is possible and it's already happened uh I open those fields when I was 30 years old and that together with my birthday and the scriptures uh unlock the whole mystery all right sir Don uh time travel uh time travel we uh we've talked about it before it's one of my favorite subjects do you believe time travel to be possible no question about it really absolutely possible you can go forward in time much easier to go
(1:33:42) back but you can certainly go back in time I once wondered as have many people and I'm going to make you uh tell me it's not true again whether you and uh Mr Lazar um have thought of trying to construct something to Traverse time well yes we've thought about it but it it's a big deal I mean it's just you just can't go out and make this thing you need a lot of equipment so that you know sheer speculation and it'd be fun to try but you know we don't have any of the stuff but we certainly not doctor just an idle
(1:34:20) question of curiosity John if you had such a device incidentally we were going to go forward because that's a lot easier to do than going back that was going to be my question uh where would you go time wise well all you have to do to to go forward in time is uh is create a strong gravitational field and you more or less just stay there while all the rest of the world passes you know as time goes by then when you remove the gravitational field uh you're wherever they were I see all right on my east of
(1:34:53) the Rockies line you're on the air with John Lear hello yeah where where are you sir um San Antonio Texas all right go ahead I've got a story about a friend um dear friend of mine I've known about 12 years he's a retired colonel and I'm not going to leave his name for he never getting this mission to do stuff but he even made a story to me and my wife about his encounter with a spaceship and he told me that he was on his way to West Texas driving I guess toward El Paso and he and his wife have seen this
(1:35:30) aircraft but he said wasn't aircraft it was a large disc said it went across his vehicle came back however when uh vertical up and down and left and right and then just left and then he's a airport terminal retired he's still Aviation he uh flies uh private flights now he said there's no way anyone ever tell him that there that doesn't exist uh aliens all right sir thank you well there's a story it's true once you've seen one yourself your attitude really changes uh doesn't
(1:36:06) it John yeah it really does uh but you know it's so few of us get to see those things now for instance I'd love to see when I saw the one that Bob took me up to and I saw that at night now my wife Marilee who didn't believe in any of this before as a matter of fact you know it almost came to it almost split up our family because of my interest in this uh she's from Mississippi and uh she just didn't believe any of it and here in 1986 I was on a flight to Frankfurt and she and my daughter Jackie are out in
(1:36:43) the gardening and about two o'clock in the afternoon and Jackie looks up and she says hey Mom look are you a phone they look up and here's two of them at a very low altitude less than a quarter of a mile away they were going they I live right near Nellis Air Force Base they were coming from Nellis and went around to the southern part of Sunrise now that's an extremely rare sighting to this uh in the day in the daytime uh and it really it changed your opinion of course he says well I saw him but I still don't

(1:37:17) believe him but but she did see them well maybe maybe that was the sighting that saved John lear's marriage it definitely was deciding that saved my marriage I really can't understand that John and uh you know where I live out here and you know what I'm close to yeah and I see things uh quite frequently John and I'm very hesitant uh to talk about them frankly I I have one major sighting of an aircraft I told you about or a craft uh but I see other things John in the night sky a lot and now there are those
(1:37:50) who say that activity up here has lessened or gone away or been moved can you tell me anything about that well there certainly has been a good fighting in say two years and so uh there's a facility in Northern Nevada where they do a lot of testing now whether they do UFO testing I don't know but but there is a major facility up up there there's also an increased activity down at Holloman which seems to be just uh the new secret aircraft we've got but uh yeah there definitely doesn't seem to
(1:38:24) be as much uh testing as there used to be just after uh Bob and I started talking about this you used to be able to go up to test site and see all kinds of weird stuff but they just just aren't any sightings anymore I wonder if it is the attention that's been given up there and there's been a lot of it there's a lot of people hanging up there of course they're trying to get more property now and isolate the area uh and there's a kind of a government grab going on for property as you know
(1:38:51) John yeah and I just I don't really understand what the big deal is because like in 1980 there was at least 30 uh aaos which are air access only areas in the United States which you know all this weird stuff went on uh so you know Groom Lake is just one of a number of facilities uh it has been a pretty intense area though I've been in pretty intense area and uh they are I'm sure they're going to get the land uh yeah I'm sure and I've heard that the testing has been through severely curtailed for the past years
(1:39:28) until they can until yeah too many cameras too many people on the um a toll-free line you're on the air with John Lear good morning where are you calling from please well just let me get my radio here all right get your radio yeah yeah where are where are you sir kvi kvi we're holding this for East of the Rockies oh thank you uh very much for the call on the try on the Wild Card line you're on the air with John Lear hi fine where are you doing all right let's talk to you hey how you doing good
(1:39:58) been a long time since I've been in WinStar I bet it has um I wondered are you know you're at the writings or or no what's what's that uh religious writings concerning uh uh metaphysical uh stuff um Book of the Dead you said you go you go toward the dark light instead of the the light are you familiar with have you read that no but that sounds that's an interesting thing a dark light I haven't heard that before yeah yeah you gotta read the Tibetan Book of the Dead and I would recommend people like you to get
(1:40:37) in touch with people like say the Dalai Lama and talk to them about this kind of stuff and see what they think well all right uh people that are realized or or that have studied mystical or metaphysical stuff that are you know that are in that genre all right thank you John you don't seem inclined uh to really be pursuing this much more in other words uh my assessment of you psychologically is that you have reached some kind of inner conclusion and uh stop me if I'm wrong and uh and and you're kind of settled about it
(1:41:13) now is that right settled or fatalistic uh all right fatalistic yeah I I never in my wildest dream when I started getting into this had any of remotest Hope of finding out as much as I did and when I found out as much as I did it was just it was it was very interesting and it was it was in one way extremely satisfying but I didn't think that I'd find out much more than I did so you know I continued on my life and like I say there's a lot of guys that just keep plugging along I know and but I think I
(1:41:50) I found out pretty much what's going on and so I'm continuing my life and fatalistic is the right word that's kind of ominous for a lot of us of course laugh all right uh on the east of the Rockies line you're on there with John Lear hi yeah Kansas City yes yes I heard that you can only go to so far so far forward in time and so far backward at time is that true no I think you can go both ways as long as you want and to the answer of the Paradox if you go back in time and kill your father will you still
(1:42:31) be here the answer is yes you will still be here because time has compartmentalized okay you can go back and kill your father but you'll still be here

okay that's all I wanted to know who serious about that right thank you uh very much in other words uh you will affect the local all time is local is that right that sounds like a good analogy yeah all time is local you will affect uh the immediate sphere or time that you commit this act in but somehow time will bend back in on itself and everything will self-correct and you'll
(1:43:06) still be there somehow whatever all right uh on the uh east of the Rockies line you're on the air good morning uh yes sir I was wondering if will we be able to get a tape of tonight's program yes ma'am where are you coming from Oklahoma City Oklahoma City uh yes indeed you will and if you'll listen I'll tell you how to do it all right okay I just wondered if you would all right all right yeah I'll be glad to do it uh sure if you want to tape this program the first two hours we spent on a very careful uh chronicling
(1:43:36) of UFO history John's involvement in it and all the rest of it you can get a tape uh by calling right now area code 503-664-7966 let me give that again area code 503-664-7966 and on the east of the Rockies line you're on the air with John Lee or hi hi how you doing where are you sir uh Erie Pennsylvania okay first of all love it quite outstanding glad you're enjoying it okay uh for Mr Lee I have a couple questions first of all are you familiar with Guardian yeah you are Guardians legitimate oh I don't know
(1:44:24) okay I know that he's a good researcher um you know I'm sure he's not thinking all this uh but you know other than that uh yes I am familiar with the case okay uh second of all well I've been trying to get through all night I'm kind of nervous now oh well relax just try to remember what you wanted to ask I'm trying uh second of all without getting the in-depth at all about religion uh because I know that's catchy subject uh but do these civilizations uh alleged civilization do they uh purport to be
(1:45:13) um religious the way we uh all right that's a reasonable question sir uh John do these beings themselves uh have a religious faith that we are aware of well in answer your question let me tell you what Woodley's drivers said about that when he was abducted and he's he's uh absolutely horrendously terrified and he's screaming and he's saying oh God oh God he helped me a God God please help me and the the little Grays are looking down in the very cool league is that why do you call further
(1:45:54) over your God there's only us up here uh that that will certainly serve as a as an answer no question about it on the Wild Card line you're on the air with John Lear good morning good morning uh our gym in St Louis St Louis yes um Mr Lear I want to thank you on behalf of everyone listening for coming on the show thoroughly entertaining well thank you um you seem to be hitting everything right on um for people that call up they've read a book or they're real religious they obviously haven't been following some of
(1:46:29) the stuff covered on this show the cover-up the military involvement politics everything um um you seem to be right on I respect the fact that you don't want to go into the religion uh aspect because I've uh I've read a little bit I think of what you uh what you've outlined there and uh a couple of different uh a couple of different books but um again the astronauts the whole thing of keeping quiet people can't understand why the why aren't they talking about this um and the stuff really is happening
(1:47:01) um I'm uh getting announcements on our uh station here in KSD that say this is a warning this is not the views of this this station that's uh it is shocking it's very shock a lot of this is except my religious beliefs are simply I believe Above All Else above anything else that there is a that there is be God God the creator of all things and why can these things that be happening God God takes care of other elements of nature in accordance with the plan why can this not be somewhat along uh of an
(1:47:38) overall plan in the plan yeah otherwise yeah yeah yeah okay all right sir hold on listen to the answer uh go ahead John what's the question well the question was really he walked around it six ways from Sunday but he's asking why can't uh there be the God we all know and not we all know but many of us think he is there uh whose in control and who's just well let me tell you I'm not properly asking in other words why why do God and uh and and UFOs and the aliens have to be mutually exclusive uh they don't but
(1:48:16) let me tell you a story that that Bob uh Lazar told me once we're talking about uh the universe and the ramifications of it all and and he's telling you be about the theory that the Universe expands until it can't go uh any further and then it starts Contracting and time reverses and everything comes down to its original uh

size less than an atom size and then starts spreading out the other direction whereas things only exist that travel faster than speed alike and uh so we came to the conclusion uh now whoever
(1:48:54) made that that's God whoever made that that's God um okay well I hope that serves as an answer to his question you're on the air Coast to Coast AM with John Lear where are you calling from please calling from Youngstown Ohio Youngstown yes sir um I have a copy of a videotape by uh Bob Lazar um I was wondering if Mr Lear was familiar with it oh he sure is um and uh I was wondering if he could give us some comments about the other two areas of S4 that uh Ms Lazar talks about about uh the physics of time
(1:49:28) travel and the charged particle beans all right we've only got about a minute John can you do it I'm not sure whether areas that he's talking about yes that uh [Music] they had both of those things there uh once you know I I told you the stories where uh the hangar door was open uh he walked into the craft uh to do some work and he was in there about two hours and when he came out uh it was exactly the same same time as before he went in and when he asked what the explanation was that they said uh because defroster is
(1:50:03) time shifted uh there is a way people can get the videotape that the caller mentioned about uh Bob lazar's uh experiences and uh his explanation of what these craft are and how they work it is very educational how do they get it the right to try that Corporation now write the address down because there is no telephone number if you call out of Vegas and ask for information there is no telephone number it's try.
(1:50:37) t-r-i-d-o-d Tri dot Corporation 1324 Southeastern and that's in Las Vegas Nevada 89104 and it's 29.95 that's 29.95 plus three dollars shipping and handling and what you get is a four 40-minute day but it's called the Lazar tape and excerpts of the government got Bible which is a chronological count of government UFO activity details and Bob's experience working with recovered flying saucers for the Department of Naval intelligence it explains the propulsion construction and details of where the aliens are from including what Dr Keller
(1:51:16) has to say about model car all right good that's how to get it everybody and uh we'll repeat that address down the line here somewhere on our toll-free line you're on the air with John Lear where are you calling from please Memphis Memphis Tennessee all right yes uh Mr Lee it's a pleasure to speak with you thank you uh on discussion of um uh after death experiences uh would you please reconsider and go toward the bright light the white light not the dark sure there's another body of work
(1:51:47) known as the Egyptian Book of the Dead other than Tibetan and please research that yeah they uh I'd like to say something about the Bible one of the most important books in the history of mankind uh the New Testament like went to the Old Testament is in many places a greatly altered version of the original accounts on which it is based in addition probably less than five percent of all but Jesus and his original followers tie is found in the Bible many of these changes and deletions do the New Testament were made by special
(1:52:22) Church councils the editing process began as early as 325 A.D during the First Council of Ikea and continued well into the 12th century for example the second Senate Church Council of Constantinople in 553 A.D deleted from the Bible Jesus's references to reincarnation yeah I just want to be sure that I got that on that's not the the bright light not the dark light all right thanks John why uh why why the dark light uh right going there yeah because according to Whitley uh if you go to the uh the bright light uh they
(1:53:07) you have made a conscious choice of which direction to go and supposedly according to him uh at that point if you go to the white light uh the the grade or whoever is in charge of this thing can decide what to do with you now they can either send you back into another body or they can put you in the black box now the reason that they would choose the white light is I don't want to spend what Whitley says is anywhere from 12 to 40 000 years in the black box he was in there and he says it's a very frightening experience now I don't mind
(1:53:40) being by myself I could probably spend a couple years by myself but I'm not sure whether I could spend 40 000 years whereas if you go towards the dark you come right back into a terrestrial body and you can continue on with whatever body you got into all right um Dear John art this comes from Santa Barbara do you think there are any off-planet guys who are trying to help rescue us from this prison any hope for the future Annie Santa Barbara possibly possibly all right tantalizingly just possible uh also uh this question John

(1:54:20) The Philadelphia Experiment uh do you believe it really happened uh is there any connection between it and the UFOs uh yes obviously something happened during the Philadelphia experience now whether that vote actually disappeared or not I don't know but there's enough evidence that something very very strange happened during that time uh uh due to the government's Research into uh magnetism all right and one more facts this from Lawrenceville Georgia uh Jimmy Carter had seen a UFO he was given a top secret clearance thus he was
(1:54:56) shot down when he became president yes he does he filed his report in 1969 as when he ran for president one of his uh platforms was uh I believe in UFOs because I personally see one and if I am elected president I will see that all the information about UFOs is turned over to the public uh naturally when he became president we didn't hear one word and that's because the presidents are briefed to a certain extent on the problem all right um on our toll-free line you're on there with John Lear good morning
(1:55:31) uh where are you sir yes I'm in uh Fort Bragg North Carolina Fort Bragg North Carolina okay yeah go ahead I was listening to uh your comment about Delta Delta Forces yes yeah um I believe some things you said but I think you might have your units wrong okay what how did I have one uh one thing I don't think of 66 people were killed from Delta how many people I don't believe anyone was killed in downtown oh okay uh but but there would have been it would it was a different group uh yeah I would say so what would you
(1:56:17) say it is caller what what group was it uh that I don't know but they come out of the Delta Community um it'll just be noted right here in Fort Bragg that's too many people uh he's he's uh he may be partially right because uh uh he obviously uh was in the community but there are certain parts of Delta which are unknown to other parts so it's possible that you're correct uh and that was just a secret very secret portion of Delta for it all right uh thank you caller uh John uh from uh the state of Washington uh is
(1:56:58) there any possibility that some of these aliens could come from beneath the Earth instead of from outer space yes most definitely really oh yeah do you give much Credence to the um uh the dimensional theories John well I didn't used to but there seems to be a body of evidence now that there is a uh some kind of uh extra dimensional creatures appearing here and there all right you're on the air Coast to Coast AM with John Lear good morning where are you please I can't seem very yes sir I just got a question is uh Mr Lira read
(1:57:35) anything the the uh Betty Andreessen story and her beliefs it kind of pertains to the religious aspect yes I read uh both books and uh uh you know what more can I say there's uh she definitely is is very religious and she had a very religious experience uh during her abduction uh I think that the uh whoever they are who picks up catered to those specific beliefs oh yeah that was basically my question I didn't know if your beliefs followed along those lines because they were filmer the lights and uh putting people back in the
(1:58:12) bodies and that sort of thing and I was just curious if I if you knew about that and if uh you had any thoughts on it well it's been some time since I read the hydration Affair but uh she didn't have a very uh interesting experience right yeah I read I read the newest one the why because it's called Watchers by Ray Fowler and it was a pretty interesting I'd recommend it to anybody out there we're going to be interviewing Ray Fowler again pretty soon on Dreamland instantly oh that that'd be
(1:58:39) really great all right thank you we've had him before and I was neglectful let me do this now we have a new affiliate beginning this morning it is k-k-a-r-a-m in Omaha Nebraska so I would like to officially welcome Omaha Nebraska to the network and uh let's keep moving here on the Wild Card line you're on the air with John Lear good morning yeah good morning Aunt Bob in Vegas hello hello yes go ahead and uh in 1952 I read a book by a man named kosov called all on everything and there he talked about the spaceship current going
(1:59:11) all over the place and I went to Europe to work with a good job group but in 55 we weren't on the air with commercial television in London and we had a couple there and I can remember their name but uh we had a half hour show and the man who was interviewing them was really trying to break them down that they were phony but he couldn't of course after that I invited them home or we went to dinner went to my place we talked about Coach Jeff in this book and these people were very authentic and I do remember the name of a married couple
(1:59:38) and we went to a few of the group meetings in London and this is back in 1955-56. and they were all what I call good wholesome people not phony baloney type

people and of course I lost touch of them then but I wonder if he's from Johnny Familia would go to this book all and everything we talked about connect I'm not catching the last name what what go to Jeff my name's Jeff there's groups that are working say the name slowly Bob good Jeff g-u-r-d-j-i-e-w-f George yes and he wrote the book way back in the
(2:00:13) 40s called all and everything and as I said then subsequently when I was with this couple in London and I don't remember their name but I remember going to several groups and this was back in the 50s I deeply remember that book but I don't know enough about it to make any comment on it right but he talked way back then about uh spaceships yeah all right all right Bob thank you very much uh for the call we appreciate it I guess not not enough knowledge to uh really be commenting about it you're on the air
(2:00:43) Coast to Coast AM with John Lear good morning where are you calling from please uh this is Tim from KSD in St Louis yes sir how you doing uh I want to know if you could tell me anything more about the alien picture and could you tell us earlier about that experience that you had and uh could you possibly tell me the internet number and how I could get that off the internet when you finally do send that up all right um I will thank you uh yeah he's right John I have a young man who has what he believes is an alien
(2:01:17) creature the body of an alien creature which is now dried it's pretty good size it's very hard to describe John uh I've got very good 35 millimeter photographs of it and I've got a videotape of it as well I'm getting them scanned and put up on uh on the internet uh probably by the middle of next week the thing looks are the closest I can come John is it almost looks bat-like but it's not a bat it's pretty good size it's a a couple of feet tall uh two to three feet tall and um
(2:01:50) it is very very weird now without seeing it it would be impossible for you to comment but it supposedly came from Puerto Rico where there's been quite a quite a bit of UFO activity hasn't there yeah yeah and so I will show you that uh a photograph um oh when I get a chance John and and then you'll be able to comment yeah interesting I'd like to see it yeah okay it's just something I'm working on right now on the toll-free line you're on the air with John Lear where are you calling
(2:02:17) from please this is John from Kansas City Missouri how you doing hi John well um basically um while I was calling about is this throw out another theory here if these things do happen and is essentially you know like um first off I don't really buy that so many healing creatures are really buying um using people as food because the simple fact would be easier to kidnap a group of people to and then read them for as cattle was it not uh well what about are we being bred as cattle yeah who knows maybe we are
(2:02:56) anyways um some of the other things like you said like when the mechan's been in Cambodia um and they had in the space forces had fire fight with them it would be a very good place to collect human bodies to study the anatomy because you wouldn't have to worry about taking them and then probably bringing them back and things like that that's a good point yeah and truthfully in this place I mean truthfully one naked of wood so to speak in our galaxy and what is so interesting for it all right why Why Us is the question John
(2:03:36) why what why else why are they interested in us I I can almost answer that I mean when you look at the Earth it's a hustle and bustle of activity and growth and beings and intelligence and it's a contrast to everything around it right yeah well you know my opinion is is it's not that they're they came here looking down and say oh yeah that's a neat place I think they created the whole thing and that's their interest so uh they have an intense interest in following their handiwork yeah they're
(2:04:08) handy work being uh the the breeding of the human race over 200 000 years in which they made 65 separate corrections to make us what we are today which is which they refer to as containers uh you know I doubt if the uh the experiment is over I think that uh you know it's continuing on uh each of these separate Corrections they have to uh you know when they bring in the new model they have to recall the old model uh and they do that with you know math plagues uh uh floods uh gyroscopic perceptions of the
(2:04:43) earth uh which I might mention all this EPA and BLM and stuff about you know carefully bearing our trash you know every 23 000 years this Earth rotates on its axis and takes up a different rotation and essentially cleans everything out so why are we so worried that we're about you know a thousand years overdue for this rotation so why are we worried about all this uh this trash you're talking about a

polar reverse interesting it used to take me seven minutes to drive to the dump and now it takes three
(2:05:19) hours time for the big cleaning cleaning it's all going to be done for us we don't have to worry about that all right on the toll-free line you're on the air with John Lear good morning where are you calling from calling from Bakersfield Art all right we're holding this for East of the Rockies sir for about five more minutes uh thank you very much for the call though on the Wild Card line you're on the air with John Lear good morning good morning wonderful show Sunshine here I think that was Betty and Barney Hill wasn't it
(2:05:45) no he said 1955. oh I didn't know what when their book came out Betty and Barney Hills it was after 63. oh I see open my mistake but anyway they did allude to the time travel tour or the time uh span do I believe didn't they I mean they were in there for some time and yet when they came out it was lost to them yeah they had the same experience yeah wonderful show thanks for having us all right thanks for uh making the call and good morning on the toll-free line you're on the air with John Lear hello
(2:06:19) [Laughter] that was it I guess John uh on the first time caller line you're on the air with John Lear hello yes uh I'm calling him out near Albuquerque yes sir actually in the um east of the mountains about 500 feet from the Manzano test range Sandia base um I had a signing here about two years ago in May uh since then I've talked to three of my neighbors who have had similar sightings a retired school teacher and a real estate agent you're not having some of that famous New Mexico towels hum right now are you
(2:07:00) a diesel truck in the distance or um uh Machinery clanging around but some of it I think I'm hearing uh construction going on on the base now with your sightings within the Montana weapon storage area Coyote Canyon well I was driving I was on the highway driving home and this was a large orange glowing sphere that went over my car and it was heading due south into that area yeah well there's been a lot of reports in that fact when I first got into this uh Paul benowitz had just lived in the uh in the uh for yield fetch in there and
(2:07:35) he set up in 1980 a videotape which ran 24 hours a day he changed it every eight hours and he got some spectacular photos of Dome shade objects taking off from the Montana weapon storage area well I sometimes wonder if you know if they're saying that there's less action going on up in Nevada maybe some of it's moved here well it could be either there or Holloman I've also got uh two acquaintances uh they don't know each other but they have told me that they were involved one word for the
(2:08:03) contractor and the the other uh Workforce somebody in the architectural design firm that built all these underground bunkers back in the early 80s out there and they said that these these bunkers were as big as football fields uh solid concrete they're huge and of course nobody knew what they were being built for yeah no runways yeah I had a friend that uh in one of those things if there was nothing in there but he said it was absolutely enormous yeah and uh but there was nothing in there at the time he went in all right Paula
(2:08:38) thanks what can I ask one more question yeah very quickly do you think that anything will come of this Roswell investigation all right and yes representative Schiff of course is often running on the investigation as you know John yeah uh do you think anything will come of it no zero zero why do you think that well because it's it's a cover-up dancing they're not going to let some congressmen go and go and find out find out yeah I suppose that the levels all this uh moves a congress person is not much lots of people want to talk to
(2:09:12) you so back to the phones on the toll-free line you're on the air with John Lear good morning where are you please I'm in Las Vegas Las Vegas all right thank you kdwn go right ahead hello turn your radio off man it's off all right go ahead uh Mr Lear yes uh a few callers back A lady called asking you about the Bible and you told her something that Jesus said about reincarnation what did he say about that he believed in it and uh he tried to tell us that it was true but it was taken out of the Bible by these uh uh
(2:09:51) Council of churches he did believe in it yes absolutely absolutely really ah however it was taken out yeah it sure was how could if I told that to somebody how could I prove it uh you could get the um in there what's the name of the book uh the gods of Eden the gods of Eden right he goes into it at Great length what is that author's name again Bramley r-a-m-l-e-y-n-thing can I get that in the bookstore I wonder uh I think you can order it in a bookstore well thank you very much all right thank you very
(2:10:36) much for the call ma'am have a uh have a good morning on the Wild Card

line you're on the air with John Lear hi radio free America yes yes Mr Lear uh I believe uh in the Bible and uh I'd like to talk to you about the Nephilim and how that could correlate into uh these things that uh you and art have been describing and also the fact that Linda Howe reported on these cattle mutilations uh that the maggots on flies wouldn't touch the carcasses that's right for days now that's something that seems a bit
(2:11:13) unnatural to me and I'd like to ask you uh throughout the Bible there is a conflict of Good and Evil and uh these things that uh you guys are describing do not sound uh very good to me no not not warm and fuzzy John that's correct that they they would not be my idea of warm and fuzzy John why do you think uh so many people so many ufologists and people uh in in the various Associated fields I want to present them always as warm and fuzzy why why I think that because we couldn't imagine a advanced Society
(2:11:55) not being one of the city we figure well too you know after all that uh civilization thousands of years ahead of us they certainly must have worked out their problems and just want to come down and help us and cure cancer and AIDS and and help us get to you know for our food problem and all the rest of it certainly uh certainly reinforced by Steven Spielberg and his uh Close Encounters yeah it is true uh John a few quick ones for you by facts uh from Alaska a quick question for John a paraphrase the Sheep know the voice of
(2:12:35) their Master will we know I don't know enough about that I know that's a quote but I just can't put it together in time to give a decent well I I can I can Wonder though uh or I can I guess uh try and help him out here the Sheep us know the voice of their Master will we know when that voice comes that it is our that they are our master I guess is the question yeah no no comment no comment or if it's not too late in the show could you ask John about my guess concerning cattle mutilations remember I guessed the
(2:13:14) mutilations were to Garner the components of a medium used to proliferate recombinant DNA research well I think yeah that's that's speculation what it's all about Dear John since 1988 that year to the present around round balls of Light have been hovering above my house day and night this is not a hoax I've been videotaping these round balls of light during the night hours hovering above my house with only a within only a half block at the very most since 1989 I've been videotaping them and I've got these
(2:13:53) videotapes what would you suggest somebody with evidence of this sort does there's not much you can do who's going to listen to you uh I know a few people that have that phenomenon over there and I don't know what they are but um but they are but they are they certainly are is John implying that the god of our Bible was created by aliens no no no you're not going to get me into that now okay uh we'll just drop that one and go back to the phones on the Wild Card line you're on the air with
(2:14:26) John Lear hi hello hello yes sir yeah this is our art in Spokane hello art and I wanted to ask uh John uh what he thought of the possibility that the uh def the Dulce Were Somehow related to the introduction or the further introduction of the AIDS virus into uh population and also what his feelings are about the government being somehow involved in the development of the AIDS virus all right thank you uh John ya AIDS what do you think about AIDS well as I said before there's no question in my mind that the government developed it
(2:15:08) a specific doctor the Navy doctor that that actually did the research I believe his name was RM Donner and uh yeah we made it what it was for I know I don't know some people say it was too uh eliminate or decrease the population but certainly there ought to be better ways to do it because things takes a long time uh to affect and also it causes a lot of suffering I think our hospitals would be over taxed before it would start reducing the population so when people say well it's just the government to try to introduce the population
(2:15:44) possibly but you think even they would be able to figure out a quicker way to do it well I know that there was Congressional testimony it's on the record John uh an inquiry of some scientists about whether such a thing could be created that would uh produce or suppress the human uh immune system yeah I got a copy of that and that's what they were they got their initial 10 million dollar funding to uh to create that so that much is at least on the record all right uh on the toll-free line you're on the air with
(2:16:18) John Lear good morning good morning how are you fine sir where are you I'm the kogo San Diego excellent John um I have some questions about uh one of the guests you had on earlier um wrote the Montauk books yeah Princeton Nichols Preston

Nichols I had him on the program yes right and I wondered if uh your guests could make any references to some of the things he said in his books like the alien treaties or um things like that all right follow the Montauk uh books too closely uh I did listen to president Nichols several times uh all I can say
(2:16:58) is specifically yes there is an alien treaty uh but other than that unless you have a more specific question no I guess he just wanted a general reference whether you were familiar with it whether you agreed with it yeah we certainly do have the treatment all right uh one more stab at this John this comes from uh Veronica in Wichita I'm a Christian but not so arrogant a Christian to believe that we are the only form of life God created as the Bible says in my father's house there are many mansions we're at uh were it not so wouldn't he
(2:17:34) have told us somebody did it some entity some something did it uh I think most of us most of us believe that a power far greater than ourselves uh uh had something to do with this it's just uh too complex all right on the toll-free line you're on the air with John Lear good morning okay hi good morning uh I'd like to say the just out of Common Sense on this one entity and stuff like that uh there there probably is even if there is one NC I'm not saying the problem is but even if there is and I go through life and have to go see
(2:18:17) him in Judgment Day I'm going to appeal to a higher court because he's got peers I mean it would have to be that but anyway uh on this time travel yes okay time travel uh the way the way you're looking at it I think time travel uh back in the past there's no way you can see time from back in the past but you'll never you'll never be able to travel you'll only feel light from it and as far as it's been the future that you might be able to do that too but you'll never be able to come back to
(2:18:47) your own time just on uh you know what are you basing these comments well it's just like okay let's say uh the extraterrestrials okay uh you'd be a fool to think that we're the only ones in the in the universe well wait a minute you are switching topics all right okay it's like planets and other galaxies we can look at them right now and what we're looking at isn't well you know isn't right now it's it's time from way back when it's way back when that's true so there may be inhabitants
(2:19:22) on what we're seeing and we just you know the only way we're ever gonna know is to be able to travel faster in a speed of light that's the only way we'll ever know which certainly can be done and very easily if you have the technology but I'll have to disagree with you on time travel you can certainly go forward in time and you can come back well I'm sure you can go forward but I doubt I doubt very seriously you'll be able to come back yeah well okay well we disagree on that it's just Uncommon Sense so I mean
(2:19:48) I don't I don't understand how you think you can come back to a time that you can go forward unless you're talking about this gravitational thing where you hold off and you're just you're thinking you go in and forward in time and you're you're never leaving the time that you're letting you know your time stands still while you're gone where are you calling from please Everett all right uh John when I get my time machine I'll come and pick you up uh do you think John in your life that
(2:20:14) you will do that no you do not no why is that such a quick no I mean if you had a chance an opportunity uh with Bob Lazar and others and lots of funding would you Endeavor to do it no I think with lots of money no there's very complex uh Machinery I I don't think it can be done on 52 I'm gonna retire here at 60 and I hope to have you know maybe a couple of years attending my lawn but certainly there's nothing I want to go back and see or go forward it's an interesting concept it certainly can't
(2:20:50) be done all right on the toll-free line you're on the air with John Lear good morning morning art uh cliff and Glendale Arizona KFYI yes sir uh I was wondering if uh John might have a privileged information that uh might give us a clue to our future have uh have we been told anything that might uh might tell us where we're headed oh I will tell you this that in my brief career the ufologist I've paid several predictions two or three of them and they've all turned out false so I may be a good researcher but I'm a terrible
(2:21:27) Prophet okay all right John all right thank you very much from Arizona and of course KFYI on the Wild Card line you're on the air with John Lear hi hi yes sir hi uh John yeah oh this is fantastic uh John I'm an old uh fighter pilot from Korea and we used to fly the old f-86s yeah my favorite one these email okay um uh they were Pratt with me and uh and uh we do the Rolls-Royce engine yeah and the only time I ever got involved with your your company was when I bought my own Jet and it was a

lyricet anyway we had a flame out at about 35
(2:22:12) 000 feet one time coming over to Kansas City no I think it was Cincinnati and they came uh my pilot came back and uh we get up there we said we had to bring it down to 25 000 feet and we kicked her up again and uh she flew like a real trooper yeah interesting oh interesting as hell yeah anyway the the reason I wanted to call and uh get my I'm uh I'm calling from San Diego to own the tail hook Uh maniacs right yeah yeah roll a bunch of uh Cowboys out here but uh some of us are really curious about things
(2:22:47) and uh uh do you know about uh Thorne your thorn you know which one's then well he's a physicists the cosmologist out here and uh we were wondering about what the heck is going on uh we built the uh we're involved in the accelerator up there at uh at Stanford yeah yeah and uh we took a whack at things and uh I gotta get a million things to tell you well you're right in the middle of the action down here in San Diego because that's where the Navy has a lot of their uh operations and I can tell you uh some
(2:23:29) real weird stories about stuff that goes on down there but but you are right in the center of operations I doubt if you could ever penetrate it but if you could you'd see a lot of real interesting stuff well uh here's what we got we're looking at um uh times 10 to the minus 33rd and we're looking at instead of black holes we're looking at wormholes yeah and this is a constant that Thorne was been preaching for about 10 years and I of course I think he's a wacko and it's a viable concept uh
(2:24:02) a wormhole and uh you know that we've got a black hole in our vicinity is this supposedly every galaxy has its own black hole and as far as Wormhole I don't think that's how it works but but go ahead well it has to do with the space-time continuum and uh I'm listen to Thorn of course thorns and all the you know an old buddy of mine and uh at first it's uh inconceivable if you look at the uh space-time Continuum it is a viable concept yeah I think that would be what he's trying to do is figure out how they
(2:24:39) can get from place to place uh without violating the uh the speed of light and and they and because they don't have access to the real information of how it works they invent stuff like wormholes but the way it works is called the instantaneous propagation of gravity science doesn't know it yet but gravity is instantaneous and there's two forms that A and B and basically to travel hundreds of times faster than the speed of light what you do is generate a very powerful beam of gravity and pull space
(2:25:11) towards you space is actually a fabric it can be pulled this way and that we think of it as a nothing we think it is something that there's just one hydrogen atom per square meter John in a sense then you're not really traveling through the space to get from A to B you are jumping across an area correct you are pulling space towards you and coalescing or uniting with space that's maybe hundreds of light years away but that's why the end of wormholes because they're trying they know that it
(2:25:41) can be done they're just trying to figure out a way that it can be done I think I know the concept of a black hole what's the difference between a black hole and a wormhole John well a black hole is just a very intense uh uh a collapsed star with which is not letting it delighted it's so dense that it doesn't let light go uh through a wormholes a completely different thing Wormhole is what they're speculating is how to get from point A to point B uh very fast without violating the uh the
(2:26:13) principle of the speed of light do you believe it can be violated and I don't mean by the method you just described but I mean uh in actual speed travel no I don't think you can go past the speed of light in a linear Direction you have to do it some other way all right on the toll-free line you're on there with John Lear good morning oh good morning good morning John you know listening to you today I'm Susan from Moscow Mills and yes um you know in the fear that some people have of what John is talking about they
(2:26:49) must understand that whatever experience that we have as humans or humanoids or whatever is a very good experience and obviously whoever whatever has created us whatever use that we have for them we have youth for ourselves too and if there's such I mean there's so much love and joy in life opposed to the diversity which there's plenty of that too but the the mind has to the mind that was given to it and the spirituality that we have um needs to be used and I think that's what he's talking about when he says go
(2:27:23) on and live your life even though you have more information that's right

you get to do what you want you get to make your life and they have fun and and do whatever you want right can you tell me if there's um in in the other dimensions of what you're talking about in the the 70 or so group do they show a sign of their own spirituality I'm going to talk about religion here at all but of a separate spirituality or more intense spirituality or just different or no I don't have an answer to that
(2:27:59) okay well thanks a lot thank you thank you very much for the call and it'll have to be fast but uh we'll do one more here on the Wild Card line you're on the air hello oh hello um I was wondering uh sister uh there are several people such as Charles Schwartz and H.E Lovecraft and people like that I'm sorry what's the name Charles Ford Charles Ford and Lovecraft yeah no oh no sport Charles Ford yeah um yeah that's what I meant um it just seems that when you talked about I want that like like you do uh
(2:28:35) expandable a little bit is when you referred to that somehow humans are considering to be containers vessels even I've heard that word where where are you calling from man I'm in San Francisco San Francisco all right uh John you've said it before vessels containers uh for the soul well if we're speculating it through the soul there wasn't a it was described in the documents that Bob read exactly what we were containers of we could be containers of hormones enzymes or whatever my own speculation is that we
(2:29:06) are containers of soul well it's the uh I guess it's it's it's a good one and uh I hope I hope we do contain sauce you can never destroy this all it goes on forever and ever and ever all right uh John Lear is my guest back now to John and your questions John are you there yeah all right buy fax from Portland Oregon Sylvia please ask your guest who does the briefing of presidents when they come into office on the supposed National Security aspects of uh ifos mj-12 which still operates who's been
(2:29:42) making the decisions over the years on the continuity of our government's policy toward ifos mg12 who decides what the President should know mj-12 and uh elaborate on that within the mj-12 intelligence Community there's a great disdain for elected and appointed officials which is why the president of the Congress or uh any other appointed uh officials don't know very much security clearances work like this the lowest security clearance you can get is top secret above that there's 28 levels of what which is called top
(2:30:18) secret crypto and they run through 1 through 28 28 being the highest above that there's 10 names like uh Umbra Amber Ultra the top being Majestic now the president of the United States has a clearance about top secret crypto 17. he doesn't know very much he doesn't need to know very much he's kind of a figurehead so they tell him you know a little bit they tell them probably that there's recovered vehicles and and that they maybe have a dead body or so but he doesn't know the whole story he doesn't
(2:30:50) need to know the whole story to perform his job all right uh John this and then we'll go back to the phones from San Clemente California art I heard that a nuclear explosion can actually destroy a soul and I heard Mark McCandless say there's there is a death raid it can eliminate the sold does John know if the soul can die or be destroyed so it's my understanding that it can't no but it cannot all right um I suppose a nuke would shake it up at least on the toll-free line you're on the air with John Lear good morning
(2:31:24) hello there hello yes sir you're on the air yeah I'm calling from Medford Oregon Medford yes what's your question I know quite a bit about the UFO subject and I've taken note of the fact that these beings seem to be quite interested in the human soul um I I think Whitley schrieber said that he doesn't believe that any human being on Earth uh really knows what these what these beings are what they really represent um also for your information you know when a moth goes to the light you can grab it
(2:32:02) and make it easier to grab and do whatever you want with it yeah do you like that do you like that analogy John that sounds good to me the moths go toward the line huh and they're they're they're grabbed or they uh they fry themselves on the first time caller line you're on the air with John Lear good morning good morning this is Mike from KFC on KCMO yes hi Mike all right I have a few problems with some things you said Mr Lear uh scientific but I want to address the biblical issue first you indicated that the Bible has been
(2:32:34) changed at the time of Constantine is that correct right so are you aware that the Patriarchs in the early part of the second century in their letters and apologetics had already included almost all the verses of the New Testament in their

letters well this is more than a hundred years before Constantine and so that we could find almost all the New Testament just in their letters of writing to each other in the Apologetics okay now and and that there has been a copy of the whole book of Mark found in Egypt David did the 125.
(2:33:08) after Christ after A.D and they they when they calculate how long it would have taken to get that deep into Egypt yeah it would have existed uh before the turn of the century okay now the changes I'm talking about are 325 A.D during the First Council of Nikia I know the date and I'm saying that the almost a complete New Testament is already found in the radio the writings of what we call the Patriarchs some of them which were Disciples of John and the first part of the second century and so we already have the New Testament
(2:33:43) in letters written back and forth plus we have a whole book of Mark found in around 120 uh in the archeology State at 125 A.D then you have even secular historians agreeing that Luke who wrote the Gospel Luke in the acts it was a first-rate historian and had to have been there and so I'm wondering where you come up with this conclusion I I I've heard this Theory before and uh questioned people about it and they insist on it but then when you present them with the fact that the New Testament can be recovered from
(2:34:18) documents before the time they say they were changed they just kind of go on and uh don't discuss anymore they may be recovered but they're not in the King James version that has nothing to do with the reliability when you do textual analysis it's not based on when the King James is written based on the number of manuscripts and how old they are and how much they change over a period of time in for the Old Testament we even have in the Dead Sea Scrolls uh a good part of the book of Isaiah recovered that we
(2:34:47) find has changed very little with what we have today I'm just saying your conclusions you say you do careful research and apparently you didn't know that the New Testament can't was known and can be found in manuscripts older than before Constantine was ever born I'm just saying that they didn't make it to the King James version and most people have access so these manuscripts still exist and we can compare them with King James Version uh now as for science I'm always upset when people talk about science but uh
(2:35:17) ignore the fact that when they start talking about things that are Supernatural they still included science and I'm going to give you one example when you talk about time travel one of our most basic laws is conservation of energy and matter now if someone comes from another time into this time Dimension and brings their matter with them they have added matter and broken the law of conservation of energy matter when we by definition when something breaks our natural laws we call it Supernatural but everybody seems to want
(2:35:49) to bring an umbrella Under the Umbrella of science instead of call it what it is which is what okay so we're natural all right so where are we wrong here excuse me where Are We Wrong where are you wrong yeah well I admit you're dealing with the supernatural that I'm dealing with a supernatural all right I guess it's a semantic argument he wants it called the supernatural instead of science oh oh man yeah okay um on the toll-free line good morning you're on the air with John Lear yeah the heartbeat sound in the ocean of
(2:36:25) government work it's gone if government works oh it's government work uh we'll explain that in a second but I just want to say something to John Lear John everyone around here says he worked for air America and I don't want to go into that about the um sonar sound three sentences thanks to Congressman Sam for a sonar device that might have threatened the environment has been indefinitely delayed the Scripps Institute an oceanography in the defense Department's Advanced research projects agency have stopped the Project's
(2:36:57) development in order to conduct an Eis uh the 35 million dollar device part of the acoustic thermometry of ocean climate a talk program would be placed off the coast of points during the Monterey National Marine Sanctuary the uh you know I'm aware of that the fact that they had plans but it hasn't been done yet wait the device relies on the transmission of sonar burst blah blah blah well I've heard the thing over the radio and it sounds like a heartbeat it goes well Sam far the congressman takes you
(2:37:30) stopped it well 20 miles north of where they were going to place it a couple of divers heard exactly the same thing they just went on with it all right all right thanks uh well I again I say as far as I know they have not yet begun that project uh it's been halted and so I have great doubts that that's a uh what they're hearing but uh but time will tell on the toll-free line you're on the air with John

Lear good morning hello Mr Lear uh your Aviation credentials are are certainly uh impeccable to say the least but like the
(2:38:04) previous caller said you're you know a science discussion is kind of strange to say the least it doesn't seem to hold a lot of a lot of water with any prison scientific theory okay well it just just tell me specifically where I went wrong well uh the discussion of element 115 is all based on a non-existent element uh it's existing because I held it I just I did experiments with it and this is a stable non-radioactive element that's correct okay well I suppose that's true and I can't say anything different than that
(2:38:39) um I would like to say also you mentioned the book the uh Gods of Eden of um there's recently been released on the internet a excellent in my opinion review of this book uh that says that it's pretty much based on L Ron Hubbard's Scientology what do you think of that I don't think so because I studied scientists it's already a very short time and I don't think there's any correlation well thanks a lot for your time and uh I've uh been keeping up with your information since about 1988 and um
(2:39:10) I hope it's not all over but the screaming thanks all right thank you uh that's an interesting comment I I hope it's not too um wildcard line you're on the air with John Lear good morning yeah I'd like to ask John Lehrer a question but I I really doubt that he can do anything but deny it uh John how long have you been involved in the occult uh never as far as I know but I understand that most of the information in the book that you read are not a cult books no because uh I read a book about 10 years
(2:39:47) ago called The Cosmic trigger final stickers of the illuminatus and how they were going to duplicate the second coming of Christ with the um with the alien deal that people would believe that they were going to be saved by aliens yeah Christ John I I understand what he's saying I'm sure a lot of the religious folks out there think you've got three sixes somewhere tattooed under your hairline huh yeah under that gray hair yeah I see uh John what about air America um you did can you talk about that at
(2:40:21) all sure I worked for Kathy which was Continental area Services Inc a wholly owned subsidiary of Continental Airlines we did the same work as uh air America but we were not a holy subsidiary of the CIA which air America was we did we did all the same stuff but uh no I did not work for America I worked for Kathy and those that are familiar with the operations in Southeast Asia will know exactly what I'm talking about uh I I'm not gonna I was gonna bring some up but I'm gonna go ahead go ahead uh Iran Contra yeah you want to talk about
(2:40:58) that sure what what's there to talk about uh you um you transported or were about to transport some um material to Iran yes especially ammunition from Israel to Iran right so you ran some of the early um early weapons that Israel cut loose on our word is that correct yeah we didn't I never made a flight like I said the first airplane in got shot down the Mossad was running the operation didn't want to send 707 then which I was flying uh so they they canceled the operation later I think it was like six months six
(2:41:35) or eight months later they ran it with another airline that was out of somewhere like NASA or Nassau or someplace like that and ran it from the Persian Gulf like Dubai or one of those countries directly into Iran so they didn't have to go around another country like like we did uh turkey we had to go through Turkish airspace and the deal was that we would drop every other load or give turkey every other load that went in information for flying over their airspace all right just thought I'd get that out on the toll-free line
(2:42:08) you're on the air with John Lear where are you calling from please uh Seattle Seattle all right yeah uh I'd like to ask him a little more about that um the security that the uh the government has that doesn't allow the president to know very much yeah what was that called again oh well I'll just described how security works the lowest clearances uh top secret and then there's 38 levels above that but the president of the United States only has like a number 17 level I mean there's not enough time to clear
(2:42:42) them nor is there any reason to clear it what what sort of uh is this some sort of German agency that set the security you had mentioned some name mj-12 yeah it was created by President Truman and it more or less got out of hand in 1952 when President Eisenhower came in being a military man he gave more keep and more power to mj-12 that got out of control they ran the whole lot whole operation uh people who think we have a democracy even a republic are badly mistaken we don't uh but we hear it enough that we have a free country uh

(2:43:18) you know the bigger the LIE the more people believe it but in fact it's not true mj-12 runs the whole thing okay one last thing are could you give the number or not the number the address to your uh to your network I'll take it off the on the uh the address to the network I'm sorry what do you mean sir the address to the network do you mean to write to me yeah to the network yes sir well the network is in a separate place than I am do you want in Oregon yes yo in Oregon yes sir I'd like to see about
(2:43:48) advertising on your program I see okay well contact me by facts all right thank you all right thank you and that's area code 702 727 um 8499 that's my fax number eight four nine nine if uh you want to contact the network directly it's area code 503-664 uh 8829-8829 and if you want a tape of this program as long as I'm going nuts with numbers here it's area code 503-664-7966 John uh we're in the number mode why don't you give the address for the Lazar tape okay the Lazar tape is try dot Corporation that's t r i d o t
(2:44:36) Corporation and it's 1324 South Eastern and it's Las Vegas Nevada 89104 don't look for the number because it's not in the book it's uh 29.95 plus three dollars in shipping and handling for the Lazar tape where he describes his experiences with the uh back engineering on the massage all right good on the uh toll-free line you're on the air good morning hi Vancouver Canada calling all right great show hello John um I don't really know too much about UFOs so I might this might be a real
(2:45:09) basic question but um can you tell me about navigation of this craft and uh what what they would be built up what kind of uh compounds are it's my understanding that the the uh the uh material that they're made out of is more or less a growing material they've been able to Compact and uh compact the atom to such a tight state that it's it's almost indestructible uh we've seen that many times where a soldier will crash into Santa be at a 45 degree angle uh impact but there's little or no damage at all
(2:45:49) as far as the navigation I don't know how that works I just know how the propulsion works okay well best of luck all right thank you John you remember did but first of all did you happen to catch the movie Roswell on Showtime sure I was uh the producer was a friend of mine oh um what was your assessment of the movie was it good yeah it was pretty good each time they make a movie they get a little closer and a little closer to the truth I didn't like the way that they portrayed the alien of you know some
(2:46:16) poor lady you know reaching out yeah and it didn't look all that realistic but you know it was better than this stuff before well in that movie and in descriptions of Roswell uh there is a number of witnesses John who say that a piece of material from one of those craft was held and they showed it in Roswell and you could crumple it up and it would spring right back out again right is that similar to the material that you described a little while ago um as the construction yes sir uh some of it some of it yeah you can imagine I
(2:46:52) suppose various parts of it uh yeah they're all different all right um very good let's uh go here on the Wild Card line you're on the air with John Lear good morning uh yeah this is Greg from the kiskey Alaska yes sir right anyways in this first couple hours because Kate United doesn't uh play those until after you're over I see so this may or even answered but I got uh three short questions for John um number one are you a member of the trilateral commission no how about the Council on formulation no
(2:47:26) how about a member of the Masons of what the amazing I I I know but what is it well the Masonic quads no but I can tell you that I have certainly been accused of that okay how about the CIA John Let's cover them all KGB NSA no I'm just a poor old airline pilot all right okay okay caller okay thank you thank you Nikiski Alaska well that covers most of the alphabet agencies anyway on the toll-free line you're on the air with John Lear not a lot of time hi good morning Eric good morning good morning about a couple two three
(2:48:09) months ago my wife and I were looking at telescope we had a really good uh View and then in the outer layer of the Moon there was like a but they're also look to be sort of like a craft that was um I never thought my wife and I don't want to talk to too many people about it you know because we don't want to be accused of being nuts and all that kind of stuff um from Omaha Nebraska somebody wants to know John isn't it possible the aliens are lying to us they've been several documents said that they are
(2:48:48) deceptive and uh it's going to tell the previous caller that a friend of mine had seen was looking up one morning ready to go fly and he saw his roster 120th

the size of the Moon just go across it and while we were talking here I had a reference that I was going to read but I can't find it announced a technical document that documents about 600 uh different types of weird phenomena that was observed on the moon between uh the year 1600 and now as far as blinking lights flashing lights uh weird shadows
(2:49:25) all kinds of stuff I just can't find it uh all right well if you run across it we'll do it uh Matt in Portland wants to know among other things um about a secret earth War Linda Howe spoke about a secret earth War does that make any sense to you yeah she was saying that uh that somebody had uh you know they have these secret vaults where they hold high level discussions that are sound proofed and monitored and swept all the time sure and as somebody had stepped out uh opened the door and as Somebody went in they said well how's
(2:50:01) her secret war going and of course what he was referring to is is the the conflict we have with the grade all right uh we're gonna ask you about one more thing I've done a series of interviews John I don't know whether you heard any of them with uh uh Richard Hoagland yeah and uh Richard did you hear some of that uh no I didn't but I just got an escape uh there's two new tapes of the structure on the moon right that stands uh something like six or seven miles high that's right very interesting and I ordered the
(2:50:33) photographs myself from NASA and I'm looking forward to them arriving within the next few days all right very good yeah I have a lot of the pictures I also have the videotapes the presentation was uh was was very captivating and you would think that it would be breaking in the news but not so far John no really they're just just not interested in as far as his work on on Mars I told him that that Bob Lazar had seen in his briefing uh the cydonia region uh photos that weren't uh accessible to the public
(2:51:06) and there was definite doors and windows and construction on those pyramids in the cydonia region all right on the toll-free line you're on the air with John Lear good morning good morning yes sir where are you uh I'm Bob from kex Point Oregon yes good Bob um I got a couple questions for John uh one is if you're familiar with Bill Meyer Billy Meyer over in Kirkland right yeah sure uh well he talks instead of his contact papers about the pleiadian the oldest group of visitors on the earth and they're actually uh from the
(2:51:44) same ancestors as we are uh the question I have is they also believe in reincarnation and and they don't really believe in religion as such but more as as creation they believe in the good and then man and whatnot uh the question I have is they don't like us dealing with the grades because they seem to think that they are a negative life force yeah I heard that and why apparently they came and offered their their help to the American leadership at one time or another and it wasn't accepted well I'm just kind of
(2:52:30) wondering if that is because they aren't giving they weren't offering uh technology weapons we wanted weapons and the graves offered to give us the weapons and the Palladiums did not all right John um I want you to give some advice to the young ufologists out there a lot of people are absolutely lit a fire by all of this and they're going to travel down the same road that you traveled down and uh you've now reached a point where you've said you're fatalistic about it and the best thing we can all do is go out and live
(2:53:04) our lives lives and enjoy our lives what would you say to the young ufologists out there they're not going to pay any more attention to that than than I did when people me that you know when I used to start first started getting it well I know but we should try we really should try I mean if you were to sit down with somebody who's just starting into all this what would you say to him good luck good luck yeah you wouldn't try to stop them no no because I know that the the lure of of information of stuff is just too powerful there's
(2:53:40) just no way that you could stop anything well that's good and realistic anyway John thanks on the toll-free line you're on the air with John Lear hi how you doing we're doing okay this is Dave from Granite City yeah okay well I got a question for him uh my question is is that out of all the things I've already decided tonight how could anything be possible I mean I'm a big Star Trek fan and everything that he's talked about seems to come in there how does that all happen and could it be possible that someday we could
(2:54:21) travel like that all right uh why not John do you think that is in Mankind's future in other words is there going to be a federation is there going to be an earth that goes outward uh is that where we're headed or do you think not no I don't think so uh first of all I think the cleaning out of the petri dish is gonna

is Gonna Come pretty soon well not pretty soon but whenever it comes uh you know the Star Trek was based on that uh uh well I guess I'm right I was going to say based on that we were first but
(2:54:57) that's not not what it was based on Gene Roddenberry was supposedly one of three uh Hollywood producers that was given uh excuse me special information uh to use in his series now since then I've read where where he he denies that but uh blue note who knows all right but you think uh on balance we're gonna be pretty much Earthbound we're not uh and and then there's the petri dish right enjoy your lives folks on the toll-free line you're on the air with John Lear good morning hi how's it going hey it's going okay
(2:55:35) great um I was wondering um I don't even thinks Arizona a few years back a bunch of my friends and I we were out in the front yard and we saw a great green light being going across the sky and it was solid and it had a beginning and it had an end to it like water coming out of the hose when you first turn it on and shut it off yeah like a big plasma being going through the sky and it was a good like 30 to 40 feet diameter and oh that lasted a good three four miles going through the sky it was like a big Arc and I was wondering if you had any
(2:56:19) knowledge it was what that might be so that's the first description I've heard of there's of unusual phenomena I've heard a lot of different stuff but that's the first one I've heard of that kind boy me too that's an interesting one though all right on the Wild Card line you're on the air with John Lear good morning uh good morning all right this is Matt in Portland yes ma'am made it through um John question very quickly quickly you spoke of uh William bramley's book gods of Eden yeah where
(2:56:46) he describes the uh humans have been manipulated throughout history by um extraterrestrial and uh what I wanted to know is if you've had any information indicating that possibly the New World Order push is being orchestrated by these beings the order of what the new world order new world yeah no I don't have any opinion on that okay um art who who's your guest on Dreamland this week ah let me see um my guest uh coming this week is going to be Dr Bruce Goldberg author of the search for Grace uh sounds
(2:57:24) interesting no it's going to be all right thank you thank you sir bye-bye um let's see uh very quickly we'll go to the toll-free line you're on the air with John Lear good morning yeah this is Phillip calling from Champaign Illinois no you don't Philip first time caller line you're on the air with John Lear hello yeah good morning I'm calling from the kingdom of Valley Center which is in Southern California at the base of Mount Palomar welcome the favorite famous 200 inch hail telescope you know Dr Hale
(2:57:55) it's interesting he never saw his telescope become a reality but he was led by an invisible dwarf who apparently inspired him told him where to build it and that's right I have two questions first of all what does your guest think of George adamski who is also a local fellow here he was apparently the father of the UFO culture and also sending information on a Hypersonic vehicle called Aurora which is apparently a top secret thing coming out of a base in Northern Scotland we have a lot of Sonic booms here on Wednesdays
(2:58:28) and Thursdays and we've been hearing that this is coming from this Aurora vehicle which does something strange over the San Diego area all right hold it there let's get a response John call George adamski reported everything exactly as it happened he was reported to be a hoaxer but no all that stuff happened to him the photos were analyzed by friends of mine uh who had very good analyzing equipment and it was true there was one picture of him looking outside of a saucer and that was true Hale had a very interesting background
(2:59:01) there was an alien that talked to that guy and led him uh in some of his research Endeavors and he has a very very interesting uh history the Aurora is a mark 15 airplane operating out of somewhere in the United States but all also goes into macro hammock which is in Northern Scotland yeah that is the one of our top secret one of our six top secret airplanes how high does that fly do you know 285 000 feet wow okay all right thank you and at Mach 15 yeah seven or eight but it's not it's not Mach 15. wow
(2:59:38) um toll-free line you're on the air with John Lear hello hey this is Dana and Eugene hi Dana kbnw country yeah um when I lived in Redmond Washington I was over to friends of a friend Army intelligence guy who his dad worked with for a while a year and uh this guy sent him like just a thousands of page document he was supposedly on the run from the government because they were trying to hunt him down and he sent like six of these papers out and one of the things he said was that

Roswell and he was giving them in case
(3:00:17) File numbers everything anything you could possibly wanna I just barely saw that document but we just sat around and talked about it one day he said at Roswell they recovered the bodies one of them was alive his name was something like emu or emu or something like that uh they had like two separate brains one on the left side one on the right side that's correct they ate human flesh oh so you saw that but but yeah go ahead um and just you know he went into the whole cover but I mean he detailed everything from you know different
(3:00:51) fighter pilots their names their vehicle identification number everything you know just hundreds of documents on that uh that would be great to get those documents wouldn't it oh I I wish I knew the guy I mean uh it was the only time I ever talked to the guy I moved like a week after that huh all right thank you uh John a brain on the left and a brain on the right yeah go bifurcated now why that was I don't know but I remember reading the iPhone wow you have an autopsy well you know the disrupted Springfield uh put down
(3:01:30) yeah all right um on the Wild Card line you're on the air with John Lear hi yeah this is Louis over in Chico uh John about two years ago I had an opportunity while I was back East to uh run into an intelligence officer I won't give his Branch service because I certainly don't want to get him in trouble but uh he worked out of one of our top command units back on the east coast and he told me that now it's what he said that the aliens that that supposedly that our government's dealing with are in a
(3:02:02) non-interference type of Pact and that that there were other aliens who were interfering and he said there was actually three levels of government in this country and they're all vying for positions of power and they're kind of all in like a standoff uh to each other because you know different groups of these supposed aliens have uh uh upped the ante you know it's just kind of like here on Earth you know Bosnia you know somebody gets an AK-47 and the next guy gets a nuclear bomb yeah I agree with that and I think your
(3:02:34) friend was right uh he also said though that the ones that you know were you know they kind of kept over an overall picture of the thing he said that most of the inductions were not being carried out by aliens but they were being carried out by uh by the government and it was for use for later you know they were they were programming people they would go out and find people who would be susceptible to this he said they had special editions of films that were very subliminal and they would get like a control who would make friends with
(3:03:05) certain individuals and they would go over to the guy's house you know and show him a special copy of E.T except the guys not knowing he's watching a special copy of E.T and it would program these people up to a point where they would either give them a hypnotic uh experience where they would actually and I myself was kind of amusing but he said they actually hired dwarfs and would dress them up and have a whole theater set up to be like a ship and give these people a physical experience so that even if they took them out and they got
(3:03:38) out to a a psychiatrist or a hypnotist who was not even believing in this when he would put them under that he would get the reading back from them that they actually believed what they went under with all right kind of a kind of a mission impossible sort of that's true and it's been detailed by Martin Cannon uh the government abductions and yeah they do pretend they're aliens I don't think it's the predominant form of but yes the government is certainly doing that there's a lot of research now
(3:04:06) John into the abduction phenomenon a lot of the researchers have sort of left the siding mode and they think the way to pursue this now is through the abduction phenomenon do you agree with that John uh uh that'd be hard to do but I'm just gonna sit and watch on the toll-free line you're on the air with John Lee or hi uh yeah this is rich in Anchor July hello Rich um I I wish you could call me one of them fat dumb and lazy Americans because I just got turned onto your program a little while ago so I'm learning but uh
(3:04:39) I was wondering if you could explain to me what uh MGA 12 actually is all right well we did earlier but we will again John mg12 was these government secret uh [Music] reduce uh body that was put together by President Truman in 1947 to review uh and decide what to do about the alien threat if any it was guaranteed by President Eisenhower when he got in and regretted by President Eisenhower uh when he got out he said Beware the military industrial complex mj-12 uh essentially run uh for the people who don't believe
(3:05:18) that mj-12 exists my source uh for the existence of them J12 was Jimmy

Doolittle and since he's passed away now uh I don't mind saying that that was my sort he confirmed to me that it did exist

BOB LAZAR : UFO PRESENTATION BY JEREMY KENYON LOCKYER CORBELL - YouTube
https://www.youtube.com/watch?v=4s1b6pOTJ08

Transcript:
(00:04) [Music] Jeremy Fogel everybody thanks for having me back again today wow I just got out of editing a movie come here to join you guys and had to whip together this presentation current and modern because so much of this footage I've never been able to show anybody this is the case of bob lazar who in this audience is unfamiliar with the claims of bob lazar don't be shy raise your hands I need to know cool that's gonna change okay so this case is really close to my heart because it is the reason most likely
(00:58) that I got interested in UFOs at all this was before I started looking into the subject it was before I even knew anything about the subject probably like most of you I heard Bob lazarre's claims and that's what inspired me to try to find out is he telling the truth the central question about Bob Lazar and his story if he's telling the truth it's huge it's game-changing but there's that nagging question do you believe Bob Lazar so I'm not gonna try to convince you one way or the other I'm gonna just
(01:37) show you my journey in trying to get closer to that truth for those of you that I've never met I'm an investigative filmmaker self-proclaimed okay I make films that I investigate things I think anybody with an iPhone these days can be an investigative filmmaker eventually have to put the the film out the movies out and I've been luckily been able to do that recently just kind of started after all these years I can put this footage out there will probably be a lot of questions after the presentation about Bob Lazar
(02:12) so I will leave some room for that for those either want to talk about that because it's a complex case but I have to take you all the way back to 1989 in order to start this story so again my curiosity was weaponized when I heard Bob's claims he was on the radio with my mentor and journalism George Knapp and I heard them talking about the propulsion system that Bob said he back engineered at a sub base of area 51 called s4 nobody had ever heard about s4 it was not a subject of conversation nobody even knew about the area that he was
(02:52) that he was claiming this was going on totally new information but the part that stuck with me was the way he described propulsion that was my interest typically if you want to make something move forward you have to have something pushing back it's really simple but the way he described this propulsion system was completely counterintuitive his claim was that these non terrestrial craft these flying saucers that he saw and had a chance to try to work on one of the propulsion systems worked by generating gravity
(03:35) waves and if you can generate a gravity wave and you can distort or amplify a gravity wave you can distort space-time space-time and gravity they're they they all operate together so if you affect one you affect the others basic physics the way that he described it the best way I can imagine it is the way exactly how he described it put a bowling ball on a mattress and push your fist down on the mattress and the bowling ball will roll towards your fist right so it's a completely different type of propulsion
(04:11) it's like as if you're falling into where you're wanting to go you're not pushing anything out so that was just crazy that was a wild concept to me his claims went everywhere what Bob Lazar claimed whether you believe his claims or not something that is undeniable is the effect that his words had on the world no words are weapons they're used as weapons propaganda that's how things work his words were weapons they sliced through the imagination of the American public and then the international public this was
(04:55) in Omni magazine you might recognize when the most iconic pictures of Bob Lazar with his geeky coke bottle glasses and he said that he worked on alien propulsion for the United States military but in 30 years now he has rarely made himself available he doesn't talk about it wants to get on with his life and getting to know Bob there's a lot of really good reasons for that but most people that's the image in their mind that they have a bob lazar however it's a new day Bob is again talking and he's talking to me
(05:32) and he's allowing me to finally put his story in documentary film form after 30 years this is a guy that has never profited off of his UFO celebrity he never

sought it he doesn't like the attention but he simply is telling a story and it's up to you whether or not you believe him he just wants to make sure at least you know his story and then it's up to you and there's more to that but we have to go back all the way to how this started so I'm taking you way back the world's best-known secret
(06:11) base I love that the reason you know about area 51 is because of Bob Lazar it's because of Bob Lazar George Knapp and a man named John Lear you probably would have found out about it anyway our government has now finally acknowledged area 51 but really the reason that it's in your mind anybody's mind why it's become a meme and their shot glasses and hot sauces is because it became this household name for secrecy for UFOs and that is directly because of the reporting of George Knapp on what John
(06:50) Lear was saying and what Bob Lazar was saying so that's kind of crazy so I'm gonna take you all the way back to the first time that Bob Lazar was ever mentioned publicly and they didn't even say his name they referenced a guy so you're gonna see in this video George Knapp on a little tiny show that he had that nobody watched it was at a terrible time before he was this big-time investigative news reporter right and John Lear is his guest John Lear is the Godfather of conspiracy I've known John for a long time and he came
(07:28) out and started telling George all this wild stuff and the ratings went through the roof people wanted to know is what John's saying true so this is the first time Bob bazaars name was it was not said where he was referenced so check it out it's kind of rare footage [Music] oh and welcome once again to on the record if you joined us last week heard some startling revelations about UFOs and the government cover-up about UFOs from noted UFO researcher John Lear alright you rogue you recently decided to take it upon yourself to try to get
(08:13) to the bottom of this major cover-up what do you say as a cover-up he went up to groom Lake which you say is like a center of this UFO activity what happened is I was approached by government theoretical physicists employed by the government who works on the saucers up at groom like he has seen the aliens he is tired of the cover-up he knows what a ripoff it is of how much how many billions of dollars were wasting on trying to develop develop technology that's already been developed and he told me when and where to stand
(08:43) and we drove up there we were actually there on three occasions I mean the fact that that the military doesn't want you around the top secret base doesn't mean there's flying saucers there I know it doesn't except we had just seen one the theoretical physicist that was with us that told us where to stand and you know what time to work the next day he was told instead of driving to work to drive to a certain place he was debriefed with a gun in his ear and asked why you know he told this and told us that and well
(09:17) he's worked in what capacity with him up there theoretical physicist but I mean what did he do around the saucers or whatever all I can tell you is that when you find out the truth a month from now a year from now two years from now you'll look back and you'll say my god that son of a gun was right or maybe thirty years from now he must have said yeah it's so great you know you see George Knapp talk in there and you know he had never covered a UFO story he was covering mob stories because he knew some of the mob guys and
(09:47) he was you could see in his face I mean I love seeing it the first time he engages this topic with John Lear you know he's skeptical real skeptical yeah and he should be if it was wild then it's wild now what's what's being claimed but but John had credibility with the news station John Lear had credibility because he brought forward some photographs it's of area 51 at lake level you will never see photos like this again it was from 1977 where the security was a chain link and I told you that story yesterday
(10:21) how he snuck out the roll of film it's pretty funny it's a bar story so John had credibility because he brought these photos forward and they actually identified a stealth fighter and a MIG fighter Russian MIG that was being I guess you'd say back engineered as well so he had really brought the news station some interesting information and John came to George's mentor in journalism a man named Ned day and he said here's all the UFO stuff there is a secret program area 51 and they're reverse engineering alien spacecraft in
(10:55) Ned days like nope I would have heard about it no chance that's true John and then and then there's George Knapp kind of knew at the station his Hey look at those documents boy did he not know that would completely alter his public identity for the rest of his life you know so what I like about this photo you got area 51 up

there and you had that little strip of tan to the right and that is Papoose Lake that is not a place that was known or is known as having anything happen there's no runway there really there should be nothing
(11:36) happening there especially at that time but that's where Bob said he worked he did not work at area 51 he worked at what he claims it was called s4 a sub base of area 51 about 15 is 17 miles south on that little tan strip they're called Papoose Lake so that's the first thing to know is that he's claiming to not have worked at area 51 he's claiming to have worked near 51 on the same complex but I want to still focus on John here because I spend a lot of time with John I did film about seven
(12:11) years of his life I am sure that film will come out to date I put out a 20 minute short film first episode on John the whole series would be called immaculate deception when it gets made it's all filmed when it gets cut and put out but I'll just show you a little trailer for that because John really is what he was my gateway drug to ufology yeah you listen to John talk for a little while and you start questioning everything about the universe so I'll show you the little trailer because I make films so I figure they speak for me
(12:50) sometimes [Music] oh and welcome to a special edition of on the record in the more than five years since we've been hosting these programs no guest has inspired such a widespread and enduring audience response as has John Lear son of the famed aviation pioneer and a world-class pilot in his own right as many of you may know though Lear the son is best known for his research into UFOs a phenomenon described by some as worldwide hoax described by others as the most important issue of our times [Applause] does it just happen it's written the
(13:53) exact I have talked to his people and I know the truth [Music] birth is like Allison wonderful things get cures here [Applause] [Music] [Applause] you certainly couldn't figure in your
(15:02) wildest dreams that would be the most important thing when you can't see the objective right so John Lear is intimately connected to the bob lazar story and the reason he's intimately connected the bob lazar story is because I've talked with a lot of people that knew Bob Lazar before he became public about before he even worked allegedly in the program and man he would say things like I feel bad for John you know it comes from a prominent family the learjet family and he believes in UFOs he like felt bad for him so that was
(15:41) like Bob's standpoint on UFOs way before he ever found himself in the situation that he says he did so staying back here in 1989 Bob comes forward he says I worked on reverse engineering a propulsion system he they did not succeed in reverse engineering it he said it was an impossible task it was like you know dropping a iphone out into the Stone Age and saying make one yeah he said it was absolutely impossible and there was such control and there was such compartmentalization in these programs he didn't even really know what he was
(16:22) supposed to be working on until he went a few times and in fact this is what he says he says when I when I saw the craft for the first time he said I started kind of chuckling inside because I thought that's what all those UFO nuts we're seeing in the skies and thinking they were extraterrestrial they were ours you know so that was his thought when he first saw the craft that's how kind of skeptical or analytical bob was he wouldn't take anything on face value still doesn't you know one of the most
(16:55) kind of interesting minds that I that I've met so he did a lot to try to prove to you his story he did probably more than you realize to try to prove to you his story he says I've tried to prove my story I can't under the scientific method I can't prove to you beyond a shadow of a doubt that what I'm saying is true so you're obligated not to believe me and nowadays he goes and if you don't believe me pass it on because it's caused you you only see it from it from a personal perspective you can only
(17:35) really see it from personal perspective how it has negatively influenced his life what he's been through because of telling this story which supposedly in a lot of people's mind isn't real yet there have been some real-world consequences let me just get an idea from everybody's you know I really actually like to know how we're divided in this group you know who absolutely believes Bob Lazar the absolutes who's there all right all right who maybe maybe not 50% where's the 50% of undecideds okay
(18:12) and then how do people absolute lying cockamamie [__] where are you come on it's okay oh come on you're hiding don't worry I'll get you after right okay so that's that's about average we all want to believe Bob Lazar how can you not we you know how cool would that be so we all want to believe him it doesn't mean it's true

but it also doesn't mean that it's false so we're kind of stuck with that a lot of you here believe him you raised your hand majority of people maybe because you
(18:49) want to believe him we don't have all the evidence so you're inclined to believe him as you could tell from the news reports the George did George dug deep and that time period was so bizarre for the people that lived it they were followed by people George had six other witnesses that were coming off of the base to corroborate bob lazar story or parts of bob lazar story all six of them declined to ever talk with again after they're paid a visit and told that they would be harmed and we're talking about George Knapp he let's talk
(19:27) about people that do talk to them and and the stories of these people that couldn't tell their story to him afterwards it's pretty incredible but other people have come forward and things have come to light over the last thirty years and let's look at those things and let's see if they provide proof or if they take away from Bob's story so Bob Lazar began to talk in 1989 and just to give you another little clip so you can judge for yourself if what you think he was saying back then could be true or not true here's
(19:59) another little clip I had sent resumes to several national labs around the country I got a response from a couple of they said we might have something in the near future you would be very interested in you know you say you work on little project I said yeah I have a particle accelerator in my master bedroom and and things of that sort and some time went by and they called me back in they said there was a senior staff physicist that was leaving this organization and the basically interviewed me for that job I don't know
(20:51) many people with particle accelerators and their master bedrooms and I know a lot of nerds I'll tell you that you know and I always found that really interesting I know for a fact the Bob Lazar is highly intelligent so he's got that going for him and that's nice I can tell for sure that he's smart but I too was skeptical I was probably like most you that raised your hand I was like yes I believe because I want to it makes sense but that's about all that we had until you really speak with someone you
(21:31) can easily just dismiss them if you're just talking about a name you don't know them you don't know their family you don't know what they've been through you can't even imagine to imagine none of us can so we're all stuck with that because Bob really doesn't make himself available to get to know him so I was skeptical and I don't know I talked with George and George obviously encouraged me to talk with Bob like yeah who wouldn't want to talk with Bob of course I want to talk to him so
(22:02) George made a point you gotta talk with Bob and you got to tell this store and you got to do it yourself to really get to the bottom of it he's like but you got to be the luckiest guy on the planet for that to happen and he kind of explains that to me here you have to cover the story of Bob Lazar and the only way to do that is to talk to Bob I don't know if it'll talk to you or not but you need to try well it was it's all gonna be circumstance for you is the moment that you approach him the mood
(22:29) that he's in what else is going on in his life at the time you might hit the jackpot and get him in exactly the right time and the the universe is aligned and he's willing to talk about it but you'd have to be awfully lucky because in general Bob doesn't like to talk about I think he's very happy in his life he's happy to have left the UFO stuff behind he misses his friends he misses John Leary mrs.
(22:56) Jean Huff maybe even me some extent but he doesn't miss the UFO topic and he doesn't miss talking about it because ultimately it's disturbing these are disturbing issues they go to the heart of who we are as people as human beings the nature of reality itself is this a computer simulation are we all the product of an alien video game or some multi-dimensional movie drive-in movie theater production or something big questions disturbing answers and bob has never been and talking about never so that was about as encouraging as he can get
(23:39) you're never gonna get him you have to be the luckiest guy on the planet he doesn't like to talk about it because it's disturbing it messed up his life it's disturbing to everybody good luck right I'm pretty damn lucky and the first time that I actually met Bob like any of you really interested I was like okay I want to ask him these questions directly I don't want to look him in the eye and I want to see how he responds I happen to have a camera you know and he happened to let me turn it on
(24:13) and it had been a long time since he let somebody turn the camera on right so I thought oh man this is amazing let me see what he has to say so I'll show you a little clip of that first time I didn't know Bob at that time I didn't know him he

was not a friend of mine he's just I accidentally got to be in the same place as him and had the camera and got to ask him questions and I wanted to give the public just a glimpse so I put this out it's it's in a free 20 minute documentary just a few minutes of Bob so
(24:47) you can kind of be updated this was a few years ago but he talked about it in a different way and that's what I found so interesting it wasn't the Bob Lazar that I saw in all those videos from 25 years ago it was five years ago and I film this it was a different Bob you know it's like something had changed and you'll see the way he talks about it so I'm gonna show you that little clip just so you get a update up until five years ago you know look you can nitpick anything you know to the point where you find
(25:23) inconsistencies and then you can add those inconsistencies up and say you know what this can't be true but the thing is you can do that with factual events and this was a factual event where I mean where the project is now where the parts are now you know this is all 20 years ago so I know there are alien craft here from another planet I know I saw other ones but I was inside one I know who was now made on earth I know it was may blue the materials that we can fabricate we cannot duplicate and we've never been able to I know it uses
(25:58) a power source that's so advanced that we could only dream of something along those lines and the energy density on it is phenomenal it's nothing that I would ever expect to see I know that you know this is done in the highest levels of security and you know that they use all kinds of methods to keep it quiet from disinformation I mean some exotic ways of just hiding things like I said the installation itself was buried in the side of a mountain and you know I also know that there's lots of nonsense information
(26:37) that has gone around and whether it was started by the Navy or military or whoever's at the absolute bottom you know of the project and I truly suspect that be the case because look disinformation is the most powerful you know way to distort facts you just throw a bunch of useless stuff out there and you know they just take the real facts along with the nonsense and bundle it together and say well this is just impossible and you know there your security is maintained but I also know that at some point they've examined
(27:14) or had bodies of alien creatures somewhere so I know that stuff for a fact and that's the bottom line pretty cool to hear him talk about it 25 years after he said the first time just so I get an idea who hasn't seen that footage of mine anybody hasn't seen it okay so you did you're seeing it for the first time today I'm glad I mean isn't that cool aren't you stoked on that it's like man you know it's like Elvis meets Bigfoot you can never find a Murray's dad you know there's always a rumor he's dead and all
(27:49) of a sudden I got him on camera I have proof positives are exists and not only that but he's not backing down he's doubling down he hasn't changed his story he's telling you now the same thing he was telling you then I find that really interesting and it's different when you can see someone has aged and they're a little bit more confident they're not like a geeky 20 year old kid now there's the geeky adult but they've changed and so that little bit of footage was the first step the
(28:22) first taste I got of [__] this I'm gonna find out the truth I'm gonna do my best because this story's too big it's too important and look I've already got them once on camera maybe down the line five years later I might be able to do some more filming with them right and really I'm doing this to bring it to you because you're seeing it just like I'm seeing it you now have three more minutes in which to judge Bob Lazar by right and that's all I was trying to do was get more data into the streams so we
(28:54) can make a more educated opinion on if his story is true or not the crux of his story is about a place called s4 site for this is a place that nobody had ever heard of there is not one mention in the public realm not even private circles I had no one around that time had ever even heard about it yet things were different back then when George Knapp called Nellis Air Force Base and they admitted that they had an s4 if not multiple task force wouldn't tell him what they did there now they just completely deny it right we thought but
(29:37) George got confirmation there was an ask for so Bob somehow knew things he somehow that on Wednesdays at 8:00 p.m. over this tiny little lake bed that's not even part of area 51 that there would be a test flight of something that looks identical to a flying saucer and he took people out there on a variety of occasions and they filmed it right how did he know that that's probably a real guarded secret

wouldn't you think you know the existence of a secret little sub base of area 51 you figured out everybody would know that so I'm already
(30:08) kind of intrigued that he knew things that really he shouldn't know if he didn't work out there s4 is kind of the key and I'll show you little clips about that you've brought s4 into the forefront it's been confirmed to you directly from the base maybe 25 or 5 years ago yeah s4 has been confirmed to me directly twice one from an employee of EG&G security was daunting and then somebody else who's confirmed to me s4 that that's exactly how it looks the story though is that there was a facility like
(30:44) that at Papoose there is a facility like that a Papoose flying disks not this UFO term that's created to make it ambiguous flying disks saucers that were piloted by nonhumans they were not ours and this was confirmed by both of my sources that this technology is not ours Bob Lazar story was confirmed to me by those two same sources one saying that when he was working in secret capacity at White Sands in 1989 that it was common knowledge at the base about Bob's story and I said well what was the believability with the general
(31:28) believability and he said everybody knew that what was going on out there were with these types of projects and they all believed Bob sword no were they following it as its unfolding 1989 that was the impression that I got was that it was big news if you ever see it if it's soundless noiseless it's hovering anti-gravity or appearing to be the way it is not ours as I said not ours like America says not ours like humans so 28 it's about 25 years after Bob's story and I started digging into it and started
(32:05) pulling up and calling up a bunch of the people who have advised my work in nanotechnology and an aerospace stuff and in investigations in general the highest-ranking military individual I've ever met has been someone that has advised my work for a while was in position to know and I've had multiple confirmations that Bob Lazar is telling the truth and that asks for as he described it existed exactly like he described it and for the purpose that he described it so I've got all these independent personal confirmations that
(32:35) there's a grain of truth to bob lazar story that was driving me crazy so I sat down with George and went through with him showed him he knows who some of you know the people that advised my work are he's satisfied with it I'm satisfied with it so we're getting you know direct testimony from people not for public consumption not for me to go on radio doesn't talk about it not to put him in movies but just to inform my work people that care about me and my work too so it really started to intrigue me because
(33:04) now all of a sudden it's not just one person saying this thing but 25 years later I'm getting independent personal confirmation of the facilities Bob said he worked on that wasn't happening 25 years ago so that was pretty cool everybody's focused on area 51 we know the great things that were achieved at area 51 it's a shell game it's a sleight of hand we're talking about s4 right and we're talking about the acknowledgement of a secret base called s4 that has special projects there extra-terrestrial projects well I
(33:40) got confirmation from Nellis Air Force Base I called their public information offices back in 1989 we're working on this do you have a place called s4 on the Nellis range and they said yes can you tell me where it is no do you have more than one yes can you tell me what goes on there no it's classified so we know and s4 exists we know classified work goes on there we know that they're not going to tell us any more about it no one had at about a place called s4 and public before Bob Lazar there's no printed records of it it
(34:15) didn't appear in the newspaper story he's the one that told it how did he know how did he know that those test flights were gonna take place three weeks in a row there'd been no news stories not in in UFO circles about test flights of something that looks like a flying saucer over Papoose Lake that happened three weeks in a row they took people out there I've interviewed all the witnesses who were there and they've got it on videotape how did he know well maybe somebody told him the you how
(34:42) ridiculous that is maybe somebody told him but it's important that Bob didn't go to MIT how ridiculous is that here's videotape of a flying saucer flying over a secret base the government has never acknowledged and the important point of this is Bob did go to MIT it's ridiculous how about the Maine you're sort of losing burying the headline the headline is flying saucers at a secret base there they are on video and we're quibbling about whether he has a degree or not George Knapp calls up Nellis Air

(35:17) Force Base do you have an s4 and they say yes yeah we hadn't gone with our UFO stories they weren't on the only thing that had been on the air was John Lear on on the record and then this dentist interview the interview with Dennis so I wasn't quite the UFO guy than I am now and and actually the guy I talked to the public information officer at Nellis is somebody that I knew we called and he said does s4 exist I could try I mean I could certainly ask them whether they'd still answer or not I don't know
(35:49) you'll recall twenty-five years ago they would answer questions about UFOs you know they they might keep you on the phone long enough to figure out if you're crazy or not but at least they talk to you about it they don't talk to you at all they don't have that conversation with you whether they'd answer that s4 question around I don't know we could try we're calling Nellis Air Force Base of Public Affairs Office and that's who I called 25 years ago we'll see if they will confirm for us
(36:15) that they have an s4 out there or where I suspect we're gonna have trouble but we'll give it a try hi my name is George Knapp I work with Channel 8 News and I had a question I'm not sure if you can answer it or who might be able to answer it I'm trying to try to figure out if there is if you can confirm that there is somewhere on the Nellis range a place called s4 and designated s4 facility yes great thanks thank you hi Airmen my name is George Knapp with channel 8 I was calling to
(37:22) see if and I don't know if you can tell me this or not but whether you have something on the Nellis range called s4 a site or a facility or a location designate an s4 this number here yeah I'll just let you know that I've been told some years ago that there was there is a place called s4 they wouldn't tell me where it was but in fact you might have more than one like Eskimo meaning site for right I'd want to know what if it exists we had been told that there
(38:26) had been classified work going on out there one one version of the story is that there was a facility near Pappu's dry lake that was called s4 there's another version the story that you've got a place at Tonopah test range and I just didn't know if you can confirm one way or another anytime there's no deadline [Applause] I appreciated airman thank you very much yes so um you know it's just kind of interesting he already confirmed it decades ago we're just wondering what the climate of the situation was now and
(39:16) I could like tell you this story but it's much more fun to show it to you I make films anyway right so I can talk about it by showing you how these things go there's a little bit of humor in it so we waited for a callback and we weren't very hopeful we didn't think they were gonna call us back back in the day George knew the the public affairs guy this time we don't know who we're talking with the kid didn't even sound like he knew much of the base you know so we don't know what kind of
(39:40) information we're gonna get they called right back and left a message that's this is the next morning yesterday you called to get Nellis Air Force Base to confirm s4 as a physical location the one by the post Lake that is one we're interested in and they and you've called before back before a lot of this was secret and you got direct confirmation yes that facility exists we can't tell you anything more about it so we get a guy on there yesterday and he's like I have to go ask people that would know
(40:12) and you get a voicemail back the same day right this yesterday and let's hear what the voicemail is from Nellis Air Force Base I'm calling to get you this formation you requested earlier today I spoke with the range headquarters and they let me know that none of their maps and possession have a location that depicts s4 or sites or as a designation so that's what I can tell you right now so if you have any further questions be sure to let me know when you get a chance have a good day so a couple things one is that 25 years
(40:57) ago they did confirm not only they have won and and more than one s4 they wouldn't tell me where it was they wouldn't tell me what goes on there but they said it is a real place and I've got that from other people who worked out there not just Lazar secondly it was the parsing of languages what I thought was interesting we talked to the people at the range and they don't find it on any map well it's not gonna be on any map it wouldn't be on any map even if it was even if existed and so just saying
(41:24) that it it's not on any map is not the same as saying it doesn't exist it's a very specific kind of truth it's a new day and age dealing with public information officers and not only for the airforce but every federal agency is that they are where you go for information and you never get to speak unless you get their permission you never get to speak beyond that it's like fishing as a journalist you

want to see where the level of secrecy is and ys4 is important is because s4 is linked to all
(41:54) of these special projects that we've been looking into dealing with the extra-terrestrial presence yeah being able to confirm that there really was an s4 which is where Bob Lazar said he worked goes a long way toward establishing that his story was true because it had never appeared in any newspaper it wasn't at any map that's what he claims so when nihlus told me yeah we've got an s4 but we're not gonna tell you where it is that was a really big deal I you know I don't necessarily think they're lying to me maybe they
(42:21) this guy doesn't know maybe they don't call it us for anymore maybe after all that stuff with Lazar came out they changed the name who knows but I just thought it was really interesting that the parsing of the language to say we don't see it on a map yes that's just a fun little look into one of the ways that we can go about getting nothing from our government of how these facilities but you know it's kind of fun and you do learn a lot along the way it it is interesting the way questions are answered or sometimes very
(42:54) telling and the guy was kind of chuckling actually when he had you know said we don't have any you know maps with that designation on it he knew it was a BS answer to get around having to answer so basically there's a lot of controversy but what is the proof when it comes to lazarre's claims after all this time you know what stands the test of time I'm not going to go over every finite detail on what people think is or is not true about the Lazar story there are you know a few interesting things
(43:26) this was just a copy of it but one of the things I went through is this box of archives and photographs and you know Bob would just I could pull any box out of just garage and he did not you know have anything to hide he's just like go for it look through it all you know but this was like a pay stub he got people say well why is it for so little and it's because he's just getting started with a job and they pay so little at the beginning it's not that much money even this has been hyper analyzed and people
(43:55) trying to see is it real because the name of the department is different than what's they know that's an older department so there's all these tiny little things that people like to go through and try to see does it add up but none of it adds up to is Bob telling the truth or not like his schooling Bob is always claimed that he went to MIT and that he went to you know he got a you know degree from MIT and there's no way to prove that the Bob's not offer him proof we can't find proof okay so
(44:27) let's let's just say he lied let's just pretend he lie i don't by the way that's not my position i'm just saying let's just say he lied let's say he was home-schooled and just had no education okay well does that change the fact that he worked in scientific capacity at Los Alamos no that's established fact and I'll tell you why it's established back now I actually made sure it was established back but the point is we can go back to when he was a baby it's like
(44:59) is that gonna change is this true about this story about what he's telling us now and so that that's kind of what I'm interested in I really don't care if he was homeschooled by gnomes I like care if he worked at los alamos how did Bob walk George Knapp through one of the most secret and lockdown facilities in America at los alamos going into the maze on facility with cameras how did that happen it's it's like people try to belittle the story because they're afraid of the implications maybe let's stick to what
(45:33) we know Bob tried creating recreating what the badge looked like so that other people could recognize it maybe and then people say oh you've made a fake badge yeah I made a replica so you would you're welcome so you would know what it looked like I mean just all these crazy stories I see tape up there on the right by his neck yeah he made a badge replica so you could see what it looks like he also did diagrams and drawings of you know these are like on napkins he's like famous for napkins I have like a stack
(46:06) of napkins from Bob okay so this is like one of the first drawings he did back in the day of where the the saucer out of the nine that he claimed he saw the one that he dubbed the sports model that's where it was and he you know he kind of drew it out so people could see what it looked like from what he's telling these are drawings I don't know if people have really seen some of these but he saw a bunch of different shaped UFOs but from a distance so he saw there were nine but some of them like held that one the
(46:37) jello mold the one below that the top hat he called that one the light bulb

he doesn't even remember it now he's like oh yeah that was weird that one was weird shaped but they were all kind of like down this corridor you know he only got to see the one little known parts of his story very elaborate one time you know in that section where he goes I was inside one he's talking about a UFO because I was inside of one and I said well Bob did that was that cool you know that's gonna be really cool right and he goes
(47:08) now it felt all - he goes it was so weird first of all everything is gunmetal gray there's not any other color everything is rounded there's no corner or edge it was like an injection mold because what it felt hominis because I stepped in and the seats weren't for grown men they weren't for normal grown men human size right they were small and he says that was the moment when I realized this is weird we ain't in Kansas no more toto you know something's weird here it's kind of dawned on him and I think kind of the
(47:48) light display that came up with the alien writing probably sunk that right in at one point they were operating on a little piece on the ground and this display came up where side of the craft that he was inside to look at a very specific part of the propulsion system there was this rounded window partner I just went transparent but not like even glass you know it's just clear she doesn't know if it was there or not there but on that was very strange writing you know to us we don't know what kind of writing it was but he tried
(48:18) to kind of show what it looked like it kind of looked like amoebas you know he didn't know in like eyes but it was like that's kind of a replica of what he saw have you guys seen that before so there's all these details to a story that are just not well known because we get the bullet points okay another thing that he avoids talking about cuz it's so bizarre but he read all of these briefing documents that was one of the times he went out there was they just had him read through all these documents
(48:49) and he wasn't sure if it was like a test or a joke he doesn't really know what's going on but he flipped through pages and saw photographs and he tried to draw one thing that he saw on the left which was an autopsy page of a being and he doesn't like to talk about it he actually drew this though from memory and I loved it because that's all I know you'll have to make up the rest because he said that's what everybody does they just insert [__] you know you like that's what I know that's what it
(49:18) looked like that you know to the best of my ability so he read all these documents he goes I don't know if they were true it's like you reading a piece of paper do you know that's true he goes I didn't have my hands on that so I don't know that's true but there were tons of things that he read in these documents bizarre things back - how the hell did Bob know okay this drawing on the right that was done by Bob right after one of his visits to the base when he happened to see on the bus a strange
(49:51) airplane they said worked on like a methane fuel and he said it sounded like it was tearing open the sky turns out we now know he drew the back of the Aurora which is still a very secret plane that was being tested out at area 51 at the time he was out there how did Bob know how did he know it worked on methane propulsion how did he draw the back of it correctly if he was never there again it's really annoying isn't it because all these things are kicking in the ass like oh I wanna believe you but I want
(50:24) to know the truth I'm starting to believe you so then I found someone willing to speak with me after 25 years from Los Alamos after all these years everybody's making jokes that bob was the janitor at Los Alamos he never worked there okay he's in the phone book I've talked to a bunch of individuals that were that knew him from working with him there but I couldn't go public with it finally I found a brave individual who was willing to talk to me on the record about working with Bob Lazar at Los Alamos in scientific
(50:58) capacity being in briefings classified briefings which by the way the janitors are not invited to the highly technical classified briefings with Bob Lazar and his name was dr. Robert Crandall I have all of his documents all of his paperwork from all the contracts that he did during that time period at multitude of bases including Los Alamos during that time dr.
(51:22) Craig was telling the truth I can prove it what was your impression of what bob was doing at Los Alamos in the 80s I didn't know what he was - anymore than he knew what I was up to but you did know that he was a physicist yes and that was very clear to you that he was a physicist at Los Alamos and not again like the janitor right so he worked there and he went on record with me and says of course remember

bob bob was the jet car guy he was a rock star he looks like Mick Jagger how can you not remember Bob I remember Bob Bob was
(51:52) cool as [__] and yeah yeah he worked at Los Alamos big deal and my big deal - boo it's a big deal man and he goes why and I'm like because he's got a bigger story and everybody says a good link - that is did he work at los alamos because if he worked at los alamos there is a possible reason he could have been picked up to work on a highly classified project through EG&G to go to the test site and work on this non-terrestrial stuff and dr.
(52:19) Bergen was like okay whatever so I got him on record the guy's a really funny guy really smart and um next thing you know I published it next - shoulda warned him he starts getting inundated by calls by Stan Freeman just inundated you know I mean God you know I love Stan Stan and I like him we totally disagree because Stan's wrong so yeah so he attacked dr.
(52:48) Crangle on the phone trying to belittle what dr. Crangle said he goes jeremy what did you do I this guy keeps calling me all I did was tell you a little thing and he won't leave me alone I'm like yeah he's looking to try to discredit you because he's invested in it not being true about Bob Lazar I said just tell him what you told me tell him the truth so anyway you know anyway you get around it here's a physicist work to Los Alamos inside the capacity was in security briefings with Bob Lazar make
(53:14) of that what you will now for my most exciting part of this story this is the thing that really gets me has everybody heard of element 115 okay so you've heard about that because of Bob Lazar there's no other reason you would have heard about that back in 1989 very obscure an element that we theorized you know we might be able to you know create a few atoms of one day element 115 is a huge part of Bob's story because it's a very specific part he said that we had he was told 500 pounds of element 115 in fact if you
(53:54) remember his story that was the fuel source for the gravity wave amplifier and this sounded like total science fiction and everybody said oh it's very unscientific what Bob saying all he said was that there was an element that was yet to be fabricated by humans that is super heavy and has this potentiality to create as a fuel source for these saucers and it runs off of that well it's a minoes we can't fabricate at that time we couldn't for at all but to this day and actually we will never be able to and
(54:31) there's reasons why we cannot fabricate stabilized element 115 in any significant quantity now the argument that people make about element 115 is that okay you're right okay we fabricated some we have a few atoms of it sure but it's completely unstable just milliseconds and it's gone well Bob always said well he recently said he goes yeah that's true he goes but there is an isotope or I stopped a combination that will stabilize it just because we haven't found it it doesn't mean it
(55:03) doesn't exist so I called up some physicists at UCLA at Berkeley a couple in Russia and I started asking him there they're specialists and isotopes and they're specialists and elements one of them was very familiar with 115 across the board none of them wanted to talk about UFOs that was made very clear to me this is not about UFOs is it couple notes about element 115 okay cool totally unwilling to talk about this on the record but consensus they all said yeah we absolutely cannot rule out a stabilized form of element 115 there's
(55:41) probably an isotopic combination because it is theorized that as you move into that realm it becomes stabilized for a long duration of period we can't rule that out so it is not pseudoscience to say that's a pasta ability and I'm like oh that's interesting cuz I know some like physicists who are like that's pseudoscience you know what Lazar is saying well apparently that's not the common thought it's not so I don't know why people like scream that all the time so it is within possibility that that is
(56:11) true now a sensitive part of the story is that a Lazar described this very specific way in which this element 115 was machined at Los Alamos freeze in the saucers the guys machining the 115 at Los Alamos didn't know what it was it would be shipped to them something called la 1000 that's what they would ship back and forth and that was the 115 Bob alleged that at one point he got some element 115 out of the lab out of Los Alamos yeah can you imagine now that's problematic why did Bob claim that whether it's true
(57:00) or not we'll get to that why did he claim that well if his story is true he was in serious danger that is precisely why he went on the news with George Knapp in fact I wish I could have seen this I wish I could have filmed this the last second

when George is about to reveal Bob's identity to the public on the news Bob and George start wrestling over the tape they're in the news station about to go live to air and he's like doesn't want George to air this tape he is scared shitless what's gonna
(57:39) happen when people recognize his face and George is like dude you're already out we tried to protect you by putting you kind of out there under your boss's name not a smart choice Bob Dennis that caused some problems but so if his story's true he's being threatened what is the one thing that could prove his weather a few things could prove his story I actually believe Bob could prove his story I don't think he wants to I think he wants you to know the story but he doesn't want you to know for sure
(58:07) he's telling the truth that might problems for him but let's just say it's true the one thing that would save his ass his trump card would be having element 115 stashed somewhere right making sure somebody knows where it is dude that's proof positive so if we're deciding to believe his story right now wow that that's a twist right there and he and he did claim it not saying anything out of line but you notice he hasn't talked about it twenty something year probably twenty five years hasn't
(58:39) even mentioned it cuz it was a sensitive topic you might have heard that he was once raided in New Mexico by a multi-agency raid they were looking for something and that is a story he doesn't like to bring up because it traumatized his life can you imagine so you're at home right you have your wife and your animals all this stuff and your house is just [__] raided and they're looking for something which you don't have okay okay so I'm gonna show you this this is not element 115 okay this is just
(59:15) aerogel just say that first okay but this is a piece of aerogel before anybody knew what aerogel was that they used to package around the LA 1000 which is element 115 this is actually a piece from the 115 which may or may not have come out of the lab it's turned yellow over time right but this is a piece from that packaging material which is so funny because nobody knew what aerogel was back then in 1989 so they thought it was extraterrestrial they're like oh man it comes with a 115 it must be alien you
(59:50) know they had no idea turns out you guys ever seen that aerogel it's like lightest smoke it's amazing it's like insulation or something it's light as smoke and it's just this little clear it doesn't even feel like you're holding it it's really strange anyway so this was part of the actual packaging from the LA 1000 and you know look this is Bob story in a nutshell he's the element 115 the flying saucers the government secrecy coming forward because he was scared for his life and annoyed at all of the
(1:00:21) secrecy and it's really kind of sad actually what what happened like how he kind of why he decided to do it I don't know he would do it again I don't know he'd come out again you know I think he would have loved to continue working on this projects if he worked on him right I think he would have loved to continue it I got to bring back to one thing that that George has said to me and I showed you the other day which is it's the duty of journalists and scientists to investigate the unexplained did not
(1:00:50) explain the uninvestigated what does that simply mean it's just we need to look at the things we don't know not try to explain them as if we know them and so I've got a couple more clips for you that I think you'll find interesting the idea that bob was a disinformation agent or part of a program to mislead the public is wrong he's not and I can say that or knowing the guy for a quarter of a century the story he told then is the story he tells now he didn't add to it he's not making it more elaborate he's
(1:01:23) not remembering new parts of it it's the same story it's consistent all the way through so that's you know impactful when somebody kind of tells the same story over 30 years there's some merit to that you know it's not changing one thing we know for sure is real is the impact that Lazar has had on ufology and the world and I love the way George says it and just think of the things that in the 25 years since Bob came forward with the story there are those who it drives them crazy that he gets attention that he is
(1:01:59) obviously is he a phony he didn't go to MIT he made this stuff up I'm sorry but they lost Bob one you look at how far that story has traveled when you've got President Clinton on on Jimmy Kimmel talking about area 51 that aliens and then a week or so later President Obama says hey by the way at an event for Shirley MacLaine he mentions area 51 and I'm the first president to say it in public you

know look at what has happened since Bob came forward the government has acknowledged there is a place called area 51 for a long time
(1:02:33) they they denied it they pretended that it would that the base that everyone could see didn't exist we know that there is a place called s4 they confirmed it to me Nellis Air Force Base told me that there was one we know that there is something called element 115 they've synthesized that it's not exactly as Bob described it but as he says there are different isotopes you can make different kinds of different versions of it and eventually we might be able to make one that's more stable scientists who the scientists who made
(1:03:05) it talked to Bob they called him the ones that synthesized it the first time were in contact with Bob asking him questions about 115 the area 51 meme has gone everywhere it's in the da vinci code it's in national treasure it's an independence day it's in the x-files the books the TV shows it is part of our culture all over the world our baseball team is named the 51s and we've got the extra-terrestrial highway on a table on the other side of this room is 50 or 60 products that are being sold product
(1:03:41) lines different kinds of trinkets and and collectibles from area 51 did that that's from Bob that's from bob lazar that's why this story caught on that's why it went worldwide it is now part of our shared collective experience and knowledge and it's not going away so it must drive his detractors crazy who those people who think he's phony because they lost and Bob one Aldous Huxley said facts do not cease to exist merely because they're ignored okay so you're pretty thoroughly up-to-date now
(1:04:21) and the bob was our story you know we could go into finite detail about any of the specific claims or what arguments people have for or against I'm pretty well versed in it at this point I pretty much know and have interviewed and talked with everybody involved from the beginning but also having covered new stuff and so that's what my film will be showing you it's coming out December hell or high water like that's my deadline so it's kind it's coming out December so this story has really just
(1:04:51) begun and I'm gonna take you in the movie through some areas of Bob's life which nobody has ever really been able to see I've been able to verify some things that have been big question marks for 30 years Bob's life was not traditional I mean he was kind of an outlaw he was he's a weirdo man and then he had this like jet car right just blowing fire he still builds jet bikes by the way he built me a flamethrower so they've really remotely in the desert so it's totally safe try like that besides
(1:05:24) maybe blowing myself up but he still likes to to do and make these incredible things so he had a multitude of jet cars still has this jet bike he takes around still draws on napkins and you know still looks like the same guy it's kind of an interesting photo right that's from one of our filming's different glasses same dude I have yeah okay I'll play it I have just like one minute clip and one minute clip of just audio so you can hear maybe why Bob is deciding to allow me to bring his story forward
(1:06:01) again I think it's important because you understand why it's happening so you can just listen to this one the biggest roadblock to understanding is the ability to dismiss someone because you don't see them as human as a person so what pisses you off I mean disinformation and lies and attacks that have no basis in reality I mean you can disagree with me and say hey I don't believe that that's fine I haven't presented you with enough information I I understand that I probably be in your position but don't
(1:06:34) fabricate stuff there's some important information that needs to be released and everybody needs to understand the truth to it and not distorted versions of it you really need to pay attention to what I'm saying because I have better things to do than come up with this I'm not interested in doing this I don't like being in the public eye I don't have money for doing this and quite frankly I could make up a better lie but I have no motivation to lie this hasn't this hasn't helped me out it's
(1:07:06) something that it's information that I'm releasing and that's it it's not an ordinary life that's one thing I would like I don't like living in a James Bond movie I like watching James Bond movies yeah I mean one of the most striking things about Bob as a person is he does not waste his time on [__] you know it's like he could make up a better lie would he know I I asked my wife one time I said what do you think of Bob you know cuz she thinks I'm crazy you know what do you think of all this you know she's

(1:07:40) like yeah he just doesn't seem somebody that would like waste his time with stuff like that I'm like yeah for 30 years wouldn't waste his time now when was 30 seconds of his life so that was you know that's the kind of impression you get from him I've one more piece of audio and you can kind of see why he's probably letting this happened now people who try to minimize who you are people have been trying to trivialize who you are people have been trying to twist your story based on absolutely
(1:08:05) absurd things that's gotta wear on people to a point you gotta set certain things straight it's time to pull things out by the roots just to get things reset and get people familiar with the story and who I am and this is what's true the divergence has increased just over time I'm trying to tell you exactly the way things were I mean when I was exposed to you think there's something more secret than that that the flying saucers are a government for some of this stuff just sounds crazy to me
(1:08:37) and I understand I'm biased because I'm behind my eyes and see everything but this is this is crazy [__] yes I think it gets kind of annoying you know getting trolled and you know by people and you know oh you're such a liar why are you holding all this information because well do what back I've told you everything so I think that people inserting fantasy and fiction and their own opinions altering and distorting his story is precisely why he's letting this happen now you're gonna hear a story again and then
(1:09:09) I'll have some updates as I was able to uncover some pretty interesting stuff so to kind of conclude this part on Bob because you're really going to see it in my film I I do have an exciting announcement which is nobody has seen this yet this is a little maybe two minute trailer with some new footage we get to hear from Bob very very recently and of course I've done tons of filming but you got to wait for my film but I can show you this little piece there using a can Film Festival to get the movie out to market which is pretty neat
(1:09:43) so first time ever just a little clip to again update how much information you have on bob lazar exciting nothing good comes from europeo forehead this is a reluctant UFO Messiah he changed his life this week we've heard the contention of UFO researchers that there is a secret government within our government well there's several actually nine flying saucers flying this that are out there of extraterrestrial origin the live interview with the shadowy dentist drew international attention portions were broadcast by radio and six
(1:10:26) European countries and in a nationally televised TV special in Japan despite numerous inquiries and feelers Dennis has remained anonymous until now his real name is Robert Lazar he says he was hired to work at an area called s4 which is a few miles south of groom Lake and s4 he says our flying saucers antimatter reactors and other working examples of technology that is seemingly beyond human capabilities I did not believe that this should be a security matter some of it sure but just the concept that there's definite group we even have
(1:11:02) articles from another world another system you just can't not tell everyone [Music] it was like a Twilight Zone episode just kept getting stranger the fact that that was happening at all was the weirdest part look it's been 30 years and all of a sudden you raised it to this level you know this is a powerful technology fearsome technology and you just don't want everyone to have they will become obvious how to make constructive as well as destructive devices from it it's my only guess as to why they have never
(1:11:57) released information it's kind of difficult once you release the technology to be analyzed and give it to everyone they can just run with it you really can't keep the weapon potential hidden you really can't look with et technology you can literally rule the world well I am telling the truth I've tried to prove that what's going on up there could be the most important event in history you're talking about contact physical physical contact and proof from another another system another planet and other intelligence
(1:12:37) that's got to be the biggest event in history period and it's real and it's real and it's there [Music] so excited for this film to come out I'm so excited to actually make the film I still have so much to do you have to edit the whole thing but this is the story that I've always wanted to tell you know since I first started looking into the idea of UFOs I want to know like you is Bob telling the truth because if he is if any of that is true it is game-changing and I got to tell you through my movie process we're
(1:13:23) closer to the truth than ever before but you're gonna have to decide for yourself because somebody telling you something it's not as good but there'll be a

lot coming out and I'm so excited to be able to bring that to you because like just as a fan of this I would love to see the movie myself so all of my work for those of you that haven't met never seen my work before you can spend weeks at extraordinary beliefs calm but there are tons of videos and clips and everything from my films investigations and reports
(1:13:52) I hope you enjoy it you know I make it so that everybody can just watch it for free that's the point you know the films are what I do now for a living which is great hopefully that works out but everything is on that website for you to just go to enjoy and experience again I'm not trying to tell you to believe or not believe or I'm just trying to provide you a little bit more information hopefully those two clips of footage one I know nobody's seen before give you a little bit more insight and
(1:14:22) the movie will provide even more than that because it is a very important story [Applause] [Music]

Bob Lazar Area 51 Interview During 1991 Full Video - YouTube
https://www.youtube.com/watch?v=B4OkpDj6xrQ

Transcript:
(00:08) what's your general understanding well as far as the alien Bible I don't know what you're really talking about some of the briefings that I read dealt with some of that information about you know it's being the product of of a genetic modification but that's about all that's that's about all that I know repercussions the big story all that you all that I really have no idea about well I meant like you mentioned the date when they were supposed to return is something supposed to happen when they
(00:37) return I have no idea it was just a date and uh it was it was a number that made no sense to me it was a 601 or 30 something you know obviously in a different numerical system and so other than having created us and done the genetic upgrades that's it as far as supposedly if that information is correct uh I'm interested in a little bit more about the physics of the power generation uh from the development of the antimatter to uh to the gravity a wave and the amplification and that process of the generation of that and
(01:20) being able to fold space question that's a pretty lengthy explanation um in other words the relationship between the development of anti matter and the gravitational force field well it's I can give you I guess a brief overview of essentially how that works if you want an in-depth description of that you can give me your address and I can send you a paper on it um essentially what the reactor does is provide electrical power and the base gravity wave to amplify and it does that by interacting matter and antimatter
(02:02) essentially uh the way it does that is injecting an accelerated proton into a piece of 115 that spontaneously generates U anti hydrogen essentially uh that's reacted in a um a small area it's a compressed gas probably compressed atmospheric gas and uh you know the Anning matter reacting with matter produces the energy uh mainly heat energy and that is converted into electrical energy by a thermionic generator that appeared to be 100% efficient which is you know a difficult concept to believe anyway uh also the
(02:44) reactor has two functions that's one of them the other function is uh it provides the basic gravity wave that's Amplified and that appears at the upper sphere of the amplifier itself and that's tapped off with a wave guide similar to microwaves and uh is Amplified and focused essentially so how is the electrical energy related to the ampliation the gravitational a ener the electrical energy is transmitted essentially without wires and I related it to almost a Tesla setup it seemed like each subcomponent on the craft was
(03:21) attuned to the frequency that the uh reactor was operating at so essentially the uh amplifiers themselves received the electrical energy like a T the coil transmits power to uh you know floresent to uh and uh I was the rest of the question yeah in other words what is the relationship between I think that's you basically answered it yeah that's that's how the amplifiers receive the power through the wave guide to receive the basic wave it's almost it's very very similar to a microwave amplifier and uh
(03:53) you know for more technical description I can send you drawings or things along those lines but uh that's basically how it works I understand you took some

115 home with you to uh do some testing on your own I obtained it yeah did you document any of your testing yeah you did yeah video mostly videotape and things like that John said it was stolen from you later last night he said they stole it back stole it back he said well there's another level to that but like I said right now it's in private hands
(04:28) okay um element 115 um John said last night that a piece a wedge that's about 2 in in length will run the ship up to 30 years how does that go in light years how long would that be well it really depends on the energy level the the more energy you expend the uh you know greater consumption of fuel just like in any any modern machine so really really all depends on the amount of energy you request out what is Dr Keller's relationship f for do you think he might be working on antimatter Weaponry I don't know but he was
(05:07) certainly uh I forgot what his exact title was he was Chief consultant or something along those lines and as far as any matter Weaponry I don't I don't think anyone was involved in that there was certainly some uh beam weapon work and uh you know teller has been involved with that U I think his last project at Livermore Los Alamos was uh um I think he called it Super X Caliber and that was essentially a uh nuclear bomb detonated in orbit and fiber optic light guides that directed x-rays to uh incoming warheads and uh
(05:42) that's his pet project he loves that thing so I don't think he jumped to uh an matter weapons all the way in the back there what uh on your sports model that you worked on what do you think was on level three and where were the bathroom uh I don't know if anything was on level well I don't know if there were any bathrooms on level three I can only guess and I would imagine that there was some sort of navigational equipment or their version of a computer or something along those lines because I saw nothing
(06:12) else that uh controlled the uh the amplifiers the directions they pointed in how do you for that mankind can develop this type of for she uh I really don't I really don't without access to certain materials or maybe new manufacturing techniques that can produce those but uh until those problems are solved you know the fact that we even know how to how to deal with it or even duplicate it uh you know is pretty useless how many other materials might be necessary uh besides 115 that you know of that were
(06:52) contained on the ship that might be it the might the rest of it might be just uh essentially polishing up manufact in techniques making things smaller you know just general increase in technology getting a a small accelerator running at a higher energy level uh I don't know about the the Metallurgy aspect of the craft I don't think any exotic metals are necessary though they may be employed uh I don't I imagine you could make a craft out of aluminum if necessary but uh what part that plays I I don't
(07:25) know is there any significance to the saucer shape the geometry having to do with any resonance or anything of that nature not any resonance but it's important most of the edges on the craft are rounded because a high voltage field does appear at most of the craft except for the upper the last upper bump there's a little ring before that now I'm only talking about one craft so I don't know about the rest but there's a small ring before that a darker black one and that's an insulator ring and
(07:50) that's the only place above that that upper section the third level is where high voltage does not appear did any technology that came from the aliens resemble anything that we can do today have we Advanced to any degree that that they are well there are some basic things uh you know the fact that they're using a little accelerator though it's smaller you know we have things like that if that's what you're getting at uh anything really Advanced uh well Stars controlling gravity we yeah other than the fact of just the
(08:28) way the craft operates you know by manipulating gravity that's that's about it really well I wanted to ask you talking about metalurgy um what you observed in terms of uh the structure the skin of it the thickness because you know there were reports from Roswell and other where that there was a very thin type of metal skin that was really un undamageable and so on what what was this construction of it like well I called it metal and uh I really can't say that's what it was I called it metal because I slid my hand
(09:07) across it and it was cold and it was semi you know lusterous so did you notice any place like where you know on an edge or something where it may have been a lot thinner than your standard metals that are BL use an aircraft it's hard from the outside you can't tell you walk in the way the the way the archways are inside they're probably about 4 in thick anyway so you really can't tell how thin the uh

the skin is itself or if it's exotic or yes more on this element 115 and your contention that it couldn't be made here
(09:42) on Earth um what if you found the the right bombardment speed the right target shape and the right containment uh well I imagine with enough time you can make a small amount of it I mean my analogy is look at uh you know look at how long it takes to make golden accelerator from bismuth or something like that but that may just be a technology that hasn't Advanced far enough yet right but the bottom line is you have to sit there and plug in protons and neutrons for that matter into an existing atom and you have to do
(10:20) it you know essentially on an individual basis and they're not all going to catch on so we're going to but how did how do you think they got their first piece of it if it was in a dead star how uh going from I think it was naturally occurring somewhere on their Planet just because it's stable yeah probably some that's just a guess on my part but uh you know if that technology was harnessed quick enough chances are they didn't have uh you know when they came here our levels of Technology were
(10:51) probably fairly new to them they probably never even considered an internal combustion engine and for that matter you know when I came flying into the atmosphere saw a little gar shaped things with fire coming out the back they probably couldn't conceive of how they were powered so it was uh you know it just all all depends how you know what materials raw materials you have but you know that's just an opinion that that was a naturally occuring are you aware of any long distance light tests that have been done
(11:18) on any of discs as of the time that I was there I was told that they didn't they really didn't take him any great distance at all other than right outside though you heard the rumor of the that were killed by no if we had a working agreement with the aliens at one time um why didn't they give us a users manual for these ships why have we had to work so hard back engineering them I haven't the slightest idea you know you assisted this at all with any of the technology and learn it I I really don't know you
(11:50) know it almost seems like there had to been some assistance or some information found but but who knows your information didn't indicate that no yeah uh with such tight security around there supposedly only 500 lb of this material how is it somebody can get some of it out of there because some of the m not some of the material the material is that they have there is essentially raw the material is it has to be machined into discs these discs have to be stacked up and then cut into a cone shape and then sliced uh along the long axis of it
(12:30) that work is done at Los Alamos I don't I'm not exactly sure not Los Alamos knows what they're doing uh apparently they think that they're developing uh the little coins they're working on as some new type of armor and uh having worked at Los Alamos and know people around that area that's how I obtain some of it can you say anything about project Looking Glass and the relationship between gravity and time well and time are almost essentially the same thing uh and looking glass dealt with using
(13:04) gravity essentially to distort time and and as I've said before I really know very little about that but you know they were only talking talking about milliseconds or even less microseconds of uh time Distortion they're not like looking back in time to see who killed Kennedy or something the uh the craft that you are you talking about the Scout craft is that the one that's like the adamsky picture picture with the three domes underneath and if it's not I'm not exactly sure what the adamsky pict the
(13:35) saucer shape has this this is the one that uh looks like a my one of the Meer craft right did did you see any others than that one or there nine out there yeah I saw nine total but that's the only one I got close enough to did you see the one with the three domes underneath that's U three balls underneath that has a Central Housing underneath and then the the second question was um did anybody give you any indication as to who was driving or or any information on them I assume that it was humans that were violating the craft
(14:09) uh though it could have been remote control but at the one test flight that I saw on the ground uh they were in radio communication with someone and I assumed it was someone in the craft I imagine it's possible that it could have been a remote Observer somewhere but uh and I just assume that the seats were retrofitted or they were sitting on the floor for that matter yeah um are you familiar with I have a couple U aspects of the question are you familiar with Howard manger electrocraft and uh otus cars saucer

(14:41) design and how are those how are their devices u u how do how do they generate their gravity fields and compared with what you've described and lastly U Can you can you can you speculate how the um why the commercialization of some of these crafts hasn't been possible with so many different uh patents applied for uh these kinds of designs because they don't work are there any gces encountered by the pilots inside the crack at all no at all um from your interviews you seem to feel that the uh Area 51 or the esort
(15:21) test site was kind of slip shot and how it how it does its research it really doesn't have the facilities there to actually do the research correctly and also I'm Wonder Could you comment about that and also I'm wondering what you could tell us about the other types of ships you saw there that you felt were alien in origin well the uh as far as the research at S4 that was kind of slip shot uh just because mainly it was being done from a military point of view uh if anything it was a weapons development program and they were more
(15:57) concerned about what duplicating the technology not really duplicating the technology duplicating the hardware as opposed to back engineering the technology to find out you how these theories actually work and uh you know what's going on with them and so they really weren't taking the scientific approach and that was causing some dissension um I don't remember the second part of the question um just what other types of ships did you see that might have been alien and origin I only saw them and they varied
(16:27) in shape but I was told they had the same same identical uh Power and propulsion system and that's the extent of my knowledge on that what about space they vary completely in shap yeah on the uh we had the military out there supposedly working with the aliens did you ever get an uh inference from them that it was a positive or A negative situation in other words when they brought up when they were talking about the aliens or whatever was it a positive or A negative type slant on on the well they really talk about the
(17:00) aliens uh the only time I ever heard anybody mention anything about an alien someone and I'm just assuming that someone called it or called the thing a gourd and that was that was it I heard it in the middle of a conversation and they stopped talking when I got up to him so that was the thing just this question to the interior of the sports model I know you have made reference to the power source in the center of the were small seats there were load to the ground how about consoles or displays or any kind of instrumentation nothing
(17:36) along those lines but the what I call the console there are three seats uh if you look at the bottom level there's a three amplifiers in a Triad formation directly above each one is something I call a console and I think that's uh a secondary part to the amplifier and an analogy to that would be that would be the actual amplifier and the thing hanging underneath would kind of be a speaker if you're talking on audio terms so is there any kind of control or no want switch not not that I could find did it seem like there was any
(18:12) place or even a need for a life support of any not that it was obvious to me question how do they navigate and how do we converse with them I have't the slightest idea how they navigate you know like I said I think if that uh whatever controls the configuration of the amplifi is the focusing which is basically their their navigation is most probably on the upper level of The Craft that I didn't get to look at of and as far as the conversation between them your guess is as good as mine was the local means of propulsion the same as
(18:52) this uh across Great Space differences what what was the local means of propos the local means of propos is essentially them balancing on an out of phase gravity wave and it's not as stable as you would think when the craft took off it it wobbled to some degree it's uh I mean a modern day Hawker Harrier or something along those lines of vertical takeoff craft is much more stable than them in the Omron configuration which is that that mode of travel the Delta configuration is where they use the the three amplifiers and
(19:32) uh that's those are the only two methods I I know about for moving the crap can One Pilot as far as you know pilot this craft or does it take three or do you know anything about that I I don't know I want back in the red that radiation no it's [Applause] stable yeah theoretically elements uh re should reach a stability around anywhere from 113 to 116 somewhere in there and apparently that's true and again they should reach a stability somewhere up around 220 some but uh you know whether those elements will ever be synthesized
(20:14) or found naturally yeah it's unusually heavy yeah um I want to know what you think of monuments in Mars and do you think we have bases also do I think we have

bases now uh the monuments of Mars are interesting that's about the the most I can say if they're suspicious and uh you I really don't know until there's more information you I've seen pictures of them and and things along those lines but the uh most recent Mars probe is taking uh low altitude photographs of those so I guess everyone will know in about a year
(21:01) indirectly yeah what about your perception of time and length width and height is it the same ofo the craft as off of it why you went aboard compared to when you went off of it why you went board it off of it well as long as you're on the craft everything seems completely normal you time Flows at a normal rate and uh if you're off the craft and you're comparing the time of someone in the craft someone off the craft there'll be a definite difference there anything where gravity is involved you know even
(21:35) the shell astronauts they'll come back just because of the difference in gravity when they come back they're uh you know there'll be a slight difference in time did you learn of any other well-known civilian scientists who are involved in this uh yes not not involved in this but involved in the gravity work and he at Los Alamos and we've had a little bit of contact you name names I'd rather not just because so far no one's bothering him and I'm sure he wants to keep it that the wall inside only one place yeah the whole no
(22:23) no it was only one one place where the seats faced and it uh you know there again I said that's advanced technology but it's not that advanced because you know we have something along the lines of that Liquid Crystal that we could you know make transparent and also use as uh you know a display of sorts so that's uh but this was metallic and we hav anything along the lines of the toughness of you metal that you could drill into that can become transparent what was the time period when probably about 30 seconds or so
(23:01) yeah two related questions are you aware of any instances where the inside of an alien craft is much larger than apparent outside no I've heard stories like that though but I haven't the strong force which you've identified with gravity a I know there's been some recent theories that propos actually 11 dimensional Universe with seven of them rolled up not buing that does does it operate on any principle related to that yeah my main problem with that and Stephen Hawking for that matter is that uh once you start
(23:38) creating other dimensions it's like an excuse I mean in particle physics they do that too when they can't figure out something they say well you know we don't know what gravity is well it's caused by the uh the graviton yeah they make up particles like that you know you can do that with Dimensions too where did it go I want into another dimension yeah it's like an excuse the bottom line is you know as everyone has said every physicist has said the answer to everything is always simple and it's
(24:02) there's not an 11 dimensional univer it it does first of all there doesn't need to be because all this technology works you a one dimensional essentially a four dimensional universe and and uh you know there's there's no need for it yeah in a bus facility on the other side of Groom Lake on the east side of Groom Lake are you familiar with that on the east side of Grom Lake across the lake no I've never been over [Music] there NOA getting back to his question about if there is any difference between being
(24:54) on the inside of a craft well it's under power versus being on the outside of a c of course you wouldn't have experienced that cuz you weren't you were never on the craft when it was powered right under power well by the fact that the screen became transparent and other things were operational I can assume that it was there was some power generated so okay huh Bob U how long were you a part of the S4 project and and how key of a person were you on the science team vehicles I was probably there only 6 months four months something like
(25:30) that it's hard to remember and as far as a key person I'm sure I was the last rung on the ladder uh though because no one has really gotten anywhere you know they were looking to me for fresh ideas which I really didn't have any anything because I didn't know you know really was going on or where they had been so uh it was a very disorganized group and that's that's really all I can relay I don't you know I don't know to describe it it was frustrating in that regard very frustrating Element 115 does it
(26:03) have emission lines does it have emission lines I imagine it does every other element does yeah that you know of that well I haven't seen you know any spectrographic analysis on it or uh well actually they did do it I don't know if I if I saw it though I saw Neutron bombardment test and density measurements and

things like that but I I'm sure they carried out that that test on it but I wouldn't be able to identify the lines no you're not aware of the results you know they probably showed them to me but I can't for the life I
(26:37) may remember after four years uh in possibly in heavier stars or in you know planets that uh s you know surround a larger star system and uh fact some people brought up that uh p some people brought up that you know that's that's ridiculous because you know all the elements that we know of are found on Earth and that's you know that's not true I think it's technium or something along those lines is only is not found on Earth and it's on the Periodic Chart so it's not what hello Doug and they mapped it out in the
(27:30) south of France they looked back and looked and it has to fall where the natural belt of uh uranium is there and I was wondering if you know you had anything that would lead you from what you saw with that propulsion system to think that aliens may have come here at one time to uh do that I don't know I mean no matter what uranium is certainly a a valuable right you know element uh I don't know did you get to see any alien all no fact what you talking about lowle flight you're talking about wobble mhm
(28:07) have you ever seen the Billy Meer movies similar to that the Billy Meyer movies of theing films films I saw I don't think I've ever seen any motion yeah he's got some that fly around tree and they've got oh wait I did see that yeah I did see that then there's some other hovering ones you know what's strange about the bil Meer photographs that the the discs that 10 once he took a picture of looks exactly like the one that I looked on but you I'm certainly not an expert in the field but some of those look
(28:41) unbelievably fake and I can't especially the thing with it flying around the tree I mean boy it looks like it's hanging from a string you know but why would he do that if he had some authentic pictures and uh you I don't know I I have mixed feelings about that how do you feel about do you have an opinion of this conflict that allegedly happened between graay and the Delph force in what was it 89 or whatever you anything about that I I really don't really have an opinion I just you know repeat it you think it
(29:11) really took place why I don't know any weapons on these ships yeah apparently there's one but I wasn't involved in the project that dealt with it and what's your next video going to cover well it's really not a next video there's the the video that I made is being being redone by another company only because they liked it so much and uh they're just redoing the uh graphics and making a little more Technical and you know I'm just serving as a technical advisor on it but uh for the most part
(29:43) it's 60 to 70% of it's you know the identical thing they just uh wanted to do it because these particular group of guys uh involved I think companies called dream Quest involved in uh special effects were really into the UFO thing and they wanted to do it with Modern Day stuff instead of you know knit stockings and things like that well that's certainly possible you know I don't I don't have any information on that but just by the EMP generated you know by the systems on the craft that that makes perfect sense to
(30:18) me I was going to ask you what type of weapon do they have I it's some sort of directed energy weapon and I think it's a like a laser beam well no a particle weapon probably a neutron how many levels does that S4 have you know just one orow there there might be two but I know there's one because obviously I was on one but uh I can't actually remember if anyone if there's any direct mention from there of there being a lower level but you I really wasn't allowed to roam freely around the whole place so I don't
(30:57) know yeah I really don't know you us that varies widely um I as far as electronic technology my degree there is from Caltech and physics is from MIT when did you graduate did you go to first college yeah I did okay just where did you hear that friend said something that no somebody I don't even know I just thought something I want to ask because yeah I went to pierce and Northridge and then uh I why you know I'm terrible at dates I don't remember what date I was at Pi probably like in 76 or something I was
(31:43) at Pierce and then 70 7 or eight I went to Northridge just for a short time for some classes and I was at Caltech and then might after that yeah some critics have suggested that there is not a department of Naval intelligence as shown on your W your IRS record I wonder if you could address that yeah I've heard people say that before but the bottom line is if you uh and I've let other people check into that Bob exler is a guy that managed to trace that down through the IRS and if you write

the ZIP code number on the
(32:22) bottom of it or nc-101 or something like that or NC something anyway it gets to it gets to somewhere in the Navy you know as far as if there's a department of there I don't know but uh you know that's that's the WW that I got sent so well that same person was saying though that the ZIP code that was on there was someone that was in reserve unused in Washington some zip code that was unused yeah well no he had he had correspondence with someone in the Navy through that address I'm not talking about Bob talking about Bill
(32:59) Moore Oh Bill Moore I I don't know Bill Moore I know he's an enigman himself yeah say that was his point he justs everything I said well there's two different types on here and this and well you know I don't know so uh you know that's basically what I get sent and uh you know I've seen enough information to where that zip code works and uh that's all the information I have I really haven't pursued it myself maybe you clarify for them why think this is a legitimate document because of the
(33:30) certain elements of that are correct oh because of the amount of money yeah no one would know the amount of money except me people that so that's all the information I've got I have two questions uh they're not related to each other but one is are they silent or noisess and U be who signed your paychecks as far as are they silent or noisess um there's a slight hiss before they take off and up to a certain altitude and that sounds like um a high voltage hiss of sorts that's all the sounds that I've
(34:10) heard I've Heard lots of reports about you know weird flying Auer type sounds but uh you I've never encountered that um who signed my paycheck there was a signature on it but I don't know you know whose it was never even you know the time I catch the paycheck I never even concerned me tra ring anything now so there wasn't a company name up in the corner like most paychecks well when I worked for the federal government years ago all you get is a green treasury check there would be no other papers with it or anything from
(34:41) the Department of Treasury no this said the department of enval Intelligence on on the check yeah on the check okay thank you would a craft like that comes into our atmosphere would you expect a loud report that might be exp well totally dependent on the velocity that it is so if uh you're dealing with something that manipulates gravity and doesn't have to slingshot into the Earth uh you know you can come in at a low speed not heat up not not really Inc velocity depend is that so right well yeah if you're traveling at suers Sonic then you
(35:14) get a report if you're not you don't you know it's pry straightforward when you were at s War to your knowledge what was the approximate percentage of Civilian versus military personnel and then what kind of job categories the civilian Personnel were uh scientific in nature and the military personnel were only uh security and as far as the percentage it was a small percentage of uh scientific to uh military personnel there secretar there I'm sure there were offices all over the place but when I
(35:50) came into the facility I was essentially escorted right to where I work and work there other than the few amount of times that I got got to walk into the hanger and uh under an escort to and when I left it was the same so like I said there might be offices there might be bunkers in there there might be underground levels there might be an alien nest in there I excuse me how did you eat how did you eat the only place I ever ate was out of Area 51 so if there was a cafeteria there I never got to eat in you come and go with other
(36:24) people I usually came with Dennis Mariani who was my supervisor now I wasn't on uh a full-time swing essentially I flew in usually between 3 and or between 4 and 5:00 at night and left by 11: so I was only there for a short time each day I board the bus from Groom Lake to Papoose how many people were on that were boarding with you very few more than one more than yourself as me me and Dennis and usually well actually not usually occasionally one other person how about Barry I don't think I ever saw Barry on
(37:01) the bus just two of you mhm is there a chance of any of the workers might defect Barry would that's why I spent some time trying to get a hold of him and there was actually some time after all this hit the news and the whole thing went down we got a call from Dennis my supervisor and he arranged a meeting at the union Plaza Hotel and when we got there I brought three people with me and I think he said he'd be in the casino area somewhere and we I think Jee Huff came with me and uh we went into the area and walking down the corridor I
(37:38) recognized one of the security Personnel from there and then when I finally

found Dennis he didn't even acknowledge my presence uh we couldn't get his attention and uh you know I left so apparently someone had known of the conversation and sent someone down there and made themselves obvious to Dennis or some happened and we left but I think that was uh where Dennis really wanted to say something uh I understand that you used hypnotic progression to get at some of the details of your experience if so what is your impression of hypnotic
(38:12) progression is a tool it's probably reasonable because uh there are specifics they contend that you can sit there and reread a document as if you had you as if you were there reading it for the first time and uh but I was mainly interested was in some of the schematics and drawings and uh you know I did some of the hypnosis stuff with Lane kek U I have no therapist in town and I was certainly able to redraw u a lot of the uh schematics and you know engineering drawings along those lines and it's uh so as far as using as it a tool for
(38:51) that that seems to work for anything else uh I have two two things uh one's a commment the other one's a question uh first of all um when I was 12 years old I I saw a daylight flying disc which looked exactly like one of Billy Myers's photographs 15 years later and uh and this you mean earlier no um earlier 15 years earlier I saw this disc and then Billy Meer took a photo in 1975 of the same exactly the same disc that I saw you know down to the Last Detail was the same and then you said that that the sport model
(39:34) looked a lot like this same photo in a interview with George Na and U I thought that was really interesting because it kind of tied it all together for me and then uh just I just wanted to make that comment and then the uh question I had was uh what was the year of your graduation from MIT and and did you get a PhD no as a master's degree uh the year what was the year of graduation probably probably 82 cuz I think I left there went to Los Alamos I went to Los Alamos thanks is there can you talk about the mind control that the C people
(40:18) that said was used on you when you decided to leave most of the FRS what mind control would that be someone made a comment that uh that you might been victim of some sort of mind control or that came about by uh when I was first brought there they had a a doctor or nurse actually in uh medical medical setup there and right after I had signed all the release papers and my first time out there I went in and they did what I perceived to be an allergen test because I put a grid on my arm and different uh you know PR different chemicals and uh
(40:55) you know was there indention well boy there's a lot of strange elements here and unusual things you'll be working on so they're trying to see if you're going to have any adverse reaction to them and uh I was given something to drink I I said it smelled like Pine uh which it it did know it's that's the best way I can describe it and a lot of people jumped on that saying aha well that's the Mind Control substance when you leave work you're going to forget everything when you come back you're going remember
(41:21) everything but you know I think if anything it was an anti-allergen drug or something along those lines how about the threats threats used yeah plenty of threats I mean can you can you like bodily harm or loss of pension or what what kind of stuff well the LA of pension and uh you know jail time that was part of signing the paperwork as far as bodily harm after they caught uh us the time I brought out John le and a couple other people up there then they threatened me and uh they really didn't get much reaction out of
(41:51) that then they threaten my wife at the time and uh you know that uh they really threw out everything they could you without physically you know attacking me well that's what I was wondering once they knew it was really you not Dennis or someone else or anything why didn't they just arrest you under charges of you know violating the ACT well they can't arrest me because they'd have to admit you know that this is classified material talk yeah they'd have to release it you know why didn't they you
(42:19) know kill me uh I you know that I really don't know you know maybe that had to do with um how I got the job or you know referencing the connection to head teller or something along those lines but uh I don't know were there any contractor names departments divisions that were mentioned or signs on the wall or anything like that referring to any companies or anything like that now but I know eg&g had nothing to do with it that's the only light I can shed on that because uh I had mentioned that to them
(42:51) once because that's where I was interviewed at the eg&g building and uh I thought that it was part of an EG Pro project and I think it was Dennis who said that uh you know we don't let those people you know anywhere near this place or

anything you know they were just a a sore thumb to him well as a as one way of getting this information out at the same time to have the government stop harassing you did you ever consider bringing them to court well threatening you and your family harassing you and as a result of
(43:23) that forcing them to with what evidence would I do that I mean it's hard enough to prove it to uh you know the layman in general but taking it to court it's impossible I mean there's uh there's plenty of people that don't believe me anyway so you never s out legal counsel with regard to any of this well a little but yeah initially and uh you know the bottom line is you know the attorney said there is absolutely nothing to go on it's a total waste of time and you know if anything it's going to be a
(43:49) public forum uh to discredit me in some manner so uh you know why even go through with it what about class action in ACLU and that's but still you need you know some sort of evidence that uh this happened even if I pulled out a piece of 115 and said here well what do that have to do with anything you know and uh there's nothing that uh and what did they do to violate my rights that I didn't agree to at the beginning so they really had their bases covered it's pretty dirty what they did to you in Las Vegas there in 1990 in the
(44:19) summer that was pretty dirty what was that it's a well yeah that was that was my own fault see you've been through your counseling by saying that right how would um someone get a piece of paper explaining the physical properties used in these in this mode of transportation the physical properties you mean I mean the the formulas used in the in the gravity you're being watched currently if you have any interaction strange you should mention that uh there's been nothing uh for for probably these four years or 3 years whatever
(44:59) it's been but uh the other day one of my phone lines has not been working and the other one was breaking up so I called sentel down and uh they checked the house out and said there's nothing in the wiring here and they called me down from Charleston Boulevard from the from the telephone pole and they said my individual line was cut and that the other one other wires were stripped and twist tied together so of course me being paranoid think well someone tapped in there but I really can't think of excuses me being
(45:29) uh you know just my single lines being played with but uh that's what he said and you know they filed a report on that so that's one form of documentation you say your records at Caltech and MIT have somehow disappeared and Los Alamos and probably everywhere else is there any way you can you could re reconstruct your coursework and your professors oh sure I've got people that uh you know that I went to school with and you George has spoke George na has spoken to some of them and you know even flew with
(45:58) me up to Los El and spoke to my colleagues there and uh you know it's just could you could you reveal some of your professors at MIT in CCH yeah if you want I don't have a list of them here Dr duxler I think was one of them and uh hostfield was another hostfield hostfield HOH SF ID or something along those lines they remember you oh yeah I I know well these are MIT or CCH uh hosfield was at uh MIT duxler was at Caltech yeah um who's Barry Barry's a guy I worked with a uh essentially work on the buddy system there and
(46:46) uh someone you have ideas to bounce bounce off of and uh VAR ctio or Castile was he there before you or yeah a long time still there or probably still there did you get any information from him well he essentially taught me everything that they had done up today in the course of your work uh did they ever mention any other facilities installation around the country where Associated work was being done no they did mention though that uh this was the place that all of this stuff was brought to and it was really purposely condensed
(47:21) here to keep an eye on everything and to have uh you know immediate access to everything that dealt with this uh you know the alien technology regarding the craft of the alien Craft um were there any test Personnel that crash them and if so do you know about what the causes were I didn't read about any crashes during tests at all so You' think that there would be some but uh I didn't was uh when you were at Caltech were you affiliated with any of the student houses no um when I first heard of S4 it reminded
(48:01) me a lot of disc testing that I've heard of that goes on in Australia at Pine Gap and I was wondering if you know anything about Pine Gap did you read anything about Pine Gap you can tell us about uh I really don't keep a breast of the UFO information as far as officially I never read anything I've heard the name Pine Gap mentioned but um I haven't heard anything about that has anybody ever approached

you with a screenplay author oh God yeah constantly you ever consider uh yeah the main problem Columbia Pictures
(48:36) last year really wanted to do it and uh they said we're making a screenplay and and my only problem is is that uh if you guys are going to make a movie it has to be exactly what happened and not the Hollywood version I don't want to see Steven Seagal in it or anything know too much about your experiential background or your expertise but um do you have any speculation why they recruited someone with a masters instead of PhD no that's that's a really good question like I've always said there's
(49:11) plenty more people qualified than I am and uh if there's any re there's only two reasons they could have is either number one uh was that Dr Teller essentially Juiced me into the position that said you know there's a guy bubbles iron no one find a place for him or that the fact that I have traditionally approached everything from a very strange angle and uh you know essentially off to beaten path and you know tackling you know technical problems and so it's only one of those two reasons unless there's the third one
(49:40) that I I have no idea about two things do you think they'll ever release this information and if they don't how do you think it'll ever come out besides people like you know or it will be something like your well hopefully it's not this way hopefully there's going to be a release of information eventually but uh you know whether or not they're going to say uh you know hey we've been keeping the secret for so long it almost seems to me that they need a staged incident to get them off the hook take a
(50:10) flying saucer up in a C130 and push it out the back and say look how would they overcome the forces and the rapid they don't apply once you've distorted distorting gravity having a gravity amplifier distorts time and space and that those really don't apply there's no interaction so there would be no effect on humans either no there's no effect inside at all Bob did your uh when you were working on the sort project did your education and whatever scientific Vision that you have permit you to believe that
(50:49) at some point you'd be able to make a meaningful contribution to the program and and if so after how much time uh I was always in ser ious doubt whether or not they were going to get rid of me because uh I had there really really wasn't anything that I could contribute I wasn't an expert in any particular field uh that they were dealing with so uh I mean I made some contributions as far as uh determining what element they were dealing with was but U that was significant right yeah to some degree um I was when you were
(51:28) MIT forgot um did you come from a pretty uh your was your your education pretty traditionally grounded as far as your own views as far as physics and what common knowledge as opposed to theoretical things and in other words how surprised were you when they started showing you all this hardware and these Concepts that could do things that it's really oh very I was how did you I start grasing that even when I was reading the documentation you know the alien the alien question really never entered my mind I kept pushing it off to
(52:09) you know all this group of scientists secretly came up with I never and I I just had a mental block against that because I always thought flying saucers were totally ridiculous and the people that uh you know really paid attention to such phenomena we're we're just out in left field you know they belong thanks Bob really made very little sense to me that that uh you know anyone would would deal with something like that so I really held out to the very end and uh until they finally said well Bob that was
(52:41) it for did you ever hear any um Air Force or military Squadron numbers or names bed about yeah I probably did but I can't remember I do remember someone talking about something along those lines uh I I don't think they were pilots but they were someone someone related to the Air Force I don't remember who or they were talking about the Air Force and I think they mentioned a squadron and I don't know if that was what they called the group that that flew the craft or it was someone else you know at Groom
(53:22) Lake I really don't know no there really wasn't much you know idle banter going on as far as like the gravitational f with these crafts and so forth if you were to amplify it enough Could you um enlarge the area that you wanted to take in other words could you uh move more than just the craft itself say two craft under the same power source and so forth or have youen you know even ever considered something like that is feasable or like a tractor be it's possible as long as they were both uh essentially in the field that was

(54:05) being emitted um I don't see I really don't know what uh you know how the level of energy relates to the amount of mass that can be bent that way or how the amount of space that can those numbers I really don't have so that's just a g do you think it'd be feasible what kind of control probably what kind of control insance systems they have I really don't know that uh anything that I assume was control systems or instrumentation was up up above and I think that's where the navigation computation took place and uh
(54:42) you know I dealt with only the strict the power hungry components essentially when you were at S4 was there ever either a period within a day or even a couple of days where you at this point don't remember what you were doing during that time and was there ever a period of time that you not able to account for yeah I kind of I said that and again that's been taken and bent a lot of different ways too there were times that that I left and it's because so much stuff I was exposed to I was essentially drowned in
(55:15) information and and when I got back home I couldn't I really couldn't remember what day anything happened uh you know did I forget big chunks of knowledge no I just uh no but there like periods of days where you're not you haven't recalled what happened during those days or you and second you probably don't want to get into this but I'd really appreciate you would when you were walking either by the hallway or down by the door with the window in it and you look through will you go into
(55:43) that and describe what you did see I mean even if you're not sure say just St it as exactly as it was well this has to be taken in the right context too first of all being surrounded by the you know flying saucers kn that the alien thing exists and all this technology U you when I was walking down a hall to the uh I don't remember where I was going anymore but the different doors to the hangers are small 9in square windows with wire mesh running through them and I I looked in one as I I walked by and
(56:14) was to told to keep my head forward and uh I saw the backs of two guys and they were talking to a child or I thought it was a small child and you know of course when I told that to John lry he said that wasn't alien there no doubt and uh I don't know what it was I don't know if it was a small guy but it just looked where than it was a glance so you know do I think it was an alien no did you see the the quote small guy did you see the small guy or you only saw the two guys looking downward no I saw the small guy you saw the small
(56:46) guy that they were talking to yeah what did it I it was just it was just a glance I have no idea that's why I said believe me if I had a rounded head and big eyes I'd say hey there's an alley in there but you I can't say that but it was a small small person or someone they were I don't think anyone could bring their kids down there so I don't know but you for that matter they could have been holding up expence right but also look at it from a technical Viewpoint that it could be a model a life-sized model and
(57:17) they're trying to see how how the size relationship works in the seats and other parts of the craft and you know what's accessible so it doesn't necessarily mean that it was a living being than you would you mind speaking at all about how this body of knowledge has affected you emotionally or maybe spiritually are you frightened by the implications of what all this means or no um you've no doubt thought about the the overall agenda speculated I'm sure on your own yeah but it's difficult to really
(57:51) uh you know put a finger on it since there's so little evidence to go and really 99% of the stuff that I hear I really don't even come close to believing at all and it's not just cuz I'm skeptical it's cuz it's absolutely ridiculous uh you know I even though it's stepping on a lot of people's toes you know I I think 99% of the sightings out here are absolutely not flying saucers most people are watching 7:30 SS coming to uh Groom Lake and they make turn up there and there's lights on the
(58:24) planes and uh the I mean along the other same lines there's uh these parachuted flares that they fire off near the papoose Lake area and they're an orange color which is pretty coincidental and they're on a essentially a modified small hot air balloon so the burning heat of the flare keeps it afloat longer and uh whether they're doing that for disinformation or practicing how missiles lock on to you know heat seeking targets you know I don't know but I think 99% of that stuff is what you know people you know that
(58:54) come around this area are saying seems as if even knowing that we possess alien technology hasn't even made you a Believer that's probably true but it has I

mean I believe the stuff that I worked on there's absolutely no question in my mind but uh I think everyone can only go so far and I can't I just hate to speculate because I hate to be wrong I don't want to say well you know this they had to be given to us because there's no you know we didn't shoot them down and you know it's so I I just stop right there we
(59:26) forget sometimes you're a scientist maybe so I I just I sto with what I'm I'm pretty sure with that said what is your synopsis in a nutshell based upon your what you saw and what you experienced well I can't like I said I stopped before that you know I have lots of possible ideas in my mind but based only on what your experience was only on what you saw what is your synopsis my synopsis of what I know to be true yes that the government is holding uh nine alien spacecraft that are propelled by a modified gravity generator
(1:00:05) uh it's being the work is being conducted 15 mil south of Groom Lake at that is designated as S4 uh that operate and that's about it okay thank you from no not at all did you ever see the word S4 written anywhere the letters S4 that's a good question the question the question is did he ever see S4 written anywhere badge on your badge on your badge yeah the S4 was punched out on the badge more long lines I was thinking it was a sign and I think because it's hard to see I think near when you approach the Papo mountain
(1:01:01) range that there is a sign that designates it as S4 but if I I I'm pretty sure I saw a sign there because I can only see out the front window when I'm when I'm going through there and I'm not I'm really not sure what it what it said but it since most other signs designated it said area or Tech area or something along those lines that might have been S4 if that's if that's what you're referring to so you just heard it orally S4 orally that's how you not of doesn't well yeah and as someone else mentioned
(1:01:28) on the badge that was star punched out there but as far as an actual sign to the area uh I didn't see it in any other writing so did you ever see it on the badel since it was punched out you wouldn't see it well that's it it really says it directly above it I mean the star punch oh so how was it written S4 s das4 oh a dash there's a hyen in there yeah oh Bill Bill Moore is making a big thing I says how is it how do you write it he's talking to George naap trying to debunk the whole thing how do you write
(1:01:57) it SC does it make a difference right right what what you call picking thiss yeah well I know there's a lot of people that don't believe the story you know Al together but uh you know I it's uh it's difficult that you know there's really a limit to what you know what else could I possibly do uh you know to show people what happened other than uh you know some of the information and things along those lines um what kind of work are you doing now a variety of things I mean everything from uh I have three separate companies one
(1:02:35) is uh deals with uh commercial photo processing the other one is uh developing uh and repairing Alpha radiation detectors for radiation off of uh plutonium which unfortunately that's going down the tubes because they stopped the testing out here and uh I do computer Graphics a lot of that and uh actually music videos believe it or not are you still building and racing jet cars well I don't I don't do it for money anymore now I just take the jet car out and run it around but uh it's I kind of got scared when most I when I
(1:03:12) originally started racing jet cars there were uh uh like 25 people or something along those lines that were licensed to drive uh and uh now there's like seven and the guy when I stopped racing the guy that trained me crashed so you know whatever else is dead so I don't race anymore you still have the Lamborghini the body is sitting in the backyard the car I take out once every couple weeks to the dry lake and play around two questions do you have any idea how they achieve that proton source as a stud stream is such a
(1:03:44) small reactor it could be a radioactive element uh you could use uh well proton Source could certainly be uh they could using alpha particles for that matter which is essentially a helium nuclei uh and there's lots of elements that can do that the other part is in the video we saw uh the badge had the letters and capital letters MJ WR ver turnover side was that actually on your badge yeah that was really on there and uh I was told Majestic was the level of clearance that that was cleared for now also that makes you know you wonder about you know
(1:04:27) Bill Moore's thing at the mj12 documents and all that is that you know actual or uh considering that uh these guys had made posters that they're here and things like that they could have taken Majestic and made it the name of it just as kind of a tongue and cheek thing uh you know or was that actual evidence that the

you know Majestic 12 actually ex existed and all that so what about your other associates did their badge look at to the one we saw or pretty much so except Dennis has look different and
(1:04:59) for the most part they had different areas punched in him at one time you said that you thought you know uh the scientific Community should be the ones in charge or you know U charge the research of this and everything what names would you put out who do you think would be qualified enough to head a group like that you know um as far as being able to uh decipher what's going on you know and stuff like that do you have any you could on uh yeah they're friends essentially that I've worked with before
(1:05:30) but I know what their expertise actual qualifications go and so forth like that and do you think that the Nam you come up with they get along enough get along well enough to be well one of them was Joe vanetti a guy that I worked with in Los Alamos one of my colleagues and uh I was trying to force his resume on them and uh you know they did take it look at it and I was kind of hoping that he would uh he would be a big bone to the project but uh you know I'd already left by the time you know they would have had to
(1:06:00) look at it uh concerning local sightings here um I've uh personally seen uh two at one time maneuvering and along with a third one later and they looked and performed exactly like your video that you took that night that was broadcast uh now not to I'm not attacking anyone that's had sightings but uh you know there are a lot of there's a lot of atmospheric phenomena that can relate to I be to sound like Phil class here I mean just to to give but I mean just to give it a fair shap in fact uh what's that guy's name
(1:06:46) uh Glenn Campbell wrote that area 51 guide and uh brought up uh I don't think he believes my story but uh I think he uh brought up some very good points in there and that a lot of that stuff can be mistaken and uh if you're looking at something with the naked eye a lot of times it can look like it jumps around and things like that especially if you're staring at it for a long time uh it all depends it all depends how it's like that obviously if but something dramatic if something is close if
(1:07:13) something makes a a tremendous jump a great distance other than a little you know tiny white light that looks like the head of a pen that's a different story you know and if that's what you saw then that remains unexplained that's what I'm referring to because it was very close both of them were very close and they would get brighter and darker just like your video sometimes almost strove and they were down on the ground God Bri took off and moved around and my main question going ask is that
(1:07:43) not all of the time the light was on it seemed like when they were getting ready to take off they' power up get very bright and take off but when they were moving around they can shut the lights completely off now they can't shut them off what happened is the craft probably pitched with the bottom toward you and it looked like the light was off because you can't see the light from the bottom I see thanks uh two questions one is nothing both but why do they generate light why why do you see any light at
(1:08:08) all well just did just answer that one first is uh that's essentially operating like a fluorescent tube anywhere you have uh you can take a l a powerful radio transmitter and you take a neon tube and you bring it near it it's going to light up just because the uh the atoms are getting excited and surrounding right you know the electrons go to a high energy State you drop down and release a photon and that's what's going on okay and secondly just to change the venue and force you to culate I you have some time to think
(1:08:35) back on some things you want to elaborate any more on your uh your ideas what containers are and why we refer to Containers as containers I I can't even guess you know all I can say is exactly the way it was written and you know because as soon as I speculate on something you know it's people are going to lean towards that way and that's not fair did those documents at all ascribe a purpose to why these genetic manipulations are being done no you know this was not a large briefing I had 90 of the material
(1:09:06) that I read was dealing with my project and when I mean briefings I mean two sheets of paper is the uh just the information I got on whatever else was going on probably to alleviate you know my curiosity and that was about it what do you know about the Aurora is there anything about the Aurora that might attribute to now the Aurora I did see once on the way out there and the only reason I see it's an Aur the Aurora is uh I uh I was told it by Dennis in the bus and uh it makes an

unbelievably loud sound and uh
(1:09:38) I I think when I heard it I said it sounds like the sky is tearing and from what I understand it operates on a liquid methane powered engine there's a lot of this information has gotten out in uh Aviation week in Popular Science and it looked if this in fact was Aurora was certain a strange aircraft it looked like if you know what the old X15 looked like a very long Slender Craft with short Wings on it and a square exhaust that had little veins in it quite is it quite large is it large large yes it's
(1:10:10) it's quite large it's a really overgrown thing and uh there were a couple people that came up who I described the sound to one of them was uh John Andrews from the testers model Corporation and they're always spying around to make the most recent models of the stealth and things like that and he heard the exact sound that I described unfortunately he couldn't record it but that really got him lit up he probably has more information about it than I do yeah okay when when you listen to some abduction reports whether or not people
(1:10:44) believe it or not there seems to be a Common Thread of people being moved by blue beams of light uh do you did you ever talk to anybody in your work about technology that could explain that or is there extrapolation systems that you work on principles that could explain something like any of the three gravity amplifiers could do that could LIF something off the ground or for that matter compacted into the ground that's not a problem and because the craft in fact can operate on one amplifier in Omron mode hovering that would leave the
(1:11:10) other two amplifiers free to do anything so I imagine they could pick up cows or whatever else they want to do but you know the craft that I worked on there were there was Abol no provision for anything to come in through the bottom of the craft or anything along those lines so I I don't how if that in fact does happens in a completely different type of craft does a blue sound is a blue color consistent with what you would expect that's more consistent than the graph's glowing orange because you
(1:11:37) know the interaction with the it should the you know nitrogen atmosphere glow blue did the ship appear to be cast at one piece of metal not cast at least mark it was injection molded CU there was no sharp objects even where the seats meet the floor is curved the top of everything uh I think the analogy I gave it looked like it was completely made of wax and heated till it melted and then cooled down everything is completely perfectly rounded and uh if in fact you're talking about something that's uh containing a high voltage field that's
(1:12:10) exactly what you want to have to know prevent the corona discharge from spraying off how can you focus a gravity wave on something that's so many millions and millions of miles away well first of all I don't think they focus it that far away like I was talking to with someone else uh I think these trips are made in several small jumps because the amount of energy required to do something like that and the it's not really that not the amount of energy but if you're looking at three amplifiers that Focus down to you
(1:12:41) something the size of a tennis ball that the amount of precision that's required to move the amplifier with minimal deviation out there eventually is going to exceed anyone's level of technology so if you're doing a jump of a thousand miles I mean that's tremendously impressive if you're doing a j i you know I can't see them jumping a light year much less 30 it just doesn't seem possible okay do you have knowledge can you speculate on what these small silver real appearing looking balls are that
(1:13:17) seem to be associated with crafts I never heard of them in the the video surrounding UFOs and Mexico's C during the eclipse there's some very remarkable uh video of a a pulsation of some sort of field surrounding these UFOs would that be an attribute would that be a tributal to the type of Technology of USA it's possible an optical Distortion absolutely you saw a pulse pulse and the the polarization of the pulse seem to be changing as well that's certainly possible yeah in your video that I saw last night
(1:14:01) mentioning hading a human brain and that that could be broken by either rock music or stimulus rock music I think I did I actually see that in the tape music yeah apparently whatever I don't know what else to call it other than some sort of anesthetizing hypnosis along those lines but anything that distracts attention uh at a high level and you know certainly uh you know some sort of stimulant drug or something uh that gets someone riled up would you know would not uh permit that to happen it's just like in in modern hypnosis or not really
(1:14:45) modern hypnosis but in hypnosis in general if you're not in a relaxed

State you're not you're not going to get into that level of Consciousness so uh you know if you're in a very alert awake State it's going to be hard to uh you know cause that effect if you know again if in fact that is correct information what context was that information in that dealt with some of the biological effects of the uh of the aliens on I think essentially on the human race is what it was uh is how it was termed
(1:15:20) it this was in I think it was in part of the autops reports because they had the single organ they had in their body uh cross-sectioned and and split up and I think there were there was a comments in there about what different functions of the brains are and I think that's where this came up is they're trying to relate some unknown lobe of the brain to uh to this function but that's so typical there again like in particle physics we don't know what it is so hey that's what does it you know
(1:15:47) it's not necessarily true uh yes u i I hope you won't be offended by this question I I have to ask it to verify your bonafides uh have you ever gone by Any Other Name have I ever gone by any other name I know been Bob laar from birth as far as I know yeah um do you have any other biological information on the aliens besides that they had one or no that's all I have and that was uh essentially just from looking at a photograph so we don't know if they eat or drink or they probably do but I don't this is really just a comment
(1:16:37) because you mentioned how you feel about Billy Meer that little scene but you said that the craft that you worked on looks just like the craft that from the Billy Myer one of them yeah however um the beings that Billy Myer L was in contact with our supposedly full siiz like average human beings and you said that the TR you worked on had that a full person could not but if you looked at the Billy Meers information I think somewhere in there maybe I've got this wrong because some of the stuff has gone through my head that they the people are
(1:17:18) large people that apparently flew that craft did not produce the craft you think Billy Meyers said it was uh it was obtained from creatures that were 2 m tall or a meter tall or something along those lines which craft is that the craft that they the Billy Myers the case Billy Meer yeah well they claimed that they were operating the craft during those contests well so are our guys for that matter so I imagine they could be retrofitted but you know I I don't know I can't go either way I I know the one
(1:17:47) that I worked on was small and uh was certainly uncomfortable for you know anything in the area 5 to 6 ft to walk around in were the other um eights To Us by the same aliens and I don't know that's information that uh you know wasn't given but I did I think as I said on my tape in an interview somewhere one of them absolutely had a projectile hole through it and uh the only thing I don't believe it was shot down this is a personal belief but uh more along the lines I believe it stood up on its side
(1:18:21) just to see you know how the metal would react to a highp speed projectile going through it you were you were there for what four to 6 months yeah um you had a lot of contact with security obviously yeah too much es how did they act it each one no I never talked to them I can't stand them they only went so far you know if I walked if I was in the lab area and I went to the bathroom the guy that came with me or that was by the door door went to the bathroom he would go so far and if I was leaving the perimeter some there would be another
(1:18:59) guy that went from that distance on was he arm yeah oh yeah was he Army Air Force can you tell I don't know any insas on his uniform no he might have been uh like I said they had a dark blue uniform most of the guys there except a few of the people outside had that desert camo Beret C no they didn't have any hats on there wasn't anyia or anything on them they just had the pistol and that was it Bo there you know there might have been but you know at the time I probably didn't pay much attention to it I was trying to
(1:19:31) put the guy out of my mind that they never wanted to talk to they all seem like a Stern Delta horse pipe or were they like oh yeah yeah they weren't the least been interested in what was going on and you know what they've been briefed on I have no idea but uh you know to them it seemed like we were a nuisance but you know it's the reason that they're there so I don't know they did you ever see any inside Hardware this machine the nuts in bolts wires and obviously probably did did it look like our nuts and bolts and wires
(1:20:06) we get in a hardware store or what well as far as fastening devices everything was formed together there were no nuts and bolts uh wires there were no connecting wires even between electrical systems um so what what was the course of

energy how did it go from one area to another area the best guess is essentially it operated like a Tesla coil does a transmitter and essentially receiver tuned to the transmitting frequency and receives the electrical power and you know there again that's not real advanced technology Tesla did
(1:20:40) that in the 30s I think lights on a console with a plastic no no lights no lights was the craft monolithic construction excuse me I was the craft monolithic in instruction yes the uh could you recount for us and detail uh your memory of what happened the night that you and the group of people were discovered on the perimeter of the uh know the viewing area when you saw the I bet John tell the difference no no it just uh it was it was compelling and I just would be curious to hear he in particular there was one
(1:21:18) aspect of the story he said evidently when they were uh vehicles with some 10 unmarked Broncos were how many he said five on each side of the road 10 must have been a different time no you jump from the either jumped from the car or left the occupants of the car to go out into the desert so that you wouldn't be discovered amongst the people there then you return that's true okay what really happened we uh we drove out well I mean John Le's a nice guy and I like him but you know he does have a tend tendency to
(1:21:52) add about 15% color to stories and if a story goes through them twice it's [Music] 30% but um what what happened that night is we took a uh Jean uh my wife at the time and her sister we going to go out and see what we could see because there was a test flight coming up and John knew that we were up to something because we didn't invite him in and he showed up at the house and said okay you know well we're going and you know come on um we had rented a car because the only reason we rented a car was because sister-in-law was in from out of
(1:22:37) town all I've ever owned usually as sports cars they see two people and uh that's all we had so we had rented a car and we all piled into that and uh we drove out there I don't remember what time we got there at but we it got dark we waited right Till Dusk to dve up the road and we got uh probably about 7 miles in I think and we were very careful not to hit the brakes because we didn't want the lights going on because we knew there by watching up on the road beforehand we knew there were Security Guys running around just
(1:23:11) looking this the mailbox Road no Ive never been on mailbox Road it's the only it's groom road that you know big one that goes up there well it's probably on mailbox road but I wasn't didn't watch anything from there um we drove probably about 5 to 7even miles and I had brought we brought all kinds of stuff with us we brought uh gerer counters we brought a celester on 10in telescope I brought a 9mm pistol because I didn't I really didn't want to get caught and uh we came up there and as we stopped
(1:23:46) the car uh my sister-in-law was driving she stepped on the brakes and so we stopped right there and just just waited we didn't see any reaction and then somebody opened the door and the dome light went on and as soon as that happened two different sets of headlights lit up on either side of us and we said that's it we're dead so uh I went in the truck and I got my pistol and I went out to the desert they were far enough away oh no what happened no I got that wrong we we hopped in the car and then started really all and us
(1:24:17) back to the exit if we get to the road in time you know we're out of their jurisdiction there's no problem so we got about halfway up there and I think there were three Vehicles maximum I stopped and you know we figured we're not getting out of there because uh as we're getting close to the top of the road you can see another vehicle pull in I said well you know we're draft on I got off and ran out to the desert uh now the rest of the story is from the people that were there because I was out in the desert laying down on
(1:24:46) the ground uh supposedly what happened was uh these guys came out John set up the telescope real fast and um that was the best excuse he could come up with and the guys came over and said I think John interrupted him say hey what are you guys trying to do a drug deal or something did we interrupt something and you know they kind of just shrugg that off and John said well we're looking at Jupiter and uh and they said what are you guys doing out here they just ignored whatever he had to say and went on for a while I don't remember the
(1:25:19) conversation because I wasn't wasn't there but uh now it was Pitch Black you couldn't see your hand in front of your face it was a moonless night and they said all right we'll just get the hell out of here they backed off down the road and they stopped but we didn't know that and turned around you can see all this happening right no my head was down I didn't want my glasses or my white face

shining so um a few hundred yards away a few yards away they had stopped no one knew this at the time and I came
(1:25:46) back you know out of the desert and uh you I'm usually very sarcastic and joke around and uh what I said was when Jee Huff was standing there I said man we're lucky those guys didn't see the other 50 Delta Force we had out there or something along those lines you know that could have taken him out at any time and he laughed you know it was just I don't remember the exact content of the joke but uh those guys heard that and they're sitting there watching us so I guess now I learned about most of this
(1:26:12) from the debriefing afterwards when they took me in so the guys that were there were on top of the truck or Jeep they had and they went to arms because they thought there were guys standing out there so they had us all under gunpoint we didn't know was going on and we're sitting there talking about everything that had happened flying saucers and all that stuff sitting on the bumper and we're just looking off down the road and we see a little green light drop on the ground and roll around and it was a
(1:26:37) night vision scope and someone picks it up and it disappears and you know we all said well let's get the hell out of here at one of the guards it dropped a night vision scope and it rolled on the ground and we could see the little green image rolling around then you see it pick up and you know and disappear and it was only like from here to the you know the The netting over there that was the distance because it was completely dark and so we got scared and you know as soon as we got in the car we all agreed
(1:27:02) they're right there you know and they heard everything so we took off and we got to the you know top of the road and Lincoln County Sheriff was there and that was another major hassle so he wanted to search the car we wouldn't let him and he was in radio contact with the baser these guys out there and uh they said where did the extra guy come from and you know that completely confused him because they had never I guess they had never seen me come up or something like that they thought I was another guy that walked around however
(1:27:31) anyway the big problem was that there was another guy and I think legally they can only hold you there for an hour and we were there for like 59 minutes and he said you know okay go but you know he really wanted to search well I got a backtrack of that John L made the Colossal mistake we were under just minimal suspicion at the time and he asked for everyone's ID and in the trunk we had everything the guy counters and all that stuff and you know the people that didn't want to show their ID said well we don't have it we left it at home
(1:27:59) and the other ones that did you know took it out and John said wait mine's in the trunk and he op the trunk and there's all the stuff laying there and that's that's when the cop decided to keep us for a long time we've always hassled John about that forever and he said so you guys are out here with a gagger counter a telescope and all this other hardware sound equipment and video stuff and you're just out you know just out walking around and you know we all said yeah and you know so that's when he
(1:28:23) kept us and that's that's really what happened that day and the following day it was a work day for me but I was taken into debriefing and yelled at for long never allowed to return to the S4 after that time right well that was uh that was kind of a turning point you fired then you officially fired no I was never fired see at the time they were going to pull my clearance before that so it's I don't know if that was ever clear the main reason was for me not progressing any further there was they halted my
(1:28:53) clearance because at the time I had my phone was being tapped and I I allowed that I signed the uh you know the order to do that and I'm go through my background and uh you know at the time I you know didn't tell my wife what was going on until later and you know as things progress but uh she was having an affair with somebody on the phone line and it was her flight instructor that I was paying for flying less but U as uh this was going on just like in you know the astronaut program not only do you have to have you know security as
(1:29:28) far as and no connection to foreign governments or things like that but as far as your family life it has to be stable because they don't want any you know loose cannons running around so this was going on I had no knowledge of it and they said well you know we're going to what they were going to do is not say anything to me and wait until one way or another the situation resolved itself either you know my wife took off or you know you know came to an end or whatever so so uh when I was in uh debriefing essentially that day you

(1:29:58) know this is when they really started attacking me and hassling me and that's when they took out the the phone transcripts you know hey by the way Bob your wife's [__] somebody and that was uh the last time I went back so that was a real rather profound meeting variety ways so that was uh must been just pretty bold over yeah did you see stuff out at es um that you chose not to talk about did I see stuff yeah is there more going on that that basically you decided not to yeah but not that really changes anything it's
(1:30:31) the same thing it's just a little technical things that you know it's really not worth bringing up yeah um real quick how did you see the paperwork on how they got U Got the discs to start with no were there it's pure speculation what did you have the guy coverters for and do you believe that are there dangerous levels of radiation uh in this area because of testing theyed they did previous now to this point we just I think we wanted to see the background level and uh I don't remember it was just like a
(1:31:06) staple to take along with you you know understand this area best high for radio radio activity the background levels are high in this area is that true you know I don't know we had the gy counter but before I got to measure the background I don't I don't know what it was B this might be important because Jac B is such stature and he's trying to debunk you on the basis of your supposedly he's telling your report is only that you saw a DVM and a oscilloscope at S4 as far as the equipment there yeah this is another
(1:31:37) thing that's gotten so Twisted Jack B who's a UFO writer some um came to see me in Las Vegas I don't remember how long ago it was but after the George that thing and um he came down with some producers from Universal Studios who was going to make a movie about his um his book Intruders or not Intruders that's someone else uh Dimensions something anyway they came down with him and they said well we want to know what you think of this and uh you know just give us your opinion if this Jes and I looked at the information
(1:32:12) and he explained it to me and I said that has nothing to do with the craft that I worked on or any of the technology that was involved you know period and uh Jack really didn't appreciate that but they asked for my opinion so I said and you know as far as the conclusions he's drawn I don't agree with him I think they're completely wrong and so on and so forth so he really didn't like me after that point so he began to interview me and he said well what did you do here and here and I went over things and there's one and
(1:32:39) this is on tape I don't see why he would even make a fuss about it but he said well well what kind of equipment did you have to work with and I said a wide variety of you know of different things and he said well what about at your bench what was on your bench I said anything you'd find in a normal Tech bench I said oscilloscopes dvms things like that and he said okay and then you know later I heard through the great fine that he's out doing election Bob Lazar said he's back engineered the flying saucers with an oscilloscope and
(1:33:04) a DVM and you know this is on it was on tape and I I think a lot of that's he's really pretty pest at me for shooting down the movie but I had no idea that was going to be the effect or else I would have reserved my opinion you know but uh it's just the way it goes what was the physical layout of the compound where you worked at like could you describe it uh it was long it was about up the side on the side of the mountain range there uh all the hanger doors went alongside and then there's a long car door that goes down in back of
(1:33:38) the hangers uh off that Corridor comes uh several rooms only two or three of which I've been in the medical area the uh lab that I work in and then there's a small little room where I read some briefing and some things along those lines but I've haven't been in any of the other rooms or know if there are things behind it or underneath it so that's that's all I can help you with on that um last night uh um John leer said that you uh really didn't believe that there was anything unusual going on in
(1:34:11) those space shuttle shops you thought it was Ice pars you know these ones they've been claiming are oh yeah uh you that's not ice that's dust or dust whatever no if hands or butts about that you know that's uh have you seen the hland yeah I've seen the whole thing I've SE a copy from NASA and that's uh you know unfortunately it would be your need if they were flying saucers but if you see a bright white flash first that's the positioning Thruster firing on the left side of the shutt the
(1:34:40) shuttle didn't change right no it doesn't it it normally doesn't do that you know they those are station keeping thrusters and that it all depends if the Thruster is firing in the direction of the shuttle keeping its forward momentum

there'll be no attitude change it's only if you're firing a pitch rocket well you see a change like that and the fact that it flew forward means it was firing in the direction of the shuttle so those little dots and things you see I mean I firmly believe because I've seen other
(1:35:05) things along those lines are right on the lens they're not on the horizon that's why you see a flash there's a delay and then particles that are normally floating in space you see Dart off like that because of the delay time from that and uh you know until I see something else that uh leads me to believe this I know it it it looked neat you know like there was a flash something came up from the ground but if you just watch that and think that these are right against the lens and that right flash is one of the V uh uh
(1:35:31) thrusters firing that uh you know you'll probably have a different opinion of it what about the right angle move it's a 45 turn which means it has to stop you're talking about little dust particles that are moving and then when the Thruster fired you know it doesn't there's there's no Mass to them and they reverse Direction there other particles in the video that do the exact same thing they're yeah if you look at the whole video and not just the crop down there's all kinds of junk floating
(1:35:53) around and when that Thruster fires there's about a 1 second delay and everything goes flying off exactly like youd expect everything goes flying off and drifting except for one item that accelerates at like 10 times the speed of all the other items in the video yeah but there's there's have you seen H's detailed breakdown yeah what about when he's talking about the light coming over the horizon of the planet under the layer what he call layer and over the ionosphere the over the horiz yeah but
(1:36:25) that doesn't it it still doesn't make sense it it doesn't take into account that something is right on the camera lens the tape that you listen to did it have the last transmission from Mission Control they have I really don't I don't remember no I'm not standing on this like this is absolute fact but from what I from what I've seen most of the have up which means pay attention to keep your mouth shut I don't know I mean that's that's my opinion and I haven't I haven't seen
(1:36:56) anything to Veer me from it but you know I I always remain open-minded but uh I don't know that's all I can say you mentioned the photon earlier do you think physics taking a wrong ter by looking for exchange particles talking about the strong force or gravity not clear on why you about the grav about the gravit time yeah every every other Force seems they have exchange particle with it no not necessarily I mean they make it have one but uh you know as time goes on that uh that really hasn't held
(1:37:34) true uh and you know the bottom line is they don't well first of all they don't even believe there's a graviton anymore so I'm not the only one um as far as exchange particles you know still though some of them like The Zeta particle maybe that's maybe that's an actual thing but uh you know when they're looking at transfers of energy I think these are scapegoats you know for the most part and uh you know a lot of experiments that I was doing in Los Alamos essentially was uh along these same lines but uh you know
(1:38:07) other exchange particles like the Intermediate Vector Bon you know I don't I don't believe that thing exists I really don't I think they're grabbing it straws and just coming up with excuses did you use or see any any kind of drawing mechanical drawing or electrical schematics any kind of documentation special which we don't know uh of what we knew of the amplifier and Engineering layouts and things along those lines and I've duplicated those at home travs gravity well and zero gravity is
(1:38:43) there a difference in I mean the the ability for how is it affected by Zer well zero gravity is ideally What It Wants I don't think it wants in any other interactive gravity field no not really but as far as you know there's never been any test no no tests out of the atmosphere you know as of 1989 when I left since it is controlling gravity would it be possible that these things could either make themselves entirely invisible or a field of invisibility by bending the light around the outside of the ship yeah I
(1:39:21) don't I I that's a byproduct of what's going on because you know just as you know any large source of gravity bends light and you get an intense Focus Source like that and it's going to really distorted can I understand correctly that you just said that you duplicated the graes some of the equipment in most of the drawings yeah and when you say duplicated you mean you test it to see if it works uh no I'm not tested it because I don't have the facilities to do that but like I

mentioned to someone
(1:39:50) else earlier that uh this summer I'll be patenting those drawings and that uh that device itself so should anyone decide that all of a sudden they discovered it and since they've made no claim to it I'll you don't know about this come on come on you know that's that's really part of the Federation The Intergalactic patent treaty don't you know about that no I didn't sign that that's right some I yeah would yeah sure okay talking about the gravity amplifiers how do you build a gravity
(1:40:28) wave detector that you can determine the frequency and the source direction of a gravity wave em the planet other source well actually gravity wave detector is a tough thing to make and uh there are there they are being made and I don't exactly follow what they're doing but I know the basis of of what it is it's a giant drum it's uh 20 or 30 ft long and it's filled with dry cleaning fluid with carbon KR chloride in there and it rotates and I haven't I never paid much attention to it I have no idea how that detects a
(1:41:03) gravity wave but uh there's I think Caltech has even funded funded one of them well mean the gravity W you're talking about well gravity waves and gravity W what about the small gravity gravity a you what the frequency the well the frequency the that the actual reactor operates at is like 7.
(1:41:24) 46 Herz it's a very low frequency that's the frequency or universally allity that's the frequency that the reactor operates at did you use any computer process in the Control process or in the Control process no I wasn't affiliated with that what why would you suppose that that the government would continue to spend these massive billions of dollars on on Space projects that are extended you know 20 years into the future when it knows it has this technology that would make them all OB repat the question oh he wants to know why the government would continue
(1:42:08) to spend millions and billions I guess of dollars on Space projects when you know they have this technology and well first of all you're assuming that you know the whole the whole one of the government knows what's going on and that's probably not the case NASA probably is aware of what's going on here uh second of all just because they have the stuff they haven't you know they they haven't left the Earth with it and they won't so we still want to send things up in orbit and uh that's the
(1:42:34) most efficient way you know way we have of doing it is essentially building a big firework to go up there um but if they spent the same money in developing this technology or half of it uh they they'd probably be able to not necessarily you know sometimes all the money in the world doesn't get you anywhere you know though though it helps it uh and of course if you want to keep something secret you know that's out of the question but you know putting that aside just dumping you know billions and billions of dollars into it sure you're
(1:43:00) going to make big strides and you get you know real reasonable people to work on the thing but you're still going to get stuck you know around the area of where uh you don't have proper materials or you know the techniques required U you know to manufacture these things and that's where you get stuck if your patents or when patents go approve what do you plan on doing at that point nothing just paying the yearly fee to him and leave him alone can you comment on uh your debr thing a little further Happ
(1:43:37) uh they really uh didn't go into much it was they wanted to know what we were doing out there and uh they went into well you know we reviewed this was secret and when we said it was secret you know didn't mean bring your friends here and you know things along those lines they flown in uh and it was my impression that they didn't know what was behind the mountain what we were watching they were just told to guard what was going on had a point of bringing up the uh you know flying saucers and things of that sort
(1:44:19) and uh that's when they threatened me that's when they mentioned the thing about my wife and you know they were really pissed about that and they

George Knapp 1992 Interview about Bob Lazar and Area 51 / S4 #1 - YouTube
https://www.youtube.com/watch?v=ZvjqwamDpa4

Transcript:
(00:00) and welcome back to a brand new edition of dark matters radio my name is Don Ecker I will be your host and tonight we're taking another one of those blasts into the past on November the 22nd 1992 which incidentally was also the anniversary date of the death of President John F Kennedy on my original radio program UFOs tonight

which that particular time was a Sunday evening I hosted UFOs tonight and my guest was mr.
(00:45) George Knapp now I'm sure everybody that Tunes into this program will know who George Knapp is he's an award-winning television journalist from klas television channel 8 in Las Vegas Nevada George has had a long long history in exploring esoteric phenomena ie read that UFOs and other facets like cattle mutilations and over the years George has broken some huge stories for example George was the guy that brought us the bob lazar story starting back in 1988 when Lazar appeared on George's television program in electronic blackout and a year later when Lazar
(01:41) went public now I've known George since that very time since about 1989 and how many of you are aware that George for a while left klas TV and began his own production company he did a series of documentaries called UFOs the best evidence incidentally at that time I was one of the people the George interview now on this particular show were talking about that we're talking about George's contributions to the UFO subject and what brought him into the fold now without a lot of further ado let's start
(02:36) this little excursion into George naps best evidence and welcome once again to another edition of UFOs tonight hello my name is Don Ecker and I'm the director of research for UFO magazine which incidentally happens to be the world's most journalistic and ethical publication on one of the world's most misunderstood phenomenon UFOs and if you've been tuning in for just about the last year you know that each week at this time Sunday evenings we do a show with a fascinating and informed guest on
(03:15) one of the world's most misunderstood phenomena now you might be asking yourselves just out of curiosity why we're doing UFOs tonight well the UFO phenomenon has been around for a long time and is an extraordinarily misunderstood and misrepresented enigma while many other TV and radio programs have sought to exploit the public's interest in this phenomenon we here at UFOs tonight are going to do what no other show has ever done before and that's totally explore investigate and probe just what is occurring and
(03:50) tonight we have a special guest that's going to help us do exactly that spending 10 years as an anchorman an investigative reporter on Las Vegas is klas television and hosting his own talk show television talk show on the record mr. George Knapp in 1989 broke probably one of the biggest stories that had been broken in years on the UFO phenomenon and that was the story on Bob Lazar and joining us tonight on UFO tonight from Las Vegas is George good evening George bye done you know how much respect I have for you and Vicki
(04:30) and UFO magazine the work you're doing so yeah I welcome the chance to talk to you and your listeners well we sure appreciate it George you've been involved in this crazy field now off and on since 1989 prior to encountering the Bob Lazar story which incidentally just a couple of weeks ago we had Jean Huff on here as a guest it was up to this point one of our most listened to and unappreciated programs did you have an interest in this subject or have you ever encountered it prior to that it was prior to 1989 I mean I think before that
(05:05) I had the same kind of interest at any reasonable thinking open-minded person would have you know you figure it's an interesting topic but you it's not an obsession in stories about area 51 of course in the news business in Las Vegas had been floating around for a long time not necessarily associated with flying saucers but about a whole variety of black projects the the u-2 spy plane we knew was was based out there the sr-71 particle beam weapons testing programs the commandos that maybe you'll fated
(05:39) raid on under Iran to rescue the hostages during the Carter years were trained there a lot of strange stuff has gone on my news director at klas bob stowed all it had had a fascination with the area my managing editor a guy named that day had also had a fascination with the area and and actually broke the story about stealth technology being developed there he did that with the help of a guy named John Lear who was probably known to your audience an aviator and now a UFO researcher who became an important source for him in
(06:09) 1987 John Lear came cruising into the TV station with the mj-12 documents and another pile of other UFO materials trying to interest my bosses in the UFO story they weren't buying it they they thought that basically people would laugh them out of the room I overheard part of the conversation I said to Lear before he left hey let me take a look at that stuff and I found it to be intriguing and fascinating I put Lear on this talk show that I reduces the time called on-the-record and just basically let him go John is a

(06:42) controversial figure and UFO circles a lot of people think that some of the stuff that he says is not supported but it was very interesting it seemed to touch a nerve with the audience because this little public affairs show got the best ratings the best public response had ever had George that's not the only program that you've hosted that garnered supremely high ratings not to mention probably one of the most bootlegged series of television shows ever which were urine news reports when you broke the Lazar story hi Don I'm very
(07:18) impressed by by whoever is running the underground UFO videotape distribution system it's amazing how far this thing is gone klas TV is never formally distributed the tape although it seems like I mean it's been three years ago this week since we started the series and since we did that first series and I get calls almost every day from Australia and Ireland and Germany and England and just about every state in the Union you can almost tell when the bootleg copy hits a new area because all of a sudden you'll get five five phone
(07:51) calls from Minnesota well you know the program that you aired I'm sure upset a lot of people and I will never forget on the I I forget whether it was the first series of specials you did or whether it was the second where you cumulated it with Lazarre story you had mentioned that while an investigative reporter you probed the Mafia you probed organized crime in Las Vegas and you never encountered anything that generated the fear that you experienced as an investigative reporter dealing with covert aspects of our government I mean
(08:30) that this was a heavy heavy duty statement for you to make well it was and that I didn't make it just in a Cavalier manner it really when Bob went on the air he had been on the air in May of 1989 but he was using a pseudonym when lemon on the air wasn't it yes when he who he was I mean the phones rang off the hook they basically didn't stop for a couple of weeks with other people who've had bits and pieces of information no one at the time who claims it's a broad spectrum of information that bob said he had but
(09:04) other people with bits and pieces about the program out there what's amazing is how many of these people and I don't mean to sound like some exaggeration paranoid type person but how many of these people who called up and offered little bits and pieces of information were were contacted subsequently by agents of different government agencies in one case it was a guy who said that he prepared tax returns for a lot of the people who worked at area 51 and it obtained information that from them that yes there were alien craft were stored
(09:37) and being tested out there the day after he called me of that information he gets a knock on the door from two guys they they're from the Secret Service the Secret Service yeah that's Department of Treasury yeah what would they be doing there well they he said that they were trying to lean on him about an older matter that he dealt with I mean he dealt with tax matters but he said the message that he got and I have this in writing the message he got was very clear it's to shut your mouth about what you learned about area
(10:03) 51 there was a lady who I contacted through a law enforcement person that I know here in Las Vegas who had worked for a contractor at the Nevada Test Site a company that's very much involved in very classified programs national security programs she was a secretary who had sat in on a number of meetings involving her company and and military officials she took the notes she said that she had a great deal of information that was related to her about flying saucers being recovered she remembered Roswell being mentioned and she remembered them
(10:37) saying that the technology was stored at area 51 I had arranged to get this information from her in a face-to-face meeting through this this third person who as I said was a lump enforcement employee after those arrangements were made on my phone at the office this lady gets a visitor visit from somebody who from the company she worked for and they told her in essence physical harm could come to she or members of her family if she talked about it that she was still under under a confidentiality oath basically what they said was we know
(11:10) that you do a lot of traveling we know your daughter does a lot of traveling we'd hate to see anything happen okay my name is Don Ecker the program is UFOs tonight here on the cable radio network my guest this evening is veteran investigative journalist and television anchorman and host former host of his own television talk show on the record mr.
(11:33) George Knapp the gentleman that broke the story on Bob Lazar and area 51 if you're living in the 8th one eight three one zero or two one three area and we have a caller already George yes good evening ah good evening Don how are you this evening I'm just fine I'm sure you recognize the voice right is this video dangerous

and uh mr.
(11:55) Knapp this is a Dave Aaron of the UFO audio-video Clearinghouse calling you in Haifa California how are you the sea okay was that a free plug Dave no I want to make sure George was angry at me because I'm one of those people that are rigidly distributed some of those UFOs the best evidence but I wanted to talk to mr. Knapp in a little bit different vein if he can if he can go along with what I want to kind of relate here we and the conversation can you hear me okay mr.
(12:20) Knapp we'll give it a try go for it when you came out with that particular show the information there was so overwhelming on UFOs the best evidence that it was true that we did duplicate a number of copies from that show that we got from one of our members in Nevada in in the Las Vegas area and I had known about the show but the tape had come here my question to you is if something very tragic did happen let's take the whole Aikau back in World War two or something like that and someone had gotten that if there was video back in
(12:57) those days and we could tell about the atrocities that were going on during World War two do you think that that would have been in the same vein as getting that UFO um for my information out via videotape across the world in 1988 or 89 when you did UFOs the best evidence well I think you you misunderstand me little bit dazed the the anger that was expressed to you was not from me personally because personally I believe the more people that know about this topic the better it is klas TV had never had this kind of
(13:30) response to any kind of programming or series that is it's done before and I think it was it was surprised to learn that the people had dubbed this off and we're selling copies of it I just don't think they knew exactly what to make of it I know I got twenty copies from foreign countries myself George so personally like I said I you know I'm called almost everyday by people who say that they've got this copy and that copy from the source or whatever I'm glad that people had a chance to see it koe
(13:59) asses there's no conspiracy involved and their their failure to distribute this thing to a home market it's just uh there is circumstances but I'm glad that you had copies of it I'm glad that some of your subscribers got copies I was in fact David you don't even know this but my company now is a subscriber to your stuff well we have something very interesting for you then I thought for sure you would be on because Don Ecker had usually tells me a week in advance so we can put it on our 900 number I got
(14:32) a videotape today and Don knows I sent him copies of just about everything I had a tape deliver today kinda looks breath this man was trapped in the woods in Canada this was taken a Halloween night this year and I watched this thing about 11 times today and this is the most incredible tape I have ever seen from eight o'clock at night to 4 o'clock in the morning this guy was hiding in the bushes videotaping UFOs no wait a minute this is a recent thing this is right off hot news right now as I'm talking to
(15:07) both of you and this just happened it happened October 13th 1992 what is that two weeks ago well several weeks ago Halloween night right and how much detail are you able to to make out of this well what happened I what happened i I assumed now because I I'm just taking a guess at this but since George's you know has so much bribe more broad casting contacts than I do is it a three o'clock you see 3:30 a.m.
(15:37) on the camcorder right you see them hiding in the bushes and you see these objects lying over the top of them and to the right and the left of them then the next thing the camcorder comes on in the afternoon early morning say about 7:30 or 8 o'clock and like in this scene is 11 discs going back and forth back and forth then you see the police show up and then it's dark again so mainly I wanted not only mr.
(16:05) Knapp and the listening audience out there to be aware of this tape but I want to take this a step further and that is with so many millions of camcorders all over the world so many people calling you every day done so many people waiting to mr. Knab for wedding to KL is the only people that don't believe in UFOs are the officials now it would appear that way Dave okay well look we have got to move on I've got an white one quick question um George people are always asking me what you're doing on the phone what are you
(16:37) doing these days I work for a communications company we are they have given me the green light within the past month to go ahead and pursue a whole series of UFO documentaries we want to do it from kind of like soup-to-nuts bring it to mom and pop America and later to the rest of the world in a way that hasn't been done before well we have the footage and you can always either contact us through Dawn or

through us direct and we'll be more than happy to support you any way we can George thanks a lot Dave okay bye now
(17:05) okay you guys take care of Dave bye bye okay George we've got to take a quick break and we will be right cyber stationed usa.com stick around we'll be right back if you're into the paranormal then you're into Don Ecker and dark matters something I have been immersed in for 20 years lunar research on items known as lunar transient for over 400 years well class astronomers have been observing strange sights light slashes and other things on the move of akut of topics list the nurse calls and everything guesses yes
(17:46) mr. Alan Stern my website I have a list of 100 or so lunar conspiracy theories I had to kind of come to terms with one of them that I hadn't really thought about was the kind of so that might still have enough speculation is at some time in our past or perhaps even today there is another presence on and I'm not talking about indigenous lunar folks I'm talking about the space base by somebody else on the far side dark matters of dawn occur exclusively on cyber station usa.
(18:42) com which I'm sure that there have been many people the last couple of years because of the stories that you broke with this case that have asked you have you ever experienced any problems or threats or anything of a serious nature since you got involved in this situation what's your answer no and it really Frost's me you know because I think Don probably like you and Vicki you'd like to think you're on the right track and that knock at the door you know where somebody says hey you're getting too close would be a
(19:18) confirmation to the fact that you're on the right track well perhaps people in the media though are considered exempt from those forces because of the possibility of exposure well that's true and that that's why I think that was the way that if there is somebody listening in and I think there there was at least for a while the way that they chose to go was to contact the people who were contacting me okay we have a call for you right now on line number one we have Bert from Burbank good evening Bert hello there dot and hi
(19:51) there George is that good to hear you on I have a couple of questions one for you George and then one for the both of you George kind of update us on what's the latest information that you've heard about area 51 well one of the latest things I've heard is they've changed the name you know it went from Watertown strip to the ranch to the funny farm to Dreamland area 51 and one of the things I've heard is they've changed the name because too many people know it what they've changed to do I don't know but
(20:21) as soon as I find out I'll let Don know if he could pass it on to you second thing is they put up some new signs out there this comes this information comes from Gary Schultz who was up at the area five or six days ago with the television crew from Los Angeles the signs that we're always imposing before now say legal excuse me lethal force can be used against trespassers another word shoot on sight which I'm not sure that they died we do that I mean they've got to get used to the idea that hundreds of people
(20:52) are roaming around up there but it's a fairly intimidating intimidating statement on an official sign there are still sightings what they're seeing I don't know it's my feeling that if they ever had alien craft up there and I believe they probably did it makes very little sense to think that they would still have them up there with so many people growing up with cameras video tape method cetera to look for what they're flying there's a whole range of suggestions on that from from people in
(21:23) the aviation industry from the aviation writers something called the TR 3a or the Black Manta something called the F 19 a self replacement so DF 15 of course the aurora is mentioned frequently a whole family of exotic propulsion vehicle I seriously doubt that they still have what we're interested in up there have they been anybody been seeing or videotaping any of the crap that have been doing very unusual movements movements that are far beyond what our normal conception of aircraft would be well a couple of guys brought me some
(22:02) video last week they climbed up the mountain to look down on the base and I really don't know how to describe it on on the radio without using gestures but it was incredibly incredible movement it almost looked like a strobe effect this thing was was on at one point and off and then on at another point in the blink of an eye just dancing around and it almost a grid kind of a formation George let me ask you a question are you aware of a road that is approximately an hour or so across the border from Nevada
(22:37) into California called Zzyzx Road sure okay this is kind of an odd little

thing that happened to myself and my partner Richard Serra day a few weeks ago you're aware that I was down in las vegas to meet with a gentleman down there about some photographs right okay on the way back my partner had had noticed that road and had asked me about it he said that's really a strange name incident and I said yeah it is and I was privy to a story that we're investigating at UFO magazine with the gentleman who apparently underwent or
(23:14) allegedly underwent an abduction right there at that road and was missing for a day and a half okay so coming back Richard said well gee let's stop there and just kind of take a look at the sky because it was a beautiful evening so we pulled off on the Zizza crowed and we were standing out there looking around and I made a smart remark about you know here we are two guys at our age standing out in the middle of the desert no we're looking for flying saucers and we both started laughing about that when honest
(23:43) to god we noticed something I noticed something in the sky at first it looked just like a star and the longer I looked at it I noticed it was moving and it was moving in a zigzag motion it was doing a falling leaf and I pointed this out to Richard and we both started watching it because I wasn't sure my eyes weren't playing tricks on me and we ended up watching that thing almost an hour and 15 minutes and right before we left we looked behind us and I'll be darned if there wasn't another one behind us in
(24:16) the sky doing the same thing now what in the world are these things do you do you think that they are in fact something from off world especially when we're talking about Las Vegas the Nevada area or could they be some type of new military technology or maybe just something to mess with our collective head I mean after all the attention devoted to that area area 51 is what I'm talking about not physics but I just can't imagine that they would still be flying it out there I know that they have played some tricks on the nights
(24:48) when the saucer Watchers are out there they would put a balloon up with a flare hanging beneath it I know I really don't think that the technology that we're interested in is still up there what they're doing I really don't know well you know I have heard some rumors that it was being moved over to Lancaster in California well yes a lot of similar sightings a lot of similar sightings the same kind of craft ok burn let me ask you I need your help on one quick thing here I've been trying to
(25:20) track down some information on the supposed to minute conversation that was blanked out I believe us on the Apollo 11 moon landing who are Aldrin and Armstrong or on the surface right you're familiar with that yes have I think that story was originally broken by maurice Chatelain who at one point had been a fairly high muckety-muck in NASA now I have seen supposed transcripts of it I've also heard which also makes sense that ham radio operators a number of ham radio operators across the world had actually verified this but it seems to
(25:59) me that some of the ham operators would have at least tapes what was going on at the time because I know hams who do that for spaceflight right have you ever heard of an actual existing tape no I have not have you ever had confirmed that this conversation actually occurred I'll tell you what I would do Bert why don't you call me at the magazine and I can discuss it with regular I'd love to thanks guys George keep up the good work we really appreciate the information coming out front you thank you very much
(26:29) Thank You Bertha and we have done from North Hollywood good evening Don my quick question is I would well first off I was introduced into the UFO phenomenon so I'm a friend of mine he gave me a tilt that excuse me a video by Bill Cooper of either of you well go ahead George you're all I think you could take that done yeah I'll go ahead and and talk about it I'll talk about it in relation to Bob Lazar because I think a lot of the problems that bob has credibility wise especially with the UFO hierarchy is because he somehow in
(27:15) people's minds got mixed up with Bill Cooper Bob knew John Lear John Lear knew bill Cooper Bob meant Metsa bill Cooper a couple of times bill basically is now appropriate is the area 51 story for his own you not to mention the Kennedy assassination story that he purloined from Lars Hanson via John Lear it's the the mother of all conspiracy theories if you're not familiar with it I mean he incorporates UFOs the Bilderbergers the trilateral the Council on Foreign Relations the Jason society everybody is in this this
(27:48) plot well George III have to take exception with that because I have not yet heard Cooper mix in the Marilyn Monroe conspiracy well it's it's early anyway a lot of people have mixed up Cooper with lazar and Lazzara come out on the short end of

that because of the association in my experience bill bill was on one of the first shows I did on the record on the UFO topic he was on with John Lear he came on he seemed sincere he seemed scared he said that he hadn't done this before going public with this information about what he said
(28:24) he had read and documents while he was in the Navy he said he wasn't going to do it again he was going to disappear because they've been threats on his life well the first thing that happens is bill Cooper gets an agent he starts appearing all over the place he's writing books he's charging money for these lectures and every time he puts out a paper of what he says he read it incorporates more and more of other people's research right and incidentally a UFO magazine I did a two-part story on
(28:52) Cooper if you're interested on in volumes five number four and volume five number five which basically showed that a lot of his information either was purloined plagiarized or in some cases I suspect totally made up anyway Cooper Cooper's out there I don't mind saying it I mean I think that he's been associated with the latest tripe is that a u.s.
(29:23) satellite is rigged with it back do you have a copy of CIA base no I don't well I'll tell you what that sure is something you want to check out and while we're at it here we have some more telephone calls coming in we have Richard from Santa Monica good evening Richard hey partner how you done that Richard okay did you have a question for your kid I had a question for George and it was a you know I have heard that some producers in Hollywood are gonna do a movie around bob lazar story does he know anything about doesn't tell
(29:56) us anything about it well I do I think a lot of that is Bob's business I'm reluctant to kind of give you all the details there has been some interest I hope it comes off I'm not sure that it's going to yeah there has been some really strong interesting okay well that was my question I was hoping to get more details like differences actually in production it's not in production though okay well enjoying the show well good question Richard okay Don I'll be listening okay you take care George how
(30:31) did you happen to come across Bob I mean this basically could be the COO of any news man's life and it's not often that you know you come across a story with potentially Universal implications how did you happen to meet him through Lear through John Lear and and Don you described it perfectly that's that's exactly how I thought about it the first time I heard Bob story I mean here was a guy who was unprepossessing he's not trying to make anybody he's not trying to convince anyone he told a simple
(31:06) story and I'll tell you the story that he told me the first time I met him is still the same story that he tells now I know a lot of people have have difficulties with bits and pieces of it I do too know there are there are unanswered questions about Bob but but there were stories about area 51 before Bob there have been a lot of people come forward since Bob who have corroborated that information and and I basically feel pretty good about it well Lazar I mean let's face it Lazar stated write it right at the beginning
(31:37) that he was not doing this for any reason other than to get himself publicly known so that he couldn't be harmed is that not the truth well that is absolutely true I mean a lot of people don't know the details of what was going on at that period of time but it was a scary time after he first did the Denis interview where he talked on KOAT STV live with without telling who it really was things started happening in his life and I was a witness to a lot of it break-ins to his house he would come home at night
(32:10) all the doors and windows are open nothing taken he'd go to a gym to work out he come out his car doors are open he'd lock them they're open just sitting out open nothing taken and sounds like what they did to Paul bennewitz I I'm not as familiar with the bennewitz case but yeah it's similar he get calls in the middle of the night and it'd be one word and they'd say dead on the other line and then hang up I remember going to Bob's house at that time at that time period and he would answer the door
(32:39) packing an Uzi I mean clearly there was something going on in his life and he wasn't making this up you are basically convinced that that at least the very crux of his story is is the real thing yes okay now we're talking about the United States of America and according to the Constitution we are all guaranteed certain rights we are guaranteed the right of liberty the right of happiness etc etc now this had to be pretty darn disturbing to you as a news journalist well very disturbing I mean I'm up you do you feel Jorge number

(33:20) one that this was a concerted officially sanctioned at some quarter effort to intimidate him and under that do you feel that his life in fact was in danger and number two depending upon how you answer the first first question how do you feel the idea of taking this to a congressional or senatorial official would be met regarding the first question was there a concerted effort there certainly was what that effort consists of I'm still not sure I mean I have no doubt that these people worked to wipe out his background I have worked
(34:02) on this night and day for three years to try to get to try to track down a paper trail it has been ridiculous the kinds of barriers that have been thrown up I even had congressman Jim Bilbray here in Nevada try to help me out and he wrote a letter to the effect that they've never seen a case like this routine questions were not answered in routine manners generally these agencies they would never say we don't know Bob Lazar we never heard of them what they would say is we're still looking and now three
(34:30) years later they are still looking concerted effort to wipe out his background yes was his life in danger I don't know I I also I wonder now looking back on it whether or not Bob was almost like a test case whether Las Vegas was almost a test market the way McDonald tests a new a new product in different markets we've got flying saucers up here alien technology let's put out the story in a way that we can always retract and see if people freak out and run around in panic in the street well Las Vegas didn't panic but but I
(35:05) think they did a pretty good job on Bob Lazar okay now that brings up another interesting point George as you know I know Bob I've been down to Las Vegas I've talked to Bob I've talked to Jean as a matter of fact Jean was even up here at one point this past year and one thing that has always intrigued me is the the fact that Bob has had an almost laissez-faire attitude about it all now there are a lot of people out there that that really wanted to jump on this bandwagon when this thing first broke
(35:39) and said look this is the first time that it looks like a real insider is out here with the information and there would have literally been tens of thousands of people that would have stood with him but yet when the question started to arise about Bob's background and so forth he had an absolutely he had no interest in in seeming to to substantiate what he was saying that you have any thoughts on that I have many thoughts since since I've been the guy who's been trying to pry him into telling the whole story I mean there's a
(36:14) lot of information about his experiences and this investigation that has never come out I hope some day it will come out it is if you creating it drives you up the wall that he won't cooperate I mean he is lackadaisical he is incredibly sloppy when it comes to record I mean there are big chunks of his life that he's talked about that we cannot verify yet I'm I have worked on this like you wouldn't believe and and getting Bob to cooperate sometimes it's very very difficult that aside I still believe there is a great deal of
(36:50) circumstantial evidence a great deal of supporting testimony from other people who don't even know the guy that he's telling the truth whether he was set up that's another question whether he was part of a disinformation campaign whether he it was hypnotized drugged induced to do this through pain or whatever I mean he will acknowledge that he had things done to his head I don't know any of those possibilities as a newsman is intriguing to me okay that that brings up some other interesting points but we've got
(37:23) to take a break so just stick there for a second George and we are back with George George not only has Bob been somewhat reticent about disclosing details in his background but even things that have come into question for example of what type of university degrees does he have now he originally stated or at least someone stated that he had been to MIT among other universities yet when a check is made nobody can find Bob's name has he ever mentioned to you the
(38:30) professor's or any of his classmates that he attended school with there something that in fact would verify this and doesn't he have any degrees from from his school days I know I do I would presume you do and anybody that has attended college or even high school keep their degrees you know what done I don't have my degrees I lost him and Bob's Bob's answer to how that happened is a very personal one but I'll share it with you his wife died when he left worked at Los Alamos labs and he says that he left
(39:01) basically everything not only degrees and papers and photos and and other things but along with $50,000 worth of of photographic processing equipment he just left this is the most bothersome part of the story and I've talked about many times

I think we're friends I have offered him the opportunity to tell me Bob did you exaggerate about your educational background because a lot of people do that you know that in every walk of life in every occupation they would exaggerate something on a resume and he's always stuck to it as for
(39:35) professors he gave me the name of one at MIT I checked on that the professor's not there now whether he was there then when bob says he went there MIT would not give me that information I do have one person who says he went to school with Bob or at least was aware that bob was going to classes at Caltech his name Jim Tagliani he was a technician in the stealth fighter program here in Tonopah Nevada he worked with Bob in the early 1980s at a place called the Fairchild income systems in Simi Valley I have
(40:09) some documentation to back that part of enough and he said he remembers Bob as working a lot of weird shifts to accommodate his classes there I agree with you is that that is a bothersome part of it for me and for klas TV though and I hope this is not too roundabout a way to answer this question the key to the story of Lazar has always been Los Alamos if he worked at Los Alamos it suggested at least possible that he could have been hired away to work in a classified program such as that s4 Groom Lake if he worked at Los Alamos and was
(40:40) hired there that he had to have gone to school somewhere the only record we can have for Bob Lazar ever in college is a single class in electronics at a junior college in California Ron you don't get hired you don't get hired at Los Alamos with that kind of an educational background you especially don't get hired at Los Alamos with that kind of an educational background if you're recruited by a headhunter company such as Cook Meyer which is the case in Bob says you know so so for us the key was
(41:10) always Los Alamos well you know something something George that a lot of people forget since the since your superb program first aired is what background and research and things that you did in order to substantiate the Lazar story now I'm speaking specifically about the regression that Lazar went through the polygraph examinations that he took and I believe he passed all of them if I'm not if I'm not incorrect and you had also off the record because I've talked to you about this before you've had other people
(41:51) verify much of what Lazar stated that would not go on the record because of fears of personal safety is that not correct that is absolutely correct one of those persons that I'm working with now and I'm sorry to be unnecessarily mysterious with your audience one of those persons is a person who is background is unquestioned his credentials run questions there is absolutely no doubt that he was in a position to know about things that went on at area 51 whether or not he will ever concede to go public with this
(42:22) information is another matter he's given it to me he just haven't hasn't given me the authorization to release that information well are you I am certain in the big picture that what Lazar is saying is true well you've talked to many many people during the course of the last four or five years about this subject and one in particular that that keeps sticking in my mind is the Air Force radar technician that you spoke to who of course is remaining nameless because of the fact that he's in the
(42:53) service but he tracked objects in excess of seven thousand miles an hour according to your report and then making right angle turns I mean come on now we don't have anything that I'm aware of or even on the drawing boards that can display those type of characteristics do we not that I know of here's something else we don't have done in 1989 the Department of Defense put out this it's a request for bids basically from small business people to deal with the specific projects that DoD needed what
(43:27) it requested was a communications and telemetry system that could keep up with something that travels at Mach 25 what do we have that goes Mach 25 I don't know but the description in this DoD document says basically that these crafts have been developed hypersonic craft that not only leaves test ranges behind but also nation and it requested that the system whatever whoever would develop it would be operational all night by 1995 that's amazing well look each week this time we have the UFO news update and commentary by vickicooper
(44:02) George so if you can hang on just a moment and as soon as silver we'll be right back with more and incidentally ladies and gentlemen if you live in the eight one eight two one three or 3 100 area hello this is Vicki Cooper with the UFO news update and comment for Sunday November 15th 1992 the latest case to stir the UFO pot has researchers questioning the methods of Budd Hopkins who has been considered the

foremost authority in the field of alien abduction Hopkins an artist and author is overseeing the case of Lyndon
(44:40) Napolitano an italian-american housewife from New York who claims that in 1989 aliens floated her out of her 12 story apartment window in full view of three witnesses the complicated case has been marred by charges and counter-charges about the veracity of Napolitano and now Hopkins himself is under fire for holding back crucial material that would he says prove that she was kidnapped by aliens aliens who wanted to be observed doing their dirty deed two of those witnesses are purported government agents known only as Richard and Dan who
(45:15) have provided Hopkins with over 80 letters plus drawings and audio tapes in support of the Linda case skeptics say they found various holes in the pole attano story pointing out the lack of available evidence for his part Hopkins insists that there's no possibility of the case being a hope that the reams of purported evidence which only he is privy to confirm Linda's abduction story it's true that UFO cases as a rule always lack good evidence but that doesn't excuse Hopkins from withholding crucial details about a case he's giving
(45:49) wide visibility or for parceling out information only to those researchers whom he deems trustworthy the irony is that Hopkins puts more confidence into a couple of obviously shady characters whom no one has been able to meet directly than in those researchers who have reasonable questions about the case for all we know Richard and Dan are nothing more than players in a mind-control game and the Linda case is just another Intelligence Agency ruse out to make us all believe in little grey aliens this UFO news update and
(46:25) comment has been brought to you by UFO magazine and the UFO media group we can be reached at the Oh box 1050 or call eight one eight zero that's it for now thanks for listening this is Vicki Cooper for the UFO media group and UFOs tonight on the cable radio network and we are back George you know I hadn't heard that news commentary before just a moment ago and you know Vicki had some interesting observations there about manipulation of information and disinformation have you encountered anything that you can
(47:05) obviously put your finger on in the realm of UFO information that was obviously disinformation yeah I have done but I'm not sure that we have enough time for me to explain this case it's been a really weird series of experiences I've had after going on the air with all those are story receiving a whole host of unsolicited information about a particular individual here in town who was supposedly involved with this with the UFO and alien research program well then obviously we're gonna have to have you come back George well
(47:38) like yeah there's a whole bunch of stuff here I haven't got around to well tell me now Las Vegas also has had a number of other associated phenomenon with the UFO thing you folks experienced some rather mysterious animal mutilations down there several years ago haven't you sure yeah okay during the course of your investigative research into this and of course this is a question that always crops up do you believe that these mutilations are somehow connected with the UFO phenomenon and if so George do
(48:14) you have any idea of what it may be I think that questions beyond me I mean I think that there there is a connection too many people have seen the strange lights too many people have have reported the mutilation phenomenon here in Nevada in areas around area 51 in the counties around area 51 no tracks no blood surgical precision obviously nobody took a laser machine out into these pastures no one sees in anything at all other than an occasional light here and there yeah I think they're related whether they're related to area 51 is
(48:52) another matter so they're you know mutilations are reported all over the country in areas that don't have bases such as this what the bottom line is why they would be mutilating cattle I don't know I know Whitley Strieber had an interesting comment about it when I asked him he said you know certainly the aliens aren't doing anything worse to cattle that we're doing have you ever been inside of a slaughterhouse you know that I know that the area or around the groom lake base has not only seen a great
(49:22) number of cattle mutilations but this past weekend actually last weekend I had an opportunity to spend some time with the family up there that's basically been terrorized by something they report seeing a number of what we would call flying saucers flying discs alien craft drains blinking lights flying all over their house they live just adjacent to the to the Noah test range they even report seeing these vehicles whatever they are being chased by US Air Force jets they've been through a terrible time which hopefully your

(49:57) audience will learn more about in the future a lot of strange activity here in Nevada a lot of it seems to fit the pattern that we've heard reported all around the country if you're looking for the big answer I don't know I do want to go back to one question you asked earlier Don about congressional interest I don't think that any kind of congressional formal hearing is going to happen again I think that the stakes are too high for for politicians these days to come clean to say that they're
(50:26) interested in this phenomenon but I will tell you this that a great number of high-ranking person on Capitol Hill are interested in this phenomenon and I know that from personal first-hand experience because I've talked to them myself well you know George in my opinion and and I've been involved in in this research for it seems like forever now but for at least five years I think you're absolutely correct the stakes are tremendously high much higher than anybody realizes and you're right once again I don't
(50:58) believe that there ever again will be a congressional inquiry it's not a question of if they're real but it's a question of yes they are real what do they want and we have time for just one last call we have kV from Palmdale one Jones cable good evening hello did you have a question for my guest mr.
(51:22) George Knapp I was just I'm really interested in this because I was in the service for six years and I was with the part of sort of with my which is air defense Artillery and I worked with ninety hurt and no fools I was the radar technician and I've seen about 40 I've tried to track him I tried locking onto him so you try and lock onto him they take off where was this hand kV over in Europe were you in Germany or the Nile region yeah did you report this - I tried reporting they told me if I did I had to rewrite my reports every time if
(52:04) I did they tied me up say what they'd lock me up you run over the gut house they said it was a malfunction in the radar and I'd go out and check the radar and everything and everything was cool no everything was defects matter of fact we had one of the best units in arteries and heart detachment how many years ago was this now that you were over okay I had I had sightings in 73 76 and 77 it wasn't real reason no but I have seen them and then I've seen him physically I went outside when I did spot him when
(52:40) they came right over the top yeah because I kept trying to lock on them when they came they were in a group of three and he came right over the top of where I was and they separated they took off I mean it's so fast it was unreal and like you mentioned earlier they did you know right angle turns at phenomenal piece I mean our B scales for the tracking device kV why don't you we're just about out of time here we're a little less than a minute but why don't you give me a call at UFO magazine because I'd really like
(53:11) to like to talk about this with you some more sure okay do you have our number I just have this number this 1-800 oh yeah UFO magazine is do you got a pencil yeah it's a one thank you very much we're gonna have to go now okay George we're just about out of time we've got about 40 seconds and in that time give me your quick dirty readout on the UFO field oh well back to the the congressional matter right like I said I don't think it's gonna happen again in a public setting but I think your readers should
(53:47) know that there is very sincere interest at very high levels on Capitol Hill and getting to the bottom of this I don't think that the interest is necessarily in the cosmic question why are they here where are they from what do they want kind of things as opposed to interest in very earthly matters such as the people who are running this how are they getting away with it and how are they paying for it that's encouraging for me hope you enjoyed this edition of Donecker live well George that was Larry King telling us that we're out of time
(54:16) well he's got a lot of nerve great we're gonna have you back very soon thank you very much and hang on the line for just a moment okay and ladies and gentlemen that's it for another week okay if you've noticed that the show appeared to be out of time actually it was because back in that time period UFOs tonight was still only one hour long however that was such an outstanding and stellar broadcast that I got a hold of George I asked him if he would come back the following week and basically have a redo and he agreed

(00:02) [Music] [Music] [Music]
(01:05) my name is Jan harzan I'm the executive director for muon we are a scientific research organization that basically collects sighting reports from the public and then goes and investigates them our mission statement as an organization is the scientific study of UFOs for the benefit of humanity and we have three primary goals we investigate UFO reports we promote Research into the UFO subject and we educate the public on our findings muon is really more just left of center where we try to take a scientific approach by collecting the
(01:40) data first off and then reviewing the data investigating the data and making sure that what we're seeing is actually something that's truly an unknown we have 3,000 members worldwide many scientists physicists phds metallurgists biologist all the way down to just the average citizen who really wants to get involved some of those have chosen to become field investigators and they go through our field investigative training courses they become part of the team in their state or country where they reside
(02:08) and they actually get engaged in going out and meeting this phenomena head on we receive about 500 to 1,000 reports per month from around the world field investigators will take the case generally review it try to come up with a hypothesis checking Star Charts we'll go put an investigation in place to determine what exactly happened we've recently formed a science review board and that board is made up of scientists from around the United States and around the world to review some of our more significant cases and
(02:38) try to render an opinion on them what we'd like to do is be more outbound more outspoken in terms of the really true UFO cases so muon is moving forward with this approach and will be publishing papers in these different areas to allow the general public and even the scientific Community to be able to be challenged by what we're finding that's the strength of muon as an organization is being really the truth Seekers of the UFO field [Music] it is my pleasure right now to introduce
(03:41) our keynote speaker he is a 24 time Emmy winner a Mark Twain Edward arm marrow and Peabody Award winner two times he's the anchor of CBS klv in Las Vegas and more importantly he's the host of coast to coast twice a month and he's our key loot speaker tonight he will speak on Area 51 this is a very significant event you think about breaking the story 25 years ago it's almost like breaking the Roswell story because nobody knew about Area 51 so our keynote speaker tonight Who's going to tell you about some unheard details and
(04:23) updates on Area 51 is George naap I'll I'll uh tell you right at the outset this is gets better and funnier the more you drink so feel free to visit your bartender back there and and T tip generously um I am very pleased to be back at muon uh especially here in New Jersey uh John didn't mention this uh I'm very pleased to be back here but John didn't mention it in the introduction but I was born about 25th miles from here uh south of here in Woodbury New Jersey and not only do I still have
(05:06) family here I mean I still have family here they're up in front I don't know how they got this front table but well done uh so let's get to it and have a little bit of fun I mean I have been covering this story for 25 years so uh it's a lot to cram in a lot of good stories a lot of colorful characters a couple of videos or two and um you might have to give me the hook here to get me to stop because there's a lot of material to cover the story we are here to review tonight has traveled all over
(05:35) the world many times and I know it sounds Preposterous on its face that the

idea that some slightly off-kilter nerdish guy in glasses could be hired into classified programs even though his educational credentials are practically non-existent his work history is sketchy he's been discredited and dismissed by people he worked with and worked for uh there's no way that this guy would ever be allowed access to Top Secret materials if we won a role number one no way he'd see classified files no way let
(06:10) alone that he would blow the whistle on some of the deepest darkest secrets of all time but of course we do know that Edward Snowden really did work for the CIA and the NSA even though he had no college degrees he dropped out of high school he dropped out of the military he was working as a security guard right before he was hired by the C CIA and then later worked for private contractors for the NSA and was able to access the most sensitive information in the US government which he subsequently leaked tonight I'm here to talk about
(06:41) another slightly nerdish guy in glasses a whistleblower named Bob Lazar uh is it fair to compare the two of these guys tonight I'll take you step by step through this story to see if this comparison is valid uh both men work on classified projects for spooky agencies both presumably were not qualified to be in those positions their personal lives were spotty their educational credentials questionable uh both were very bright guys whose lack of formal credentials was not an impediment to getting them work in places that
(07:17) seemingly should be off limits I think uh Bob Lazar Story the one you're about to hear now demonstrates that those three-letter agencies that are probably represented here in in one of these tables um will hire almost anyone if it means there's a better chance of getting the job done uh that's the reason for example that CIA came to my hometown Las Vegas in the early 1960s to hire the mafia to kill Fidel Castro uh it's why the CIA and DEA have made uh deals with drug cartels it's why we've had uh on the government
(07:54) payroll scumbag dictators like Saddam Hussein and monwell Nora it's why journalists and entertainers and others have been recruited over the decades to work for these agencies they do what they need to do to get the job done and they will make a deal with the devil if it means getting the job done and doing it well U it's now 25 years since I got sucked into the world of Area 51 and flying saucers and Bob Lazar and I was I was pretty sure back in May of 1989 that this could be somewhat explosive story
(08:30) uh that it might make some waves for a while I had no idea that I'd still be talking about it a quarter of a century later uh that it would travel all over the world I was pretty sure it was going to make uh some changes in Bob lazar's life maybe save his life which is one of the reasons he came forward and I guessed it was going to cause a little bit of a hubub at the base itself that's the place with no name it's the place with many names um and we'll go over some of them but I had no idea it was going to change
(09:01) my life in in the ways that it has and I mean it has I'm here after all um since the theme of this muon Symposium this year is UFOs and the media I thought we'd explore together how this story spread out how it became a Transcendent meme uh the way in which the story spread I think would by It Be by itself uh something that intelligence agencies would want to study or sociologists or academics who look into media issues information Theory I mean it has been astonishing at least from my end and I have had a pretty good
(09:37) seat uh I'll just tell you a little bit about myself and how I got into it I I started as a journalist in Las Vegas back in 1981 mostly in television but some in print and and as John mentioned radio uh over the years I've covered pretty much every story you would expect somebody a journalist in Las Vegas to cover a lot of organized crime a lot of mob stories uh political corruption we've got our share out there sex scandals celebrity goofballs environmental catastrophes drought the Foreclosure crisis drug dealers Gun
(10:08) Runners murders bikers fires stickups pot Farmers crack pedlers scams ripoffs scumbags boneheads and Butch Cassidy and the Sundance [Applause] Kid and um you know along the way I've broken some pretty good stories I got a couple of awards here and there and in my hometown I was considered a fairly good reporter mainstream guy that is until 1989 when I went completely off the rails and started covering UFOs um I am sure that this is true for many of you I in my town I'm the UFO guy and I'll bet in your town most of you are
(10:42) the UFO guy or UFO gal in your families somebody sees a flying saucer on television oh go tell crazy Uncle Bob about that UFO story we're all the UFO guys uh you know I mean as with many of you and this the myow fellow speakers who are here

uh not a day goes by when I don't get calls from Iceland or Ecuador or an email from All Points in between about some UFO sighting or Flying Saucer event uh everywhere I go in Las Vegas I get stopped to talk about UFOs I'm in the grocery store shopping they stop and
(11:16) want to talk to me I'm in the in a restaurant I can't tell you how many times I'm sitting there in a booth and somebody will just slide on in while I'm eating and start talking about UFOs I've had people stop me at the urinal I'm at the urinal hey man I'm a little busy here I'm not making that up and it's uh they will ask me do you really believe that UFO stuff is that for for real are you on the level and they don't care whether I believe it or not what they want is they want to tell me their UFO
(11:47) story what they saw uh the the level of interest in this stuff is amazing for some reason you know um my colleagues in the media are not okay with this they can't quite get her head around the fact that the public is so interested in this subject matter it drives them crazy the public is who they whom they serve is deeply interested in the topic and can't get enough of it that is not the case for journalists and I don't really get it I mean it's a great subject potentially the biggest story in the
(12:16) history of the world even if it weren't true even if it was all a mass hallucination that's one hell of a news story because it's been going on for so long and besides I hate to admit it but it's a heck of a lot of fun to cover this stuff and Chase it around the world but to my colleagues uh the folks here in this room your UFO Buffs you're UFO Believers those are code words that journalists use to put UFO folks sort of in their place it's a tool that they use and th those who don't believe they're
(12:47) Skeptics they're scientists you're Buffs and Believers well I don't know about you but I never thought of myself as a buff or believer I don't think of myself as a UFO reporter I'm a reporter who happens to be interested in UFOs there's a difference and I think it's a legitimate news story and as I said it's driven my colleagues and media just right up the wall uh 25 years ago you know um it I don't think they realized how how far this the interest spread and when they saw me getting so much
(13:17) attention in Las Vegas and the rating Spike that come along with these UFO stories it really pissed them off when that story about Bob Lazar broke oh my gosh that in general people my colleagues in the media think God that's the year I went nuts um I had broken other stories but and i' I'd been careful about them and I tried to be careful in the same way with this story but they didn't see it that way uh I can't tell you how many times I have been pillared by radio morning DJs as soon as they run out of belch barf and
(13:49) fart jokes in the morning they would take on UFOs uh my friends at Nevada's largest newspaper the review journal have had a lot of fun at my expense I've been featured in several editorial cartoons I remember the first one I saw had me with a butterfly net my ass looked as big as a wheelbarrow and I was chasing a fly and saucer uh the second one they had it was called the marshmallow head Chronicles was the title and it showed a couple of extra tress rail Hitman had come to Earth and they had their ray guns they were
(14:19) pointed at uh a couple of gasoline pumps at a gas station and the line was of course they are earthmen but which one is George knap I think they were making fun of my Stout frame or something um there was a series I did some years ago about alien abductions and some of the weird uh medical procedures that happen that are reported by abductees and the newspaper had a headline they called it kidnapped by aliens very funny and uh because I had described some of the procedures they dubbed me a grand mola in the Church of
(14:52) cosmic proctology uh there was a there was a media critic who wrote a weekly weekly column and he wrote one time he said people are rushing at home at night to see George nap's UFO reports not because they're interested in flying saucers but because they want to be there to quote see it when George does the big crack up on screen will he go bull Goose Looney his eyes Going Buggy and rolling free in their sockets will he Crash and Burn before our very eyes now that's a that's a quote now that's funny stuff and I
(15:23) figure you know it kind of comes with the territory I'm a public figure in Las Vegas I'm not thin skinned I'm okay with it because I know the public is okay with it I don't write news stories for other reporters I don't care what they think I write it for our listeners our viewers and the public the part that bothers me is that so few of my colleagues did any work at all on the subject before they decide

to write it all off and and me with it before they joked and tittered or made Wise Cracks
(15:51) about Elvis and Bigfoot and tinf foil hats they certainly never spent hundreds of hours sitting out there in the dark outside of Area 51 sitting in the dust in the desert waiting for something to happen trying to dodge security patrols trying to keep from getting arrested or buzzed by helicopters they haven't read the books or the documents or interviewed the witnesses none of that stuff that you would do on any other story and it drives me crazy and I'm sure many of you feel the same way they see all of us in this room as
(16:21) nuts and well I think that that is totally unfair and generally inaccurate we all know that sometimes it isn't uh the fact is and you know it's true the subject does tend to attract a lot of people who whose elevator doesn't go all the way to the top and and they they make it a lot harder on all the rest of us for the past two weeks I've been getting these cell phone messages and emails from this lady who has been imploring me to get a protective order to fly her to Nevada because former CIA director Admiral
(16:55) James woy is tormenting her with mind control beam weapons that have forced her to have all kinds of sexual activity with Asian men that she doesn't know now I'm not making this up she figures if I uh if I have a lot of UFO connections to the government maybe I can help her out and get the Admiral to back off when I was first uh in this field I had this lady who kept calling me up after she saw the Bazar stories I have got to talk to you I've got some really important information all right fine she
(17:28) shows up at the station she's wearing this skimpy halter top and holding a kid who I later Learned was her alien love child and and she within five minutes of me meeting her she's telling me the most intimate details about her sex life because it was while performing a certain act out on her front porch that she looked up and saw her first UFO eventually I'm not making up one bit of this eventually they beamed her up on board the ship they had her in sort of a a beauty queen lineup and they told her
(17:57) to put on a bathing suit and then she said they they they told her to get breast implants and this is the one part of the story I could believe because there was ample physical evidence staring me in the face uh I have been pestered by I've been pestered by this millionaire who is a transexual abductee add that combination up by a guy who says he's the twin brother of Jesus Christ who's coming back he says the aliens are bringing him back and boy are they mad I had a guy I had a guy who flew from Australia he told me he Ed the
(18:37) last money he had to fly to Australia from Australia to me because he wanted me to use my juice at Area 51 to get the aliens to stop abducting him it's a sad story but that was true um I have received all kinds of letters from alleged aliens who say they're watching me I've got alleged aliens sending me songs and poems that they've written I got people who who made death threats and issued warnings to me uh from people who pretend to be government agents uh I've had people say that I'm a
(19:07) government agent myself uh you know it kind of comes with a territory and as some of you may know if you know about UFOs or have an interest in UFOs suddenly that makes you an expert in every other weird thing that might come up um be elub you got a problem with demons I get calls about it you had an outof Body Experience can't be get back in uh you can call George about it well so major media folks when it comes to the UFO story in Area 51 in particular um has taken a pass and so be it it's their loss the story about Area
(19:48) 51 got out anyway and I remember in the beginning man everybody made fun of it and made fun of me and but eventually as we'll talk about the whole world beat a path to Area 51 door I mean as John mentioned in the introduction nobody had heard of Area 51 25 years ago but they certainly know about it now it is an oxymoron of the highest order the world's best known secret base can you be both I guess so A Place famous for being so secretive that for decades the government pretended it wasn't there even though we can see
(20:22) satellite photos that show it's there you can look over the hill and see it's there no it's not you're imagining it a place where constitutional protections do not apply where environmental laws are Exempted where you can be shot just for eding Area 51 the Box the ranch the Watertown strip Dreamland you be base began in 1955 a location where the U2 was first tested they sent out a news release I've got it with me a copy of the news release that went to media that said we're building a
(20:58) little facility it's temporary be gone before you know it and here it is you know more than half a century later it's still out there in a remote part of Nevada

100 miles north of Las Vegas few people outside of our state other than those who worked there or lived in the perimeter had ever heard of it and then that changed in 1987 when a guy named John leer walked in the TV station at that time uh I produced a little public affairs show called on the record and it's one of those shows that airs at 6:00 in the
(21:29) morning on a weekend you interview a county commissioner or a city councilman and nobody watches it and Lear came into the TV station to talk to my boss a guy named Ned day my friend and Mentor who was sort of the premier mck rer of his era uh investigative reporter mob fighter mob Buster and Lear had credibility with Ned day for one simple reason John whatever you think of him now and a friend of mine by the way Jeremy Corbell who's here is making a film about John he has some crazy ideas is wild stuff regardless of that at the time
(22:04) John had a lot of credibility with us for a simple reason that he had helped us break a really important Story the existence of the f-17 fighter John and fellow uh Aviation Watcher Jim Goodall would go out there with binoculars and cameras in the desert and they had acquired enough information about the self fighter that they gave the story to Ned he broke it it went national uh it went National so big that the FBI called Ned in and quizzed him about where he got the information anyway so at the time John had credibility with us his father had
(22:36) invented the Lear jet John had run for the state senate uh he wasn't quite as far out on The Fringe as he is now um so he brought in this pile of UFO documents and dropped them on Ned's desk and he said you got to take a look at this Ned this is the next big story and Ned said I don't want anything to do with that I don't believe it it can be true if it were true I'd already know about it and so so he wouldn't do the story I was eavesdropping at the time I said let me take a look at that stuff and he dropped
(23:05) the pile of documents on my desk I read it I thought well that would might be an interesting subject something change of pace for this show on the record so I had John on and all the sudden my phone started ringing with people who want to know hey what was the deal on that UFO guy are you going to have more on that and I had him on again and I had him on a third time and each time the response got bigger and I'm wondering what the heck is going on here I didn't understand the way in which this touched
(23:31) the pulse of the public but it did and so I started reading up on it and then that third show John had hinted to me that he knew somebody who had just been hired at Area 51 or as it turns out a place called S4 so may 1989 we have this shadowy silhouette interview with a guy named Dennis not his real name and it was just sort of circumstance that it happened we had I was anchoring the 5:00 news at the time um and our regular scheduled guest bailed on us I called Le and said hey we need a fill in do you think your saucer
(24:07) guy would do an interview and sure enough he did and it was you saw some of the footage there a little bit of uh the preparation for That interview outside and after this thing ran everything was different for me for Bob Lazar and for Area 51 let's roll a piece of this tape number two I don't know sometimes I really do regret regard it and almost I I almost feel like apologizing to him saying that you know I'm sorry I let things up and I have my job back 25 years after he was forever transformed into Bob the UFO guy
(24:41) Bob Lazar says he regrets ever talking about flying saucers or a secret base in the Nevada desert or any of the things that made his name known all over the world if there isn't a day I I don't get emails and you know I try and get this across to him look I don't even want to talk about it anymore you know well I don't believe the story great pass it around you know I really don't want you to because it makes life difficult for me a quarter century ago not many people outside of Nevada had ever heard of Area
(25:10) 51 the mysterious base 100 miles north of Las Vegas a place the government said didn't exist it was the location of choice for all manner of black projects spy planes that were kept secret from the public and that's my driveway that's Bob that's Jean Huff and uh Bob wife Tracy and Chris and uh we're just waiting there for 5:00 to roll around former CIA pilot John leer remembers the day that area 51 became a household name this is home video he shot as a kalas news truck prepared to broadcast a live
(25:46) interview from lear's home Lazar was understandably nervous yeah he was nervous because he was putting it all out on the line there and uh here he was going to you know reveal all his secret that he' signed you know that he was going to uh never tell anybody it's uh not only a crime against the American people it's in the

interview lazar's face was hidden and he used a pseudonym Dennis which was the first name of his boss out in the desert well there's several uh actually nine uh flying
(26:17) saucers flying Lazar claimed he worked intermittently at a location called S4 south of Groom Lake the main facility of Area 51 he said the hangers had been built into the sight of a mountain disguised as desert and inside were a set of nine flying saucers months later he revealed his identity to the world and said the technology he'd worked on was from somewhere else that it was being taken apart to figure out how it worked so that's the basic story he said that he was hired by a company called eg& which is in fact the company that
(26:52) has always run uh Area 51 since the beginning that it was done on behalf of the US Navy that he worked at a place called S4 south of Groom Lake a place called Papo dry lake bed he said these ships basically are have an antimatter reactor the fuel is something called Element 115 which at the time that Bob said it didn't exist it does now uh in a form that I'll talk about a little bit later uh he said that it could create basically it was able to create its own gravitational field which means it bends
(27:22) space and time and um it actually could travel in no time at all from far away worlds just by pointing this gravity amplifier at this location and I know it's Preposterous it's outrageous it's ridiculous who in the world could believe such tripe coming from a guy who has a really sketchy background like Bob turns out quite a few people believed it because the story exploded like a hydrogen bomb it it launched thousands of product lines uh it made Untold numbers of media appearances the meme was on the loose I'll show you in this
(28:01) video roll this one number three and the C Area 51 you you could have just handed me a piece of a UFO from Area 51 there have never been any spacecraft there's no Area 51 there's no recovered spaceship oh excuse me Mr President that's not entirely accurate it would probably take an Indiana Jones sized Warehouse to stash all the pop culture references to area 51 the Oho secret facility the place that did not officially exist for decades is the rockar of military bases literally there's a rock band named Area
(28:39) 51 and another named Element 115 which is supposedly the fuel for flying saucers there's an Area 51 video game an Area 51 Bar what better way to unwind after a long day than a glass of Groom Lake Red Wine from the AL in maybe spend a few minutes staring at the painting picked up at the area 51 art show while perhaps listening to the Bob Lazar music video Bazar is very the story that Bob Lazar told 25 years ago has gone around the world many times over when you get yourself in position and in the quarter
(29:15) Century since then the world has beaten a path to area 51's door every major news organization in the world has written Stories the base has inspired documentaries and TV dramas dozens of books have been written fiction and non-fiction hundreds of news articles many of them critical of Lazar and skeptical about his background his tail launched a thousand product lines every trinket you can imagine along with assorted businesses a AAA baseball team and the world's only extraterrestrial Highway running right past the entrance
(29:50) to groom Lake President Obama recently made a point of publicly acknowledging Area 51 what's really going on at Area 51 and former president B Clinton told Jimmy Kimel he looked into those stories about space aliens so first I had people go look at the records on Area 51 to make sure there was no alien down there even the Kardashians have made a trk out into the desert that's a security guard who look look how that that uh you know that story moved throughout the internet so quickly and not just the internet but
(30:20) but news in itself like was in the first 48 hours after the broadcast it was in Japan back in Las Vegas for a visit la recalls why he came forward in the first place he had traveled to the S4 base only a handful of times but began to get scared I began to get worried in that Bo they've given me all this classified information they're not calling me anymore they won't take my phone calls and in the meantime apparently they're deciding what to do with me the bright is K look at it now for a variety of
(30:51) personal reasons Lazar couldn't keep the story to himself he shared his tale with John Lear and Jean Huff they and a few others made tracks out to the outskirts of S4 because Lazar said he'd learned when the test flights of the saucer would take place 3 weeks in a row a glowing object appeared over the mountain how bright it's getting look at it now and just a few minutes ago we saw one of the government uh extraterrestrial UFOs the time when Bob said there would be a test there was a strange light jumping around in the sky

(31:22) above the location where he said it would be at the time and date he said it would be you know here the craft took off off when I said it was taking off from past the the mountain range which was Papoose Lake S4 south of Area 51 you know in a restricted area so it's not like anyone was out there with a model plane or anything and uh you know flew around in incredible Maneuvers that impressed everybody to the point where we got scared and got behind a a car fearing the thing was going to explode but um really how do you explain this
(31:54) it's bright right now so many products I I don't have time to list them all I mean they have regular tours there now for a while it was just catch as catch can but they have regular tours that go out a couple times a week I did a story on the air a couple of weeks ago about one uh driver wasn't paying attention blew right past the signs and was in a a big bit of trouble there in a big hurry um they have uh an Area 51 brothel a legal brothel which works with the Bob Lazar story if you think about it they have an
(32:25) Area 51 blowup love doll I don't know what sick dog needs that one um I was thinking to myself man I wish I had copyrighted this thing long back in 1989 I'd be calling in doing this by Skype from my island of kawaii or something you know I was thrilled when I saw President Clinton speak about UFOs it was kind of cool that President Obama said that you'll notice he was he made the comment about Area 51 First Time a sitting president has acknowledged the base while he was honoring Shirley mlan but when I saw that the Kardashians had
(32:57) visited Area 51 I thought oh man it's jump the sharp that's it for the base you saw at the end of that video the clip of the original footage of this saucer test flight that Lazar and John leer and Jee huff and others had witnessed not once not twice they went out three times in a row Lazar knew when the test flights were going to take place he knew where the test flights were going to take place officially to this day there is no base at Papo Lake there's nothing at Papo Lake in fact there is no S4 anymore
(33:29) we'll talk about that a little bit later there's nothing there but a dry lake bed so how did he know you know it's one of the points that we'll come back to Let's uh roll number four here I'll show you a freeze frame of this this video somebody had done some enhancement of this there's a whole video but I couldn't get to play earlier but that's that's sort of a close-up of that that craft that they saw and they saw it three weeks in a row over the years dozens of other
(33:53) people have taken similar images out there Sombrero shaped things orbs balls of light flying erratically some of these clearly are misidentifications of classified projects I get that and some of them are just wishful thinking I get that too but it sure seems like something that looks like flying saucers has been out there and for a long time I don't think it's there anymore but it looks like a classic UFO uh I don't know if you saw the announcement last year the CIA announced Area 51 is real thank you CIA
(34:27) for acknowledging that hoopy Fring do um we knew it was real you can see it's real people have been out there they've taken photos they' been arrested even though it was removed from maps in the 1970s we've known it's been out there a long time at the same time the CIA acknowledged hey AR 51 is real we're coming clean with you they said by the way the reason people have been having these stories about flying saucers out there is because you're misidentifying things that we're flying u2s and sr71s I
(34:57) don't even where to start with that it's similar to a an earlier CIA release that tried to explain away all UFOs you remember all those UFOs you were seeing in the 50s and 60s those were ours they sent out a tweet to that effect a couple of weeks ago that was us they said very funny except for the fact it's total I mean OS and sr71s don't look like flying saucers not from any angle they don't stop on a dime they don't land in corn fields or in backyards they don't fly straight up or
(35:27) straight down they don't do any of that stuff more importantly the stories about saucers in the Nevada desert didn't come from people outside the base seeing things in the sky they came from people inside the base who leak the information out and not just Bob Lazar which brings us back to him I I'm not going to try to convince you that Bob's story is true I can't um I wouldn't even try it's up to you I think most people have made up their mind one way or another the there's not many of us that
(35:58) are still on the fence um I do want to share with you two thoughts on this though one is my belief that it's kind of a moot point anyway because the area 51 story is kind of Taken on a life of its own whether we like it or not Bob Lazar or not it's kind of permanently etched into the public Consciousness for good or bad uh

it's kind of like a it's independent of Lazar it's kind of like a a being that is suddenly self-aware there was that group I mentioned in late May that guy who blew through the the uh the sign we have
(36:33) video of the whole thing that's why it became a news story and I I was going through it logging the tape and the guy is telling stuff about Area 51 I just I'm shaking my head he said oh yeah this is generally where the mother ships come down they're there all the time and then the the Men in Black are Patrol this area and you got to watch out for them and then there it's 60 floors underground and all this stuff that's just completely made up um I don't even want to I even want to try to correct it
(36:59) I don't even know where to start this is a beast that is out of control in some ways U the second it's a it's a monster I mean the second point I want to make is that uh how we pursued this story as journalists you know people think well you must have just done this for Ratings that's not how stuff works that's not how we work and this is a not a a lar of a decision that something that we made LLY as a ratings Ploy it did get ratings and that was good but this was uh we we thought about it and argued about it we
(37:31) knew what was at risk not only my reputation but the reputation of our our entire news Department our our news entity so we tread lightly we were careful we covered our bases I spent eight months putting together those stories about Bob and and tried to investigate every angle find every uh supporting bit of material that I could and there was quite a bit of it I know it looks preposterous on its face and uh if you were to tell somebody this story without any of the backup material they'd laugh at you but I'm not laughing
(38:04) uh my friend and colleague Stan fredman is not here tonight and I regret that because he and I have had some spirited conversations about this over the years Stan has I give him credit for uh doing the leg work on The Bob Lazar story but unfortunately because he's so far out in front on it he takes a lot of crap from people who are religiously believe in this thing and can't understand why he's cooperating with the evil secret government to keep it a secret but Stan took it on he followed up Bob's
(38:31) credential claimed credentials he found out that contrary to what Bob had said he did not have any records at MIT or Caltech and I applaud Stan for that I give him kudos for doing the work um like Edward Snowden though the only college that uh Bob had was junior college and uh he didn't finish both of those guys didn't finish so is that case closed for Lazar that he lied about his college credentials he's a liar so he can't believe anything that he said well I I would make the case that uh I give
(39:04) Stan credit for doing some of the leg work but the fact is in the very first story that we aired about Bob Lazar I said he made these claims and we can't prove it there's no one at those schools who remembers them and I'll just tell you I the first time I ever spoke to muon it was 24 years ago when I was invited to speak about this for the first time I said I don't believe Bob Lazar did go to those schools and it's really simple he doesn't you know how it was when you were in college you had to take certain
(39:33) electives uh that have nothing to do with your major interest can you imagine Bob Lazar sitting through English Lit cuz I can't I mean I could see him taking science classes electronics and Engineering but to take the kind of courses you would need to get a degree there's no way I don't think he went to school yet I'm not ready to sort of toss that U toss him out sort of the baby with the with the bath water I never believed necessarily that he went to school for me the key question was always did he work at Los Alamos
(40:03) National Lab because that was part of his claim I worked at no solos National Lab as a physicist I said well that should be easy enough to check out I called the lab they said we never heard of them so Bob you're you're not helping me here we dug up a front page newspaper of the Los Alamos monitor that showed him on a front page Story pictures of him with a jet car he' created and it listed him as a as a Los Alamos physic physicist that wasn't good enough the lab said we still don't have any records
(40:31) then I found a phone book with his name in it and they said we still don't have his uh any records on him I pursued this for three years I've got a stack of letters this big between me and Los Alamos lab and they still were denying it I finally got onto a company called um Kirk Meer which is a head hunter company they recruit Technical and scientific people and get them jobs at places like Los is lab and they said sure we've got records on Bob Lazar yeah we got a job at Los Alamos

you bet and then I said can I get the records yeah
(41:01) no problem thus started a oneye back and forth with that company uh they had promised the records yeah we're going to send them to you and they never did and then they denied ever having them and the same thing with the lab they finally after three years they coughed up an ID number for Bob yeah he was here but he was in non-classified uh work I interviewed five people that work with him at Los Alamos who said he was in classified stuff and more importantly I went there he took me in with my cameraman on a weekend and it wasn't
(41:32) like um he had never been there before it was like a rabbit going through his own burrow he knew all these buildings the ins and out of these buildings he waved at the security guy at the front gate we waved at people inside the buildings he took me in to see this gigantic particle accelerator one of the biggest in the world we took video of it I used him in those reports I think he worked there and it seems to me that if he worked at Los Alamos National Lab on classif IFI projects which is what his co-worker
(41:59) said he did it is conceivable he could be hired to work out in the desert in Nevada whether he's got a college degree or not so I applaud those who do the work and say he never had a college degree but for me that doesn't end the story and if Bob lied about his college credentials would he be the first person to exaggerate his education to get a really cool job because I don't think so there were other Witnesses who came forward and I'll talk a little bit about them the the part that's really hard to
(42:34) convey about those that time is just how weird it was and it's one of those kind of things where if you weren't there it's it's really hard to get it but man I'm telling you it was strange after we broke that story I mean Bob had death threats and he would call me up at night and I'd go over to his house and he was pacing around there had been a Breakin he's pacing around with an Uzi they would break into his they would break into his house and just move things around he'd come home and the doors are
(43:03) open there'd be things that he had on his Blackboard that were erased he had a particle accelerator with a piece of element 115 pointed at it uh they would move that stuff around he went to uh the gym with a friend of his he was par carrying a gun because he was paranoid he and his friend go in they leave the gun in the glove box of the car they come out the doors both doors to the car are open the glove box is open the guns laying on the front seat said people were messing with them and they were messing with me and I know they followed
(43:32) me around for a while because two of the guys who did it told me about it years later after they had quit working for this security company our phones were tapped which you know it really ticks me off I guess we're all used to it now because the NSA has all of us tapped certainly everybody in this room um yeah it's too bad we got used to it but in those days I weren't used to it I had six different people after we broke the story with Bob and my phone is ringing off the hook people questions about UFOs but occasionally a couple of
(44:07) people who had information and wanted to tell me their part of the story six people who offered on the phone to give me interviews even if I blacked out their face were visited one right after another there was a tax guy who had done um tax forms for a lot of the guys who worked at Nellis Air Force Base high-ranking uh officers who had told him on an out of town trip about some recovered wreckage from a flying saucer that was out at A51 just swore him to secrecy so he told me about it his name was Roy Byam and after he made it agreed
(44:39) to do an interview with me the very next day he gets visited by two guys who said they're from the Secret Service and they had heard that he'd been making death threats against the president and did he know he could go to prison for that he thought that was related to our phone call uh I had a lady who a cop introduced me to her she worked in our Clark County Court System she's still there I think and she had been previously been a secretary for a defense contractor at the test site called Holmes and narber major defense
(45:08) contractor and she sat in on a meeting she said with uh defense officials Air Force officials and the and this contractor she was the SE stenographer and in this meeting she said that they talked about a recovered disc of an alien craft and after they finished they they not only U took the notes away from her they took the the ribbon out of the typewriter it was an oldfashioned typewriter in those days and swore her to secrecy the cop hooked me up with her I talked to her on the phone she agreed to do an interview if I blocked out her
(45:38) face very next day she gets a visit by these two guys who flashed a badge at

her they said look you're still subject to your security clearance and uh I don't know how to say this they said we know you and your daughter do a lot of traveling back and forth Las Vegas to LA let's just put it this way there's a lot of desert out there and bad things can happen it was this is serious I'm not making this up it's uh she she was scared to death 15 almost 20 years later I figured I'll reach out to her again see if she
(46:07) would be willing to talk about it now she's still scared wouldn't do it I had an electrical engineer who used to work at my TV station who moved to Seattle who had worked at Area 51 and had seen a saucer shaped craft under a tarp in a in a building out there and he agreed to tell me about it and the next day after that phone call where he agreed to do a silhouette interview there's two guys sitting in a car outside of his house and their crew cuts talking into a radio they follow him to work when he gets out
(46:36) of work they followed him home um you know somebody was listening he was intimidated and I don't blame him and that happened a lot listening the phones following us around break-ins it was a really weird time and but if you weren't there it's really hard to convey it as I mentioned a lot of other Witnesses came forward I'm not going to go through all of them but they're couple of key ones that that I want to touch on one was a he was a spotter at the Nevada Test Site his name was Glenn pace and in the days of the above ground
(47:06) testing program he was one of the only guys on the test site that was allowed to have binoculars and he he worked for a physicist named autoc Krauss he said and they would sit in a place called Area 15 which is above uh the area looking down on Papoose Lake and he said they used to see these saucers buzzing around Papo Lake flying around down there in the 1960s maybe into the 70s I can't remember the exact date told me that story uh there was another guy who I first told muon about it the second time I was here to talk about Area 51 it
(47:37) might have been 20 years ago a a guy I had stalked basically I had figured out that he was in a position to know this stuff based on his employment record and I would go to these public events where he would show up and sort of ingratiate myself uh he was from a prominent Nevada family and eventually he invited me to his home and he said you want to see my scrapbooks yeah great good he's showing me these books this Atomic test and this guy and that and then he stops and he closes the book and he goes this is not
(48:10) what you want to talk about is it I said no no it is not and uh his wife walked in oh don't tell him that stuff but he did and over the course of the next two years he told me a lot and as I recorded some years ago to this group um he told me that they had an out there that they' captured that they had several craft they had been in a place called Indian Springs uh which is now Cree Air Force Base and it was moved later to Area 51 when that base was created he said that they had it alive uh he had kitted me I
(48:41) had to I couldn't take notes uh I couldn't write anything down I'd have to leave these meetings and then write furiously after the meetings everything I could remember but he had told me at the time that this being looked just like a politician of the day and it turns out he was talking about Ross perau a little little tiny jug-eared alien anyway I made a deal because this guy was a prominent family I knew other people in his family he had told them the same story and we made a deal where he was going to make a videotape and
(49:12) give it to me after his passing still alive uh but uh he's complicated matters because he was told after about two years of us talking he said I got to stop I was told to stop who told you well my former employers told me to stop and then the last time I saw him he added a little twist to the story it was no longer aliens he was leading me in another Direction well imagine my surprise when a book comes out called Area 51 by a lady named Annie Jacobson any of you read that it's a great history about Area 51 and it has a
(49:45) chapter at the end that just it's a really good book and good history about youw SR71 all that stuff and at the end it has an interview with this old guy who tells A Wack wacky and wild story about how all those UFO stories it was the Roswell saucer was really something that the Russians sent over created with Nazi technology and the aliens inside this thing these things were actually Jewish prisoners of War concentration camp survivors and that was the story this guy told and Annie put it in her book and it largely it made the the rest
(50:20) of the book irrelevant and it made poked a lot of fun at at Area 51 in the whole story made it at all less serious it's the same guy and I'm not going to identify who he is cuz I made a promise that I wouldn't but it's the same guy who

had changed his story which is troubling um over the years all kinds of people have come out of the woodwork to tell what they know about Area 51 and a lot of them just made it up uh there was a guy named Bill Cooper who wrote a book called Behold a Pale Horse it should be called Behold a
(50:53) pale of horeshit because um just just made this stuff up there was another guy named Dan burish or Dan crane he used to be now in the beginning he was kind of an interesting guy and I thought he might be on to something but in the last few 10 years or so I've realized that he it's a game he's got a Merry Little band of pranksters it's like a Dungeons and Dragons they pretend that they're superheroes to save the world and it's all made up I've had people tell these stories about all the
(51:21) Milk Carton Kids that's where they go they disappear and they're taking Area 51 they make uh alien hybrids out of them in these hugee bubbling Vats um false flag operations we didn't go to the Moon because it was all staged out there at Area 51 look that place is pretty interesting you don't have to make up anything about it um back to Bob again I don't it doesn't matter whether you believe him or not but people who want to write him off because he doesn't have college credentials have
(51:52) to also come up with an explanation for how he knew stuff how did he know about the those tests uh some people have said well maybe somebody told it maybe he was a you know a janitor out there really I mean keep you I mean can we keep our eye on the ball here a guy just told us they were flying saucers it turns out they were accurate we've got it on video and you're going to say I'm not going to believe the story because he doesn't have a degree from MIT I I think we're missing the important point there he
(52:19) also knew about something called the ofi the office of federal investigation he said he thought he would been investigated by the FBI and it turns out it wasn't he said I well it turns out it's something called ofi I said there's no such thing what are you talking about ofi well it really is an ofi office of federal investigation does background checks for people who work at the test site I didn't know that but it's true he gave me the name of a guy named Mike Thigpen who is an agent for the ofi and
(52:44) sure enough there really is a Mike THB and I tracked him down he wouldn't talk to me how did Bob know how did he pass a polygraph test not fail not sort of pass it passed it on all the major point point that he says in his story how did he do it Papoose Lake there's nothing there if you look at satellite photos though at least the old ones you can see there's a road that leads down there um let's roll the video the next little piece of video it's just freeze frames there's a guy named Jerry Freeman he's
(53:16) an archaeologist and he had an interest in the 49ers who had come across Nevada on their way to California so he had a really great that's him if you want to just freeze that for a second if you can uh Jerry in the 1990s had a hairbrained idea to walk across the test site which he did he sneaked in from the West Side heading east which is pretty smart because nobody would think anyone's crazy enough to walk across that hell hole by themselves he walked at night and hid during the day and walked all the way across it all the way to Papoose
(53:48) Lake where he found some inscriptions in rocks that the 49ers had left and he took photos and he told the story while he's out there there hiding in the desert at night trying to avoid being caught he's sitting there in the middle of nowhere and a door opened up a door of light in the middle of nowhere and people came in and out and then it closed and it was gone what the heck is that if you only had one person to tell that story I suppose you'd have to take it with a grain of salt but there's more
(54:18) than one there's a guy named Jim Goodall I mentioned him earlier as a colleague of John leers he's part of a group called The interceptors they used to go out to Area 51 and Area 52 the tonopa test range and take pictures of advanced uh airplanes he's not a UFO guy he's written a couple of books about stealth technology he has great sources in the Aerospace industry he met Bob Lazar prior to Bob going to work at S4 and as he related to me Bob had told him I hate UFOs I feel sorry for John leer it's
(54:50) goofy it's crazy I don't believe it unless I can hold it in my hand and see it and of course after Bob went to work out there his story changed after Goodall hears this story from laar he starts asking his contacts and he has a lot of them about what might be going on at Papoose Lake let's roll number six did you ever get any information about a facility at Papoose like the one you described I have a u a friend of mine he's he's a retired senior master sergeant he was early on in the f117

(55:25) program and they had full they their badge area restricted area badge he can go anywhere in the Nevada Test Site up to it including Area 51 so they had a Humvee and they drove around the the uh was it groom range yeah groom range and they're on Papoose Lake there's there's there isn't anybody around and all of a sudden they're surrounded by guys in Black uh uniforms wanting to with their hands on their weapons wanting to know who they were what are you doing here and my buddy said we're just we had some we had some
(56:05) downtime we're just exploring the area he said you turn around and you leave and don't come back they just kind of popped up out of nowhere he doesn't know where they came from he didn't see any Vehicles all of a sudden they were there and he left it was three or four guys with them they left what do you make of that that there might be something at papo's or was or what well according to Bob that's where that's where the the nine Hangar Ates are in the you know camouflage in the side of
(56:33) the mountain um one other little tidbit of information that I'll share with you um about sources uh it comes from Jeremy corbella a friend of mine I mentioned who's shooting some video tonight and who's uh been working on that project with John leer he's also the guy that did the video on Steven bassett's citizen disclosure here hearings in Washington and he and he also interviewed with Linda howel a guy known as Anonymous an old guy who did an interview with his face on camera didn't use his real name this came out last
(57:07) year talking about Area 51 and Eisenhower's plans to invade the place and take it over I I have this guy in my gray basket but as part of that work Jeremy has been traveling some really interesting places and has developed some pretty interesting high level military contacts and he was at my house and told me about a couple of them and I said well just go ahead record it so we'll play seven and then we'll about wrap up everybody's focused on Area 51 we know the great things that were achieved
(57:38) at Area 51 it's a shell game it's a slide of hand we're talking about S4 right it's been confirmed to you directly from the base maybe 25 years years ago yeah S4 has been confirmed to me directly twice one from an employee of eg& security was daunting and then somebody else who's confirmed to me S4 that's exactly how it looks the story though is that there was a facility like that at Papoose there is a facility like that at Papoose flying discs not this UFO term that's created
(58:17) to make it ambiguous flying discs saucers that were piloted by nonhumans they were not out ours and this is confirmed by both of my sources that this technology is not ours Bob lazzar's story was confirmed to me by those two same sources one saying that when he was working in secret capacity at White Sands in 1989 that it was common knowledge at the base about Bob's story and I said well what was the believability with the general believability and he said everybody knew that what was going on out there were with these types of
(59:00) projects and they all believed Bob's story and were they following it as it's unfolding in 1989 that was the impression that I got was that it was big news if you ever see it it is not ours and I said not ours like America and he says not ours like humans while Jeremy was there we were curious um cuz I 25 years ago when I started this stuff I called NIS Air Force Base I said do you have a place called S4 they said just a second hold on yes we do I said do you have more than one they said yes we do I said can
(59:37) you tell me what goes on there they said classified work what kind we can't tell you this is their public information office yes we have an S4 yes it's real they confirmed it how Lazar knew about it I don't know so when Jeremy was most recently in Las Vegas we called him again I just was curious what they would say let me get back to you on that and they called back and left a message and said and they was really careful how they parsed this language and said we called the range people they can't find it on any Maps
(1:00:07) which of course it was never on a map to begin with which is I I just thought it was really interesting the language they used to describe it one last person I'll tell you about and then we'll end this with Bob uh and his guy's name is Ben rich and if you know anything about the Aerospace industry you know Lockheed Skunk Works they developed the U2 the SR71 the greatest airplanes ever built the a12 the F-117 uh Ben Rich before he died he' expressed to close friends and interest in UFOs and he said UFOs are real both
(1:00:37) kinds UFOs from out there and unfunded opportunities and before he died on his deathbed he told Jim Goodall and a couple of other people in I think he even had it in a in in LA in a public uh meeting he said we already have the means to travel Among the Stars but these Technologies are locked up in Black projects and it would

take an act of God to ever get them out to benefit Humanity anything you can imagine we already know how to do it we have the technology to take ET home no it won't take someone's lifetime to do it there
(1:01:12) was an error in the equations we know what it is we have the capability to travel to the stars and we won't get there using chemical propulsion Ben Rich was screaming in loud and big bloody letters and handwriting on the wall that we had have some kind of technology that is way beyond anything you can imagine Ben rich is like the father of AR 51 those are his babies out there and for him to say that before he died uh I give a lot of credence to it so many crazy stories uh About That Base uh so many crazy stories about Bob
(1:01:45) Lazar um Bob is running a meth lab Bob's running a string of hookers in South America he's dead there's a lot of I get that about once a month it's no wonder he's tried to leave this all behind he only did these interviews with me because I've been bending his arm for a year I tried to get him to come here he said maybe and then he I couldn't get him to answer the answer the phone after that but I wanted to end with Bob talking about his life what it's like today why he wants
(1:02:13) nothing to do with this anymore we can roll number eight but that drives him crazy I mean you need to answer this now I need an answer how much how many times do you get that in a in a week still after all oh I get I get there isn't a day I I don't get emails and you know I try and get this across to him look I don't even want to talk about it anymore you know well I don't believe the story great pass it around you know I really don't want you to because it makes life difficult for me I'm trying to do
(1:02:44) serious research I'm you know I've got contract with governments and other companies for R&D work and aside from you know other scientific interests and I want this divorced look if I went and did everything I can to prove my story and reached a Tipping Point for where people like Stanton fredman and you know people along those lines um said you know what this is beginning to look factual do you know how that would annihilate me that would destroy my business it would make it impossible for me to operate and you know I'd have a
(1:03:20) continuous flow of questions annoying people I'm sure offers to do things that I am not the least bit interested in there's got to be party of somewhere in there even though it would be counterproductive there's got to be party that wishes God damn it I I know what happened it's true no look I know what happened is true there's no doubt period there's there's no delusion and there are some things I can say that that will Bolter the case and I'm not going to um it's going to stay that way I do
(1:03:54) regret at this point bringing anything forward look at the time I'm in my early 20s you know what this is a crime against the American people this is just BS and everybody deserves to know what's going on you know and 25 years goes by you get a little older and your priorities change and you know what they told me is this is a security matter and really what's the public going to do without this you know how reactionary they are it's there's a bunch of different reasons this is being kept quiet nothing
(1:04:29) that they bother telling me but the bottom line is they're right the bulk of the people are complete morons and I'm sorry maybe they are right and this really should just be just be information that's handled out on a on a need to know basis to some people where it would benefit them um he didn't mean that about here the folks here Bob's a Bob's a smart guy and I don't care if he went to MIT or not um he's a smart guy a lot of it self-taught but I I brought some other stuff we'll have to
(1:05:06) show it another time I want to wrap up but uh about Element 115 about the gravity amplifier and he he talks in technical terms if you folks are technical I'm not uh you could appreciate it better than I can um it's an interesting story and as I said I don't think we're ever going to have an answer they're never going to open up the saucer The Hanger doors and say there's the flying saucers come on in and kick the tires or anything anything like that I don't think they're ever
(1:05:27) going to admit it I think probably if there were something like this out there at S4 or Area 51 it's long gone because too many people have been out there over the years looking for it not only tens of thousands of people but every major news organization in the world Congressional investigators there's a lot of attention focused on Area 51 I've heard a lot of people say Bob must have been working with them well it's possible but I'm telling you it's not conscious he wasn't consciously working
(1:05:54) for him it could be that he was the perfect guy for this job let's pick

somebody who's smart who is technically capable who thinks a little bit different because we're not getting anywhere we need new input but we want to pick somebody who could be discredited if we need to let's pick somebody who will we know will leak the story well they picked the right guy there uh if you know Bob you know he has a a pension for hookers and machine guns and explosives and uh and jet cars and he has a pirate flag on his
(1:06:23) house and he's an interesting character and I would think he'd be the kind of guy who you could size up as he'll never keep this secret we'll run it up the flag pole we'll see what how the public reacts and then we'll yank it out from under him and discredit him and that's sort of how it's played out um jacqu valet once told me he said uh I'm going to be really disappointed if the answer to the UFO mystery is merely people from other planets coming here and flying saucers suggesting that the ultimate
(1:06:51) mystery is something much larger much grander and I sort of moved on in my thinking over the 25 years since this all started that I think he's right is that you know I I was focused on fly and saucers UFOs and still am but I think it's probably just a small part of a much bigger uh mystery one that goes right to the heart of the nature of reality itself I learned that sort of from the skin walker Ranch stuff which we'll talk about some other time um just that something is sort of playing with us it seems to be some kind of a really
(1:07:25) steep learning curve and we're only in the beginning of it I get the feeling that we only understand a tiny sliver and that the true nature is still kind of withheld from us maybe it's beyond the ability of our tiny brains to ever figure it out but we have to try you know it's I'll end with this is a saying that I've had before is that it's the duty of journalists and scientists to investigate the Unexplained not to explain the uninvestigated thank you very much [Applause] [Music] [Music]

Best Documentary 2017 25 Years Later: Bob Lazar, the man of Area 51 - Documentary - YouTube
https://www.youtube.com/watch?v=_oU_eHB1I_A

Transcript:
(00:00) most secretive places on the planet but that anonymity vanished forever because of what happened 25 years ago controversial electronics whiz told a fantastic tale during a TV interview the story still reverberates today the i-team's gorge that played a part in what became an international sensation he's here with an update setting stage Dave you might not know this but 25 years ago young anchorwoman named Paula Francis and I were prepping for the five o'clock news when we learned that our scheduled live
(00:30) interview had canceled we placed a call to aviator John Lear to ask if he key and a friend of his to fill the spot a guy who reportedly worked out near area 51 and had seen flying saucers out there it sounded outrageous at the time to that interview with Bob Lazar turned area 51 upside down we coaxed a reluctant Lazar into returning to Las Vegas to talk about it I don't know sometimes I really do regret it we get it and almost I almost feel like apologizing to him saying that you know I'm sorry I let things out can I have my
(01:02) job back 25 years after he was forever transformed and to Bob the UFO guy Bob Lazar says he regrets ever talking about flying saucers or a secret base in the Nevada desert or any of the things that made his name known all over the world there isn't a day I don't get emails and you know I try and get this across to him look I don't even want to talk about it anymore you know well I don't believe the story great pass it around you know I really don't want you to because it makes life difficult for me a quarter
(01:33) century ago not many people outside of Nevada had ever heard of area 51 the mysterious base 100 miles north of Las Vegas a place the government said didn't exist it was the location of choice for all manner of black projects spy planes that were kept secret from the public and that's my driveway that's Bob that's Jeanne huff and Bob's wife Tracy and Chris and we're just waiting there for five o'clock to roll around former CIA pilot John Lear remembers the day that area 51 became a household name
(02:07) this is home video he shot as a klas news truck prepared to broadcast a live interview from Lear's home Lazar was understandably nervous yeah he was nervous

because he was putting it all out on the line there and Erie was going to you know reveal all this secret that he'd signed you know that he was going to never tell anybody it's not only a crime against the American people in the interview bazaars face was hidden and he used a pseudonym Dennis which was the first name of his boss out in the desert well there's several uh actually
(02:42) nine flying thatha's are claimed he worked intermittently at a location called s4 south of groom lake the main facility of area 51 he said the hangars had been built into the side of a mountain disguised as desert and inside were a set of nine flying saucers months later he revealed his identity to the world and said the technology he'd worked on was from somewhere else that it was being taken apart to figure out how it worked the reason that they're round and have no sharp edges is to contain the
(03:13) high voltage when you get yourself in position the information exploded like a bomb and in the quarter century since then the world has beaten a path the area 51's door every major news organization in the world has written stories the base has inspired documentaries and TV dramas dozens of books have been written fiction and nonfiction hundreds of news articles many of them critical of Lazar and skeptical about his background his tale launched a thousand product lines every trinket you can imagine along with
(03:46) assorted businesses a triple-a baseball team and the world's only extra-terrestrial highway running right past the entrance to groom Lake when President Obama recently made a point of publicly acknowledging area 51 what's really going on at area 51 and former President Bill Clinton told Jimmy Kimmel he'd looked into those stories about space alien so first I had people go look at the records on area 51 to make sure there was no alien down there even the Kardashians have made a trek out into the desert
(04:15) security guards look like how that that you know that story moved throughout the internet so quickly and not just the internet but but news in itself like was in the first 48 hours after the broadcast it was in Japan back in Las Vegas for a visit Lazar recalls why he came forward in the first place he had traveled did the s4 base only a handful of times but began to get scared I began to get worried in that why they've given me all this classified information they're not calling me anymore they won't take my phone calls and the
(04:50) meantime apparently they're deciding what to do with me right if you look at it now for a variety of personal reasons Lazar couldn't keep the story to himself he shared his tale with John Lear and Jean Huff they and a few others made tracks out to the outskirts of s4 because Lazar said he'd learned when the test flights of the saucer would take place three weeks in a row a glowing object appeared over the mountain right it's good look at it now and just a few minutes ago we saw one of the government
(05:20) extraterrestrial UFOs a time when Bob said there would be a test there was a strange light jumping around in the sky above the location where he said it would be at the time and date he said it would be you know here the craft took off when I said it was taking off from past the mountain range which was Papoose Lake s4 south of area 51 you know in a restricted area so it's not like anyone was out there with a model plane or anything and you know flew around at incredible maneuvers and impressed everybody to the point where
(05:51) we got scared and got behind a car fearing the thing was going to explode but really how do you explain it right right now Lazar has more than his share of critics including the pooh-bahs of the UFO community who think he made it up and he has holes in his background that have yet to be filled but to date no one has yet been able to explain how he knew those test flights would take place out there tonight at 11 we tagged along as Lazar takes a tour of the area 51 museum exhibit that his story inspired over the next few days we'll be
(06:22) adding material to our website including the original series that we broadcast and some extended excerpts from this most recent interview remember that Dez backed off those original claims no no tells the same story right now there you go I saw a clip of our interview and Amsterdam in 1997 never does it shock a great job done a great job now at your exchange at 11:00 with Paula Francis and Dave Courvoisier the news of Southern Nevada is now it's been 25 years to the day since a live interview with a shadowy guy named Dennis changed
(07:00) everything for America's most secret military base Dennis turned out to be a Las Vegas named Bob Lazar who claimed to work at a secret facility built into a mountainside just south of area 51 story started a UFO stampede that continues to this day Lazar has tried to put flying saucer stories behind him and has been

discredited in the eyes of some critics but it is a story that simply won't go away we coaxed Lazar into talking about the last quarter-century of UFO craziness the i-team's George Knapp has the story
(07:33) what better way to unwind after a long day than a glass of groom Lake red wine from the alien maybe spend a few minutes staring at the paintings you picked up at the area51 Art Show while perhaps listening to the Bob Lazar music video a story that Bob Lazar told 25 years ago this week has gone around the world many times over inspiring books and TV shows and movies who knew that Indiana Jones warehouse is an area 51 that sound you hear me engaging five will be waiting for it you're too nice another repository of
(08:10) area 51 lore is the exhibit at the atomic testing museum while in town recently for our interview Lazar took the tour I guess I have to get a picture of that it was a little surreal watching Bob Lazar as he saw tape of the first interviews he ever gave about his time working at s4 later as we plowed through boxes of paperwork about his claims Lazar reiterated his preference that people don't believe his story look I am NOT out there giving UFO lectures producing tape sighs this is not a business of mine I am trying to
(08:46) run a scientific business and if I'm the UFO guy it makes it really difficult it's to my benefit that people don't believe the story these days Lazar and his wife operate a scientific supply firm in Michigan he's received media coverage because of the odd stuff he sells online but not everyone has made the connection to area 51 and the Stampede he started back in 1989 when he told of working at s4 south of area 51 where he saw flying saucers so advanced they had to be from somewhere else this
(09:21) is a model of the reactor he says was able to generate its own gravitational field powered by what he called element 115 Mary turned on the reactor which was a flat plate and half of a basketball essentially on it just a hemisphere and once it was activated you could not touch the sphere you put your put your hand on it and just like the light poles of a magnet the exact same type of force he had a little golf ball and you know we dropped it on it and you know it never hit the sphere and fell off and then you know we threw it at it it
(09:58) rebounded and knocked the ceiling out of place but that was a at that alone is something amazing look that can change everything we know today the story exploded among UFO researchers and just as quickly led to questions and denouncements the i-team confirmed Lazar had previously worked at Los Alamos National Lab but we also reported his claimed education credentials could not be proven UFO experts including physicist Stan Freedman and also dug into his background say here's a bright guy I did a lot of checking on him I
(10:34) find a lot of things didn't check out that doesn't mean I disagree with everything he ever said or that he was a liar all the time it means that I can't buy the story as presented what all he did out there I don't know it Lazar says there's no end to the questions and even if he could prove he worked at s4 someone would say he must have been the janitor so he generally avoids the topic altogether oh you just you want some of the fame but the fame you know there's no big dump truck dropping money off at
(11:06) my house every Thursday night there's no I'm not out for any fame I really have better things to do generally people have to twist my arm to come out and do things like that as you know you're the arm twister those who were around him at the time the story broke or took the trips into the desert to see the craft fly above s4 say you really had to be there there's a MUFON that calls me every once in a while and he says we don't still believe that guy do you and I say I lived it it the whole two years
(11:39) it was fantastic was one of the greatest times of my life he would go through the trouble to make up a story the light of people and then perpetuate that light bob has no idea who won the Super Bowl the World Series last year do you I mean he's busy doing scientific stuff but in the Bible's our world he would waste his time perpetrating a lie on anyone look I know what happened it's true there's no doubt period Lazare was known to have unconventional interests and a spotty financial record so why would a top secret program let
(12:15) him in one theory is that maybe someone predicted he would spill the beans and was chosen because they wanted the UFO story to be planted Lazar told us he can't rule that out entirely we're putting together a special area 51 section on our website and we'll be adding material to it over the next few days including extended excerpts with the most recent interview and by the way the area 51 exhibit is having a grand reopening this Saturday that alone is something amazing look that can change

everything we know today just having a
(12:50) machine to produce artificial gravity because look look at what that does we know gravity space and time are all tied together there are your shields like on Star Trek that you know deflect micrometeorites there is your protection from radiation without heavy shielding there is something that with an intense enough focused field you can actually bend space and there is something that can actually alter the flow of time I mean that's the missing piece of pie they actually freeze a candle flame yeah now that's when it was connected to the
(13:23) gravity amplifiers where they could focus it and that was they froze a candle yeah they had a they had a candle lit out to set it up for you again there's a large in the craft itself there are three long pipes I'd say well I don't know about what's that three or four feet in diameter maybe five feet long anyway they dangle the three of them at the bottom of the craft these produce gravitational waves and they can focus them to a point or spread them apart wow you called the wave guys yeah yeah
(14:03) they're part of the power source control mechanism and the wave well the wave guide is what I actually call the inner link between them but that that's the gravitational engine they had one of those devices out along with the subsystem that connects it so they can produce the power from the reactor it runs the gravity amplifier and they can focus and change the gravity beam that comes out of it they took they were speaking of Barry took a candle put it close to the mouth of it let it a normal flickering candle flame and then
(14:43) activated the reactor the gravity wave came out as expected and the candle flame remained luminous and stopped moving and yeah because look if it's going to freeze it the proton should stop being emitted if it's going to you know change the characteristics look how can the combustion continue to take place without the convection inside the flame because actually the reason a flame is elongated is not not really because it heat it's because of gravity because gravity pulls down and you know convection moves flames upward it's like
(15:24) in a zero-gravity environment flame is a ball obviously there's nothing to pull things around but anyway if look if you negate the gravity around it why is it still pointy how can it still be making light and why doesn't it move well I mean heat from what Barry said it's not just gravity but it's also time locked you've distorted that ya they essentially froze it a piece of time they're not you know what do you say I mean you're it's empirical evidence you're looking at it it's not it's not a
(15:56) it doesn't make sense that you could see it and look it the stuff I saw there is the most unbelievable literally because it it defied what what we knew as physics and at least I thought it did and maybe what we knew was a little incorrect and just needed viewing from a different angle they finally did synthesize element 115 that had the properties that I that I stated not what it wasn't stable yeah it wasn't stable now each element has isotopes for instance you know let's talk about hydrogen we're all familiar with
(16:41) hydrogen hydrogen has three isotopes they're all hydrogen there's hydrogen protium was be the technical name deuterium and tritium well tritium is a radioactive hydrogen deuterium is another stable isotope of hydrogen and regular protium ordinary hydrogen is the hydrogen we all know they're all hydrogen they have different amounts of neutrons in them they all have one proton which makes them hydrogen now this is a true for all elements you can have the amount of protons in them determines what element it is so element
(17:21) 115 has a hundred and fifteen protons in it its element 115 now depending on the number of neutrons it has it will still be element 115 but it can be any number of isotopes of it that's 115 undoubtedly how is you know many isotopes of it we've synthesized 115 we made one isotope we have a radioactive one now they just need to continue on working with it I mean they made just a few atoms but we'll see what other isotopes they come up with one of them or more is going to be stable and it will have the exact
(17:55) properties that I said or could we make it or does it have to be natural as you speculate about that well it's natural it'd be difficult to find it I do not think you can make that synthetically it's just it takes too much time mean to make it one ounce of it or even a gram would take a tremendous amount of time because not all the interactions are successful I mean you can bang particles together all day long and one may get stuck and then you've got an atom and how do you contain you know this single
(18:26) atom so how do we get 500 pounds of it where'd that come from well at it had

to either be synthesized by the extraterrestrials that bought it in the first place or you know maybe there was a location where they came from where look this was a naturally occurring material we know that all the material in the universe essentially all the atoms of all elements came from hydrogen I mean all you really need is it is just atoms of hydrogen to make anything once they start collecting together large quantities of them
(18:59) gravity just begins to push them together under their own weight as long as you haven't enough hydrogen that'll continue until they finally crush down and ignite and produce a fusion reaction and that starts a star once the star is burning it begins to produce helium by fusing so now you have another new element well this continues on until the star burns out begins to collapse and when you know large enough stars finally do they crush down Purdue's supernovas and then produce a whole host of every
(19:32) element on the periodic chart far beyond what were the numbers were used to beyond 115 and you know maybe some of these misfits where all the gold all the uranium every element you have ever come from including every cell in your body has come from supernovas that's the factory that makes elements so if there was a location somewhere else that had bigger stars multiple stars that burped out more heavy elements then you know our local system did maybe this is common and you can find stable 115 like we mined for gold on you know on our
(20:07) planets or uranium it just depends if they were lucky enough to have exotic materials like that I find that easier to believe than somebody built a machine to manufacture such a difficult material it's because they're like a Rorschach test aha they made 115 he was right it really does exist somebody doesn't want to believe it says 115 doesn't behave anything like Bob Lazar said it's sitting around in a pile of 500 pounds or something right I mean it's sort of like that what is right you have to I mean you
(20:36) just have to start accumulating what do you believe it or not and I personally again I prefer you don't believe it um you know just begin accumulating the facts that you can you know you can verify and and really be careful but that drives them crazy I mean those need to answer this now I need an answer how much how many times you get that you know in a week still after all I get and there isn't a day I don't get emails and you know I try and get this across to them look I don't even want to talk
(21:09) about it anymore you know well I don't believe the story great pass it around you know I really don't want you to because it makes life difficult for me I'm trying to do serious research I'm you know I've got contact with governments and other companies for R&D work and aside from you know other scientific interests and I want this divorced look if I went and did everything I can to prove my story and reached a tipping point for where people like Stanton Friedman and you know people along those lines said you know
(21:44) what this is beginning to look factual do you know how that would annihilate me that would destroy my business it would make it impossible for me to operate and you know I'd have a continuous flow of questions annoying people and sure offers to do things that I am not the least bit interested in which is how it was four years yeah it was four years yeah look I could have jumped on all that stuff I could have you know at area 51 sports drinks and I could have been giving look how many lectures at one point I had what's
(22:19) that talk show hosts that go what's the guy's name which one wrong fenders until old guys has been Larry King Larry King yeah yeah I mean I had an open invitation at one time for that show to come on as the you know Aldo everybody you know I turned down everything until I blew off movie scripts I blew off all kinds of stuff because they couldn't stick to facts is there a part of you though that there's got to be party is somewhere in there even though it would be counterproductive has got to be party
(22:54) of the wishes on dammit I know what happened it's true no look I know what happened is true there's no doubt period there's there's no delusion and there are some things I can say that that will bolter the case and I'm not going to it's going to stay that way I do regret at this point bringing anything forward look at the time I'm in my early 20s oh wait you know what this is a crime against the American people this is just BS and everybody deserves to know what's going on you know and 25
(23:31) years goes by you get a little older and your priorities change and you know what they told me is this is a security matter and really what's the public going to do without this you know reactionary they are it's there's a bunch of different

reasons this is being kept quiet nothing that they bother telling me but the bottom line is they're right the bulk of the people are complete morons and I'm sorry maybe they are right

Jeremy Corbell on UFOs, Skinwalker Ranch, Bob Lazar, 2004 Nimitz TIC TAC incident and alien implants - YouTube
https://www.youtube.com/watch?v=hyrfzIzx_e0

Transcript:
(00:02) [Music] Jeremy Canyon Lockyer Korbel thank you alright thanks you have so many names I didn't know which ones I could skip in which ones I had to hit my friends and enemies call me for name see you last time we had you on you were kind of just talking about moving out into teachers move out to the what part of the desert you're over in yeah pioneer town California yeah so deep Mojave up in the mountains pretty secluded yeah super cool and then also you were working on all of your artwork which we can talk
(00:37) about here in just a bit and you it I think we're already kind of getting into the citizens hearing on disclosure hearing on disclosure and also running extraordinary beliefs calm that's right yeah but you're coming to us today because you have a new movie coming out I do it's exciting about yeah it's been so long tell us everything that's been going on cuz it's not just this it's also like you've got skinwalker ranch stuff coming up you did an art art display tied into Charles Manson and
(01:08) Ashanti thank you Sharon Tate I mean less Charles Manson more celebrating Sharon Tate way more yeah that's how are you connected to so tell me what's what's up yeah so I just been since I saw you last I've just been working hard extraordinary beliefs is the you know banner that I work under and I do investigations into things they're extraordinary people that are ordinary they have extraordinary beliefs I try to find people that are credible and have some sort of you know thing that I can
(01:34) prove and so this has been my work over I mean the last 10 years but since we've talked so a lot of those stories have broke for me so everything from filmmaking to putting on my first major released movie a mass release movie which is patient 17 yeah it's been wild and non-stop and exciting yeah has there anything that and that's really shock to you like really shaky oh yeah yeah for sure don't tell us no I mean look all of these investigations they they tend you know since I've gotten into them they
(02:08) tend to evolve in pretty curious ways so there have been I was recently able to break a case and it's a military case and I was able to publicly break that case about a 2004 event off the coast of San Diego the USS Nimitz there was a whole fleet that was going out to battle and there was or going out to do deployment and there was a series of UFO and USO events that are all on the record it's something that we don't have all the documents on I was tipped off before couldn't talk about it for a few
(02:40) years but was able to go kind of live with it when some of the footage got leaked from the FLIR camera from one of the fighter jets that went out a tic-tac shaped object descending from 80,000 feet all the way down to 50 feet above the water and docking is the best word to use with some USO unidentified submerged object and our military thought it was a pretty massive threat I mean they they responded as such and documented these objects all the fighter pilots that saw this object the ones in particular that I'm speaking with said
(03:14) that it was otherworldly and we don't have the technologies I mean they tried to lock their planes on to it so they could fire if they needed to and this thing actively jammed all of our known top end radar and weapon systems so that was kind of shocking that was kind of cool to be able to be on the frontlines of that because I've been talking to people within the military for years before they don't usually focus on military cases this one kind of landed in my lap but so that was fascinating and then I got to spend time at
(03:43) skinwalker ranch one of the I know only a light surface dusting unsure what most people that that's all they get because it was shrouded in secrecy there is a guy named Robert Bigelow Robert big Louis one of the wealthiest people he owns Bigelow Aerospace right so it works with NASA put inflatables onto the international space station called beam it blows up habitats for Humanity so the guy basically is

this really interesting dude made his fortune as a billionaire in budget motels out of Las Vegas Nevada
(04:17) he pretty secretly bought a ranch this ranch is known as a paranormal hotspot there is more before he bought it wasn't already known as a paranormal the whole Uintah Basin which is the the ute tribe that has a sovereign nation there it goes back to pre Civil War that there are these accounts of shadow people beast creatures UFOs mother ships dimensional portholes I mean it's just it's not reads like science fiction the difference is is that when a family bought that ranch and started to experience what was going on they went
(04:52) to the Associated Press or actually got picked up by The Associated Press and they're like something's going on we're being run off our land we think it's the government trying to freak us out well it turns out Bigelow bought the ranch and he put seven scientists for seven years we're talking Nobel prize-winning phd-level scientists and they studied this ranch for seven years trying to document these events and they to some degree they were successful but all of this was private information well my
(05:18) mentor George in journalism George Knapp he is a two-time Peabody warning award-winning 27 Emmy journalists the guy's a major journalist and he came out and was able to basically put little bits out about skinwalker ranch you couldn't see everything because Bigelow wanted it private but he wrote a book called hunt for the skinwalker and that book details every event that this group called knids the National Institute of Discovery Science owned by Bigelow what they recorded documented and they were trying to hunt the phenomenon as they
(05:49) call it what's the point of Bigelow trying to do this well okay so at the time it was his interest in UFOs and so this whole area allegedly had these UFO encounters and all this stuff but he quickly learned that it went far beyond UFOs that the phenomenon itself is not confined to UFO activity and having these great scientists on the ranch and being able to document it was a huge leap forward for studying these hot spots because he'd been talked about for a long time there are areas with high activity and
(06:19) I can attest to you just from being there and speaking with local law enforcement they take every call and every case seriously because there have been repercussions when they haven't so everybody in the Uintah Basin has a story they have seen everything from mother ships to creatures and you have to take it kind of seriously once you kind of understand that this is a real phenomenon people are reporting this so what is this phenomenon what is it doing engaging humanity and it is a big eye-opener if you read this book and no
(06:50) one has ever been able to film on the you know Tribal Nation in that area we were able to because of George Knapp spoke and the scientists in colum Kelleher who also wrote the book with George so he got interviews who got that footage we're going back studying the ratchet also just using journalism as a way to expose at least the human level at least the psychological human level that people are reporting this and they are shaken up and there is physical evidence you know Wikipedia mentions like everything
(07:17) from UFOs to bigfoot-like creatures and poltergeists yeah I guess I've never thought of or heard of a hot spot that had like well I guess Griffith Park was kind of that same way specific things that are directly tied to the history of that spot not just kind of a way where was it we went somewhere where it was like aliens oh maybe I'm thinking of Catalina Catalina was a little weird that was like everything that's the first time actually on our Catalina trip that I had heard of prominently heard of
(07:55) the u.s. oohs yeah which apparently they've seen out there as well u.s. OS are actually the key to all of this it's just most people are not able to use submarines that kind of thing but I mean I was told by some of my contacts in the Navy that they tracked these all the time think about it it's if this phenomenon is real if there are unknown aerial vehicles or anomalous air vehicles piloted by nonhumans engaging humanity since the beginning of recorded human history which is the premise if that is
(08:23) true then the obvious place to hide would be you know in the oceans because these craft if they do work the way that they're purported to work it wouldn't matter what they go through let it be water airspace it's all the same it's gravity wave amplification they can literally traverse space-time so it's really easy to move through these mediums that's not necessarily what I believe although it's pretty damn close at this point I don't have the luxury of disbelief I mean I've
(08:48) just been you know really deep into this and talking with people and filming

people for years now credible people some of whom are high-ranking military officials which somehow gives people credit but you can be crazy on any side right but ultimately I have people telling me their stories and letting me publish them and there is physical evidence for a lot of this we have radar reports so without giving away what you're working on there is there a way that you can tell us what some of your theories are as far as why is why is it
(09:17) like a seemingly random spot on earth suddenly a hot spot well it's been a hot spot for centuries if not you know for thousands of years but right now we just have a very unique opportunity which is to study these events from a different level because we have different technologies now so for example there are cattle mutilations that go on on that property and that was a big deal back in the day I mean their Congress got involved one point about the the mutilation of cattle they had so many theories so many were being taken they
(09:47) were being studied genetically studied blood was being drained there's no way that somebody could come up to these animals or strip the meat off so on skinwalker ranch this one cattle it was like 25 minutes the rancher turns around and this and they had a team jump in from Ned's and do the analysis so we can study that stuff biologically we can we have a whole different way to study things now so it's a very exciting time for the weirdness and to be able to debunk it or to say hey there's something to this so can I ask what just
(10:18) what is the name skinwalker that's important yeah yes skinwalker it you know comes to Native American tradition and it essentially refers to a witch a shaman a trickster okay or some sort of yeah like a like a trickster right I was just picturing like a Bigfoot or something right well the thing is they can wear different skins they can that that's the the lore I don't know how that translates to physical reality but these events as I kind of keep you know say is that they do leave trace elements I
(10:49) mean there are things that happen that we or the scientific community can look at and that to me is fascinating because you're getting down to something is it's not a matter of belief anymore is it true or not true it's not just witness testimony and that's what I'm interested in well so then that's a perfect segue to talk about patient 17 your new documentary about this gentleman that you met who was had what do you call it the implant yeah people call them implants ice a foreign body because I'm not convinced
(11:20) yet what it is yeah somebody intentionally put it in although it's seeming very strange now but yeah I met a guy a doctor his name was dr. Roger Leir he was a podiatrist a foot doctor but he spent about 20 years listening to people who said I have abductive experiences I have this object it's emitting frequency in my body it was put in there by these nonhumans people say extraterrestrial but I don't know their extraterrestrial by these nonhumans intelligences and you know we have John Mac at Harvard
(11:49) University who's head of psychiatry he took this very seriously he said this is not delusion that the people that are experiencing this arts nursing a real phenomenon he was a great voice in this field because of John Mac and the books he wrote out of Harvard about this I had to kind of give it more credit so I said to dr.
(12:08) Leir is actually our common friend Ruben who introduced me to dr. Lehrer I didn't want to touch it because I was focused on you know whistleblowers and people that oh yeah he put on the Citizen hearing on disclosure you know 40 witnesses from the intelligence community astronauts pilots at the National Press Club in front of five congressmen and one senator so that was a very cool event Ruben did that want to give him credit for that and anyway so he told me to talk with dr.
(12:37) Lear talked to dr. Lear and I said look I don't really believe this and I was like if I point my camera at you if you are twisting the evidence or dissuading the public towards truth I are away from truth I am going to out you is sure you want me to do it and he said yes I said okay well that's interesting you know so I went to the surgery and I just thought it'd be like a one day thing and I figure it out pretty quick that everybody's lying you got real up close shots of that leg whole stomach I wanted
(13:09) to show what the guy went to I mean you know we're talking about this like it's somebody else see this guy's my friend now I know him yeah you know they ripped open his leg and took out a big chunk of something yeah right before right before he goes into surgery you asked him you're like something along the lines of like are you nervous or whatever and he tells you about how his wife and or his girlfriend and his mom are like just leave it just leave it like you don't he's like no it's

gonna
(13:33) be a small incision small incision next shot is literally like gaping oh oh and I'm like pressure to not do it how do the people that have how do they become aware that they have these implants they have the memory of it being implanted or is anyone just discovered I have this and I don't know where it came from first of all most people are just crazy and so they don't have an implant and they believe they do because it's you know cohesive with their worldview but the people that dr. Lee it
(14:06) is but but dr. Leir you know he had these you know tests so basically he put someone through a psychological you know exam and make sure that they're not crazy and then from there he'd say okay you abductive experiences you think you have something in your leg get an x-ray okay it's denser than bone so it's a foreign body it's not something that should be in your body okay cool then he would essentially do a Gauss meter test and this is for me trivial but they'd run this electromagnetic frequency detector over
(14:33) and these things would ping I mean I saw it with my own eyes when it was in the guy's body but again it wasn't controlled environment so I can't really count that in as part of my study but basically he did that and then all said and done you get a few people that are eligible and if it's surgically if you can remove it surgically then he would do it or he'd get somebody to do it and that's when it got weird so they did they actually removed 17 objects for Oh 70 71 out of patients 17 but there's at
(15:06) least 17 objects some people have multiples but you he went over 20 years you're gonna Whittle it down and get the right people and take them out and get them analyzed and but never before have they had real hardcore scientific evidence that would prove any of their claims you know arguably but that's what I was attempting to do with this film because you know that wouldn't that be cool you know or you're like this is and when you're done you know well now it's very interesting I'm I'm
(15:40) all ears I'm waiting right now so you'll see in my film when you watch it we had what's called broad spectrum elemental analysis and isotopic analysis basically what that means is you look at this object and you try to find out what is it made of so the most complex alloys that we have will typically be four to five different elements in it I mean nothing crazy this had 36 elements inside each one tiny piece so all those elements play nicely together it's kind of strange some of which were highly toxic some of
(16:11) which were rare earth elements so this is a highly fabricated machined something that ended in his leg some people thought it was meteorite yeah he got hit by a micrometeorite actually supposedly the earth is supposedly bombarded by thousands of those right and most things do or they disintegrate in our atmosphere but yeah sure particulates end up all the time on earth that's why we can study the isotopes of meteor I said we we study extraterrestrial isotopes and why that's important isotopes tell you origin to a degree so
(16:47) if you have zinc you have five although four are studied major isotopes that have the same ratio if they're made on earth the same across the board it is a ratio of isotope of zinc 64 that is common on this planet if you get something outside 1% of that you're like oh I probably got a meteorite because it was made somewhere else well this sample was far outside the terrestrial norm in the zinc 64 so somebody said oh okay maybe it's a micro meteorite hit him in the leg the first way you got to be really lucky
(17:15) to have that happened right but I took it to the head meteorite specialist at UCLA and it was definitively not meteoric iron so it is not a meteorite it is a fabricated material as far as everybody can tell from you know you know material scientists and nanotechnologists it is a fabricated material now is it a chip that tracks a human made by way no idea that's what their claim is so where I stand on it now it is a real mystery and we're trying my team and me we're trying to get to the bottom of that and it'll
(17:49) all be open-source the results are already on my website interesting so have you ever gotten somebody that gets come along asking for your help or you've just had to turn them away because you're like listen this has nothing damn damn I don't know anything about penis implants I mean people are crazy I mean people like you about penis implants oh yeah send me photos strange dick pics no I mean in all honesty I'm joking around that's Katie part two that's right you've got a show we've got a thing that
(18:20) we want to push all about serial killer dicks being transplanted on death row Wow yeah mine pretty creative individuals overnight I already got a sense of

that you have a nice set I think you get to the bottom a big foot over there I think so but yeah I mean all joking aside yes I get asked by people on a daily basis whether they're government military employees that have seen something have been involved in a research project to simply somebody's mom who has a lifetime of abductive experiences and doesn't know what to say
(18:53) about it I recently got a call from a young man who was serving in the Navy for quite some time and he saw something that totally blew his mind of what this reality is and it was so shaking to him that he literally went on the internet looked up UFO and research and investigator and found me and was disturbed about it you know do you have a personal estimate unlike how what the average is on these things being actually legit UFOs versus just you know an airplane or some weird bird or something that you know weather
(19:31) balloon or an odd reflection yeah depends who depends who's looking but you know the classic study with Project Blue Book which is actually the predecessor to project sign and project grudge which were the military projects to look at the unidentified flying object thing moved to become Project Blue Book it was a public thing it was largely created to discredit the topic because there was a tonality within our military that they wanted to demystify the UFO topic because it was becoming a problem when it became a problem was the
(20:01) 1952 I believe flyover of Washington DC every magazine picked it up all the teletypes stopped working they got flooded with reports and they saw this as a threat to national security so they made a clear agenda to infiltrate the UFO community and to make a mockery of people that talked about it but everybody involved to this day if they're still alive I've talked to at least two of them this is a real phenomenon it is occurring our military is quite aware of it and so as the public actually and they had I think 700
(20:33) they had some over 700 unsolved cases things that they couldn't attribute to these basic things that you just said so I would say you know they say 5 to 10 percent or real and actual but I also know a lot of these reports go completely unreported a lot of these sightings go unreported so where I'm at now is really simple the UFO phenomenon is part of just the phenomenon that includes UFOs is a much bigger picture going on because when you talk with somebody and doesn't matter what part of life who they are it's
(21:03) homogeneous around the world this is not something that just Americans are seeing or just you know this is homogeneous so there is something that is occurring it's been occurring since the beginning of recorded human history it often manifests itself as lights but when you talk with somebody and they say I saw this I saw a disc I saw a craft there's usually something behind that that they're not telling you because it is acceptable to say I saw a flying saucer or a UFO like some that's more specific or weird right and
(21:33) it's usually yeah usually is more weird and so the thing is is when people get comfortable to move out of just telling you what they reported you get this a lot with the military guys they tell you just what what they saw there's usually some sort of sociological or psychological impact that comes with that if you've seen something it's it's more common that you'll see something again and if you've had abductive experiences sure as your parents and your grandparents have too and that's a weird thing and that's been
(21:59) studied very well seems to be genetic or familial yeah you probably covered this when you are on our podcast before but how did you and just initially get interested in all of this I was 13 years old I heard on the radio George Knapp and Bob Lazar Bob Lazar was telling his story of reverse engineering alien technology and the way he described it the propulsion system was absolutely like a flip from how I saw locomotion the idea of moving something forward by pushing something back this was falling into place by warping
(22:32) space-time with gravity wave amplifiers it's the coolest story as a kid you're like I want this to be real so that's how I got interested is just hearing this story little did I know I'd ended up making the definitive documentary on Bob Lazar which is coming out in 2018 so that is full circle no I'm just starting the editing process I have a deadline and it will be out in 2018 but that's that's how I started but I know I did was talk about it and at that time of the world you know everything you say
(23:04) you're most people do you're crazy so you know just talk about it with people it's funny that you bring that up because I do feel like you said a lot more people are coming forward and talking about the fact that they've seen something and that the whole like if you saw a UFO you're crazy doesn't really hold the same kind

of water that it did back in the past because if you just look back to 20 2016 with the whole like it was a running joke well while the president liked to run for the
(23:31) presidency presidency was happening that you know you get on a talk show and Hillary Clinton saying the first thing she's gonna do is release you know UFO documents granted she put a little caveat in there unless it was up against oh yeah and she also tried to give everybody a new term on that day so is Jimmy Kimmel he's always pushed that which is great I thank Jimmy Kimmel for doing that but basically she came up and said well we now we called them you AP's unidentified aerial phenomenon she was giving the public a
(24:01) search term for FOIA requests Freedom of Information Act requests right but in fact in intelligence circles people call them a a vs and almost aerial vehicles or a ATS and almost aerial threats so there's all these terminologies that are better than UFO if you don't want somebody to look into FOIA and that kind of thing but that was cool and yeah it's becoming popular but recently I think it's cuz they're gonna I think the government is gonna drop a bomb on us everybody wishes that's the truth but you know here's
(24:28) that's gonna happen disclosure has already happened you know they are disclosing themselves whatever this intelligence is to a degree then also how do we know that our government really knows anything that's not my information that's it's my understanding that everybody is just kind of threatened because they don't know what it is they've never really known they get little bits and pieces and try to reverse-engineer them and there you go did you see that new article that just I think dropped yesterday about the the
(24:54) the group of college students in Turkey making an announcement that yeah look this up really fast I can't add it briefly but some something that there was a group of students in Turkey that announced that they that that they feel that the government is absolutely keeping all of this hidden from the public and that there's a whole whole bunch of shady business behind it going on did you see that at all I didn't but we know that we know that there has been you know kind of cone of silence put over this topic as well as active you
(25:27) know mocking of this topic to dissuade the public from taking it seriously because it is one of the more important topics this can be proved there's a document trail for this we have the documents in the public realm so that is fact it's not like a Eureka moment I'm glad that they're talking about it but it's something that if anybody just looks they can see that this is in fact the case now there's a reason for that you know we want as America let's say a technological advantage in warfare if we
(25:56) have a technological advantage then we can be a superior technologically nation and every government of the earth wants that so when you get something and you don't know what it is you don't know its potential for weaponization you keep it quiet and you figure out how to weaponize it first that's the mentality but we're way beyond that that was happening you know during the time of the Roswell crashes multiple right so now we're in a different era and now you have people you know 25 years in the CIA just came out on stage
(26:25) with a guy from the Pentagon this was through Tom DeLonge the musician it was busy that people look really harshly on this because they don't I don't think they can look past Tom and that he's fundraising for a new company but what happened on that day at that press announcement was pretty epic you have now for the first time in history we know in the Pentagon there was a guy named Lou and Lou came on stage and he says I was in charge of the anomalous aerial threats department and we have that in the Pentagon I ran it for years
(26:56) and we take this matter very seriously and he basically and you can watch it said you know I am a believer these are not from here after what I've seen in the technology is how they run circles around our craft actually around our nuclear missiles that's something that's well documented we had 10 minute men missiles shut down at maelstrom Air Force Base a guy named Robert Salas was in the bunker at the time these technologies came in shut down our number one defense in this world yeah and there were multiples they happen
(27:24) also in Russia at the same time and they happened on a second base in America at the same time and then that new case I just told you 2004 Nimitz UFO type that in tic-tac everybody type that in okay you will hear and read about the case that I recently was able to break a lot of information on it's crazy this stuff is happening and we need to acknowledge it I found an article from this week that talks about a Turkish university that's offering now a major in UF o ology that's UF ology and et Encounters yeah it's from this week

(27:58) send me the link yeah it should be studied scientifically it should be studied in academic circles there is more evidence for UFOs than there is God so we might as well look at it it's true so where do you think things go from here then I mean if if all of the the big technological push that we were exposed to that we've kept quiet and everything kind of happened back in the roswell days and now it kind of doesn't have the same stigma necessarily i mean there's still stigma there but not as aggressively as it was back in the day
(28:30) now you know you've got potential presidents making jokes about it and things of that nature where does everything go from here right so a lot of presidents pushed for the UFO topic from JFK to Nixon one of the first things he did was try to you know make stuff more available in these black budgets and these programs to him so every president I can think of you know Clinton one of the first things he did was ask about both JFK because he didn't want to be killed and the UFO subject so we've got presidents trying to be read
(29:00) in to these projects unsuccessfully the President of the United States has been told no every time since Eisenhower Eisenhower had the closest relation because he was actually a general he was like I think a three-star general he actually was a military person so he had more knowledge on this than other presidents after him but if you think about that all these presidents trying to get information and can't where does that leave us what what is what is our ability to have clearance for that so I'm not very
(29:30) hopeful that the government's gonna serve up the the alien saucer on a crap you know on a platter but I do think that every individual and what they do makes a difference if you have a loud enough voice and you shake the cages we can get somewhere it's happened throughout history there's a proof for that so I think everybody kind of shaken the cages on this from their different angles from scientific to spiritual to whatever we need all kinds of people looking at this I think that's what we do I think we just keep talking about it
(29:58) and we put it as something that's important to us because if we're not alone and we're not I mean everybody knows how big the universe is but everybody accepts that now most people accept that now but if they're visiting here doesn't that mean something and it does so let's find out do you have any thoughts on how it might tie in to all the other theories out there that we're currently living in a sim you know I mean I guess if you play the sims City aliens come and potentially destroy your city do
(30:27) they random it's a random disaster event that happens so I guess I just answered my own question if we're living in a sense oh yeah a random and disaster event it brings up a really interesting question which is that you know that theory I'm Elon Musk is famous for saying it but a lot of people are seriously talking about this in Silicon Valley right now this is a big deal you know any advanced civilization at some point needs to forego the physical body and create some sort of simulated reality which will be just like our
(30:53) reality maybe we're living in one maybe we're living in someone else's here's what I know I know that UFO is the one thing we can say is that they represent a huge amount of power in a small amount of space and this has been studied so we know that I mean moult multitude of atomic bombs and the size of a softball that that's how much power these things you know display so we can test that we know that to to a high degree so the question is is what we're seeing purely physical like craft from
(31:23) another star system the evidence suggests not the evidence suggests that what we're seeing is manipulated for us to see that this is a high intelligence does make mistakes but it's a high intelligence that is displaying to us this UFO phenomenon and that there's a lot more behind it that it's coming in waves if you track it over time in a same pattern as any general learning curve meaning there's something they want us to know or to learn so what is that you know I'm a quick learner tell
(31:53) me so that's kind of where I'm at is let's find out more but if we just acknowledge it and we say this is happening here are the radar reports here's a historical accounts here's a scientific data we have well then we can start to face it and ask the real questions what are we supposed to be learning from this what does it mean of course what's the threat there's no threat or we would be gone but that's what I want to know so be open about it and start talking about it interesting
(32:20) well we've got ten minutes left okay is there anything you want to touch base about what you've got coming up for bob lazar that you know without having to

give too much away let me just tell you the quick note of patient 17 which is that this movie I never thought was something that I would do I fell in love with the project by meeting the subject patient 17 himself he's a normal guy of unnormal height six foot nine or something he's a giant of a man yeah and he has a real mystery in his life
(32:51) and I'm trying to help him solve it we're trying to get to the bottom of it I'm doing scientific research for it but if you watch the film patient seventeen it's on iTunes Amazon Xbox Vudu all that stuff it'll be coming out too in other forms basically if you watch that you'll kind of get caught up on this particular mystery and there will be more coming out through my website and such on this case and then yeah Bob Lazar like if you don't know who Bob Lazar is please type in his name it's not that many letters
(33:18) Wow this is a guy reverse engineered alien craft at a sub base of area 51 called s4 he is the only person ever to get out of that kind of facility and have some evidence that he did work there there that's why he came out that's why he came out 1989 with George Knapp on kls news in Las Vegas because his life was under threat and it protected him yeah and people don't believe his story for X reason why reason at least have a good reason but the thing is is that he's telling you the truth and I think most people are
(33:58) gonna see that my films just going to lay out the evidence and the facts and then it's up to everybody else to decide so that's to look forward to but find out who Bob Lazar is go deep down the rabbit hole pick out all the things that why you think he's lying so that we can get to them in the film are you ever worried about yourself no no I've never been threatened never been stopped only been assisted everybody has helped me it's crazy see that's what you don't hear very options right nice to actually
(34:24) that everybody bullshit's there is seriously there someone who run around saying you know I'm under threat oh the sensitive this is sensitive information I've briefed X Y & Z people and they're lying well the government doesn't need some Joe Schmoe who pretends he's a doctor to go ahead and you know briefed people basically they have their own self-contained system so what I'm saying is if someone's coming at you like that most likely it's total however there are some times are documented
(34:57) where the United States military has literally run people into the crazy farm with this is there's a really famous case with a guy named Richard Doty who worked at Nellis Air Force Base and he worked sorry it's Kirtland Air Force Base and he worked for our government and he basically drove a man mad by giving him false information that he was already on to so that stuff does happen hasn't happened to me I don't think I am the worst person big thank you to Jeremy for coming back thanks for having me
(35:34) guys really cool I love your setup here thanks thanks for having me yeah my pleasure you can find patient 17 like he said on iTunes and pretty much anywhere else that digital distribution is going on and keep an eye out back in 2018 it seems so weird to say that 28 I know but it is richer 2018 for the Bob Lazar stuff yeah and all my work can be found at extraordinary beliefs calm like every single series that I've created is all right there so have a wonderful day and we'll see you guys next week bye
(36:06) [Music]

EXCLUSIVE The Bob Lazar Interview with (secureteam10) - YouTube
https://www.youtube.com/watch?v=JHYqEu4oEkM

Transcript:
(00:10) [Music] well guys the day has finally come today we are privileged to be sitting down with two men who are making huge waves throughout the alien and UFO research community the first is investigative journalist activist and filmmaker Jeremy Korbel the man behind the upcoming documentary we're talking about today and the other is a man that most of you have only heard whispers about over the past 30 or so years a man that among other things brought the very existence of area 51 to light and is said to have
(00:55) actually worked on recovered alien craft at the secretive military base mister Bob Lazar gentlemen it's an honor to have you both here thank you for coming on today and we really appreciate it millions of people appreciate this thanks so much dialing yeah I appreciate it man well as well I'm sure you know Jeremy many of

the audience members my audience members have commented that they didn't think this day would ever come Bob you have become sort of a UFO legend and icon over the years and especially
(01:31) to the younger generations of people curious about the UFO topic because the world wanted it and now it's here finally we have this definitive documentary on your life so the first thing I want to ask you both is was this a smooth process creating this film that's a tough question so it's kind of it was a long arduous process and out clearly much more difficult for Jeremy than for me yeah I don't know that's true I mean Bob you know lived you know this you know experience for 30 years so I don't know it's more difficult for
(02:14) but I think that the joke and in it all is no it's not been a totally smooth Road bob has you know he didn't ask me to make a movie I begged him to make a movie but I'm really glad that he allowed me to do it because I think where we ended up is somewhere really powerful where the people that have never heard his story will now get to hear it and they'll hear it in its true form they won't hear the lies and they won't hear the propaganda and the things that aren't true they're gonna
(02:43) hear it straight and of course they'll hear a portion of it but a man's life for thirty years is much bigger than an hour and a half movie right well I mean that my motivation was simply getting out an accurate account of what's going on because there is so much nonsense that's been repeated on the internet and distorted and so really I was just looking for a vehicle to get the true story out yeah right right and I think for 30 years now that has been what people have been waiting for now if I
(03:17) could ask you Jeremy could you tell us a little about what originally what it was that got you interested to speak with Bob about his experiences and get this sort of thing you know get the ball rolling so to say yeah I mean real simple I think like most of your listeners if they were born in 1989 already yeah I was 13 years old and I heard Bob on the radio and George Knapp interviewing him and it really I like to say it weaponized my curiosity and that when I heard what he said about the gravity propulsion system it kind of
(03:54) flipped the script for me because I was aware of rockets that kind of thing but the idea of falling into place in space and time I mean is just really cool and the technology of it and the propulsion system that got me curious and from that day forward I was listening exactly and as you said earlier there's been a ton of disinformation I mean a lot of the videos that I've made surrounding Bob have just been the same old info that's out there I mean there hasn't been really anything new in all of these
(04:25) years and so I really don't know if a lot of the stuff that I referenced regarding his experiences was true half true and so I wanted to ask some questions here that I know my audience would would love to hear to you Bob now you have said that you worked at s4 on did you say there were at least nine craft that you knew of alien craft at this secretive site yeah there were absolutely nine yeah okay now apart from the sleeker sports model craft that you had mentioned in the past can you give us an idea perhaps of what the condition
(05:02) of the other craft were in were they totaled were they shot down in a perfect condition as if they'd been gifted to the military what type of condition were they in if you could say the condition of all the craft with the exception of one which it looked like they had intentionally fired a projectile at uh just to see if the projector would penetrate it but with the exception of that craft everything looked like it was new now I've heard stories and you know read on the internet about you know theories about them being gifted or
(05:42) crash-landing clearly none of them crashed at all now my gut feeling and this is my gut feeling I have no information on this that I almost believe that this this was some sort of archeological find in some way I don't I don't think I don't think there was a I don't think it was an exchange like we're gonna give you a bunch of craft or I just and again I I really can't say why it's just because of the mutterings of my supervisor and the other people that work there and it was very
(06:16) compartmentalized as I understand it I mean it was oh it was basically here's what you need to know and you don't need to know anything else is that basically how it was yeah we worked on the buddy system and you know when I worked on nuclear weapons at Los Alamos it's it's it's similar you know you don't get to know the entire project how everything works you're you're assigned a component of it and you work on that component and you unlike Los Alamos in other places there is no free open discussion and
(06:48) open discussion is really what propels science forward that's the one

problem I really had down at s4 you know they worked on the buddy system my lab buddy quote-on-quote was Barry and you're only given really one person to bounce ideas off of and you can talk to him in fact when you go have lunch at the facility you can only sit with him and you can only talk with him you can't talk with other people or exchange ideas and that in itself can thwart you know the entire project of moving forward but that's yeah it's very
(07:27) compartmentalized so it was really just Barry and I working on that one small sub component at that time right and I think I'm really glad you said that because that's a message I've been trying to communicate to especially the younger viewers out there who in this sort of high paced Internet age they want everything now they want all of the answers right now and so they come to me and they hear that I may be speaking with you and Jeremy and they say well look if you're talking to the most well-known name in UF ology if you're
(07:59) talking to Bob well he should know all the answers you should be able to get every answer about aliens where they come from you should be able to lay it out for me in a nice summary and I try to let them know this is not how things work bob was a part he's one of many everything was very compartmentalized and so you do have answers but you don't have the full scope because you were just a link in the chain as it happens working there but your story is fascinating in and of itself and I'd like to pivot to Jeremy here and ask you
(08:31) sort of a double question Jeremy if I could first of all with this film and with others is it true that you do everything yourself as far as filming interviewing recording audio editing are you truly an independent filmmaker and at the same time being an independent and doing a film like this very controversial film have you ran into anything during the making of this any sort of push back things happening or from people or places that didn't want this film to come out you know um Tyler well first of all look man yeah I'm a
(09:08) completely independent filmmaker people don't understand what that means I also film in the art or fashion which basically means I do everything I add it I film I finance it so yeah I'm totally independent my life you know doing this is depend upon people liking it so if you watch my films it directly affects me so yes I'm an independent completely independent filmmaker the second part of your question is have I been resisted in any way in doing this film I was gonna just say no I'm just like laughing now
(09:41) so the answer to that is I had never been in any way resisted only assisted people have only helped me in the process of making films they encouraged me they give me tips so actually personally yeah no I personally I have never ever experienced anything that would try to stop me from making a film I'll just leave it at that right well certainly we do know that Bob again from what we know that it's public or that he has said himself he has had a great amount of push back over the years from coming out and and what he's done
(10:18) and you know I think one of the biggest questions on my viewers minds as well as mine to Bob here is if I may ask bluntly if you did what you did and it looks like you got someone scared I mean I believe that you are telling the truth 100% so let's just say if you did it how are you still alive well clearly that was the whole point of coming out and saying what I did look you just can't kill people as soon as they say something all it does is underline what they said and immediately get everybody looking in that direction you know that
(10:58) the fact that I said what I did and told him my experiences down at s4 that was done to protect myself I had already been shot at before that and you know so it works in the opposite of what most people think right right to to take us down what would only be to further validate our claims basically exactly exactly I'll tell you a little thing real quick just you know people don't know that humanity of this the actual experience so you know no matter what you think or what you can make up in your mind Bob came forward to
(11:35) protect himself that's what happened right and he didn't come forward you know oh you know openly like oh yeah let's do this man i mean george knapp impalas are physically wrestled on the ground the day that the tape was being put in to reveal his identity George told me the story I recorded it and and and Bob told me a story so yes I understand look at it that way it's hilarious I mean obviously George won you know he's right twice my way it's like you know that was the deal man whether you understand it or believe it
(12:09) or not I've come to truly understand that Bob came forward to protect himself well it's kind of more complicated than that you know this doesn't I know everybody's used to watching Hollywood films and things of that sort you know and

it's not how real life goes you don't shoot you know bullets into a gas tank and they exploded a giant fireballs that stuff doesn't happen you know and it doesn't work like that either they don't the only time they would go out of their way to kill someone is if they're
(12:38) consistently releasing increasingly damaging information the thing is I released all the damaging information initially and I was done there was nothing else to say there was no reason to stop me any further right what they do at that point they did do they began to destroy your friends and family people I know have you know we audited by the IRS people that had security clearances and other jobs of that sort had their clearances pulled so they begin to destroy the world around you so you lose your support group it's a lot
(13:12) more complicated than people think or Hollywood portrays was it true that you were shot at at one point in time yes yes I was shot at on the Charleston below getting on to the freeway in in Las Vegas yeah in your opinion do you think that was part of the sort of campaign to just discrediting they know they can't kill you but they know that they can spend years trying to discredit you hurting you and your family now those pop shots that they took at you do you think that was a part of that maybe just to scare you was it just a lone wolf do
(13:48) you think it had anything to do with it or was it just one of those freak things where you were like well what the hell was that but you got away and that was it you never you never found out what that was from I don't know I I think it was just it essentially terrorism you know I like I think we mentioned in the movie there were times my friend and I would go out to work at a health club there and you know all the car doors and you know drunken hood would be open I mean there were constant things that that let me know that you know they
(14:24) could gain access or do whatever they wanted to right and they were on you like yeah quite frankly it really was wearing me down at the time I really wasn't sure what I was gonna do George tells a lot of this story says you know he always told me for all these years I mean you know George has been a mentor to me in journalism he's broke the story with Bob in 1989 he has said to me over and over when I first started talking about this you're never gonna get it cuz you weren't there I was there he says
(14:55) because I saw it this is real this happened someone didn't want Bob talk and they wanted to mess with him and they did mess with so I guess the point is you know looking at it now thirty years later from our outside views you know it's different than the people that lived it and I've talked to a lot of them now a lot of them it lived it some of them went on camera with me for the movie so I just want to kind of put an exclamation point on what Bob said you know this is real it is real I mean from
(15:25) from the thousands of videos that I've done and again I just sort of take take what comes to me I try to correlate I post it to YouTube and I do stories on people like you and Bob and from what I'm found you know it's extremely real they're definitely covering it up it's an ongoing cover-up you know and my question for for Bob would be you know what what is your opinion Bob on the state of I guess you'd call it the UFO movement where we have guys like me on YouTube but we have many others putting out movies and books
(15:59) a lot of them in my opinion charlatans that's why I don't do interviews with them but they do have huge followings a lot of disinformation so you know was it that that kind of caused you to come back into the spotlight and if not what was it that that made you say okay it's been long enough I'm gonna come back out and tell the truth of exactly what happened and do this film what was your major your you know your step stone to doing that well if you're talking about the step stone to doing the movie with
(16:32) Jeremy well I mean that certainly played a part there was so much nonsense getting passed around and it began to grow and fester as time went on because I never challenged any of it and people began to build on it and it got to ridiculous proportions and I mean that was really shocking and and you know as you mentioned any time I looked on the internet or read any UFO material it was so blatantly nonsense and whether it's Facebook or Twitter or I mean I'm not really into any social media but there you can find people that were I mean
(17:11) pretending to be me on everything I even was listening one time on an AM radio driving I think was to New Mexico from Las Vegas and it was late night I turned the radio on just to you know keep myself awake and it was a UFO program so I turned it on on talk radio and here's a guy that was talking about yeah I had lunch with Bob Lazar yesterday and look he told me all this knew and it was all nonsense

so I mean all of this was just constantly going on and I have heard so much nonsense I mean from people having interviews
(17:48) with rare Tillet reptilians on you and it's crazy so that the sad thing is that yeah there's probably two or three percent true and accurate information out there but how especially today the way information is disseminated around on the Internet how are you gonna dig through 98 percent nonsense and mine out the 2 percent it's almost impossible it is almost impossible I mean in a small way that's what I attempt to do with secure team I get I have multiple people working for me they bring me you know
(18:20) research summaries every day I try to sift through it it's hard to do anything from a computer screen yeah I mean some things you just need to get out there and do but as you said it's probably three percent of it is real and you know it reminds me of a time where again someone had come on to my channel posted a comment they had your face as their little you know screen name face there and said hey guys bob lazar here you know ask me anything you want you know write in the comments on one of my videos and i said there's no
(18:52) way but it was amazing to see how many people were brought in by that totally fooled by it i think i ended up deleting the comment after i finally figured out I highly doubt Bob would just pop up in the comment section after all these years and you know I I just so you're right you know for a brief period I was trying to answer questions on Twitter and that just was overwhelming and that was done with however I'm gonna take personal credit both for our buddy Zacks engagement and also the fact that United
(19:25) nuclear which is Bob's business is now officially on Instagram and his lead employee Zack is the one that uploads the images and I just you just started in a few days got enough Bob even knows that I think does but Zacks doing the official United nuclear Instagram so there is now finally an official social media where people can but it's not from you know it's your business it's your business ngratulations that's awesome it's awesome news and you know I think it's awesome and you're gonna see this
(19:57) in the film I don't want to give too much away but yeah this is the first time in many years that we a bird's-eye view into the life of mr. Lazar and what he went through very tough times how the controversy shaped him throughout the years and to my viewers who are listening you're gonna see that in this film you're gonna see a lot of stuff and again I don't want to talk about it Jeremy without saying too much is there maybe something that happened in this film of note that maybe you'd like to
(20:30) kind of talk about something explosive or that sort of what blew your mind about making this film or what has Bob told you rather well I mean yeah look that the whole process for me was kind of mind-blowing you know George challenged me in 2012 oh yeah sure get Bob to talk to you it'd have to be the luckiest leprechaun in the world it's like it was hilarious so the whole process I think has been for me really interesting you know Bob saying okay total open book what do you want to know let's do it
(21:06) you know hear the tapes here's the photographs I'm not gonna presort them just grab the box of tapes and digitize them whatever's on there it's yours so bob has been completely 100% open with me without giving me any restriction put me in touch with his mom his friend whatever so that's been really eye-opening to be honest with you um so I don't know man I think what I'll give you one thing from the movie I'll give you a spoiler right now suppose you don't want ok the fans money okay so
(21:36) I'll give you a hardcore one man so thirty years ago Bob Lazar said that there was a gentleman named Mike Thigpen a very specific name that this guy was he thought an agency that was doing a background check on him he didn't know maybe FBI George goes on the news he says oh we've got some news there's a guy named Mike Thigpen and he came and I questioned Bob Lazar you know we could check the veracity of his claims and you know went on the news and I can just imagine I talked you know it could just
(22:02) matter this guy he's eating like pasta at his house and he's at dinner with his wife he sees the news and like just it's a fork drop moment he does Jastas for candy well I know that you know that was his reaction because after 30 years I found them I found Mike thank him and that could only be done after 30 years cuz George tried in 1989 called and the FBI here a source that told him it wasn't the FBI George it was the OSI office of federal investigation they were doing Boz security clearance so George tried to

(22:33) get hold this guy who was by the way in trouble because they wondered if he was impersonating an FBI agent because how did that get confused so this poor guy you know he's just doing his job and he got hit with a storm because of this well for 30 years no one was able to find him I found him tracked him down not talked to him and he is a cool cat he's a good guy he says yes I was doing security clearances 1989 for Nellis and the base and I do he says I'll go as far as I do remember Bob Lazar well Jeremy
(23:02) let me follow that up and ask you know has your personal opinion about the world in general the world we live in has it changed at all since you've gotten to know Bob Lazar has it enlightened you about certain things or maybe change your mind regarding certain things or topics I mean look I think what my hope for the movie is that you get to kind of know Bob a little bit cuz I think that's the missing component a lot of people can D humanize Bob and his story and just you know say whatever they want about him because they don't
(23:34) know him and so it's easy to make stuff up that wouldn't be congruent with his character because there's nothing to defend it so I hope in my movie you kind of get a feel as a documentary filmmaker I hope you get a feel for who Bob is because I believe a big part of the story is the human stories about who Bob is is he's somebody that would be trying to like waste his time messing with you for 30 years or is he somebody who wins and I think that's a you know that's the big question everybody in the earth
(24:04) wants to know is Bob worthy of our trust when you boil it down that's what it is they want to know is Bob worthy of our trust of course if of course everybody wants to believe they say what a cool story we all want to believe it but that's the only way that they're gonna get you know to the bottom line is if they kind of look at the facts determined you miss out back it up that's what they truly want you know oh don't use junk data that Bob's don't use junk data don't use the stories that
(24:35) aren't true so yes my whole life has been changed because you know I wanted to know if this story was true I wanted to know if you the truth about UFOs hey that's a bonus really I got to know a guy named Bob Lazar he's a cool guy so oh I can't say that I'm your YouTube I'm sorry no it's fine he's a cool dude yeah so there you go this is historic say whatever you want to do whatever you want get naked if you like so yeah so Bob I want to get back if I could I know you've probably talked
(25:02) about this a million times but you know of course I know the viewers would love to know a little bit more about some of these craft that you worked on at s4 so just a few basic questions whether you know all the answers are not at least we can say this is what Bob knows exactly so I guess I'd like to start off with now we covered the sports model the conditions they were in now were you ever told at any time and what star system or area of space that the craft came from did they come home from all the same place if you know what I mean
(25:35) when were they acquired do you have any of that information about these craft I don't have any information as far as when and it wasn't you know I like to get very particular on on exactly what was told or read or I saw so I was not told that but I did read in the briefings that the crap all of the craft the craft came from the Zeta Reticuli star system so that's the location it's a it's a binary star system apparently there are several planets around it and it's only visible from the southern
(26:14) hemisphere so don't other going out there and trying to find it at night but yeah again that's something that I read and that's that's all that I know about that yeah oddly enough that specific star system is well known in the UFO G movement for you know whether it's true or false there have been a lot of stories a lot of reports a lot of testimony just a lot of stories that seem to all go back one way or another to that star system so they're deaf may something you know something might
(26:44) be there so that's very very interesting now if we could speaking a little bit more about the equipment in some of these craft can you explain the equipment that was onboard the sport model craft as far as communications weaponry or camouflage you know what did you see when walking into this craft those are all separate questions so again to be specific as far as how you know a very brief overview of how the craft worked there is a reactor in the center of the craft in this craft there are only three seats at the bottom of
(27:30) the craft there are several levels in there and the bottom the sublevel of the craft there are three gravity emitters they look like for lack of a better analogy like a couple 55-gallon drums stuck on top one another just big tubes there were three of them and they're on a very interesting connected to the floor above on

a very interesting pipe I guess you would call it that bends at 360 degrees so these are just three big drums essentially suspended directly above them are the gravity amplifiers they sit right above them and the
(28:10) reactors in the middle the reactor produces the energy and produces the base gravity wave it's amplified by the amplifiers and as channeled down into the gravity emitters and the gravity emitters can be swung in any direction to produce a distortion in gravity there is no wiring there is no interconnection between any components the components work just by being close to one another and considering the power output which is the equivalent of a few nuclear power plants that's really amazing because you
(28:46) know according to the laws of thermodynamics there always has to be a loss you know there's no hundred percent transfer of energy but it apparently was occurring here because there was no excess heat produced anywhere and I I can run off on a technical tangent here but I won't you also asked what I saw inside I think yeah communication systems or or maybe what was the the type of metal used if it was metal at all you know things of that nature again this is compartmentalized so there was a metallurgy group that dealt with that
(29:23) all I can say is I I felt and ran my hand against the material all the entire craft is the same color and it's all the same material and there are no sharp corners anywhere there's a radius on everything and it felt to me when I put my hand on it it felt cold in my mind that relates to metal but could it be an advanced ceramic of some kind you know absolutely so I can't can't even comment on what the what the craft is made of it was kind of a pewter gray in color right and there was an upper level on on the
(30:01) craft that I did not have access to or information on it's where if you've seen pictures of the craft that I worked on there are black rectangular what people call portholes around the top they're not they're not windows I personally believe there's some sort of planar sensor that determines where the craft is in space and how to orient itself right oh well I think that having said all that I think what would probably be an even more important question to my viewers which is that do these things
(30:36) have bathrooms real quick cuz I actually don't know the answer and I want to know is like was there an obvious navigation how do you think they flew the craft was there like a some kind of navigational I really don't know yeah I rely I have no idea how they got from I mean I see another hand or you know I have no idea yeah you know and I don't even like to speculate because in people will say well Bob said that's not so I don't want to go there so do they have that did you know no there's no
(31:17) bathrooms and quite frankly there's no need for them because the travel time is so short you know you're taking I can't remember time you know space time is one thing and if you're distorting space-time you're taking gigantic leaps in milliseconds that you know you're not traveling you don't really break the speed of light as you're traveling in a linear fashion but you go far in excess of the speed of light because you're bending space and time you know you're just taking gigantic leaps so there's
(31:48) your never assuming they need bathroom yeah right you know well especially your white you know for a long enough time you know to have any kind of emergency right right and another thought I had had which has been widely discussed is that many of these alien beings or at least particularly the smaller grey alien a lot of people seem to believe that these are droids of some sort they are not flesh and blood and they are more like probes that are sent out they fly these things so there is no need for eating or drinking we're using the
(32:22) bathroom or anything like that have you heard anything similar or have you at least heard of this theory and that's the U or Jeremy uh I haven't heard of that theory of me but I do have to say I did see a briefing now you know there are several other projects going on at the same time and what we do have is each group gets a two or three page briefing of what the other groups are doing and their term again they're trying to keep everything departmentalized but what they want to do is at least let you have a little
(32:52) knowledge of what's going on in the other groups in case there's a connection so you you know can complete your you know your research right but so in my briefing it did have to do with as far as the you know the actual beings that were in the craft they had a photograph of them where their chest was cut and and peeled back and they had made notes of - there it was only one central organ is as if all the organs had grown together into one mass and it had multiple functions and

that was like the extent
(33:32) of my knowledge of it right but it was certainly a biological specimen now whether or not that piloted the craft or that was making reference to something you know that had to do with the craft I don't know but there was there was definitely a reference to a biological entity of some kind Rhett had unique organs inside well and another thing regarding these craft this may be the most controversial of this whole bob lazar topic is that of element 115 which is said to have been used to power these craft and of course nobody knew back in
(34:11) the 80s element 115 did not exist it wasn't until almost 20 years later that yes we have something here now there are debunker so-called debunkers out there who say well Bob didn't know what he was talking about in regards to element 115 it's not stable so what would you say to them regarding element 115 how it exactly worked and maybe how maybe these debunkers today simply just don't understand these things about this element you know they're not in the know as much as you were what can you tell us
(34:45) about that element and why it was perfectly legit and it was used to power these craft yeah well that's an understatement first of all don't tell me I don't know about 115 because it was in my hand second of all 115 was synthesized recently and you know for people saying well it's not stable and you know that's the end of it clearly you don't understand chemistry that you know that the way elements work all elements have isotopes to them and the example I always give is you know for example hydrogen we all know
(35:24) hydrogen is a gas hydrogen one actually the technical name is protium to it it has one proton and one Neutron well there's actually two other forms of hydrogen one is deuterium and one is tritium tritium is radioactive others you know other elements cesium they can have 20 or 30 I don't remember what it is isotopes to it all elements can have the same number of protons making the element but they can have different numbers of neutrons and by changing the different number of neutrons the element can have remarkably different properties
(36:03) so yeah element 115 probably has many many isotopes of it that decay but there is certainly one isotope that is absolutely stable and it is that isotope that is used in the Kraft right so it's basically sort of an issue where you know just just because we can't figure it out yet today does not mean that these alien beings didn't have it figured out because they did obviously no question in time if they keep experimenting what now keep in mind they only made four atoms of 115 and again if they keep experimenting with it I'm sure
(36:45) they'll find eventually a combination with neutrons that will be stable and that'll be another point of indication but yeah that's typical of any element there's nothing new about that and everybody claiming you know that that disproves it really has limited knowledge about that yeah I'm gonna jump in here and just say I've done a lot of research for the film on this because I wanted to understand it you know I'm not a scientist I'm a filmmaker but I did talk with some of the top scientists in
(37:12) the nation and outside of our nation from Russia to San Francisco to gosh Washington DC so I talked to a number of scientists and physicists and people that actually work hands-on with the fabrication of super-heavy elements and across the board the you know some people got ticklish talking to me when they realized that it had anything to do with UFOs however the people that would talk to me too about the hardcore science they absolutely 100% unanimously across the board confirmed and agreed that element 115 that we
(37:57) cannot discount a stabilized version exactly like Bob Lazar described so I just want to make that really really clear to your audience Tyler because people always use this as a fake Newt they use this as something to say to dismiss and discount what Bob said and and and that is they say that it is junk science or it is pseudo science what he said I have confirmed every way from Sunday that we cannot discount a stabilized form of element 115 and so I just I want to say that on the record now it is total BS when people try to
(38:44) act like scientists and say that it's they discount it they either don't understand the story or they've got an agenda because the top of the top of the world's deal with this told me to my face so I just want to throw that down well he heard it right there guys that's all the info you need to know about 115 exactly what Bob and Jeremy had just said I mean we have scientists on record who say what Jeremy just said I mean we know the element exists and I personally believe that he was there and you know
(39:16) as we were talking about these so-called debunkers who will pick and choose

these little things you know a lot of people attack Bob by saying well there's there's no proof that he worked at Los Alamos or there's no proof he went to this this college or was that this base or anything like that well we've come to find out that that he is and that there has been proof not just finding his name in the phone book registry but as many of you will see in the film and I don't want to give anything away but there is
(39:46) much more to this story that proves that bob was there he did this work so you can count on that seeing it in this film now you mentioned earlier Jeremy mr. George Knapp he is your mentor is that yeah George Knapp has been a mentor to me he's been an incredible resource of information he originally broke the story about Bob back in 1989 and he actually championed for 25 plus years completely alone you know about this story and I really admire him for that he stuck to his guns and I look George Knapp was convinced of a Bob's truth and
(40:25) if for a second he thought Bob wasn't telling the truth he would have not only dropped the story he would have exposed Bob and people forget look man Bob tried to prove his story to you you know George wanted to know - so George put him through four polygraph tests Bob aced them all Eastham no deception yeah aced em no no which way of from Sunday about that so that was with T
(40:52) erry Tavern Eddie . . aced them all so what else can he do you know look George put him in front of people that verified worked at area 51 at the time because that's where Bob would land in the plane and then go on the bus and aced it they all believed he was there at least they could prove area 51 so George really put Bob through his paces it's not just like he wanted as a journalist to believe a cool story so there's a lot of history here people need to rise understand this already so George is the bomb is what I was saying he is working he stood up and he stands
(41:20) when he beat his chest like King Kong and he's the bomb that's a yes he that definitely well said sir now he also he also took people out and he said look I know for a fact that they are going to be testing these craft at a certain time of night in a certain area and isn't it true that multiple times Bob you took people out and like clockwork these crafts are out there being tested and you even got it on film is that correct yeah I did have when I was there the one thing that I was able to memorize were
(41:53) the name first of all there were only 22 other people that had clearance to work on the project and I knew those names and there was also a clear test scheduled and they always the you know the the test site is close not close but I mean the closest highway to it is uh I don't remember the distance to that do you know it's it's not but what they did is they looked for a statistically the lowest volume of traffic along the highway before they did the test and that was always on a Wednesday night all the tests all the
(42:31) flight tests were on a Wednesday night and I had the times of those tests down now when things went bad between us and my employers there you know I still had the schedule so that's when I told my friends hey we need to go out what I told you I want to show you guys what I was working on so we you know we'd go out there hide out in the desert and the craft came up and flew around you know at the times that I specify it's amazing footage and you know I know it's been years but from what you saw them testing
(43:04) in those videos in your experience and in your opinion from maybe some of the research you've done today I'm not sure if you've had ever your own UFO encounter but in your opinion would most of the UFO seen today come from a human source from an offworld source so there's this is almost split right down the middle where half of my audience believe that it's all us every craft even the ones that show you know anti-gravity tech everything is ours half the other half believe it's it's
(43:38) all offworld and that maybe we have one or two of their craft I mean in your opinion where do you think you would fall well it certainly advanced technology now I mean can I say that it's not advanced I mean this is really pushing the limits of you know belief here but can I say it's not advanced technology from the future I mean that's possible it is how do you explain the connection to Zeta Reticuli though I mean is it possible in the future humans live there and we're coming back and just checking on ourselves I mean all of
(44:11) these are it that is another big theory there it is humans it is hot oh no I have I have nothing to say that that's possible or not well it it's it's all it can all possibly be real right but I well I really don't know actually well I think I mean if it's funny you ask no Hezb'allah had is gonna come to you next how do you

see no because of course like you you did because you had a school but not a classic you know I think you actually when I went to work out there the first thing I thought was first of
(44:50) all I never believed at UFOs I thought people that believed in UFOs were just nut cakes and you know when I went out there the first time I saw the craft I thought oh well this clearly explains all the UFO sightings were developing a really advanced fighter and they've been testing it and everybody thinks it's alien life-forms this is hilarious I'm so you know happy to be working on this project and it's clear that was not the case right yeah what I meant to say was since then have do you have you seen
(45:23) anything in the skies or do you think there's any of our public technology fighter jets that we have today that could be potentially using tech from those crafts so many years ago just in your opinion I haven't seen anything at all I mean the technology is extremely advanced and I haven't seen anything it's all been just and you weren't you were not able to successfully back engineer it were you I would just want to clarify that when you were working on these craft where's there and wasn't
(45:56) there an issue where I mean you can take them apart you can analyze them but you you couldn't replicate it was that true right it wasn't just back engineering I mean the the aim of the project was to duplicate the technology with the materials available to us now we could at least from what we ascertained is determine how the systems worked but there was no tweet the problem is we couldn't duplicate anything we couldn't even duplicate the metal in the conduits everything was and pardon the pun was
(46:31) alien to us and it was just too big of a project and so you know they would have splinter groups working on smaller components of it like you know you guys figure out how this part works but it's really a dead end they the material science was just too advanced for us so no we couldn't duplicate anything now maybe there were some you know that there were some components here or the way things were laid out that might have translated themselves into military components but it you know to me it was just a giant
(47:02) military project but the you know the major technology never made it into anywhere because it's uh it was all very high-energy related and we had no way to store and transmit levels of that energy yet at all do you think they're still likely working on it sort of tinkering with it to this day trying to make something out of it in some dark hair or somewhere it would probably be conjecture I mean you know I remember when I first talked to Dennis that was my supervisor they had an argument about this being out in the
(47:37) South Pacific to keep it out of an member that's where they did the first you know uh thermonuclear bomb rest you know to put it out there just to keep it away from prying eyes and things of that sort but the reason was the same as it was for the you know hydrogen bomb development in the 50s was it's just too expensive to shuttle back and forth all the time but that was always in the back of their minds they always wanted to leave the continental United States and take the stuff somewhere else maybe after I came out and kind of it
(48:14) ruined the situation there they did that or its I would find it very hard to believe that's in the same place and still preceding it at the same rate but alright there's no doubt they research continues on it well I think and Jeremy I think would you agree to this that despite the fact that we don't know where they're coming from would you agree that we are definitely surveilling them I mean with the recent DoD releases of those three UFO Clips taken from fighter jets everything I've been able
(48:48) to do scrounge up and put on the channel I mean there they definitely seem to be monitoring these things they they know that these things are here we know that they're here I mean it doesn't take long I mean how many pieces of footage and eyewitness testimonials do you have to go through before you yeah right I mean look it's not a matter of belief you know UFOs are either real or they're not real obviously they're real if you don't understand that then you have a data poor perspective but the you know kind
(49:20) of social kind of consciousness people are starting to understand that now because of the release from the New York Times in December of 2017 however I'd like to say I did break the tick-tack UFO case the famous event before the New York Times because commander David flavor who is a friend of mine was talking to me for two years before that and I kept it quiet I didn't tell anybody and I developed sources I broke that story that's twice before the New York Times now what does that tell you yeah I can tell you beyond a shadow of a

(49:52) doubt the United States government does have a UFO program and they admitted it to you and it was called a tip advanced aerospace threat identification program and guess what it was a reactionary program to military encounters and sightings and that is one tiny program and I happen to personally know that there are more why do I let you release that in the first place and why do you think they even let you in the door nobody let me release anything I've got a charming personality Tyler that you do sir yeah I called up these individual
(50:24) witnesses these Admirals these you know fighter pilots and I made friends with them and I didn't burn them and I didn't distort their story or mess it up when I told it and guess what the whole world is now commander favorite story is being twisted and and I told it right and he we talked the other day and he's like everybody else is twisting it like I told you it would have and I was like yeah I'll try to clear it up but that's the deal man I just don't burn people it ain't worth it and the
(50:52) people I talked with cuz I wanted and they're good people I have a no d-bag policy so I'm right well from this new film which I actually had a chance to watch last night I wanted it to be fresh and I just kind of I wanted to wait as long as I could and stick with the audience because they're having to wait for it but it was an amazing film and it truly gives us an insight after all of these years to what Bob's life what he went through how his life has changed and you know I'd like to ask you Jeremy
(51:22) well you've said before that timing is everything with your films you know why have you chosen as a filmmaker to focus your attention on this story now and is there any new info that the global audience will be learning upon the release of this new film yeah there's new info the whole film this is not a rehashing of the past this is not repurposing vintage footage you four sentences yeah this is brand-new breaking news and information in fact I am shocked because I did not anticipate what we were going to experience in the
(51:58) filming of this movie so yeah you can anticipate to have your socks knocked off for the film you know absolutely you'll hear the chatter as soon as it's out in public people are going to talk about it so why now though is kind of an interesting question I just want to briefly answer that I mean first of all it's because I don't know Bob let me finally film him and that was cool and then second of all because I have always thought this is the most valuable story and modern history about UFOs and exotic
(52:30) propulsion and I stand by that I agree an and because we live in a different world now than we did in 1989 we now live in a world where people are on Twitter and social media and all sorts of you know every communication device possible yet that they have a lack of credible information this is credible information and the world has changed we now know that it was a lie that the study of UFOs ended in 1969 with Project Blue Book that our government lied to us and that in fact we are currently studying the UFO
(53:05) problem on multiple levels and that is a game changer all of a sudden the story the Baba's are told in 1989 about a government program to study UFOs to back-engineering them has a completely different meaning and light because of modern-day events it is time it is time and as I like to say Bob's critics have been holding the mic for 30 years and we're taking the mic back and we're taking it back on December 3rd at the world premiere in Los Angeles which you're gonna be at Tyler so we're taking
(53:32) like and we're not giving up that mic for a while we're gonna scream into it yeah that's gonna be a blast well I know you guys don't have a lot of time I just have a few more questions starting with Bob but let me ask you this and what was the if you could say the most important thing that you learned from your time at s4 and follow up if you could would you go back and accept or would you not accept your position at area 51 and s4 if you could do it over boy as far as the most important thing that's that's a
(54:09) difficult thing to say I guess the one thing that really caught my attention was the fact that there were alien craft that's it I thought it was this was advanced uh you know what they hired me for was advanced technology and advanced propulsion system that the military had made and it just happened to look like what people had called a flying saucer the biggest shock in my life was the fact that the actual aim of the project was we have to figure out how this thing works right so it was it was really the
(54:44) scope of the whole project that there were actually alien craft from another civilization so that today remains and probably always will be in my life the most

shocking thing I was ever presented with I already forgot the second we can go back and accept the job at s4 if you could do it over yeah I would always accept that job because just being exposed to that technology things I thought were my Cybil I will never forget and usually people ask after that would you if you could go back tell the public again and
(55:27) I really don't know how to honestly answer that question because sometimes I say I wouldn't sometimes I say I would it just depends on my mood of that day right um you know and I really don't know but I know I would never turn down that project especially knowing you know that technology is relic is that was the most fascinating thing in my life right and I think that'll lead me to my final question for you Bob and it's a big question that my audience constantly asks which is that in the end why do you
(55:58) think Bob but there is so much secrecy why has the public at large been lied to why is the secret being kept about the UFO subject and still is to this day because this is the most powerful technology on the planet and anybody that controls it this technology controls the world look it's all a battle you know whether we know it or not but you know Russia the United States North Korea I mean it it's you know if you really take a step back they're all acting like little children on a playground but really this is
(56:37) extremely powerful technology and this is a military project and you don't want to give away even the slightest hint to what's going on at one time part you know the project right before I got involved with it the Russians were involved and they made a huge discovery at some point again this was right before I came on and they kicked everyone else out and kept it to themselves and there's kind of been you know a point of contention between the Russians and the United States at that time well I don't know what that was but
(57:10) yeah this is it I think it all boils down to weapons and controlling the world and forcing your views on everybody else that's just the bottom line well do you think that you know is there something that needs to happen for our government to finally tell us the truth or is it just out of our hands I don't know if I can answer that question I don't think our government ever really you know comes clean unless they're pressured to run some reason right and there's no reason for them to come clean about this quite frankly I'm
(57:41) more concerned about the repercussions from the movie you know I am it wouldn't surprise me if I suddenly got accused of some bizarre thing and I'm just I'm waiting for the other shoe to drop yeah that's that's been you know I got to tell you that's a debate of my night I'm one sense I'm like yes the movies gonna do really well now and the other sense I'm thinking oh no you know it's not gonna affect Bob and I think you'll understand that when you watch the movie
(58:11) that there's real-world consequences to this type of dialogue and I experienced that for the first time in my life like doing this film so as a friend I want to you know hope and protect that nothing Bad's gonna happen about from this but you know bob has always been able to defend himself he has never needed a defender he just chooses not to engage and I think smartly over the years because there's so much signal or so much noise in the signal so I'm look I'm gonna look at this really positively I'm
(58:45) gonna say we've had 30 years where Bob has been you know really beaten up by the UFO community unnecessarily and honestly we're so far beyond our scope of our audience is so much bigger now with this movie a dozens of millions of people are gonna see this if not or and it's a new day I don't think Bob needs to worry now about no percussions from government or anything like that we are now out in the light permit let me tell you something we have an army behind us now I mean my little channel alone were
(59:22) about to hit 2 million subscribers but have had almost a billion views in the last couple of years we have an army we missed you Bob we truly did you know I'm I'm tired of posting videos using 20 year old vintage footage of you I am so happy to you came on you have nothing to worry about there's an army out there who support you and back you and gentlemen it's been an honor a true honor to have both of you here I want to thank you for coming on today you know Bob you truly are a legend you have millions of people behind you so
(59:57) just remember that I know it's been tough for you over these years but sometimes great men have to pay a price for the things they do and for doing what's truly right and that is giving the public the truth that they deserve and you have gone above and beyond that sir so I want to thank you for that to Jeremy I want to say thank you my friend for coming back on secure team once again and for all of

your hard work and getting these films made and getting this film made and for being one of the very few left spearheading this movement
(1:00:31) and leading the March for true disclosure you are both always welcome on secure team thank you both again it truly is an exciting time and Jeremy I'd like to end this by asking you you know is there any information that you can give regarding the film when it's coming out when when can we see it tell us what you got to say buddy I'm gonna give you that but I'm gonna give the mic to Bob for a second okay what we got well I just I just wanted to thank you for the kind comments and I look forward to
(1:01:01) meeting you when you when you come down for the premiere thank you sir I truly look forward to meeting you tuned it was an honor to have you and so just about the movie yeah let's just get this out so everybody knows I really really want people to see this film that's why I made it as an independent filmmaker when you watch that movie and you buy it on iTunes you bought it on Vimeo that directly affects my life you know thank you and Bob is making nothing off off this home he would accept nothing I want
(1:01:27) to clear that up right away it's only me so if you want to see more movies for me yes please get the film so you ask Tyler I'm gonna tell you okay so we do lots more yeah okay bob lazar area 51 and flying saucers that's the title of the movie if you get it on iTunes you get over two hours of bonus material the most amount of bonus material and then next up is Vimeo you get all that bonus material too but it's available on Amazon all pay-per-view platforms just literally click the button buy the movie
(1:01:56) watch it and you determine for yourself reality otherwise somebody else is gonna determine it for you so that's it man I hope you enjoy the film I'm really proud of this one celebrate with me watch the film and engage in the debate alright so you heard it right there guys if you want to see this movie I'll put all the links down below this is a historical film it's not gonna be another one like this and from what I've seen Jeremy has knocked it out of the park it's it's such a treat and especially for Bob to
(1:02:30) come out after all these years after all he's been through and putting his life back out there for the public so let's show both of them they're going to stand behind them we're gonna support them support this film we're gonna watch it it's an epic film thank you both for being here I'm gonna do my best to continue supporting you guys and I hope you will both come back on very soon thank you so much Heather you know just to make it clear bob lazar is not going on UFO circuits he's not doing radio
(1:02:58) interviews you were like literally the only one we have rejected everybody every publication everything he he made he allowed me to make the movie that's it guys well you know what I was just trying to leave a little bit of hope that he might at some point come back on that's all it was I know very private man I've been a treat I'm hoping listen honestly to be a candid here I'm hoping that bob has such a good time at this premiere that he'll come with me to a couple more theatricals because i think it's
(1:03:27) powerful for people to see Bob and to actually hear him talk about it so he's not you can't be dehumanized by people they're like oh that's him so that's my hope but bottom I just want to let everybody know stop calling me stop asking me it happen but I was not doing anyway you're right you're right Bob you have that's true you've done enough I'm I'm I'm selfish of course I'm gonna want you back on I'm gonna want you both back on I'm a selfish man but you you Bob
(1:03:53) especially you have done enough live your life enjoy your life my friend you have done it all Jeremy you're on your way and I appreciate it buddy you've done great work thank you both for being here thank you so much how I can't wait to see you at the premiere Matt's talk saying to buddy have a good day all right all right you

Bob Lazar Q&A - YouTube
https://www.youtube.com/watch?v=8Xodh_trWuc

Transcript:
(00:00) I bid you welcome on December 3rd 2018 at the theater in the Ace Hotel in downtown Los Angeles investigative filmmaker Jeremy Korbel released a documentary a documentary about one of the most controversial figures in ufology a man who tells a

story that if true changes everything that man as Bob Lazar the documentary was called Bob Lazar area 51 and flying saucers I was there at the premiere it
(01:11) was an amazing event it was as if this controversial story after almost 30 years was finally receiving the recognition and the validation that it's so very much deserves Bob Lazar story from my perspective reeks of the truth when I hear Bob Lazar speak about these things I do not get the impression that he's a conman or a liar or mentally ill I get the impression that he is an honest man to the best of his ability relating events that happened to him working at the top-secret facility s4 in the late 1980s if you're not familiar
(02:10) with Bob Lazar story this documentary will be a massive iOpener for you if you are familiar with Bob Lazar story there are several things in this documentary that you are unaware of and will open your eyes also and I think and I hope will hammer home the truth of the matter that Bob Lazar is telling the truth these events are real and really did happen once the movie was over in the theater there was a Q&A session the Q&A session consisted of investigative reporter George Knapp who was responsible for
(03:04) breaking the news story of Bob Lazar and area 51 in 1989 to the world think about that for a second before Bob Lazar and George Knapp the world at large had no idea about area 51 this iconic secret location nobody knew anything about it now today you could literally grab any random stranger off the street and ask them about area 51 and you get a response they have the aliens there it's in Nevada it's a secret base everyone is aware of this and the only reason they are aware of this place is because of
(03:57) George Knapp and Bob Lazar George Knapp appeared on the stage closely followed by Bob Lazar and Jeremy Korbel they sat there the three of them on the stage and took questions took questions from Twitter and Jeremy also asked Bob a bunch of questions and asked George Knapp a bunch of questions and their answers were amazing thought-provoking straightforward and incredible if you weren't there that night you missed the Q&A session but luckily for you I recorded it now here's a brief disclaimer during the Q&A session Jeremy
(04:49) Korbel the filmmaker told everyone in the audience that they could not video record the event they could take photographs but they could not video call radio record the event I have followed his wishes to the letter I did take photographs I did not videotape the event but I did record the audio might sound like a loophole to some but I think it's worth it because this information is valuable this event was valuable this movie is valuable and I strongly recommend anyone listening to go and purchase or rent the
(05:50) documentary Bob Lazar area 51 and flying saucers having said all that cheers the Q&A from that night enjoy in the audience I would ask any questions from Twitter not those people are saying things to me because naturally questions to be already you know I remember you can text me but the hashtag bombs are clearing the field it's a question to answer but I want to put the script here for a second because George is always a when interviewing everybody somewhat I think a second interviewer of something number 21 was
(06:49) 30 years now George was standing up and saying hey can I believe Bob story but he never really told everybody someone at least one so thirty years ago and to this day bebop story keeps coming couple reasons what you did at the beginning for love are your trust first of all did you notice I have brown hair back I think the fact that has turned white you said what to do with Bob Lazar over the build what Derby set out to do was sort of to let the world know a little bit about Bob because what you get to know him the improbable premise he comes
(07:39) for wrong and I was agreeing to do that in our story we were always arguing about what school he went to and what he did at Los Alamos and and what has happened since then and all that he crafted ufologists in minted buffers one of the wanted whether and I never got to really tell about Bob other than this Gracie interesting interest is yet part blowing stuff up but putting its what won me over I think back then is just getting to know about what kind of a guy he would have said that you know if you follow the eight meant that because the
(08:15) people are here you are familiar with that appeal you know what it's like for the phonies the people who come up with these crazy stories they always have to keep adding to it is to keep themselves in the light way you know so one day they saw flying saucers the next day they gotta say they were abducted the next day they had section of evil aliens that I said they got a wife on Mars and I stay they're trying time-traveling Mars and they always have to be packing stuff up Bob wasn't like that he told

(08:42) the same story to Jeremy that's bill that he told me 29 years ago and I think that with [Applause] no we would speculate he didn't jump into conclusions he just stuck with the stuff he he knew or had personal experience with and it impressed me that he didn't necessarily believe in himself I mean he was skeptical about the things that he read the reports and then quite figure out - now to see this stuff we have entertained the idea that maybe they had an idea in mind that he might leave him that it was a false flag or
(09:23) running up a flagpole and see how the public reaction and pull the rug out come on baby he doesn't cool that stuff out but as Jeremy pointed out of the building people are doing the best who are closest to it we know that he's not a liar it doesn't make stuff up and the story's good really consistent and then the other part that's really hard to slate on we didn't copy the conversation and a part-time debate with all the weird stuff that happened to must be the Bob but all said whether it's a must
(09:54) have a circle in those cases while we were trying to work on verify historian building - Casey you know a lot of really strange and unpleasant things happen if you heard this story that I repeat I was reporting but they're all kinds other really weird things break into this house when they just move things around break dates on the board break-ins to his car just gamesmanship to let them know that they were around that for me as I interview people who had experiences out there two dozen different people who had
(10:28) worked at area 51 through Blake over the years people who agreed by phone to give me information whatever another were visited by agents who told them to keep their mouth shut shut up six people bring a rope nope today we take it for granted that our phones are are tapped that it all goes into some gigantic database use on a monitor by the NS back then you know I can comprehend when I realized that somebody was listening to micro but it happened again and again people who offered to get the information that would buttress the
(11:04) story that was told by Bob were visited by agents who told them to shut up or else one of those ladies went for the marketing court system and they had these two guys named Hershey and secretary and over and a stenographer and he speaks with a defense contractor at which they this is covered with disgust crash saucers and they came to her and said look here's no manure your superior we know you travel back and forth to Los Angeles to see your daughter and that he comes here it's a big desert on parity
(11:35) shape of something bad and she was scared to death that ten years later on the back yard maybe she'll talk to me help she won't do it so those things were real and things have happened about real bad things that happen to all of us in that circle were really somebody who's threatening him and it's because the storage period and when we figured out that the mystery of what was in the beginning to care of a skull with the bones I wasn't reading that happened that wasn't thirty years ago it was a
(12:03) hero I want to show that okay I wanted to show you guys that you know for the first time not that was real that did happen I experienced it and and the movie is something like that what's going to happen so I kind of understand a little bit we think whatever you want that happened so response georgian is adhering who the thing is we've never needed a defender you've never needed somebody to talk for you and people have said that and the things you've ever needed it you just didn't think was worth your while that
(12:49) you have a receptive audience to hear your story and i think this is a different era and a new time this is a question of it from all this experience you need to drag into this world premiere do you have anything you want to say once my money had input from my college domakr did you ever fight then clip from modern-day he says he never saw an alien but in the clip of 1989 you reverences see daggers those old clips remember we can be explained yeah so we were given two or three
(14:00) projects going on every department lies so we had you know we don't with power propulsion and there was another group that dealt with metallurgy there was another group that dealt with many biological enemies in any way we just said little briefings between the groups so we kind of knew was there were any connections and that was part of the biological enemy briefly so they had been the second trying of a creature to Melanson trying to thank you and the only thing showing was there was a single organ in that body as if the
(14:40) heart lungs liver everything had grown together it was single organ they had cut that apart the different chambers inside and that's pretty much literally that all they have to see from that but that was kind of fascinating in itself and I mean

that's why I think that the brandy you're saying and Oh everybody slip up on words we said drawing first Bob drew me a picture of the kneeling down of a current president so that's another thing I noticed we get on the air with George and he professed special
(15:14) on Bob the stove like worried you're gonna when he's talking he says the wrong word you just listen for what he says you know kind of big part the words I think that's so important I feel like it's a new kind of thing I mean you also kind of hate having the camera I mean you love that let's say another question from the audience unless you have something you want [Applause] I don't even know where to start there you know my friends actually asked me just follow sources or like science experiments do you believe undercover
(16:14) agents are in the room at this very moment also George with one of the people tasked with following you during that time period actually admitted into you that they were the ones following empty that is there were these week that one of the places we used to hang out was a watering hole called the smuggled lavinia it's my land we would be there with to soar strategize and figure out where to go next there were a couple of other people in that small broken when the guy was one of the ones who had followed us around
(16:54) he met me there this is years later and told me that his job to problem was there and he doesn't like the bars later but I you know I see one right here Erica a question for Bob how close to duplicating the alien propulsion system did you achieve we didn't we couldn't even duplicate with material that I mean even the casing material we degrees even understand what's going on it's one of those things for Rico see what's happening and be proficient at using it but there wasn't a single thing we could
(17:46) do one day at all at least at the time when I was there I have no idea where they are at this point okay [Music] what breakthrough and kept Redemption is my eyes what breakthroughs did you come to them give the research that you did there were there any great did you experience any breakdown experiment question did you have any breakthroughs you were working at us for an alien spacecraft bottom you have breakthroughs well anytime you you were able to decipher something it was afraid true I think when we determine the fuel was a
(18:23) super-heavy element that was a great room when we finally figured out how the reactor and the amplifier work together that was a breakthrough when we finally figured out how to shut the reactor on that was afraid of every single thing what's amazing to us it's like you know having a couple little children playing with advanced materials it's just all you know it's pretty much all luck I guess you know some of the things I know that you cover I know it was a news to me and talking with George all these
(18:56) years and talking with Bob as well bob was a kind of hit me like it was like I was to the situation we were in we just going on this complicate that's a stable element the element 115 that
(20:08) was synthesized recently a few years ago that does the game very quickly and any element can have a whole host of isotopes and those isotopes can have various half-life or beast so the isotope of the 113 that it's using the crepitus table does not detect funny though story gravity was admitted it was a wave for sure I call my way because you know it's a little bit - to get to know Bobby he's not happy being up here like he's
(21:16) doing me a favor answer your questions he's trying to [Music] [Music] [Applause] [Applause] [Music] what does they thanks to some friends of
(22:20) ours from buda Jones they call so I think all alone in a room and Bluetooth wrote this amazing company they didn't trailers he's a predator the day by repeated weather the people will decide to believe your story or not leaders for a lifetime that's because they have the information or they do I mean you know
(23:39) here to see you and I go you travel from other countries from around the world every country it's unbelievable to be the bestest I'm getting steak for supporting my work thank you for supporting George's will you might but trying to 25 years against all laws that have been Bob cellphone is your anything Bob that you want to tell this audience right now just what's what's important about your show whether they believe it or not what do you want them to take away when they leave this artwork now I
(24:16) understand it's an incredible story and I myself have a really tough time believing as I said in the film but the events that were portraying a curve just like they were shown and you know quite frankly I prefer people don't believe it because [Music] for those of you they can see through that and all I want to tell

you is personally this sports model okay I think it's really interesting I had a guy he's an aviation writer ideas very sophisticated he said one of the things that's killing me is that commas are team up with
(25:15) there's more because it is from an aviation standpoint it is so perfect the system is right it's genius and I'm like well maybe you didn't make it up okay so tell us about sport Before we jump off stage just tell us a little bit about what was the most impressive to you about the sport one about the science of it what you got to see inside of it what did it feel like to walk inside a flying saucer it was really more honest and interesting at the time and everything is exactly one color it's
(25:52) all dark pewter gray there is no sharp angle anywhere everything has the radius of curvature to it as if somebody built this thing out of wax and let it melt a little bit and let it cool off it's a very unusual I mean it feels at usual just to be in there but even the most simple things inside are at partly proper completely alien the little doors that snap open are making a little little hexagons I mean it's hard to go through everything that pops into my mind right now but it's difficult really to say but there's
(26:36) nothing that it's like going into a room where nothing looks familiar at all uneven the room itself so it was really something I'll never forget there's small furniture well yeah that's a good point to me but even that doesn't you have something I can want to see fence Hammonds normal science so it was really it's a shocking thing but I just want to say you know thanks for including me guys this has been arriving earning George's trustee can tell me you're never going to get down good luck
(27:11) kid that was awesome thanks they heard me thanks love just so everyone spirit their mom did not ask me to make movie he's getting zero from this movie he gave to the site's charity callosum we have screening them the things you think are just wrong and go ahead and T that ain't what you want or you do the story and you can with your rational line with your skeptical mind but with at least part of your mind open to this or even hear it some point you gotta tweet this and your friend of Dave Navarro's there Heon
(27:57) called it because of some hopeful skeptic he said he hopes that this is Jeremy wants to believe the x-files but he still uses his line racism is a healthy thing this kind of fear not to just body you're skeptical of your own story and in some ways understand but it doesn't mean having a there will be now a storm of information there's norm of information that comes out over the next probably six months
(29:01) what you saw is a glimpse it's just a glimpse into Bob's life it's a glimpse into work the Georgia thirty years into this story slowly I'm going to be releasing clips and little pieces there's you know let's get the information out there you saw the bulk of it but the conversation has started now every single conversation and there's going to be more so even though we're closing I'm here just do me a favor if you like those good tell me the whole thing
(30:04) [Music] be back when the started in 1989 I was kind of an alpha you know he was telling his story you in the last month a traumatic that be our times for infinity this December of last year of TSA the public more worthy those videos that Lisa constantly people with my line of work worth doing UFO stories protecting its treatments don't start off with funny jokes and put down at us and maybe the pages turn maybe we are in the art in a new era an era when Bob story can be used in a much more positive way well I mean I don't have a lot to say
(31:12) other than I know a lot of people came from great distances to be here I really do appreciate that I appreciate all the support [Music] [Music] [Applause] Bob's posters exactly we're going to school me if I ain't do that so to sign them and you know what was not invented you don't worry about it just supposed to celebrate thanks for sharing I hope you've enjoyed that glimpse of a truly great night listening to Bob Lazar
(32:18) in person tell us about his experiences along with George Knapp and the filmmaker Jeremy Korbel it was a wonderful night and a great experience and I cannot wait to see what's next for Korbel what's his next movie what topic will attack hole next we'll have to see once again thanks for listening go purchase the movie Bob Lazar area 51 and flying saucers you

Transcript:
(00:00) so Jeremy you talked about bob lazar during your talk and your feelings about his case but i guess now that we had that Q&A last night if you could kind of reiterate your feelings and also because you've been involved with a lot of interviews with him lately and and seemingly have become a friend of his but also maybe what you thought of the Q&A well in what you just said my feelings have nothing to do with the Bob Lazar case I looked at it and have been looking at it not through a standpoint of feeling Bob is a friend and that has
(00:38) nothing to do with why I believe Bob Lazar and has nothing to do with feelings or emotion has to do with spending years and years and years investigating his case and being able to see it from every angle from the inside there's so much misconception about his case I think it was great that he came up on stage I mean you have no idea my mentor George Knapp he's the guy that really helped me with all of my investigation all of my work not just on the Lazar case he had to literally drag Bob he was so terrified of you guys and
(01:17) I honestly was it was unbelievable I asked him to sign a few posters I have a short film out about Bob that were released two nights ago and he was like he wouldn't sign the post or he was like are you sure people want my they don't want to clean one they want my autograph on it but Bob people like your story they like who you are you know you have to do it so it's like kick and and scream and can't believe it's miracles do happen George and app got him to come and talk to you guys and you know what I
(01:45) got to tell you because he you he he will you have no way of knowing he loved you guys he thought it was so cool that you wanted to hear what he had to say you gave him a good experience and I can tell you the you know hundred thousand reasons why you should look at his story with a rational non emotional mind and make the decision for yourself about him and I'm happy to go into those points but again all I can say is I believe Baba I'm happy to tell you why great I think we'll get into some of those points later on and and discuss
(02:25) some of those hopefully Bob Lazar will watch this and I I'm curious myself to find out from the audience if you could clap I'm kind of putting you on that the on the hot seat right now and maybe your opinion will change towards the end but if we could just you know from clapping or from supporting with the yell or whatever how many of you believe Bob Lazar well like Bob shared last night he was very hesitant I thought that would be the case and that's what I told him and I think we have confirmation hearing
(03:11) with the QA I just want to say thank you for doing that because I I don't know what you're thinking and just there it's so cool that you believe him like me but I hope that your belief is rooted in your personal investigation into the case as much as you can because a belief is something that you will lose immediately if someone throws garbage at you if you haven't earned it if you haven't spent the time to look at the details unemotionally and with an empirical I so I hope that's why you're
(03:43) clapping but lock Bob's gonna love it he's gonna love it so it's kind of a funny that that should happen right before we get to I think what many people would bill is Bob's number one skeptic he cooked tomorrow I just wanted to echo what Jeremy said you got to investigate you got to check the facts you got to go after the evidence and I know most people believed him but you didn't ask him what it is they believed so we'll talk about that what I don't fully hope that he has said great
(04:12) that's gonna be a lot of fun Stanton you you did a mirage man thing here on the audience you said you know what are they applauding for am I wrong and I would like to hear the applause if yes or no do you believe in Bob what you mean is you believe he back engineered alien spacecraft is that right okay I just want to make sure that Stanton knew and I knew what you were applauding for and no he no offense but I don't want anything twisted okay can I go ahead and mister can i untwist do what you got it okay I was first introduced
(04:52) to the idea of Bob Lazar twenty-five years ago at the mutant conference where Bill Moore gave a terrible paper we won't go into that I met George Knapp heard about Bob Lazar and everybody was asking me about him because he was being promoted as a nuclear physicist with the master's degree in physics from MIT and a master in electronics from Caltech now those are pretty darn good credentials if they're real but I wasn't going to endorse him until I checked on him I looked at my

directory of the American
(05:27) Physical Society and most physicists belong he wasn't there so I started a probe and where I have a problem is every time I checked he found I found he wasn't telling the truth now this is about Bob this isn't about what he was doing because he really wasn't saying a lot about what he was doing and there are two separate questions I talked to five people at MIT nobody ever heard of it including the physics department in the place that has a master's thesis the legal counsel said there's no way for the government to
(05:58) wipe out anybody's records which was the argument black anybody couldn't find anything the legal counsel is sure MIT has been doing classified work since 1940 I mean it's not something new for them Caltech never heard of him I asked George Knapp or George Knapp gave me Bob's high school it's in New York State Long Island and so I called them had a call back when gal dug out his records and I said I'm getting different information you know about what is what his background really is so briefly that
(06:34) conversation was well let's see I have his file he graduated in August not with his class that usually means you failed the course you know okay he took a lot of science courses didn't they she says chemistry what else chemistry okay was he valedictorian of his class doesn't mean you fail the course it maybe you just took you didn't take a class and do the required credits that's again a thing that doesn't quite make sense wait I feel you let me finish yeah he didn't have any other science courses
(07:14) then I asked was he valedictorian no she laughed and I have to give you the background why I asked that question I was valedictorian my high school class in Linden New Jersey 1951 a long time ago and I was accepted at MIT except I couldn't afford to go to ition was 950 bucks what is it twenty-seven thousand nine so I resented the kind of implication that this guy had graduated from one of the top schools in the country and MIT qualifies was he in the top ten in his class no top fifty no now she's laughing top 100
(07:58) no he was like 265 out of 366 which is the bottom third can we cut to the chase here well he's dating when is that the notion that he went to MIT doesn't stand up nobody could find him in a yearbook none of five people there when I talked to including the Registrar at any connection with him and he was in the bottom third of his class and MIT admissions office says you gotta be in the top 20% if they'll Bend if it's more than 15 you know he so you know as he was lying about having gone to MIT I'd
(08:38) called Caltech they never heard of it he was asked in Rachel Nevada home of the infamous little alien to name some of his professors he said let's see bill doctor will remember made from Caltech physics I looked in my directory there's bill duck sir I called him he never taught a Caltech only at Pierce College which is a long way intellectually if not geologically from Caltech he checked Billa Bob had taken a course under him at the very same time when he was supposedly at MIT 2500 miles away and if you go to MIT you don't go
(09:17) to pierce junior college so we've got some dissimulation is that a good word on it mm-hmm love to say something about that it can Jeremy speak to that now or do you earth man you know you got to give me a second okay so they basically let's just get to the crux of it the crux of it is none of this is really the point I mean really the point is how did he know that go ahead and clap that's a good one Bob that's the you know this is really the point okay the point is this you know how did Bob know that on
(09:51) Wednesday over pathless dry lake that there'd be I didn't say he wasn't there I know so we're talking about things that aren't important so but let's get to the chase here let's get to the chase no wait I think Stanton is about to say something that Lois I think that the deal didn't well I checked on his working at Los Alamos I saw the phone directory it says case lives M after his name and that means he worked for a subcontractor not for the land so George Knapp is lying when George Knapp said
(10:19) that he went in with Bob Lazar and he had the run of the place he took him into the particle accelerator that every employee knew him that he's interviewed a number of people that have worked there with him and that he worked on special projects George Knapp is lying I'm saying Bob is lying about having degrees from MIT and Cal hey keep your eye on if a person lies why should you believe what he says about Tony things you've never lied to get a check okay so I'm just saying I'm just saying Sam would you answer
(10:51) that question please okay so let's just let's just cut to the chase here so

we don't waste time with everybody going through what's been said for 25 years diluting the issue do I keep I can't swear do I care about if Bob Lazar went to MIT or Caltech well a little bit do I care if you worked at Los Alamos yes I do because if Bob Lazar worked at Los Alamos that's kind of rational for me that he's a scientist oh he could be a janitor got you a janitor that has access to the maison facility and
(11:28) everybody there works with him and knows the maison facility isn't classified my good man right that's okay great everybody who works there has a clear route so your point is Bob's not a real scientist is that what you're saying my point is Bob lied deliberately and without a doubt about his credentials okay well I'm not sure about that that he lied deliberately and without a doubt but you're sure by accident and you've been waited by this Jeremy Jeremy so when it comes to the education okay you
(11:58) talked about how you just said setting that Bob Lazar lied and so you can't believe anything he said it makes me very wary of what he said he also lied I believe about saying that they had six five hundred pounds of element 115 so so it can't be proven that he's a scientist although it doesn't mean that he didn't work at area 51 I just have a follow-up question but the question is related to Richard Doty Richard Doty was the first one to mention mj-12 in a document that he says his host did you ever hear me
(12:34) cite Richard Doty as an authority for anything you've admitted he's a liar if he's a liar and you can't believe what he says then why can we believe mj-12 is really because mine if you read my book about mj-12 and my articles I don't depend on Richard Doty at a wall do you do I consider him a disinformation without William I mean you know he lied to the UFO community you wrote a book with him right what book did I write well did you or not I mean I don't know you're friends with no he work with more but I
(13:06) mean what I'm getting at is that just like what Jeremy feels even though perhaps some things could not be substantiated or even if someone lies about one thing just like you've told me before you don't throw the baby out with the bathwater of course not I didn't say bob was never at area 51 I didn't say he'd again say it again that was so gratifying thank you the look I tried my darkness with George and so forth and one point that you made that the George didn't go into was that conversation with the high school George
(13:46) at one time thought of you worked at los alamos you had to be a scientist because George didn't stop at that one phone call like you calling his high school records they're not even allowed to give that information out George kept going kept going for 25 years he didn't stop when he got satisfied with one answer oh he didn't go to the school that he said he went to they admitted that in the first report George didn't stop I didn't stop I have footage of bhavas are inside Los Alamos I mean you can see it you
(14:16) know I hope Bob and George let it come out it's just it's ridiculous to me this is the point we're missing the point the point is flood the top page he worked on back-engineering a flying saucer call him what true Bob that's right and he knew exactly where over Papoose Lake on three separate Wednesday nights the exact time and location why does that prove he's a scientist or knows how they work first of all what proves he's a scientist is United nuclear just got a contract with the Naval Academy to
(14:44) basically take the hold on let me tell you this this is great this is this morning he said at breakfast he's he has a new contractor he just finished it they have these hovercrafts that go on the beach the problem is sand is getting up in these huge ball bearings so they're spending so much money cleaning these so just like a month ago what Bob Lazar is doing is creating neodymium magnets to clean out the sand from these huge ball bearings on hovercrafts with an A that's not he's not a scientist oh my
(15:12) gosh she's more of a scientist than any of us because he's doing it daily weekly look the smartest guy ever worked for had a bachelor's degree 40 patents and an honorary PhD no college degree at all and he ran Oak Ridges fusion work for many years guess what I call him a scientist yes sir do you call Bob Lazar scientists maybe oh come on man the guy runs the United nuclear age again United no clear wait a minute now I worked with the real United though clear back in the sixties every agency he's doing things
(15:51) that would blow your mind just I've never a conversation with it have you ever been on the phone with Bob Lazar and had to get in depth hold on because that's the point we got to talk about then hey you have had an in-depth on the phone

conversation with Lazar I wish all that in depth okay so how is less in depth was it like how many minutes I have no idea several minutes I tried to meet what did you ask him any scientific questions that he couldn't answer I talked to somebody who interviewed him had a physicist with him
(16:17) and he couldn't answer any of the physicists question you have a recording of that because I need proof Stanton you need proof but you don't care whether he nodded degrees oh it's not I don't care I don't care about the degrees I care about the bigger topic I need proof of this conversation where he can't answer basic physics questions that you've said for 25 years let me tell you he will blow your mind if you sit down with him scientist or not which I've sat down with him with
(16:43) both he will answer questions and blow your mind so this little story you've been telling I can't buy it got to call you out man you have not had an in-depth conversation with Bob Lazar directly how can you make an opinion on a guy without talking to him that's all I got to say I did talk to her like a minute cuz because one minute he's very hard to get ahold of and would you be willing to sit down with him soon I tried to then I would I would hold - yes I'm here by Jeanne Huff who I think was here yeah he was yeah that's
(17:17) him I got asked by him what would it take this is 20-some years ago to convince me that bob was telling the truth it was a friendly conversation it wasn't an antagonistic one this is just me by the way I'm not like I'm not don't have a heart attack can I am gene ask what it would take I told him well a copy of his diplomas you know stuff like that and resume a list of his papers a number of such items and okay he gave me an address I sent him copies of my diplomas yeah I mean I don't know anybody's got a degree
(17:56) from MIT you can't provide it but she never had an in-depth conversation with his lawyer in fact have you ever had a conversation with his are on the phone yes okay and but literally it was just to ask for his resume I mean there's no I didn't ask him for his resume you know with the agrees you never got to ask him any scientific questions personally so you're basing on this other per let him answer have you been able to ask him scientific going to verify have you attempted to do that well I best George
(18:23) about making contact with them I asked you two years ago sitting right over there if I could get Bob Lazar and you to talk and have a scientific conversation would you do it you kind of went like this to me yeah like you weren't interested so well are you and you like to talk to them I would like to have talked to him yesterday sure well great what we'll do is arrange that we call it right and Stan can tell us all about it next year but you know why didn't happen yesterday bob was in and out and of course like
(18:57) Jeremy said he was extremely nervous he didn't know what to how this would go he so he came in and he was out he wasn't interested at that time but that doesn't mean that in the future it can't happen so we will see what we can arrange especially if he'd be willing to do so however of course he he might be not be as interested to talk to you as can you feel hard him Bob Bob lives in Bob world he does his scientific projects he's doing incredible projects right now and his company said you know United nuclear
(19:26) that's what they do he really does not have a huge interest in being involved but honestly he might want to nip this in the bud yeah that'd be great did he pass the polygraph test yes I'm presuming he did what is it we have to say about that I'm satisfied that there is indeed an area 51 and that it has I'll call it spacecraft for one of a better term no better place in the country to put it and it was built into highly classified work before there were spy satellites I might add where you
(20:00) thought you could hide but you can't now as easily so what it was it doing out there I don't know I his explanations yesterday we're very crude having worked in industry for 14 years about what he was doing and we've got a gravity amplifier that's a great term but he sure didn't tell us any details I mean there's a dome and you can feel things when you when you go close to the dome that doesn't I don't know how much what he did was science and what he did there well every as he written a paper about
(20:44) what he did when he was out there what what is it you want me to say about him he was an interesting guy to watch you just to stop saying the same thing that has nothing to do with the reality of the story the story is George Knapp has done has followed this story for 25 years yes you compared to the 25 minutes man that you've done and and George Knapp is telling us George Knapp is telling us not only does he believe Bob but he's verified right and left almost every detail possible so

let's get away
(21:15) from this little he lied about his education I don't even care what I care about is did he or did he not back engineer alien spacecraft that our government are holding now I don't know the answer to that but I do believe him but I wasn't there but I do believe him and there's reasons did he figure out how they were and and the whole idea right here the whole idea that he was doing nothing scientific and he just explained a dome why don't you try that conversation with him in depth about the
(21:46) science of it he has explained it in high detail and probably you have already I don't know if you haven't read it but there's been a lot of information out there and you know honestly it takes like curiosity and persistence on a story to make a breakthrough and that's what George Knapp has done for 25 years that's what I've done for five years and I'm more than satisfied satisfy yourselves get into it get into it [Applause] a couple things to be fair to Stanton of course he's he's more than he can have
(22:19) his own opinion and I think that IQ beyond that and I it's impossible to say that Stanton has not done a significant amount of research certainly not as much as 25 years compared to it would be a ratio of 25 minutes man George Knapp has dedicated his career to this hmm and we're gonna arrange the meeting still but again to be fair to Stanton and to put you on the spot again clap your hands if you doubt Lazar story [Applause] there's a few hours later he wishes that you do because he does not want
(23:01) everybody banging on his door so that's just fine but hey those doubters out there thank you you are real investigators then if you do something with that doubt do something with it we can believe Bob Lazar story without having to believe that he was working on extraterrestrial spacecraft at area 51 because he may but he may he does appear to really believe the story that he tells which may not be the story that we think it is although he thinks it is so he may have been lied to is that what you're saying he may have been he may
(23:37) have been deceived himself you may have been led to believe there are extraterrestrial but it could have been this high-tech technologist it's so hard to understand how for so many years this guy could be like the professional best liar even to his wife and his friends and his family and people like his grandchildren and Wow he can't even remember how to tie his shoelaces sometimes he's like a mad scientist dude and he is such a good liar so I appreciate what you're saying I wish we disagreed on more but the
(24:09) problem is is that what he except the physics of what he experienced out there so you can agree that thought is mine but you you can't fake the physics of what he experienced out there no of course I agree but thank you it's cool having the report did you want to comment on the physics being a physicist well I haven't heard what he's used words like they have a gravity wave amplifier that that's a simple description for this okay does that tell us the physics of what's going on it was gobbledygook when I
(24:46) listened to his description it you know 500 pounds of element 115 he used to say now backed off from that a bit you can't have 500 pounds the half life is too short frankly so it sounds like there's a science fiction element in here you notice I used the word science I didn't just say friction in other words to say that he back-engineered he was working there to do something figure out how they work rocket ships for science fiction until we invented them I've been told directly by a high military naval engineer that element 115
(25:28) has great promise so has great has great promise for propulsion for fuel so I just you know is where they're gonna get it okay I I would love to have a three-hour debate with you even not as a scientist about the science of it I feel like I can pair it some of it back but you need to have this conversation with the man himself to work we're working on work on that see how you Mariano's for you all right let's get to the next question thank you Mexico II actually I think it's really highly
(25:56) unlikely that you can wash someone away with all of their stuff that that's a difficult thing for me to buy but the idea that Bob Lazar had the ability and the technical knowledge to work on special projects such as this propulsion absolutely 100% resounding yes this is a guy who made jet cars was in treated more scientific stuff than I've seen like most anybody do the guy had incredible jet cars he was on the front page of the Los Alamos newspaper you know with his jet car the guy has scientific knowledge it's proven through
(26:34) his company everything he's been doing for the last 25 years the dude was a

scientist I don't know it is a scientist but you sound like you doubt that he had those degrees as well no III that is not my issue again I'm keeping my eye on the prize now sure in the conspiracy world can you erase somebody I think that's why he was kind of fearing as is his thing my thing is I know he worked at Los Alamos I have talked with people but he claimed he was had two degrees they are erased and you're saying that's not
(27:05) possible no I'm not saying it's not possible I don't know is what I'm saying about erasing somebody's history I'm not good at even doing anything I asked the legal counsel at MIT and they said you can okay that's great so whatever the situation with that that I think the key point here is that Bob Lazar worked at Los Alamos has scientific ability and then from there you can just deduce the rest but I you know I don't know all right and Stan did you want to answer that question you believe it's possible
(27:34) then to erase his school records not according to legal counsel at MIT and I don't know who else to ask there are loads of good sightings we have to expect that any advanced civilization or plural civilizations uses technology about which we know nothing we're not the smartest guys on the block we haven't had technology very long it's one of the things I argue with the setting people about you think aliens are stucked at our level of radio communication and we've only had long-distance radio since 1901 I mean I
(28:09) think they're beyond that so it's not a question of what you see is impossible therefore it isn't but what you see is interesting how do we do it wouldn't that be nice if we could do that and there's a whole book that Kathleen Martin and I have done about science was wrong with all kinds of outstanding professionals saying something was impossible that turned out to happen not very long thereafter because they didn't know they did weren't ready to admit that there was stuff they didn't know
(28:40) eat man's ego gets in the way here so the fact that you see something that's incredible is a good place to start with gee how could they do that how could I do that how could i duplicate that and Bob is curious it's okay we'll let him work on it my final comment is is very simple I know Bob Lazar Bob Lazar is the most kick-ass amazing crazy out there scientists that I have ever met and I've chilled with nano technicians and nuclear physicists and a bunch of people and I got to tell you Bob Lazar is doing some of the most
(29:18) interesting work he was painting some sort of radioactive isotope onto ants without killing the ants so that they can be tracked the other day who gets contracts like that well scientists do and I mean creative people do I am so yeah a very creative scientist actually so I'm just want to say Bob Lazar is the most badass scientist you have ever heard of for those of you that doubt his story good weaponize that find out for yourself start digging because we want to get more from Bob Mann he doesn't want to
(29:49) give much we want to get more from him so do it that's my final statement [Music]

Transcript:
(00:23) [Music] [Music] [Music] my name is Jan horizont I'm the executive director for MUFON we are a scientific research organization that basically collects sighting reports from the public and then goes investigates them our mission statement as an organization is the scientific study of UFOs for the benefit of humanity and we have three primary goals we investigate UFO reports we promote research into the UFO subject and we educate the public on our findings MUFON is really more just left of center where we try to take a
(01:21) scientific approach by collecting the data first off and then reviewing the data investigating the data and making sure that what we're seeing is actually something that's truly an unknown we have 3,000 members worldwide many scientists physicists PhDs metallurgist biologists all the way down to just the average citizen who really wants to get involved some of those have chosen to become field investigators and they go through our field investigative training courses they become part of the team in their
(01:48) state or country where they reside and they actually get engaged in going

out and meeting this phenomena head-on we receive about 500 to a thousand reports per month from around the world field investigators will take the case generally review it try to come up with a hypothesis check e star charts and we'll go put an investigation in place to determine what exactly happened we've recently formed a science review board and that board is made up of scientists from around the United States and around the world to review some of our more
(02:20) significant cases and try to render an opinion all we'd like to do is be more outbound more outspoken in terms of the really true UFO cases so MUFON is moving forward with this approach and we'll be publishing papers in these different areas to allow the general public and even the scientific community to be able to be challenged by what we're finding that's the strength of MUFON as an organization is being really the truth-seekers of the UFO field [Music] it is my pleasure right now to introduce
(03:23) our keynote speaker he is a 24 time Emmy winner a Mark Twain Edward r Morrow and Peabody Award winner two times he's the anchor of CBS klas TV in Las Vegas and more importantly he's the host of coast to coast twice a month and he's our keynote speaker tonight he will speak on area 51 this is a very significant event you think about breaking the story 25 years ago it's almost like breaking the Roswell story because nobody knew about area 51 so our keynote speaker tonight who's going to tell you about some unheard
(04:05) details and updates on area 51 is George Knapp I'll tell you right at the outset this is gets better and funnier the more you drink so feel free to visit your bartender back there and and to tip generously I am very pleased to be back at MUFON especially here in New Jersey John didn't mention this Bree please to be back here but John didn't mention it in the introduction but I was born about 25 miles from here Southie here in Woodbury New Jersey and not only do I still have family here I mean I still have family here there up
(04:51) in front I don't know how they got this front table but well done so let's get to it and have a little bit of fun I mean I have been covering this story for 25 years so it's a lot to cram in a lot of good stories a lot of colorful characters a couple of videos or two and then you might have to give me the hook here to get me to stop because there's a lot of material to cover the story we are here to review tonight has traveled all over the world many times and I know it sounds preposterous on its face that
(05:23) the idea that some slightly off-kilter nerdish guy and glasses could be hired into classified programs even though his educational credentials are practically non-existent his work history is sketchy he's been discredited and dismissed by people he worked with and worked for there's no way that this guy would ever be allowed access to SAAP secret materials if we want to roll number one no way he'd see classified files no way let alone that he would blow the whistle on some of the deepest darkest secrets
(05:57) of all time but of course we do know that Edward Snowden really did work for the CIA and the NSA even though he had no college degrees he dropped out of high school he dropped out of the military he was working as a security guard right before he was hired by the CIA and then later worked for private contractors for the NSA and was able to access the most sensitive information in the US government which he subsequently leaked tonight I'm here to talk about another slightly nerdish guy in glasses a whistle
(06:27) our name Bob Lazar is it fair to compare the two of these guys tonight I'll take you step-by-step through this story to see if this comparison is valid both men work on classified projects for spooky agencies both presumably were not qualified to be in those positions their personal lives were spotty their educational credentials questionable both were very bright guys whose lack of formal credentials was not an impediment to getting them work in places that seemingly should be off-limits I think Bob Lazar story the one you're about to
(07:04) hear now demonstrates that those three-letter agencies that are probably represented here and in one of these tables will hire almost anyone if it means there's a better chance at getting the job done that's the reason for example that CIA came to my hometown Las Vegas in the early 1960s to hire the Mafia to kill Fidel Castro it's why the CIA and DEA have made deals with drug cartels it's why we've had on the government payroll scumbag dictators like Saddam Hussein and Manuel Noriega it's why journalists and entertainers
(07:44) and others have been recruited over the decades to work for these agencies they do what they need to do to get the job done and they will make a deal with the devil if it means getting the job done and doing it well it's now 25 years since I

got sucked into the world of area 51 and flying saucers and Bob Lazar and I was I was pretty sure back in May of 1989 that this could be somewhat explosive story that it might make some waves for a while I had no idea that I'd still be talking about it a quarter of a century later
(08:19) that it would travel all over the world I was pretty sure it was gonna make some changes in Bob lazarre's life maybe save his life which is one of the reasons he came forward and I guessed it was gonna cause a little bit of a hubbub at the base itself that's the place with no name it's the place with many names and we'll go over some of them but I had no idea was gonna change my life and in the ways that it has and I mean it has I'm here after all since the theme of this MUFON symposium this year is UFOs
(08:53) and the media I thought we'd explore together how this story spread out how it became a transcendent meme the way in which the story spread I think would by its be by itself something that intelligence agencies would want to study or sociologists or academics who look into media issues information theory I mean it has been astonishing at least from my end and I have had a pretty good seat I'll just tell you a little bit about myself and how I got into it I started as a journalist in Las Vegas back in
(09:26) 1981 mostly in television but some in print and and as John mentioned radio over the years I've covered pretty much every story you would expect somebody a journalist in Las Vegas to cover a lot of organized crime a lot of mob stories political corruption we've got our share out there sex scandals celebrity goofballs environmental catastrophes drought the foreclosure crisis drug dealers Gun Runners murders bikers fire stickups pot farmers crack peddlers scams ripoffs scumbags boneheads and Butch Cassidy and
(09:59) the Sundance Kid and you know along the way I've broken some pretty good stories I got a couple of awards here and there and in my hometown I was considered a fairly good reporter mainstream guy that is until 1989 when I went completely off the rails and started covering UFOs I am sure that this is true for many of you I in my town I'm the UFO guy and I'll bet in your town most of you are the UFO guy or UFO gal in your families somebody sees a flying saucer on television I'll go tell crazy Uncle Bob about that UFO
(10:33) start where all the UFO guys you know I mean as with many of you and this the my fellow speakers who are here not a day goes by when I don't get calls from Iceland or Ecuador or an email from all points in between about some UFO sighting or flying saucer event everywhere I go in Las Vegas I get stopped to talk about UFOs I'm in the grocery store shopping they stop and want to talk to me I'm in the in a restaurant I can't tell how many times I'm sitting there at a booth and somebody will just slide on in while I'm
(11:05) eating and start talking about UFOs I've had people stop me at the urinal I'm at the urinal hey man I'm a little busy here I'm not making that up and it's they will ask me do you really believe that UFO stuff is that for real are you on the level and they don't care whether I believe it or not what they want is they want to tell me their UFO story what they saw the the level of interest in this stuff is amazing for some reason you know my colleagues in the media are not okay with this they can't quite get our head
(11:42) around the fact that the public is so interested in this subject matter it drives them crazy the public is who they swim they serve is deeply interested in the topic and can't get enough of it that is not the case for journalists and I don't really get it I mean it's a great subject potentially the biggest story in the history of the world even if it weren't true even if it was all a mass hallucination that's one hell of a news story because it's been going on for so long and besides I hate to admit
(12:11) it but it's a heck of a lot of fun to cover this stuff and chase it around the world but to my colleagues the folks here in this room your UFO buffs your UFO believers those are code words that journalists use to put UFO folks sort of in their place it's a tool that they use and though those who don't believe they're skeptics their scientists your buffs and believers well I don't know about you but I never thought of myself as a buff or believer I don't think of myself as a UFO reporter I'm a reporter
(12:39) who happens to be interested in UFOs there's a difference and I think it's a legitimate news story and as I said it's driven my colleagues and media just right up the wall twenty-five years ago you know it I don't think they realized how how far this the interest spread and when they saw me getting so much attention in Las Vegas and the ratings spike that come along with these UFO stories it really pissed

them off when that story about bob lazar broke oh my gosh that in general people my colleagues in the media think that's the
(13:14) year i went nuts i had broken other stories but and i'd been careful about him and i tried to be careful in the same way with this story but they didn't see it that way i can't tell you how many times I have been pilloried by radio morning deejays as soon as they run out of belch barf and fart jokes in the morning they would take on UFOs my friends at Nevada's largest newspaper the review-journal have had a lot of fun at my expense I've been featured in several editorial cartoons I remember the first one I saw
(13:45) had me with a butterfly net my ass looked as big as a wheel barrel and I was chasing a flying saucer the second one they had it was called the marshmallow head chronicles was the title and it showed a couple of extraterrestrial hitmen had come to earth and they had their ray guns they were pointed at a couple of gasoline pumps at a gas station and the line was of course they are earth men but which one is George Knapp I think they were making fun of my stout frame or something there was a series I did some years ago about alien abductions and
(14:18) some of the weird medical procedures that happen that are reported by abductees and the newspaper had a headline they called it kidnapped by aliens ha ha ha ha very funny and because I had described some of the procedures they dubbed me a grand mola in the Church of cosmic proctology there was a there was a media critic who wrote a weekly weekly column and he wrote one time he said people are rushing at home at night to see George Knapp's UFO reports not because they're interested in flying saucers but because they want to be
(14:52) there to quote see it when George does the big crack up on screen Willie go bull goose loony his eyes go and buggy and rolling free in their sockets Willie crash and burn before our very eyes dumb that's it that's a quote now it's funny stuff and I figure you know it kind of comes with the territory I'm a public figure in Las Vegas I'm not thin-skinned I'm ok with it because I know the public is ok with it I don't write news stories for other reporters I don't care what they right it for our listeners our viewers
(15:21) in the public the part that bothers me is it so few of my colleagues did any work at all on the subject before they decide to write it all off and me with it before they joked and tendered or made wisecracks about Elvis and Bigfoot and tinfoil hats they certainly never spent hundreds of hours sitting out there in the dark outside of area 51 sitting in the dust in the desert waiting for something to happen trying to dodge security patrols trying to keep from getting arrested or buzzed by helicopters they haven't read the books
(15:51) or the documents or interview the witnesses none of that stuff that you would do on any other story and it drives me crazy and I'm sure many of you feel the same way they see all of us in this room as nuts and well I think that that is totally unfair and generally inaccurate we all know that sometimes it is the fact is and you know it's true the subject does tend to attract a lot of people who whose elevator doesn't go all the way to the top and and they they make it a lot harder on all the rest of
(16:24) us for the past two weeks I've been getting these cell phone messages and emails from this lady who has been imploring me to get a protective order to fly her to Nevada because former CIA director admiral james Woolsey is tormenting her with mind control beam weapons that have forced her to have all kinds of sexual activity with Asian men that she doesn't know now I'm not making this up she figures if I if I have a lot of UFO connections at the government maybe I can help her out and get the Admiral to back off when I was first in
(17:02) this field I had this lady who kept calling me up after she saw the Bob Lazar story I have got to talk to you I've got some really important information all right fine she shows up at the station she's wearing this skimpy halter top and holding a kid who I later learned was her alien love child and and she within five minutes of me meeting her she's telling me the most intimate details about her sex life because it was while performing a certain act out on her front porch that she looked up and saw
(17:30) her first UFO eventually I'm not make one bit of this eventually they beamed her up on board the ship they had her in sort of a beauty queen lineup and they told her to put on a bathing suit and then she said they told her to get breast implants and this is the one part of the story I could believe because there was ample physical evidence staring me in the face I have been pestered by I've been pestered by this millionaire who is a transsexual abductee add that combination up by a guy who says he's the twin brother of

(18:11) Jesus Christ who's coming back he says the aliens are bringing him back and boy are they mad I had a guy I had a guy who flew from Australia he told me he used the last money he had to fly to Australia from Australia to me because he wanted me to use my juice at area 51 to get the aliens to stop abducting him it's a sad story but that was true I have received all kinds of letters from alleged aliens who say they're watching me I've got alleged aliens sending me songs and poems that they've written I
(18:40) got people who've made death threats and issued warnings to me from people who pretend to be government agents I've had people say that I'm a government agent myself you know it kind of comes with the territory and as some of you may know if you know about UFOs or have an interest in UFOs suddenly that makes you an expert and every other weird thing that might come up beelzebub you got a problem with demons I get calls about it you had an out-of-body experience can't macaque get back in you can call George
(19:12) about it well so major media folks when it comes to the UFO story and area 51 in particular has taken a pass and so be it it's their loss the story about area 51 got out anyway and I remember in the beginning a man everybody made fun of it and made fun of me and but eventually as we'll talk about the whole world beat a path the area 51's door I mean as John mentioned in the introduction nobody had heard of area 51 25 years ago but they certainly know about it now it is an oxymoron of the highest order the
(19:52) world's best-known secret base can you be both I guess so a place famous for being so secretive that for decades the government pretended it wasn't there even though we can see satellite photos that show it's there you can look over the hill and see it's there no it's not you're imagining it a place where constitutional protections do not apply where environmental laws are exempted where you can be shot just for entering area 51 the Box the ranch the Watertown strip dreamland biggest base began in 1955 a location where the
(20:34) u2 was first tested they sent out a news release I've got it with me a copy of the news release that went to media it said we're building a local facility it's temporary be gone before you know it and here it is you know more than half a century later it's still out there in a remote part of Nevada 100 miles north of Las Vegas few people outside of our state other than those who work there or lived in the perimeter had ever heard of it and then that changed in 1987 when a guy named John Lear walked in the TV station at that
(21:05) time I produced a little public affair show called on the record and it's one of those shows that airs at 6 o'clock in the morning on a weekend you interview a county a commissioner or a City Councilman and nobody watches it and Lear came in to the TV station to talk to my boss a guy named Ned day my friend and mentor who was sort of the premier muckraker of his era investigative reporter mob fighter mob Buster and Lear had credibility with Ned day one simple reason John whatever you think of him now and a friend of mine by the way Jeremy
(21:37) Korbel who's here is making a film about John he has some crazy ideas wild stuff regardless of that at the time John had a lot of credibility with us for a simple reason that he had helped us break a really important story the existence of the f-117 fighter john and fellow aviation watcher Jim Goodall would go out there with binoculars and cameras in the desert and they had acquired enough information about the self fighter that they gave the story to Ned he broke it it went national it went national so big that the FBI hauled net
(22:12) in and quizzed him about where he got the information anyway so at the time John had credibility with us his father had invented the Learjet John had run for the state Senate he wasn't quite as far out on the fringe as he is now so he brought in this pile of UFO documents and dropped him on Ned's desk and he said you got to take a look at this Ned this is the next big story and Ned said I don't want anything to do with that I don't believe it can be true if it were true I'd already know about it and so he
(22:42) wouldn't do the story I was eavesdropping at the time I said let me take a look at that stuff and he dropped the pile of documents on my desk I read it I thought well that would might be an interesting subject something change of pace for the show on the record so I had John on and all of a sudden my phone started ringing with people who wanted oh hey what was the deal on that UFO guy you're gonna have more on that and I had him on again and I had him on a third time and each time the response got bigger and I'm
(23:08) wondering what the heck is going on here I didn't understand the way in which this touched the pulse of the public but it did and so I started reading up on

it and then that third show John had hinted to me that he knew somebody who had just been hired at area 51 or as it turns out a place called s4 so may 1989 we have this shadowy silhouette interview with a guy named Dennis not his real name and it was just sort of circumstance that had happened we had I was anchoring the five o'clock news at the time and our
(23:43) regular scheduled guest bailed on us I called Lear and said hey we need a fill-in do you think your saucer guy would do an interview and sure enough he did and it was you saw some of the footage there a little bit of the preparation for that interview outside and after this thing ran everything was different for me for Bob Lazar and for area 51 let's roll a piece of this tape number two I don't know sometimes I really do regret it regard it and almost I almost feel like apologizing to him saying that
(24:15) you know I'm sorry I let things out can I have my job back 25 years after he was forever transformed and to Bob the UFO guy Bob Lazar says he regrets ever talking about flying saucers or a secret base in the Nevada desert or any of the things that made his name known all over the world there isn't a day I don't get emails and you know I try and get this across to him look I don't even want to talk about it anymore you know well I don't believe the story great pass it around you know I really don't want you
(24:46) to because it makes life difficult for me a quarter century ago not many people outside of Nevada had ever heard of area 51 the mysterious base a hundred miles north of Las Vegas a place the government said didn't exist it was the location of choice for all manner of black projects spy planes that were kept secret from the public and that's my driveway that's Bob that's Jean hub and Bob's wife Tracy and Chris and we're just waiting there for five o'clock to roll around former CIA pilot John Lear
(25:19) remembers the day that area 51 became a household name this is home video he shot as a klas news truck prepared to broadcast a live interview from Lear's home Lazar was understandably nervous yeah he was nervous because he was putting it all out on the line there and he was gonna you know reveal all this secret that he'd signed you know that he was going to never tell anybody it's not only a crime against the American people in the interview bizarres face was hidden and he used a pseudonym Dennis
(25:52) which was the first name of his boss out in the desert well there are several actually nine flying saucers are claimed he worked intermittently at a location called s4 south of groom lake the main facility of area 51 he said the hangars had been built into the site of a mountain disguised as desert and inside were a set of nine flying saucers months later he revealed his identity to the world and said the technology he'd worked on was from somewhere else that it was being taken apart to figure out how it
(26:25) worked so that's the basic story he said that he was hired by a company called EG&G which is in fact the company that has always run area 51 since the beginning that it was done on behalf of the US Navy that he worked at a place called s4 south of groom Lake a place called Papoose dry lakebed he said these ships basically are have an antimatter reactor the fuel is something called element 115 which at the time that Bob said it didn't exist it does now in a form that I'll talk about a little bit later he said that it
(26:59) could create basically it was able to create its own gravitational field which means it bends space and time and it actually could travel in no time at all from faraway worlds just by pointing this gravity amplifier at this location and I know it's preposterous it's outrageous it's ridiculous who in the world could believe such tripe coming from a guy who has a really sketchy background like Bob turns out quite a few people believed it because the story exploded like a hydrogen bomb it launched thousands of product lines
(27:36) it made untold numbers of media appearances the meme was on the loose I'll show you in this video roll this one number three and it could rod area 51 you could have just handed me a piece of a UFO from area 51 I've never been any spacecraft there's no area 51 there's no recovered spaceship excuse me mr.
(28:03) president that's not entirely accurate it would probably take an Indiana Jones sized warehouse to stash all the pop-culture references to area 51 the oh so secret facility the place that did not officially exist for decades is the rock star of military bases literally there's a rock band named area 51 and another named element 115 which is supposedly the fuel for flying saucers there's an area 51 video game at area 51 bar what better way to unwind after a long day than a glass of groom Lake red wine from the alien maybe spend a few minutes staring at the

(28:40) paintings you picked up at the area 51 art show while perhaps listening to the Bob Lazar music video a story that Bob Lazar told 25 years ago has gone around the world many times over and in the quarter century since then the world has beaten a path the area 51's door every major news organization in the world has written stories the base has inspired documentaries and TV dramas dozens of books have been written fiction and nonfiction hundreds of news articles many of them critical of Lazar and skeptical about his background his tale
(29:19) launched a thousand product lines every trinket you can imagine along with assorted businesses a triple-a baseball team and the world's only extra-terrestrial highway running right past the entrance to groom Lake President Obama recently made a point of publicly acknowledging area 51 what's really going on of area 51 and former President Bill Clinton told Jimmy Kimmel he'd looked into those stories about Spacey Lee so first I had people go look at the records on area 51 to make sure there was no alien down there even the
(29:51) Kardashians have made a trek out into the desert that's a security guard look how that that you know that story moved throughout the internet so quickly and not just the Internet but but news and itself like was in the first 48 hours after the broadcast it was in Japan back in Las Vegas for a visit Lazar recalls why he came forward in the first place he had traveled did the s4 base only a handful of times but began to get scared I began to get worried in that why they've given me all this classified
(30:23) information they're not calling me anymore they won't take my phone calls in the meantime apparently they're deciding what to do with me for a variety of personal reasons Lazar couldn't keep the story to himself he shared his tale with John Lear and Jean Huff they and a few others made tracks out to the outskirts of s4 because Lazar said he'd learned when the test flights of the saucer would take place three weeks in a row a glowing object appeared over the mountain just a few minutes ago
(30:56) we saw one of the government extraterrestrial UFOs the time when Bob said there would be a test there was a strange light jumping around in the sky above the location where he said it would be at the time and date he said it would be you know here the craft took off when I said it was taking off from past the mountain range which was Papoose Lake s4 south of area 51 you know in a restricted area so it's not like anyone was out there with a model plane or anything and you know flew around it incredible maneuvers that
(31:27) impressed everybody to the point where we got scared and got behind a car fearing the thing was going to explode but really how do you explain you right now so many products I don't have time to list them all I mean they have regular tours there now for a while was just to catch as catch can but they have regular tours that go out a couple times a week I did a story on the air a couple of weeks ago about one driver wasn't paying attention blew right past the signs and was in a big bit of trouble there in a big hurry they have an area
(32:00) 51 brothel a legal brothel which works with the Bob Lazar story if you think about it they have an area 51 blow-up loved doll I don't know what sick dog needs that one I was thinking to myself man I wish I had copyrighted this thing long back in 1989 I'd be calling in doing this by Skype from my Island of Hawaii or something you know I was thrilled when I saw President Clinton speak about UFOs it was kind of cool that President Obama said that you'll notice he was he made the comment about area 51 first time a sitting president
(32:34) has acknowledged the base while he was honoring Shirley MacLaine but when I saw that the Kardashians had visited area 51 I thought oh man it's jumped the shark that's it for the base you saw at the end of that video that clip of the original footage of this saucer test flight that Lazar and John Lear and gene Hoff and others and witness not once not twice they went out three times in a row Lazar knew when the test flights were going to take place you know where the test flights were gonna take place
(33:02) officially to this day there is no base at Papoose Lake there's nothing at Pat Loosli now in fact there is no s4 anymore we'll talk about that a little bit later there's nothing there but a dry lakebed so how did he know you know it's one of the points that will come back to let's roll number four here I'll show you a freeze-frame of this this video somebody had done some enhancement of this there's a whole video but I couldn't get to play earlier but that's that's sort of a close-up of that that
(33:30) craft that they saw and they saw three weeks in a row over the years dozens of other people have taken similar images out there sombrero shaped things orbs

balls of light of flying erratically some of these clearly are misidentifications of classified projects I get that and some of them are just wishful thinking I get that too but it sure seems like something that looks like flying saucers have been out there and for a long time I don't think it's there anymore but it looks like a classic UFO I don't know if
(34:02) you saw the announcement last year the CIA announced area 51 is real thank you CIA for acknowledging that hoopty friggin do we knew it was real you could see it's real people have been out there they've taken photos they've been arrested even though it was removed from maps in the 1970s we've known it's been out there a long time at the same time the CIA acknowledged hey area 51 is real we're coming clean with you they said by the way the reason people have been having these stories about flying
(34:34) saucers out there is because you're miss identifying things that we're flying u2's and sr-71 I don't even know where to start with that it's similar to a earlier CIA release that tried to explain away all UFOs you remember all those UFOs you were seeing in the 50s and 60s those were ours they sent out a tweet to that effect a couple of weeks ago that was us they said very funny except for the fact it's total I mean you twos and sr-71s don't look like flying saucers not from any angle
(35:04) they don't stop on a dime they don't land in corn fields or in backyards they don't fly straight up or straight down they don't do any of that stuff more importantly the stories about saucers in the Nevada desert didn't come from people outside the base seeing things in the sky they from people inside the base who leaked the information out and not just Bob Lazar which brings us back to him I'm not going to try to convince you that Bob's story is true I can't I wouldn't even try it's up to you I think most
(35:38) people have made up their mind one way or another there's not many of us that are still on the fence I do want to share with you two thoughts on this though one is my belief that it's kind of a moot point anyway because the area 51 story is kind of taking on a life of its own whether we like it or not Bob Lazar or not it's kind of permanently etched into the public consciousness for good or bad it's kind of like a it's independent of Lazar it's kind of like a being that is suddenly self-aware there
(36:10) was that tour group I mentioned in late May that guy who blew through the the the sign we have video of the whole thing that's why it became a news story and I was going through it logging the tape and the guy is telling stuff about area 51 I just I'm shaking my head he said oh yeah this is generally where the motherships come down they're there all the time and then the men in black patrol this area and you got to watch out for them and then there's it's 60 floors underground and all this stuff
(36:36) that's just completely made up I don't even want to I didn't want to try to correct it I don't even know where to start this is a beast that is out of control in some ways the second it's a it's a monster I mean the second point I want to make is that how we pursued this story as journalists you know people think oh well you must have just done this for ratings that's not how stuff works that's not how we work and this is a not a lark of a decision something that we made lightly as a ratings ploy
(37:08) it did get ratings and that was good but this was we thought about it and argued about it we knew what was at risk not only my reputation but the reputation of our entire news department our news entity so we tread lightly we were careful we covered our bases I spent eight months putting together those stories about Bob and and tried to investigate every angle find every supporting bit of material that I could and there was quite a bit of I know it looks preposterous on its face and if you were to tell somebody this
(37:41) story without any of the backup material they'd laugh at you but I'm not laughing my friend and colleague Stan Freedman is not here tonight and I regret that because he and I have had some spirited conversations about this over the years stan has I give him credit for doing the legwork on the Bob Lazar story but unfortunately because he's so far out in front on it he takes a lot of crap from people who are religiously believed in this thing and can't understand why he's cooperating with the evil secret
(38:09) government to keep it a secret but Stan took it on he followed up bob's credential claimed credentials he found out that contrary to what Bob had said he did not have any records at MIT or Caltech and I applaud stand for that I give him kudos for doing the work like Edward Snowden though the only college that Bob had

was junior college and he didn't finish both of those guys didn't finish so is that case closed for Lazar that he lied about his college credentials he's a liar so he can't believe anything that he said well I I
(38:44) would make the case that I give Stan credit for doing some of the legwork but the fact is in the very first story that we aired about Bob Lazar I said he made these claims and we can't prove it there's no one at those schools who remembers them and I'll just tell you I the first time I ever spoke to MUFON it was 24 years ago when I was invited to speak about this for the first time I said I don't believe Bob Lazar did go to those schools and it's really simple he doesn't you know how it was when you
(39:14) were in college you had to take certain electives that have nothing to do with your major interests can you imagine Bob Lazar sitting through English Lit because I can't I mean I could see him taking science classes electronics and engineering but to take the kind of courses you would need to get a degree there's no way I don't think he went to school yet I'm not ready to sort of toss that toss him out sort of the baby with the with the bathwater I never believed necessarily they went to school for me
(39:43) the key question was always did he work at Los Alamos National Lab because that was part of his plane I worked at no salamis National Lab as a physicist I said well that should be easy enough to check out I called the lab they said we'd never heard of them it's a bob you're not helping me here we dug up a front page newspaper of the Los Alamos monitor that showed him on a front page story pictures of him with a jet car he'd created and it listed him as a as a Los Alamos physicist that wasn't good enough the lab said we still
(40:12) don't have any records then I found a phone book with his name in it and they said we still don't have his any records on him I pursued this for three years I've got a stack of letters this big between me and Los Alamos lab and they still were denying it I finally got on to a company called Kirk Meier which is a headhunter company they recruit technical and scientific people and get them jobs at places like Los Alamos lab and they said sure we've got records on Bob Lazar yeah we got him a job at Los
(40:41) Alamos you bet and then I said can I get the records yeah no problem thus started a one-year back-and-forth with that company they had promised the records yeah we're gonna send them to you and they never did and then they denied ever having them and the same thing with the lab they finally after three years they coughed up an ID number for Bob yeah he was here but he was in non-classified work I interviewed five people that work with him at Los Alamos who said he wasn't classified stuff and more importantly I
(41:10) went there he took me in with my cameraman on a weekend and it wasn't like he had never been there before it was like a rabbit going through his own burrow he knew all these buildings the ins and now these buildings he waved at the security guy at the front gate we waved at people inside the buildings he took me in to see this gigantic particle accelerator one of the biggest in the world we took video of it I used him in those reports I think he worked there and it seems to me that if he worked at Los Alamos National Lab on classified
(41:40) projects which is what his coworker said he did it is conceivable he could be hired to work out in the desert in Nevada whether he's got a college degree or not so I applaud those who do the work and say he'd never had a college degree but for me that doesn't end the story and if Bob lied about his college credentials would he be the first person to gerrate his education to get a really cool job because I don't think so there were other witnesses who came forward and I'll talk a little bit about them
(42:14) the part that's really hard to convey about those that time is just how weird it was and it's one of those kind of things where if you weren't there it's it's really hard to get it but man I'm telling you it was strange after we broke that story I mean Bob had death threats and he would call me up at night and I'd go over to his house and he was pacing around there'd been a break-in he's pacing her with an Uzi they would break into his they would break into his house and just move things around he'd
(42:44) come home and the doors are open there'd be things that he had on his blackboard that were erased he had a particle accelerator with a piece of element 115 pointed at it they would move that stuff around he went to the gym with a friend of his he was carrying a gun because he was paranoid he and his friend go in they leave the gun in the glove box of the car they come out the doors both doors of the car are open the glove box is open the guns laying on the front seat it said people

were messing with him and they were
(43:13) messing with me and I know they followed me around for a while because two of the guys who did it told me about it years later after they had quit working for this security company our phones were tapped which you know it really ticks me off I guess we're all used to it now because the NSA has all of us taps certainly everybody in this room that's too bad that we got used to it but in those days or weren't used to it I had six different people after we broke the story with Bob my phone is ringing off the hook people questions
(43:48) about UFOs but occasionally a couple of people who had information and wanted to tell me their part of the story six people who offered on the phone to give me interviews even if I blacked out their face or visited one right after another there was a tax guy who had done tax forms for a lot of the guys who worked at Nellis Air Force Base high-ranking officers who had told him on an out-of-town trip about some recovered wreckage from a flying saucer that was a 51 just swore him to secrecy so he told me about his name was Roy Byram and
(44:20) after he made it agreed to do an interview with me the very next day he gets visited by two guys who said they're from the Secret Service and would they had heard that he'd been making death threats against the president and did he know he could go to prison for that he thought that was related to our phone call I had a lady who a cop introduced me to her she worked in our Clark County Court system she's still there I think and she had been previously been a secretary for a defense contractor at the test site
(44:48) called Homes and Arbor major defense contractor and she sat in on a meeting she said with defense officials Air Force officials and the and this contractor she was the SEC stenographer and in this meeting she said that they talked about a recovered disk of an alien craft and after they finished they they not only took the notes away from her they took the ribbon out of the typewriter it was an old-fashioned typewriter in those days and swore her to secrecy the cop hooked me up with her I talked her on the phone she agreed to
(45:20) do an interview if I blocked out her face very next day she gets hit visited by these two guys who flashed a badge at her they said look you're still subject to as your security clearance and I don't know how to say this they said we know you and your daughter do a lot of traveling back and forth Las Vegas to LA let's just put it this way there's a lot of desert out there and bad things can happen it was this is serious I'm not making this up it's a she she was scared to death 15 almost 20 years later I figured I'll
(45:48) reach out her again see if she would be willing to talk about it now she's still scared wouldn't do it I had an electrical engineer who used to work at my TV station who moved to Seattle who had worked at area 51 and it's seen a saucer-shaped craft under a tarp in a building out there and he agreed to tell me about it and the next day after that phone call where he agreed to do a silhouette interview there's two guys sitting in a car outside of his house and they're Crewcuts talking into a
(46:17) radio they follow him to work when he gets out of work they followed him home you know somebody was listening he was intimidated and I don't blame them and that happened a lot listening the phones following us around break-ins it was a really weird time and if you weren't there it's really hard to convey it oh as I mentioned a lot of other witnesses came forward I'm not gonna go through all of them but there a couple of key ones that that I want to touch on one was a he was a spotter at the Nevada
(46:44) Test Site his name was Glenn pace and in the days of the above-ground testing program he was one of the only guys on the test site that was allowed to have binoculars and he said he worked for a physicist named Otto Kraus he said and they would sit in a place called area 15 which is above the area looking down on Papoose Lake and he said they used to see these saucers buzzing around Papoose Lake flying around down there in the 1960s maybe into the 70s I can't remember the exact date told me that story there was
(47:14) another guy who I first told MUFON about it the second time I was here to talk about area 51 it might have been 20 years ago a guy I had stalked basically I had figured out that he was in a position to know this stuff based on his employment record and I would go to these public events where he would show up and sort of ingratiate myself he was from a prominent Nevada family and eventually he invited me to his home and he said you want to see my scrapbooks yeah great good he's showing me these books and his this atomic test and this
(47:48) guy and that and then he stops and he closes the book and he goes this is not what you want to talk about is it I said no no it is not and his wife walked in

all don't tell him that stuff but he did and over the course of the next two years he told me a lot and as I reported some years ago to this group he told me that they had an alien out there that they'd captured that they had several crafts they had been in a place called Indian Springs which is now Creech Air Force Base and it was moved later to
(48:18) area 51 when that base was created he said that they had it alive he had kidded me I had I couldn't take notes I couldn't write anything down I'd have to leave these meetings and then write furiously after the meetings everything I could remember but he had told me at the time that this being looked just like a politician of the day and it turns out he was talking about Ross Perot lilt little tiny jug-eared alien anyway I made a deal because this guy was a prominent family I knew other people in his family he had told them
(48:50) the same story and he we made a deal where he was going to make a videotape and give it to me after his passing still alive but he's complicated matters because he was told after about two years of us talking he said I got a stop I was told to stop who told you well my former employers told me to stop and then the last time I saw him he added a little twist of the story was no longer aliens he was leading me in another direction well imagine my surprise when a book comes out called area 51 by lady named Danny Jacobsen anyway he read that
(49:24) it's a great history about area 51 that it has a chapter at the end that just it's a really good book and good history about you too sr-71 all that stuff and at the end it has an interview with this old guy who tells a wacky and wild story about how all those UFO stories it was the Roswell saucer was really something that the Russians sent over created with Nazi technology and the aliens inside this thing these things were actually Jewish prisoners of war concentration camp survivors and that was the story
(49:57) this guy told and and he put it in her book and it largely it made the the rest of the book irrelevant and it made poked a lot of fun at area 51 and the whole story made it all less serious it's the same guy hey and I'm not gonna identify who he is because I made a promise that I wouldn't but it's the same guy who had changed this story which is troubling over the years all kinds of people have come out of the woodwork to tell what they know about area 51 a lot of them just made it up there was a guy named Bill Cooper who
(50:31) wrote a book called behold a pale horse it should be called behold a pail of horseshit because we just just made this stuff up there was another guy named dan burisch Oh dan crane used to be now in the beginning he was kind of an interesting guy and I thought he might be on to something but in the last few 10 years or so I've realized that he it's a game he's got a merry little band of pranksters it's like a Dungeons & Dragons they pretend that they're superheroes to save the world and it's all made up I've had
(51:02) people tell these stories about all the milk carton kids that's where they go they disappear and they're taken arey 51 they make alien hybrids out of them and these huge bubbling vats false flag operations we didn't go to the moon because it was all staged out there at area 51 look that place is pretty interesting you don't have to make up anything about it back to Bob again I don't it doesn't matter whether you believe him or not but people who want to write him off because he doesn't have college
(51:34) credentials have to also come up with that explanation for how he knew stuff how did he know about those those tests some people have said well maybe somebody told him maybe he was you know a janitor out there really I'm keep yet I mean can we keep our eye on the ball here a guy just told us they were flying saucers it turns out they were accurate we've got it on video and you're gonna say I'm not gonna believe this story because he doesn't have a degree from MIT I think we're missing the important
(52:00) point there he also knew about something called the Oh fi the office of federal investigation he said he thought he had been investigated by the FBI and it turns out it wasn't he said I know it turns out it's something called Oh fi I said there's no such thing what do you talk about Oh fi well there really isn't Oh fi office of federal investigation does background checks for people who work at the test site I didn't know that but it's true he gave me the name of a guy named Mike Thigpen who was an agent
(52:26) for the Oh fi and sure enough there really is a Mike big ben and i tracked him down he wouldn't talk to me how did bob know how did he pass a polygraph test not fail not sort of passive passed it on all the major points that he says in his story how did he do it Papoose Lake there's nothing there if you look at satellite

photos though at least the old ones you can see there's a road that leads down there let's roll the video the next little piece of video it's just freeze frames it was a guy named Jerry Freeman he's an
(52:58) archaeologist and he had an interest in the 49ers who had come across Nevada on their way to California so he had a really great that's him if you wanna just freeze that for a second if you can Jerry in the 1990s had a harebrained idea to walk across the test site which he did he sneaked in from the west side heading east which is pretty smart because nobody would think anyone's crazy enough to walk across that hellhole by themselves he walked at night and hid during the day and walked all the way across it all the way to
(53:29) Papoose Lake where he found some inscriptions in rocks that the 49ers had left and he took photos and he told a story while he's out there hiding in the desert at night trying to avoid being caught he's sitting there in the middle of nowhere and the door opened up a door of light in the middle of nowhere and people came in and out and then it closed and it was gone what the heck is that if you only had one person to tell that story I suppose you'd have to take it with a grain of salt but there's more
(54:01) than one there's a guy named Jim Goodall I mentioned him earlier as a colleague of John Lear's he's part of a group called the interceptors they used to go out the area 51 and area 52 the Tonopah test range and take pictures of advanced airplanes he's not a UFO guy he's written a couple of books about stealth technology he has great sources in the aerospace industry he met Bob Lazar prior to Bob going to work at s4 and as he related to me Bob had told them I hate UFOs I feel sorry for jawed leer
(54:32) it's goofy it's crazy I don't believe it unless I can hold it in my hand and see it and of course after Bob went to work out there his story changed after Goodall hears this story from the Czar he starts asking his contacts and he has a lot of them about what might be going on at Papoose Lake let's roll number six did you ever get any information about a facility at Papoose like the one D described I have a friend of mine he's a he's a retired senior master sergeant he was early on in the f-117 program
(55:08) they had full they their badge at the area of restricted area badge he can go anywhere in the Nevada Test Site up to it including area 51 so Ana Humvee and they drove around the the it was at groom range yeah grim range and they're on Papoose Lake there isn't there isn't there isn't anybody around and all of a sudden they're surrounded by guys in black uniforms one in it with their hands on their weapons one know who they were what are you doing here and my buddy said we're just we have some we have
(55:48) some down time we're just exploring the area he said you turn around and you leave and don't come back they just kind of popped up out of nowhere he doesn't know where they came from he didn't see any vehicles all of a sudden they were there and he left he was it was three or four guys with him they left what do you make of that that there might be something at Pappu's or was or well according to Bob that's where that's where the nine hangar rats are in this it you know camouflage in
(56:16) the side of the mountain one other little tidbit of information that I'll share with you about sources it comes from Jeremy Korbel a friend of mine I mentioned who's shooting some video tonight and who's been working on that project with John Lear he's also the guy that did the video on Steven Bassets citizen disclosure hearings in Washington and he and he also interviewed with Linda Howells help a guy known as anonymous an old guy who did an interview with his face on camera didn't use his real name this came out
(56:49) last year talking about area 51 and Eisenhower's plans to invade the place and take it over I have this guy in my gray basket but as part of that work jeremy has been traveling some really interesting places and has developed some pretty interesting high-level military contacts and he was at my house and told me about a couple of them and I said well they just go ahead and record it so we'll play seven and then we'll about wrap up everybody's focused on area 51 we know the great things that were achieved at
(57:21) area 51 it's a shell game it's a slide of hand we're talking about s4 right it's been confirmed to you directly from the base maybe 25 more years ago yeah s4 has been confirmed to me directly twice one from an employee of EG&G security was daunting and then somebody else who's confirmed to me s4 that that's exactly how it looks the story though is that there was a facility like that at Papoose there is a facility like that at Papoose flying discs not this UFO term that's created to make it

(58:01) ambiguous flying discs saucers that were piloted by nonhumans they were not ours and this was confirmed by both of my sources that this technology is not ours Bob Lazar story was confirmed to me by those two same sources one saying that when he was working in secret capacity at White Sands in 1989 that it was common knowledge at the base about Bob's story and I said well what was the believability with the general believability and he said everybody knew that what was going on out there were with these types
(58:43) of projects and they've all believed Bob story no were they following it as its unfolding Ike in 89 that was the impression that I got was that it was big news if you ever see it it is not ours I said not ours like America and he says not ours like humans while Jeremy was there we were curious because I had 25 years ago when I started this stuff I called Nellis Air Force Base I said do you have a place called s4 they said just seconds hold on yes we do I said do you have more than one they said yes we do I say can you tell me what goes on
(59:20) there they said classified work what kind we can't tell you this is their public information office yes we have an S for yes it's real it confirmed it how Lazare knew about it I don't know so when Jeremy was most recently in Las Vegas we called him again I just was curious what they would say let me get back to you on that and they called back and left the message that said and there was really careful how they parsed this language it said we called the range people they can't find it on any maps
(59:48) which of course it was never on a map to begin with which is I just thought it was really interesting the language and they used to describe it one last person I'll tell you about and then we'll end this with Bob and this guy's name has been rich and if you know anything about the aerospace industry you know Lockheed skunkworks they developed the u2 the sr-71 the greatest airplanes ever built the a12 the f-117 been rich before he died he'd expressed - close friends and interest in UFOs and he said UFOs are
(1:00:19) real both kinds UFOs from out there and unfunded opportunities and before he died on his deathbed he told Jim Goodall and a couple of other people in I think he even had it in LA in a public meeting he said we already have the means to travel among the stars but these technologies are locked up in black projects and it would take an act of God to ever get them out to benefit humanity anything you can imagine we already know how to do it we have the technology to take e.t home no it won't take someone's
(1:00:53) lifetime to do it there was an error in the equations we know what it is we have the capability to travel to the stars and we won't get there using chemical propulsion Ben rich was screaming and loud and big bloody letters and handwriting on the wall that we have some kind of technology that is way beyond anything you can imagine Ben rich is like the father of area 51 those are his babies out there and for him to say that before he died I gave a lot of credence to it so many crazy stories about that base so many crazy
(1:01:26) stories about Bob Lazar bob is running a meth lab Bob's running a string of hookers in South America he's dead there's a lot of I get that about once a month it's no wonder he's tried to leave this all behind he only did this interviews with me because I've been bending his arm for a year I tried to get him to come here he said maybe and then he I couldn't get him answer the answer the phone after that but I wanted to end with Bob talking about his life what it's like today why he wants nothing to
(1:01:55) do with this anymore we could roll number eight but that drives him crazy I mean that we need to answer this now I need an answer how much how many times you get that you know in a week still after all I could there isn't a day I don't get emails and you know I try and get this across to him look I don't even want to talk about it anymore you know well I don't believe the story great pass it around you know I really don't want you to because it makes life difficult for me I'm trying to do serious research I'm you know I've
(1:02:28) got contract with governments and other companies for R&D work and aside from you know other scientific interests and I want this divorced look if I went and did everything I can to prove my story and reached a tipping point for where people like Stanton Friedman and you know people along those lines said you know what this is beginning to look factual do you know how that would annihilate me that would destroy my business it would make it impossible for me to operate and you know I'd have a continuous flow of questions annoying
(1:03:06) people and sure offers to do things that I am not the least bit interest in it there's got to be partyi somewhere in there even though it would be

counterproductive has got to be party of the wishes and damn it I know what happened it's true no look I know what happened is true there's no doubt period there's there's no delusion and there are some things I can say that that will bolster the case and I'm not going to it's gonna stay that way I do regret at this point bringing anything forward look at the
(1:03:43) time I'm in my early 20s oh wait you know what this is a crime against the American people this is just BS and everybody deserves to know what's going on you know and 25 years goes by you get a little older and your priorities change and you know what they told me is this is a security matter and really what's the public gonna do without this you know reactionary they are that's there's a bunch of different reasons this is being kept quiet nothing that they bother telling me but the bottom line is
(1:04:15) they're right the bulk of the people are complete morons and I'm sorry maybe they are right and this really should just be just be information that's handled out on a on a need-to-know basis to some people where it would benefit them he didn't mean that about here that the folks here Bob's uh Bob's a smart guy I don't care if you went to MIT or not he's a smart guy a lot of it self-taught but I brought some other stuff we'll have to show it at another time I want to wrap up but about LMO 115 about the gravity
(1:04:52) amplifier and he he talks in technical terms if you folks are technical I'm not you could appreciate it better than I can it's an interesting story and as I said I don't think we're ever gonna have an answer they're never going to open up the saucer the hangar doors and say there's the flying saucers come on in and kick the tires or anything like that I don't think they're ever going to admit it I think probably if there were something like this out there at s4 or area 51 it's long gone because too many
(1:05:17) people have been out there over the years looking for it not only tens of thousands of people but every major news organization in the world congressional investigators there's a lot of attention focused on area 51 I've heard a lot of people say Bob must have been working with him well it's possible but I'm telling you it's not conscious he wasn't consciously working for him it could be that he was the perfect guy for this job let's pick somebody who's smart who is technically capable who thinks a little
(1:05:44) bit different because we're not getting anywhere we need new input but we want to pick somebody who could be discredited if we need to let's pick somebody who will we know will leak the story well they picked the right guy there if you know Bob you know he has a penchant for hookers and machine guns and explosives and and jet cars and he has a pirate flag on his house and he's an interesting character and I would think he'd be the kind of guy who you could size up as he'll never keep this secret we'll run
(1:06:12) it up the flagpole we'll see what Kyle the public reacts and then we'll yank it out from under amid discredit him and that's sort of how it's played out Jacmel a once told me he said I'm gonna be really disappointed if the answer to the UFO mystery is merely people from other planets coming here in flying saucers suggesting that the ultimate mystery is something much larger much grander and I've sort of moved on in my thinking over the 25 years since this all started that I think he's right is
(1:06:44) that you know I was focused on flying saucers UFOs and still am but I think it's probably just a small part of a much bigger mystery one that goes right to the heart of the nature of reality itself I learned that sort of amidst skinwalker ranch stuff which we'll talk about some other time just that something is sort of playing with us it seems to be some kind of a really steep learning curve and we're only in the beginning of it I get the feeling that we only understand a tiny sliver and that the true nature
(1:07:16) is still kind of withheld from us maybe it's beyond the ability of our tiny brains to ever figure it out but we have to try you know it's I'll end with this is this saying that I've had before is that it's the duty of journalists and scientists to investigate the unexplained not to explain the uninvestigated thank you very much [Applause] [Music] you [Music] [Music]
(1:08:33) you you

George Knapp 1992 Interview About Bob Lazar part 2 - YouTube
https://www.youtube.com/watch?v=PjJJytgZD4Q

Transcript:
(00:00) [Music] all right we're gonna draw back from the sweet tones of herb Albert's trumpet and get back to November 22nd 1992 and immediately following his last appearance mr. George Knapp is back again right here on duck Mathers radio brought to you courtesy of UFOs tonight well last week my guest was award-winning television journalist George Knapp the man that was responsible for bringing the story of Robert Lazar to the world and we had such a fantastic program and there were so many points in so many areas that we
(00:50) didn't get to cover that I asked George if he would come back this week and he very graciously agreed and joining us in Las Vegas is George Knapp good evening George a pleasure to be here and I want to thank you for being able to make it because as probably most of the public don't know you're not feeling very well tonight well I just hope it's my sinuses not my personality that they'll stuffy well speaking of sinuses George how are things down in Las Vegas just fine real real busy as some of your listeners may
(01:25) not know I'm working for a company called Alta Mira communications now and we're we're preparing a whole series of what I think will be state-of-the-art kind of documentaries on the UFO topic and it's very exciting well that's one of the things that that I wanted to mention with you this evening and wanted to bring it to the public's attention since you left klas channel eight a lot of people have have been of the impression drawers that you've dropped out of sight but that's not actually
(01:54) true what are you folks working on now well whole bundle of stuff I think one of the most exciting things we're working on deals with some new information from Russia we have an associate who's in in the former Soviet Union and as as your readers your listeners probably know KGB archives on a variety of topics have been opened up to the West for the first time I have fairly reliable information that documents and even films may soon be obtained which I think will prove that there has been contact between earth
(02:26) governments and and aliens of some sort that that technology has been obtained from them that the clashes have occurred and recoveries and that the US government has has hidden these facts from from the American public the irony of it is I think we could end up learning more about what our government knows about UFOs from the Russians and we will ever learn from Washington I hope to be going to the former Soviet Union in the next few months all right my name is Don Ecker my guest this evening is mr. George Knapp
(02:58) award-winning television journalist and former news anchor with klas channel 8 in Las Vegas you're listening to us if you're in the eighth one 8 to 1 3 or 3 100 area Jorge it's funny that you should mention information coming out of the Soviet Union and especially from the KGB archives a number of months ago now probably fast approaching a year the Los Angeles Times ran a story which I still have back in our records at UFO magazine in reference to several television production companies vying for the
(03:34) rights for the KGB archives at the very end of the story they in fact mentioned UFOs and we have a former Russian citizen who is now a naturalized US citizen by the name of Paul Stonehill that writes for UFO magazine from the Russian perspective and he had some pretty fascinating information that we're following up on right now that appears to show that the former Soviet military in fact have recovered at least one what they called extraterrestrial craft do you know anything about them I have heard that done I've heard the same
(04:10) information in fact what the information that's come to me is suggested that there was some sort of a landing at a pre-arranged site that this landing may in fact have been filmed that there was a fishel contact between the Russian government and whoever these people are these beings are I also have information about documents dating back to the Stalin era which I think will verify not only the reality of the Roswell crash but also the reality of an mj-12 type organization being created I don't have those documents in my possession I
(04:44) haven't seen them personally but I have been in contact with people who have seen them and it's it's very exciting I've heard the same stories you have about the recovery of alien technology from crash sites is my associate over there is in contact with with people who are analyzing material that they say was recovered from these crash sites of course as you and I both know you know and until we actually see it in our hand I'm not sure how much credibility we can give it well absolutely and you know the
(05:14) last several years George and you would know this probably better than

anyone Las Vegas has become a type of of Mecca if you will for the faithful not only of course is the area 51 story down there and still going strong but also the Robert Lazar story and you've had had a chance to meet meet many of the the alumina Maneri coming through there haven't you well I sure have and it's interesting I think it's about it's about three years ago this month that that it really started when our report
(05:48) started and it hasn't tapered off a bit a lot of the people who come to area 51 to look for whatever the heck it is it's flying around up there come from your neck of the woods Southern California official expeditions a lot of them just come out on their own there's a little place called the alien up there in Rachel Nevada they have a guestbook where people have come from all over the world and signed in I mean Europe and Australia and Japan it's interesting to me that that the the interest in that
(06:18) area hasn't dropped off a bit okay George the telephone calls have already started to come in and then I want to ask you about something as a matter of fact that involves a group out of Southern California and something that in fact may have some legal ramifications but let's take this first call we have Rick from Sylmar is that King King cable Rick you got it right okay how you doing this evening good yourself I'm doing fine I'll tell you what I think we just lost our guest we're gonna have to get him
(06:52) back so right good did you did you have a question I have a question I definitely have a question for you and mr. Knapp this one thing for sure I hope we can get it back on yeah we'll get him back on okay well my question is mr. Ecker this one thing I have recorded a lot from this of course the show sightings and of course unsolved mysteries and of course from my other sources and stuff good really good footage of disc you know definitely what you can see as a craft you know in the sky moving around especially over the
(07:21) area 51 cases you can actually see discs doing tremendously weird feet how can why can't we use this videotape as you know and use it and presented and you know as evidence for the actual usage of either a our own craft used by the military by perhaps alien technology or of course being just failing itself over just the landscape of area 51 I mean can't we use this as actual evidence of the aliens being here or of our own advanced technology I mean can't that you know used well yeah that's an
(08:00) excellent question Rick because I mean especially the Gulf Breeze and some of the other stuff you know that you know if we can use stuff from neo like Belgium some of the cases that they've been having you know they've been been over well you know there have been the others right there have been a number of people that have filmed some anomalous lights out there normally and usually in the evenings as a matter of fact back in April NBC News had their Pentagon correspondent out there and they filmed some things and at the very best the I
(08:37) think we have I think we have George back here hang on one second all righty okay George are you back yeah hello okay are you back yep oh great all right I'm sorry about that way we lost you there we have are you still there Rick I'm still here okay we have Rick on line one George he was asking why can't some of this film that's been filmed at a dairy 51 showing anomalous lights be used as as evidence it's something in fact strange especially with the way some of them have been you know films they've been
(09:14) doing them like straight loops around in circles right in front of the mountain you can see it I have it on video I've recorded it off fighting a few other cases you know other shows I started to see I started to say that the Air Force would deny that anything strange is going on out there and it is an open secret that this area has been used for a research development now what do you think about them well I know for a fact that the Air Force has denied not only to the public but also to a high-level congressional folks that they've got
(09:44) anything of the nature that's been described flying around out there in fact the evidence suggests there's an entire family of advanced propulsion strange-looking flying saucer call it whatever you want type aircraft out there I hate to throw cold water on those folks who are going out in that area looking for alien kind of technology but I suspect it if in fact they did have alien technology out there when testifying it for a while I'm not sure that that's what what people are seeing I mean it makes no sense to
(10:14) me that they would still have it out there in light of the the sheer numbers of people who go out looking for work every night alright was that interent you got it thank you very much Dan thank you and make sure you tell your friends about keep

up the good work you guys okay all right George one of the questions that I've had and it has I have not been able to get anyone to answer it especially to my satisfaction or with the number of people that have been going out there and we have one group here in the Los
(10:44) Angeles area that are called the secret saucer base expeditions you may have seen them out there as a matter of fact and they have been apparently harassed by the armed guards that are patrolling the outside area around area 51 which I believe are employed by the wagonette Security Corporation we've had instances where individuals have been buzzed at the low minimum height by military helicopter in several cases these people have come back to Los Angeles have gone to the federal prosecutor and have attempted to
(11:20) file some type of legal action and they refuse to hear the case they've gone to the state attorney general in nevada they've gone to the county prosecutor none of these people will hear this do you have any idea on that I know with all the work that you've done out there that you've had to have encountered these questions well certainly the the idea that the Air Force the military would not be would not be very cognizant of civilian Authority is pretty clear in the fact that they seize those 89
(11:53) thousand acres surrounding Lake in 1984 even before they had legal authority to do so there there have been numerous incidents that have come to my attention about confrontations between these Wackenhut they're Delta Force or whoever the heck they are and and private citizens even though it's it's public land surrounding that area PLM land Bureau of Land Management I know that people have had cameras and video gear seized they've kept it in one case for more than a year and haven't returned it
(12:24) I know I haven't positioned the video of a helicopter coming very close to a private car buzzing them trying to chase people out of there I know there have been threats it's a bad situation but you have to remember this is this is the middle of Nevada a rural area and maybe justice doesn't move as quickly as people from Los Angeles or big urban areas might be used to well you know I was a police officer and carried a badge for over ten years and it's been my experience that the law is the law
(12:57) regardless of where it's at where within the borders of the United States has anyone approached the FBI about this or perhaps some of the military organizations that would be involved with Military Justice well I know that Gary Schultz from your area there Dunn has approached the US Attorney in Southern California to try to file charges but that basically went nowhere I know that as of last week they have some new signs up there that suggest anybody who goes these signs that lethal force is authorized in dealing with people who
(13:31) are trespassers that that's pretty that's a pretty potent statement to put on the side not only is it potent but it seems to say something about constitutional guarantees as they're practiced in Nevada I don't think I don't think the military in some regards is all that concerned about constitutional guarantees I know I remember when they when they seized the land the 89 thousand acres they later went to Congress to get permission to do something they had already done over the congressman John Seiberling who have put
(14:03) the question to the Pentagon you know what authority do you use to seize this land what authority is higher than the law of the United States and the guys response was well I can answer that but only in the close briefing I sure would like to know from congressman Seiberling or or someone else exactly what kind of rationality gave behind closed doors all right George if you could hold on for just a moment we have to take a break and as soon as we're back we're going to continue with this we are back and we
(14:31) have a call from it looks like Richard in Vista is that Vista Richard okay good evening how you doing this evening I'm really interested in all this all this UFO stuff one of the one of the things that curious me that a lot of UFO buffs don't really think about is have you ever reversed the situation and looked at it looked at it as being an alien coming here to this planet how many different rules regulations and just dealing with the UN in general probably now that's how they would have to deal
(15:10) dictate to just set up and start start any kind of a business or any kind of trade with with a human being on this planet the paperwork would be fantastic [Laughter] well that's that's a heck of a thought Richard I'll give you that tell you what that was one today is that I don't think if the government is ever going to officially say anything about UFOs now what it's going to take I think if there's a

lot of information that's put into computers these days what it's going to take
(15:54) instead of take for some some somebody that's really good at computer hacking to hack into somebody hack into the you know the defense computers and then perhaps the computer that I hear just understand it's over in Belgium it's supposed to be the Beast and everything get the telephone number of that guy and get ahold of them and get the hard data on this stuff and then and then publish it that's the only way you're really going to find out what's going on well then then you're looking at at a number
(16:20) of federal laws that would be would be broken Richard the big question is who would want to to end up spending years and years in jail because they broke into somebody's computer and that's something that we could never advocate to anybody because you know that person would be putting themselves in one heck of a fix you know Richard III might address part of your question the people behind the government that are better writing the things don't so so by us what the Constitution says he's done in
(16:50) effect you know lawlessness from the government itself so what do you think about the George George what do you think about that well a couple of things uh as far as the the cosmic implications of this whole thing I'm not sure that I deal with that as well as I'm more interested in the government's reaction to the phenomenon than the phenomenon itself I think I would explain it this way I'm more of the drive-in movie theory that that they would never have to fill out paperwork because they come
(17:22) near they treat earth like like a drive-in movie because they find us so interesting cruise into our neck of the cosmos on Friday nights to check us out as for whether or not that the government will ever release the information I'm not sure they have to and III don't think your your listeners don't have maybe thought of it this way but they've got all these things flying out there at area 51 things like some witnesses described it as a TR 3a like Black Manta they've got some huge boomerang side craft with no operational
(17:51) name something called Aurora a methane power-type or sonic Mach 7 replacement for the sr-71 things that all look like flying saucers when the government can reach and create its own flying saucer type vehicle again it will be in a position to explain away all future UFO sightings I don't think there's ever going to be a release I don't think they're ever going to come clean well that's that's a pretty sad commentary well if you if you decide to do something like that Richard send us a
(18:35) a card from from Leavenworth and I'll be interested to hear what you may have found out okay thank you and we have Burke from Burbank on salmon's cable good evening Burton howdy there done thank you for your call back with me I got to get back with you later this week I got two very good question important questions for the both of you George you were mentioning the Soviet connections things going on over there I'm interested in your opinion about with the new relationship with the United States with the Soviets if we aren't
(19:17) going to be pulling the same thing we've done with some of the other governments around the world and saying well if you want any money any help from us you better shut up about the UFO material well I I'm worried about that myself and it probably already said too much I would imagine that there are some efforts underway to that extent but there are a lot of Russians who are facing hard times who will do basically anything I think at this point for hard currency but that's that at least is what I'm hoping
(19:42) I am also hoping that there isn't any kind of a coup my friends in Moscow tell me that the possibility of the hardliners coming back is something that exists it could happen at any time I think if that happens we're all going to be cut off in that information again for a long long time how do you feel about that done well I I think that this situation is much larger Bert than anybody even realizes and the only thing I can suggest at this time is we're gonna have to wait and see what the new administration may have on its mind and
(20:16) on its agenda if you remember back in 1976 when Jimmy Carter was running for the presidency one of the things that he stayed right in his campaign promises was that if he became president he was going to go in and release everything that they had on UFOs now I have a very unusual piece of information back at the office I cannot vouch for its validity but there was an individual that claims to have been on Carter's administrative briefing team and that when he came out from the briefing one of the things that
(20:51) he was briefed on in fact was the UFO situation and according to this source

it is not verified I want to stress that he claims that when when Carter came out of there he had tears in his eyes well of course we all know that we never heard another word about UFOs from Jimmy Carter so we're gonna have to wait and see what happens with the Clinton administration right let me ask you both of some information again about the Soviet sightings and so forth are done and George are you guys familiar with any connection with the unusual among
(21:27) people and some of the saucer sightings out there and I'll explain later on why the uomo right yum I'm very familiar with it Bert the almost situation is something that occurred a number of years ago in Spain there have been many questions raised about that particular series of sightings and information that ended up flowing through there is quite a bit to suggest that it could have been in fact some type of intelligence disinformation operation but I want to stress the but in 1989 when TAS released the
(22:04) information on the brownish sightings the kids saw the kids the witnessed those sightings of those alleged landings in fact had the Omo designation on the side of their drawing that the exactly the reason I have the question now George if you had any experience with your contacts over there mentioning anything about this no and that I would hope at some particular time you might be able to with those contacts propose that because I thought the kids and that insignia in the middle of a place where that doesn't have great communication
(22:39) was a very unusual situation not that it couldn't have been faked but nevertheless it's something that could be followed up okay guys let me ask you yeah I ask you a real quick question bird did you by chance see the Fox television sighting segment on Friday yes I did okay did you see that segment on this on the Soviet Union on Russia about that M they imply a go yeah right well I had a call immediately after that program from our Russian story consultant and writer Paul Stonehill right and Stonehill told me that he had
(23:14) been in contact with the individual from Fox television that produced that segment and had warned him against this particular case because those people as Stonehill later told me are the equivalent of the Russian Adamski's and Van Tassel's and other writers that there is not a lot of credibility allegedly in that particular case well and there's something that was very unusual and this again can be taking a look at with you guys in that segment the there was five or six lights that were in a kind of pattern and they were
(23:50) flowing around and the main thing that I noticed on that which was unusual it was the fact if you look at it again rather than the lag on a video camera which with a piece of light trails like a comet the motion was going towards the tail and as it would be the reverse so maybe that's something you guys can check on and see if anything's going on there with somebody just panning across backwards some lights or something all right well Paul Stonehill did tell me bird that that area in fact he believed may have been a testing area
(24:26) for Russian experiments and psychotronic yeah exactly love to find out more about that okay guys thanks a lot all right thank my bike Jorge you mentioned congressman Seiberling labelling Seiberling have you tried to contact him at any time to get his reading on this I did a couple of years ago and I didn't get a response you mentioned Jimmy Carter I've also tried to contact him just to get an explanation about why he didn't live up to that campaign promise and I didn't get a response from him I am in contact
(24:59) with with a number of people on Capitol Hill I can tell your listeners this much that there is a great deal of interest at very high levels there in the UFO situation I think not necessarily in the cosmic implications or who they are or why they're here but more interested in how agencies of the US government military agencies are spending big piles of money and where they're getting okay we've got to take another break on the half hour George so if you can hold on and we'll be right back they confuse the
(25:36) old ways with the best ways of doing those things forever future ready right again were there such a cyber station and Georgia is still there are you holding up oh yeah okay great looks like we have a call from Mike in Orange County on his that Comcast cable yeah that's right done okay good evening Mike good evening mr. Knapp and mr.
(26:01) Don we really enjoy the show and mr. Knapp we've enjoyed all the work you've done and been with you the past few years since Billy Goodman and all that good stuff done back to your question regarding a Gary and Oreos work out there well the not the question but the idea that you brought up regarding the helicopter yes just I thought you might find this interesting I know Gary an Oreo and I was on the phone

with the FAA inspector out of Nevada area about six months ago when they got or so it was the final word it was the second letter that they received
(26:33) from the US Justice Department stating that nothing would be done did you see copies of those letters done yes I did as a matter of fact Gary and I just saw Gary this evening oh he was giving a lecture over at Yvonne's yeah she wrote group as a matter of fact okay Gary and Nouriel have been sending me information on this I did a new story on the original harassment that they underwent when they were out at area 51 I tried to personally contact the federal prosecutor and after calling them a good half dozen times I ceased
(27:06) they never got back to me yeah we had problems with them getting to return calls I'm sure mr. Knapp's aware of the work that mr. Hildred did and sending the letters to the DEA out there yeah we got in phone contact with her a couple times and she was very hostile I would say at best in regards to the helicopter situation I was on the phone with the Nevada FAA inspector and he basically I relayed the story to him and we faxed him copies of the letters and he without seeing the videotape we told him we have
(27:39) the copy of the same one that George was referring to and I don't know if either one of you knew this but he basically stated that a 1,000 foot ceiling is mandatory and around any residential area or structure now granted at the at the mailbox and groom road where this occurred there is no structure per se in that in that three mile radius as they call for however it's still FAA law mandates that they keep a 500 foot ceiling at all times now the law states that a military pilot has to use his own what he called
(28:14) pilots discretion however under pilots discretion the military can take a aircraft fixed-wing or rotor down to within a hundred feet or lower it's completely up to pilots discretion and if a complaint was to be filed and this is what I'm sure George can comment on there has to be some kind of a tail number or ID number which everybody knows those copters out there don't carry well that's very interesting Mike but you know there's one thing that we're all going to have to once again remember and that is the fact that yes
(28:51) you and I and everyone else we are truly under ours form of government we are the government absolutely and every once in a while we have to remind these folks down in Washington who in fact is not only paying the bills but calling the shots well I present our present administration the bush administration I think found that out just a couple of weeks ago that they were unresponsive to the country's needs to the domestic problems that that we as citizens were facing and that's why we have a new administration coming in in just a few
(29:27) weeks perhaps it will change we hope so well I'd like you in closing I'd just like George in your opinion on a something that came up I guess in the past couple weeks when the naval officer I guess the the homosexual officer that was meant it was mandated that he be reinstated to service the federal judge that sat in on that that ordered the Navy to reinstate him made a very interesting statement and the actual written finding on the case and he stated that at no time does anybody in the military no matter what the
(30:02) structure within the military have precedence over even the lowest of civilian authorities including the civilians because the civilians are the government and it was with that finding that he ordered this individual to be reinstated in the Navy I'd like to know what George's idea is and what your idea done on that would be because I would think that would apply to this UFO issue also wow I've never heard that before obviously it would apply to the UFO situation that gosh I couldn't imagine yeah well I couldn't either but I
(30:36) thought it might be interesting for George and his new endeavor to try to look up to see we're trying to do the same thing and if I get at George I'll send it to you okay but we're trying to get the written copy of what what the actual case finding was in the the order that the judge made because he did state in the order that it was no military power whatsoever would supersede the right of the even the lowliest civilian and especially if we're talking about being on public and or private land
(31:02) however we all know that in the course of over forty five years especially when we're talking about the UFO subject there have been cases where in fact the military have come in to private property where there have been UFO situations and they have taken over a good friend of ours Dick Criswell in Indianapolis Indiana was trying to track down a case that happened there not more than just a couple of months ago with an alleged cattle mutilation on a private farm the military showed up there blocked the area off allowed no one on

(31:40) or off the property until they completed whatever it is that they were doing there and then in fact took off and to this day the last I heard from Dick Creswell the farmer is not talking so that's that's some fantastic III would like you to keep us advised on what you find out also my call with UFO magazine great and just in closing I was wondering last week when you ended the program I had a kind of an idea that George was going to bring up something regarding somebody by the initials D H that was kind of out circulating in the
(32:17) UFO community stating he was from that area at 51 with photographs of George I'm talking about George do you know what he's not human I do I just I'm gonna hang up I was just wondering if he could comment on that because I kind of got the idea last week he was going to say something about it you guys ran out of time no I wasn't gonna comment on oh okay all right well thanks a lot Dom you bet my righty bye bye okay George tell us who's th you can't talk about it okay well I understand that well we have John from Palmdale out
(32:49) of Jones Cable good evening John just fine did you have a question for my guest yeah sure did I'd like you to one of you guys to comment if you can on Jacques ballets book revelation you bet you bet I'd be happy to unless George unless you wanted to comment on it oh well I can speak in general terms that I have the utmost respect for this guy I mean I think he's one of the best thinkers in this whole field it's not the best it's meticulous research I really like I like what the guy says I think he's forst
(33:24) forst people like me and Don and others to reexamine the extra-terrestrial hypothesis and look at it in much broader terms I couldn't couldn't add a thing to that George you basically took the very words out of my mouth okay well thanks a lot guys okay thank you John well what what is your idea George for attempting to focus some real hard congressional scrutiny on this what does it take for for in your opinion for we the citizens to make Congress sit up and start fulfilling their obligation and their their duties to us the public
(34:06) that's it that's a tough question to ask for one thing as I hinted earlier done Congress is taking a look at this situation but I don't think we can realistically expect them to come out with a full-blown hearing and I'm not sure that that would be all that productive anyway they're looking at it in a quiet behind-the-scenes way I don't think we can expect Senators Congressmen to come out and say I want to get to the bottom of this UFO situation because we know they would be politically
(34:36) defied they'd be ridicule but yet be that as it may the more I'm in this and I've been in this now almost full-time since 1987 and I have interfaced with I couldn't even begin to count how many people that have come out with some of the the strangest most odd and and and troubling stories and I mean you know yourself that these people cannot all be crazy I myself had a sighting of something very strange coming back from Las Vegas just a little over a month ago I spoke to a man this evening that was
(35:12) relaying to me the the account of an abduction that he underwent seven years ago and he was one of probably in the last year maybe a hundred people that told me the same thing that not only did he interface with what he took to be an alien life but there were also human appearing individuals on board that part partook of this and he thought for some reason that they were military I mean if this is true or if any part of it is true it's the most outlandish thing that I've ever heard of and I know that
(35:49) that's got a hole true for you what what do you suggest we can do I I realize I'm putting you on the spot I really don't know I know that there is sincere interest at very high levels I also know that they are treating it very cautiously I don't know if they're afraid of something but but that's the impression that I get is that they're treading on some mighty big feet and even these people in in Congress are afraid of the forces that they're dealing with I don't think I can be any
(36:18) more specific than that well once again that seems to suggest that we are in fact dealing with an agency outside of our government but yet it is acting on the behest or behalf of our recognized government and that that doesn't sit kosher with me well I I'd have to agree I think there is some sort of cabal you know we always talk in general terms about the government knows this the military knows that it's not the government right isn't the military it's some sort of a cabal within it the
(36:49) same way that Oliver North was able to get away with all sorts of hanky-panky people within the military within the government pursuing their own agendas that aren't necessarily consistent with the Constitution or with the needs

of the people do you think any of this may change for the better or for the worse with the incoming new administration you know I don't know I'd like to think that but gosh Don how many times have we heard it over the years you know here comes another opportunity to open up the
(37:19) books and let people know what's really going on I I don't know what that briefing is like when the president sits down and people from the Pentagon tell him the reality of the UFO situation I'd really like to be a fly on the wall and hear that hear that conversation I suspect that there may be really legitimate reasons why a president why a military why a government would not want to reveal the whole story well there very well may be but then again if it bodes yo for Humanity as a whole it would kind
(37:52) of be in my in my mind like Franklin Roosevelt attempting to hide the Pearl Harbor debacle from the American public on December the 7th 1941 well we all know that that's the way government operates sometimes I mean the Gulf of Tonkin there have been a lot of Secrets that they use sprinkling out information to suit their own policy purposes it's unfortunate we don't like it I think you know as a citizen I I feel that I'm ready to learn whatever the heck it is they've got in their files I'd like to
(38:28) know but I've also developed a certain sympathy I think for the Air Force for the military in in realizing that maybe what they know which may not be the complete picture maybe what they know is going to be very disturbing would be extremely disturbing to social institutions and society in general okay let me let me hit you with another quick question prior to the UFO news commentary but while you were a channel 8 down in in Las Vegas George and you were a recognized first-rate most investigative reporter and you had
(39:06) ends with not only the police department with the courts with the prosecutors and so forth how did they react when you questioned them about why they would allow things to happen within this their jurisdiction that were obviously illegal and I'm talking primarily about innocent people civilians being harassed out there at gunpoint why would they not take some type of stand on I don't want to make Nevada sound like cowboy country but but the part of the state that we're dealing with Lincoln County is a rural area it's
(39:39) very conservative area I think they view all the outsiders who come up there looking for flying saucers or UFOs or whatever as a nuisance and I don't think we're ever going to see a great change in attitude that's going to get people the kind of quote/unquote justice that they think they should have coming but any innocent civilian could be driving down that road and encounters some of these security personnel or a helicopter attempting to run them off the road and here they are just minding their business so I I can't believe that
(40:14) the Lincoln County prosecutor would not feel duty-bound or an obligation to protect their rights well I think as as any of your listeners would know if they've been out there there is a great deal of cooperation between the Lincoln County Sheriff's Department and the security forces that surround area 51 in essence these days what I hear from people like Gary Schultz and norio these days the Sheriff's Department are the people that do the dirty work for the guys from Wackenhut to Delta Force people right they're the ones that
(40:49) intercept camera crews they're the ones that tell people don't go any further they're the ones that that threaten folks if you climb up that mountain with cameras work we're gonna seize this stuff you know I don't know I can't explain it I can't justify it that's just the way it is out there well after we get back from the news commentary George let's discuss if there's anything that we can collectively do okay and we'll be back in just a moment hello this is Vicki Cooper
(41:23) with a special UFO news comment for Sunday November 22nd 1992 29 years ago today an assassin's bullet took the life of President John F Kennedy our country is still haunted by that murder in Dallas and many of us will remain troubled until the final truth is known a number of dedicated researchers have disproving the Warren Commission two lone assassin conclusion which pinned the crime on Lee Harvey Oswald but there are some other kinds of researchers around adding to the confusion surrounding the assassination our UFO
(41:58) propaganda artists such as John Lear and Milton William Cooper both of whom have claimed that Kennedy was killed by the Secret Service agent driving the presidential limo that day William Greer further defiling the information stream Cooper has alleged that Kennedy was killed because it was discovered the president was about to spill the beans about UFOs such outlandish claims are made without a shred of proof both the UFO mystery and the Kennedy assassination deserve the

attention of research professionals of impeccable
(42:32) integrity instead the loudest voices to scream for truth are those who have done the most to discourage responsible investigation what the Kennedy assassination and UFOs have most in common is their appeal to paranoid conspiracy buffs and schizophrenic certainly a most pleasing audience to those who have worked so hard to cover up the truth for all these years yet it seems reasonable to expect that by this time next year Congress and a new democratic administration will have opened up the assassination files 30
(43:07) years will have passed now if only the American people could be certain that those years of Unknowing were not in vain and that those files will contain the absolute truth about the JFK assassination [Music] this UFO News comment has been brought to you by UFO magazine and the UFO media group we can be reached at peel box 10:50 call eight one eight nine that's it for now thanks for listening this is Vicki Cooper for the UFO media group and UFOs tonight on the cable radio network and we are back well George with about six minutes
(43:55) remaining what are your suggestions for what the public can do in order to change some of these very troubling policies that we've been the set width for going on now 50 years are you there George yes one thing I'd say I don't really know how to explain the lack of interest in this topic by mainstream news organizations but if if your listeners could encourage their own local news operations to get interested in it I think after some time a little bit of research as you would know done if you do just a modicum of research you'd find
(44:32) out there is a solid body of information there something really important that's going on real solid information and it's going to take the resources of somebody like CBS or time or or the New York Times to get interested to expose this stuff well it's interesting you should mention that because just several days ago channel 13 here in Los Angeles in fact did run a story on area 51 but you know it's one thing I have noticed in the years that I've been involved with this George and perhaps you have too it
(45:04) seems like the subject has its own dampening effect on the collective consciousness it's something that I cannot explain but but yet I've seen it time and time again well I thought about it the same thing it's like people can view these reports even my own reports and somehow because it's on television they almost see it like yes that's very interesting but they view it as almost a movie of the week or something very interesting yes that that will shake shake our beliefs right down to the
(45:34) bones and then just switch the channel and go on I don't know how to explain that I think one other suggestion I would have for your for your listeners certainly as people should read your magazine well I appreciate that I think they should too I don't want to be too obvious about the plug but I think you know it's a reliable source objective information when you know we just heard Vicki referring to these paranoid conspiracy buffs I think that's the kind of commentary that this field needs because
(46:04) there's a lot of baloney out there and it's hard for people especially people just getting into it to separate what's real and what isn't well I'm glad you mentioned that because next week I'm going to have on as a guest Kevin Randall one of the two co-authors of the book UFO crash at Roswell and I'm sure you you know Randall George he's been in the field for a number of years now and between him and Donald Schmidt they they wrote an absolutely first-rate book on the Roswell crash and subsequent
(46:38) cover-up one of the things that Randall however is going to be discussing is some other research that figured into Roswell on a book just just published this past year by Stanton Friedman and Don Berliner and in the book in their book crash at Corona one of the primary witnesses to this alleged event was a fellow by the name of Gerald Anderson now many of the listeners out there may be aware of Anderson's story but he was at that time in 1947 a young child of about 5 or 6 years old and basically the crux of this particular bit of
(47:19) information is that Anderson witnessed not only alien bodies at this crash site and and some survivors but also a number of other instances that involved the US military coming out and his family being warned to keep their mouths shut and so forth now what's strange about this particular case is the fact that we have just found out this week that two months ago Anderson admitted to Friedman Berliner and several other people including Walt Andres of MUFON that he in fact lied about certain aspects of this case now at this point
(48:00) this is the first public announcement that this in fact has some severe

problems with it how why do you feel that some of these researchers which have a basic obligation to the public to release information like this when in fact it is necessary they hold back on them well I know that the case you're talking about as you said it it came out about two months ago and I think it will be coming out I mean Stanton Friedman is uh is as honest as the day is long and if he is wrong about Anderson I am sure that he will be the first one to come
(48:36) forward with that information and I think he will be I'd like to speak in in general terms about Freedman versus Moore versus Schmidt versus Randle I don't know mr. Schmidt or mr. Randall I I respect the research they've done but I feel that a lot of these this bickering between them and Friedman and and others is just unproductive for the whole field it's no wonder that serious researchers don't want to get involved in this as much backbiting and nastiness there isn't this thing exactly but all
(49:05) these people in fact are considered and are very serious researchers but yet there seems to be almost as much problem getting these guys to sit down and discuss in a rational logical manner the things that are dividing them as it was to sit down with the North Vietnamese and decide on what kind of table we wanted to sit at at same Paris that's exactly right you know we don't need an mj-12 organization to cause disarray in the field of UF ufology the UFO research because people do it to themselves you
(49:36) know I find it to be extremely unproductive these personal disagreements for example the Roswell thing I mean how many times can we prove that Roswell happened you know I just think there are more important things we we've proved it over and over Roswell is real something really crashed it seems like great researchers like those guys Friedman could get onto something else we're out of time thanks very much hope you enjoyed this edition of they're live well George it looks like we did it once again we ran out of time
(50:07) I want to once again thank you from the bottom of my heart because I know how ill you are this evening oh that's okay that's it for the world that you hung in there we are definitely going to do this again George as a matter of fact hang on the line here after after we get off here but I want to tell everybody out there that my guest next week is going to be Kevin Randle the week following that Yvonne Smith and a number of people from her SERO group we're looking forward to it and hey keep your eyes to
(50:39) the skies and we'll see you in a week okay well as you can see George hung in there until the end of the show now look he was with Altamira for a while then he ended up going back to klas and of course these days George is still there not to mention he also hosts on coast to coast generally once or twice a month where he continues on with his UFO research and dare I say it fascination look as always you can come right here to dark matters radio for some of the most cutting-edge look at research and what is happening in the
(51:35) field today and in days past we appreciate your interest I appreciate the time that you take with DMR and I especially appreciate hearing from the audience okay until next time remember to keep those eyes pointed

George Knapp 1992 Interview About Bob Lazar part 2 - YouTube
https://www.youtube.com/watch?v=h_Cl-loW4Yo

Transcript:
(00:00) [Music] all right we're gonna draw back from the sweet tones of herb Albert's trumpet and get back to November 22nd 1992 and immediately following his last appearance mr. George Knapp is back again right here on duck Mathers radio brought to you courtesy of UFOs tonight well last week my guest was award-winning television journalist George Knapp the man that was responsible for bringing the story of Robert Lazar to the world and we had such a fantastic program and there were so many points in so many areas that we
(00:50) didn't get to cover that I asked George if he would come back this week and he very graciously agreed and joining us in Las Vegas is George Knapp good evening George a pleasure to be here and I want to thank you for being able to make it because as probably most of the public don't know you're not feeling very well tonight well I just hope it's my sinuses not my personality that they'll stuffy well speaking of sinuses George how are things down in Las Vegas just fine real real busy as some of your listeners may

(01:25) not know I'm working for a company called Alta Mira communications now and we're we're preparing a whole series of what I think will be state-of-the-art kind of documentaries on the UFO topic and it's very exciting well that's one of the things that that I wanted to mention with you this evening and wanted to bring it to the public's attention since you left klas channel eight a lot of people have have been of the impression drawers that you've dropped out of sight but that's not actually
(01:54) true what are you folks working on now well whole bundle of stuff I think one of the most exciting things we're working on deals with some new information from Russia we have an associate who's in in the former Soviet Union and as as your readers your listeners probably know KGB archives on a variety of topics have been opened up to the West for the first time I have fairly reliable information that documents and even films may soon be obtained which I think will prove that there has been contact between earth
(02:26) governments and and aliens of some sort that that technology has been obtained from them that the clashes have occurred and recoveries and that the US government has has hidden these facts from from the American public the irony of it is I think we could end up learning more about what our government knows about UFOs from the Russians and we will ever learn from Washington I hope to be going to the former Soviet Union in the next few months all right my name is Don Ecker my guest this evening is mr. George Knapp
(02:58) award-winning television journalist and former news anchor with klas channel 8 in Las Vegas you're listening to us if you're in the eighth one 8 to 1 3 or 3 100 area Jorge it's funny that you should mention information coming out of the Soviet Union and especially from the KGB archives a number of months ago now probably fast approaching a year the Los Angeles Times ran a story which I still have back in our records at UFO magazine in reference to several television production companies vying for the
(03:34) rights for the KGB archives at the very end of the story they in fact mentioned UFOs and we have a former Russian citizen who is now a naturalized US citizen by the name of Paul Stonehill that writes for UFO magazine from the Russian perspective and he had some pretty fascinating information that we're following up on right now that appears to show that the former Soviet military in fact have recovered at least one what they called extraterrestrial craft do you know anything about them I have heard that done I've heard the same
(04:10) information in fact what the information that's come to me is suggested that there was some sort of a landing at a pre-arranged site that this landing may in fact have been filmed that there was a fishel contact between the Russian government and whoever these people are these beings are I also have information about documents dating back to the Stalin era which I think will verify not only the reality of the Roswell crash but also the reality of an mj-12 type organization being created I don't have those documents in my possession I
(04:44) haven't seen them personally but I have been in contact with people who have seen them and it's it's very exciting I've heard the same stories you have about the recovery of alien technology from crash sites is my associate over there is in contact with with people who are analyzing material that they say was recovered from these crash sites of course as you and I both know you know and until we actually see it in our hand I'm not sure how much credibility we can give it well absolutely and you know the
(05:14) last several years George and you would know this probably better than anyone Las Vegas has become a type of of Mecca if you will for the faithful not only of course is the area 51 story down there and still going strong but also the Robert Lazar story and you've had had a chance to meet meet many of the the alumina Maneri coming through there haven't you well I sure have and it's interesting I think it's about it's about three years ago this month that that it really started when our report
(05:48) started and it hasn't tapered off a bit a lot of the people who come to area 51 to look for whatever the heck it is it's flying around up there come from your neck of the woods Southern California official expeditions a lot of them just come out on their own there's a little place called the alien up there in Rachel Nevada they have a guestbook where people have come from all over the world and signed in I mean Europe and Australia and Japan it's interesting to me that that the the interest in that
(06:18) area hasn't dropped off a bit okay George the telephone calls have already started to come in and then I want to ask you about something as a matter of fact

that involves a group out of Southern California and something that in fact may have some legal ramifications but let's take this first call we have Rick from Sylmar is that King King cable Rick you got it right okay how you doing this evening good yourself I'm doing fine I'll tell you what I think we just lost our guest we're gonna have to get him
(06:52) back so right good did you did you have a question I have a question I definitely have a question for you and mr. Knapp this one thing for sure I hope we can get it back on yeah we'll get him back on okay well my question is mr. Ecker this one thing I have recorded a lot from this of course the show sightings and of course unsolved mysteries and of course from my other sources and stuff good really good footage of disc you know definitely what you can see as a craft you know in the sky moving around especially over the
(07:21) area 51 cases you can actually see discs doing tremendously weird feet how can why can't we use this videotape as you know and use it and presented and you know as evidence for the actual usage of either a our own craft used by the military by perhaps alien technology or of course being just failing itself over just the landscape of area 51 I mean can't we use this as actual evidence of the aliens being here or of our own advanced technology I mean can't that you know used well yeah that's an
(08:00) excellent question Rick because I mean especially the Gulf Breeze and some of the other stuff you know that you know if we can use stuff from neo like Belgium some of the cases that they've been having you know they've been been over well you know there have been the others right there have been a number of people that have filmed some anomalous lights out there normally and usually in the evenings as a matter of fact back in April NBC News had their Pentagon correspondent out there and they filmed some things and at the very best the I
(08:37) think we have I think we have George back here hang on one second all righty okay George are you back yeah hello okay are you back yep oh great all right I'm sorry about that way we lost you there we have are you still there Rick I'm still here okay we have Rick on line one George he was asking why can't some of this film that's been filmed at a dairy 51 showing anomalous lights be used as as evidence it's something in fact strange especially with the way some of them have been you know films they've been
(09:14) doing them like straight loops around in circles right in front of the mountain you can see it I have it on video I've recorded it off fighting a few other cases you know other shows I started to see I started to say that the Air Force would deny that anything strange is going on out there and it is an open secret that this area has been used for a research development now what do you think about them well I know for a fact that the Air Force has denied not only to the public but also to a high-level congressional folks that they've got
(09:44) anything of the nature that's been described flying around out there in fact the evidence suggests there's an entire family of advanced propulsion strange-looking flying saucer call it whatever you want type aircraft out there I hate to throw cold water on those folks who are going out in that area looking for alien kind of technology but I suspect it if in fact they did have alien technology out there when testifying it for a while I'm not sure that that's what what people are seeing I mean it makes no sense to
(10:14) me that they would still have it out there in light of the the sheer numbers of people who go out looking for work every night alright was that interent you got it thank you very much Dan thank you and make sure you tell your friends about keep up the good work you guys okay all right George one of the questions that I've had and it has I have not been able to get anyone to answer it especially to my satisfaction or with the number of people that have been going out there and we have one group here in the Los
(10:44) Angeles area that are called the secret saucer base expeditions you may have seen them out there as a matter of fact and they have been apparently harassed by the armed guards that are patrolling the outside area around area 51 which I believe are employed by the wagonette Security Corporation we've had instances where individuals have been buzzed at the low minimum height by military helicopter in several cases these people have come back to Los Angeles have gone to the federal prosecutor and have attempted to
(11:20) file some type of legal action and they refuse to hear the case they've gone to the state attorney general in nevada they've gone to the county prosecutor none of these people will hear this do you have any idea on that I know with all the work that you've done out there that you've had to have encountered these questions well

certainly the the idea that the Air Force the military would not be would not be very cognizant of civilian Authority is pretty clear in the fact that they seize those 89
(11:53) thousand acres surrounding Lake in 1984 even before they had legal authority to do so there there have been numerous incidents that have come to my attention about confrontations between these Wackenhut they're Delta Force or whoever the heck they are and and private citizens even though it's it's public land surrounding that area PLM land Bureau of Land Management I know that people have had cameras and video gear seized they've kept it in one case for more than a year and haven't returned it
(12:24) I know I haven't positioned the video of a helicopter coming very close to a private car buzzing them trying to chase people out of there I know there have been threats it's a bad situation but you have to remember this is this is the middle of Nevada a rural area and maybe justice doesn't move as quickly as people from Los Angeles or big urban areas might be used to well you know I was a police officer and carried a badge for over ten years and it's been my experience that the law is the law
(12:57) regardless of where it's at where within the borders of the United States has anyone approached the FBI about this or perhaps some of the military organizations that would be involved with Military Justice well I know that Gary Schultz from your area there Dunn has approached the US Attorney in Southern California to try to file charges but that basically went nowhere I know that as of last week they have some new signs up there that suggest anybody who goes these signs that lethal force is authorized in dealing with people who
(13:31) are trespassers that that's pretty that's a pretty potent statement to put on the side not only is it potent but it seems to say something about constitutional guarantees as they're practiced in Nevada I don't think I don't think the military in some regards is all that concerned about constitutional guarantees I know I remember when they when they seized the land the 89 thousand acres they later went to Congress to get permission to do something they had already done over the congressman John Seiberling who have put
(14:03) the question to the Pentagon you know what authority do you use to seize this land what authority is higher than the law of the United States and the guys response was well I can answer that but only in the close briefing I sure would like to know from congressman Seiberling or or someone else exactly what kind of rationality gave behind closed doors all right George if you could hold on for just a moment we have to take a break and as soon as we're back we're going to continue with this we are back and we
(14:31) have a call from it looks like Richard in Vista is that Vista Richard okay good evening how you doing this evening I'm really interested in all this all this UFO stuff one of the one of the things that curious me that a lot of UFO buffs don't really think about is have you ever reversed the situation and looked at it looked at it as being an alien coming here to this planet how many different rules regulations and just dealing with the UN in general probably now that's how they would have to deal
(15:10) dictate to just set up and start start any kind of a business or any kind of trade with with a human being on this planet the paperwork would be fantastic [Laughter] well that's that's a heck of a thought Richard I'll give you that tell you what that was one today is that I don't think if the government is ever going to officially say anything about UFOs now what it's going to take I think if there's a lot of information that's put into computers these days what it's going to take
(15:54) instead of take for some some somebody that's really good at computer hacking to hack into somebody hack into the you know the defense computers and then perhaps the computer that I hear just understand it's over in Belgium it's supposed to be the Beast and everything get the telephone number of that guy and get ahold of them and get the hard data on this stuff and then and then publish it that's the only way you're really going to find out what's going on well then then you're looking at at a number
(16:20) of federal laws that would be would be broken Richard the big question is who would want to to end up spending years and years in jail because they broke into somebody's computer and that's something that we could never advocate to anybody because you know that person would be putting themselves in one heck of a fix you know Richard III might address part of your question the people behind the government that are better writing the things don't so so by us what the Constitution says he's done in

(16:50) effect you know lawlessness from the government itself so what do you think about the George George what do you think about that well a couple of things uh as far as the the cosmic implications of this whole thing I'm not sure that I deal with that as well as I'm more interested in the government's reaction to the phenomenon than the phenomenon itself I think I would explain it this way I'm more of the drive-in movie theory that that they would never have to fill out paperwork because they come
(17:22) near they treat earth like like a drive-in movie because they find us so interesting cruise into our neck of the cosmos on Friday nights to check us out as for whether or not that the government will ever release the information I'm not sure they have to and III don't think your your listeners don't have maybe thought of it this way but they've got all these things flying out there at area 51 things like some witnesses described it as a TR 3a like Black Manta they've got some huge boomerang side craft with no operational
(17:51) name something called Aurora a methane power-type or sonic Mach 7 replacement for the sr-71 things that all look like flying saucers when the government can reach and create its own flying saucer type vehicle again it will be in a position to explain away all future UFO sightings I don't think there's ever going to be a release I don't think they're ever going to come clean well that's that's a pretty sad commentary well if you if you decide to do something like that Richard send us a
(18:35) a card from from Leavenworth and I'll be interested to hear what you may have found out okay thank you and we have Burke from Burbank on salmon's cable good evening Burton howdy there done thank you for your call back with me I got to get back with you later this week I got two very good question important questions for the both of you George you were mentioning the Soviet connections things going on over there I'm interested in your opinion about with the new relationship with the United States with the Soviets if we aren't
(19:17) going to be pulling the same thing we've done with some of the other governments around the world and saying well if you want any money any help from us you better shut up about the UFO material well I I'm worried about that myself and it probably already said too much I would imagine that there are some efforts underway to that extent but there are a lot of Russians who are facing hard times who will do basically anything I think at this point for hard currency but that's that at least is what I'm hoping
(19:42) I am also hoping that there isn't any kind of a coup my friends in Moscow tell me that the possibility of the hardliners coming back is something that exists it could happen at any time I think if that happens we're all going to be cut off in that information again for a long long time how do you feel about that done well I I think that this situation is much larger Bert than anybody even realizes and the only thing I can suggest at this time is we're gonna have to wait and see what the new administration may have on its mind and
(20:16) on its agenda if you remember back in 1976 when Jimmy Carter was running for the presidency one of the things that he stayed right in his campaign promises was that if he became president he was going to go in and release everything that they had on UFOs now I have a very unusual piece of information back at the office I cannot vouch for its validity but there was an individual that claims to have been on Carter's administrative briefing team and that when he came out from the briefing one of the things that
(20:51) he was briefed on in fact was the UFO situation and according to this source it is not verified I want to stress that he claims that when when Carter came out of there he had tears in his eyes well of course we all know that we never heard another word about UFOs from Jimmy Carter so we're gonna have to wait and see what happens with the Clinton administration right let me ask you both of some information again about the Soviet sightings and so forth are done and George are you guys familiar with any connection with the unusual among
(21:27) people and some of the saucer sightings out there and I'll explain later on why the uomo right yum I'm very familiar with it Bert the almost situation is something that occurred a number of years ago in Spain there have been many questions raised about that particular series of sightings and information that ended up flowing through there is quite a bit to suggest that it could have been in fact some type of intelligence disinformation operation but I want to stress the but in 1989 when TAS released the
(22:04) information on the brownish sightings the kids saw the kids the witnessed those sightings of those alleged landings in fact had the Omo designation on the

side of their drawing that the exactly the reason I have the question now George if you had any experience with your contacts over there mentioning anything about this no and that I would hope at some particular time you might be able to with those contacts propose that because I thought the kids and that insignia in the middle of a place where that doesn't have great communication
(22:39) was a very unusual situation not that it couldn't have been faked but nevertheless it's something that could be followed up okay guys let me ask you yeah I ask you a real quick question bird did you by chance see the Fox television sighting segment on Friday yes I did okay did you see that segment on this on the Soviet Union on Russia about that M they imply a go yeah right well I had a call immediately after that program from our Russian story consultant and writer Paul Stonehill right and Stonehill told me that he had
(23:14) been in contact with the individual from Fox television that produced that segment and had warned him against this particular case because those people as Stonehill later told me are the equivalent of the Russian Adamski's and Van Tassel's and other writers that there is not a lot of credibility allegedly in that particular case well and there's something that was very unusual and this again can be taking a look at with you guys in that segment the there was five or six lights that were in a kind of pattern and they were
(23:50) flowing around and the main thing that I noticed on that which was unusual it was the fact if you look at it again rather than the lag on a video camera which with a piece of light trails like a comet the motion was going towards the tail and as it would be the reverse so maybe that's something you guys can check on and see if anything's going on there with somebody just panning across backwards some lights or something all right well Paul Stonehill did tell me bird that that area in fact he believed may have been a testing area
(24:26) for Russian experiments and psychotronic yeah exactly love to find out more about that okay guys thanks a lot all right thank my bike Jorge you mentioned congressman Seiberling labelling Seiberling have you tried to contact him at any time to get his reading on this I did a couple of years ago and I didn't get a response you mentioned Jimmy Carter I've also tried to contact him just to get an explanation about why he didn't live up to that campaign promise and I didn't get a response from him I am in contact
(24:59) with with a number of people on Capitol Hill I can tell your listeners this much that there is a great deal of interest at very high levels there in the UFO situation I think not necessarily in the cosmic implications or who they are or why they're here but more interested in how agencies of the US government military agencies are spending big piles of money and where they're getting okay we've got to take another break on the half hour George so if you can hold on and we'll be right back they confuse the
(25:36) old ways with the best ways of doing those things forever future ready right again were there such a cyber station and Georgia is still there are you holding up oh yeah okay great looks like we have a call from Mike in Orange County on his that Comcast cable yeah that's right done okay good evening Mike good evening mr. Knapp and mr.
(26:01) Don we really enjoy the show and mr. Knapp we've enjoyed all the work you've done and been with you the past few years since Billy Goodman and all that good stuff done back to your question regarding a Gary and Oreos work out there well the not the question but the idea that you brought up regarding the helicopter yes just I thought you might find this interesting I know Gary an Oreo and I was on the phone with the FAA inspector out of Nevada area about six months ago when they got or so it was the final word it was the second letter that they received
(26:33) from the US Justice Department stating that nothing would be done did you see copies of those letters done yes I did as a matter of fact Gary and I just saw Gary this evening oh he was giving a lecture over at Yvonne's yeah she wrote group as a matter of fact okay Gary and Nouriel have been sending me information on this I did a new story on the original harassment that they underwent when they were out at area 51 I tried to personally contact the federal prosecutor and after calling them a good half dozen times I ceased
(27:06) they never got back to me yeah we had problems with them getting to return calls I'm sure mr. Knapp's aware of the work that mr. Hildred did and sending the letters to the DEA out there yeah we got in phone contact with her a couple times and she was very hostile I would say at best in regards to the helicopter situation I was on the phone with the Nevada FAA inspector and he basically I relayed the story to him and we faxed him copies of the letters and he without seeing the

videotape we told him we have
(27:39) the copy of the same one that George was referring to and I don't know if either one of you knew this but he basically stated that a 1,000 foot ceiling is mandatory and around any residential area or structure now granted at the at the mailbox and groom road where this occurred there is no structure per se in that in that three mile radius as they call for however it's still FAA law mandates that they keep a 500 foot ceiling at all times now the law states that a military pilot has to use his own what he called
(28:14) pilots discretion however under pilots discretion the military can take a aircraft fixed-wing or rotor down to within a hundred feet or lower it's completely up to pilots discretion and if a complaint was to be filed and this is what I'm sure George can comment on there has to be some kind of a tail number or ID number which everybody knows those copters out there don't carry well that's very interesting Mike but you know there's one thing that we're all going to have to once again remember and that is the fact that yes
(28:51) you and I and everyone else we are truly under ours form of government we are the government absolutely and every once in a while we have to remind these folks down in Washington who in fact is not only paying the bills but calling the shots well I present our present administration the bush administration I think found that out just a couple of weeks ago that they were unresponsive to the country's needs to the domestic problems that that we as citizens were facing and that's why we have a new administration coming in in just a few
(29:27) weeks perhaps it will change we hope so well I'd like you in closing I'd just like George in your opinion on a something that came up I guess in the past couple weeks when the naval officer I guess the the homosexual officer that was meant it was mandated that he be reinstated to service the federal judge that sat in on that that ordered the Navy to reinstate him made a very interesting statement and the actual written finding on the case and he stated that at no time does anybody in the military no matter what the
(30:02) structure within the military have precedence over even the lowest of civilian authorities including the civilians because the civilians are the government and it was with that finding that he ordered this individual to be reinstated in the Navy I'd like to know what George's idea is and what your idea done on that would be because I would think that would apply to this UFO issue also wow I've never heard that before obviously it would apply to the UFO situation that gosh I couldn't imagine yeah well I couldn't either but I
(30:36) thought it might be interesting for George and his new endeavor to try to look up to see we're trying to do the same thing and if I get at George I'll send it to you okay but we're trying to get the written copy of what what the actual case finding was in the the order that the judge made because he did state in the order that it was no military power whatsoever would supersede the right of the even the lowliest civilian and especially if we're talking about being on public and or private land
(31:02) however we all know that in the course of over forty five years especially when we're talking about the UFO subject there have been cases where in fact the military have come in to private property where there have been UFO situations and they have taken over a good friend of ours Dick Criswell in Indianapolis Indiana was trying to track down a case that happened there not more than just a couple of months ago with an alleged cattle mutilation on a private farm the military showed up there blocked the area off allowed no one on
(31:40) or off the property until they completed whatever it is that they were doing there and then in fact took off and to this day the last I heard from Dick Creswell the farmer is not talking so that's that's some fantastic III would like you to keep us advised on what you find out also my call with UFO magazine great and just in closing I was wondering last week when you ended the program I had a kind of an idea that George was going to bring up something regarding somebody by the initials D H that was kind of out circulating in the
(32:17) UFO community stating he was from that area at 51 with photographs of George I'm talking about George do you know what he's not human I do I just I'm gonna hang up I was just wondering if he could comment on that because I kind of got the idea last week he was going to say something about it you guys ran out of time no I wasn't gonna comment on oh okay all right well thanks a lot Dom you bet my righty bye bye okay George tell us who's th you can't talk about it okay well I understand that well we have John from Palmdale out
(32:49) of Jones Cable good evening John just fine did you have a question for my

guest yeah sure did I'd like you to one of you guys to comment if you can on Jacques ballets book revelation you bet you bet I'd be happy to unless George unless you wanted to comment on it oh well I can speak in general terms that I have the utmost respect for this guy I mean I think he's one of the best thinkers in this whole field it's not the best it's meticulous research I really like I like what the guy says I think he's forst
(33:24) forst people like me and Don and others to reexamine the extra-terrestrial hypothesis and look at it in much broader terms I couldn't couldn't add a thing to that George you basically took the very words out of my mouth okay well thanks a lot guys okay thank you John well what what is your idea George for attempting to focus some real hard congressional scrutiny on this what does it take for for in your opinion for we the citizens to make Congress sit up and start fulfilling their obligation and their their duties to us the public
(34:06) that's it that's a tough question to ask for one thing as I hinted earlier done Congress is taking a look at this situation but I don't think we can realistically expect them to come out with a full-blown hearing and I'm not sure that that would be all that productive anyway they're looking at it in a quiet behind-the-scenes way I don't think we can expect Senators Congressmen to come out and say I want to get to the bottom of this UFO situation because we know they would be politically
(34:36) defied they'd be ridicule but yet be that as it may the more I'm in this and I've been in this now almost full-time since 1987 and I have interfaced with I couldn't even begin to count how many people that have come out with some of the the strangest most odd and and and troubling stories and I mean you know yourself that these people cannot all be crazy I myself had a sighting of something very strange coming back from Las Vegas just a little over a month ago I spoke to a man this evening that was
(35:12) relaying to me the the account of an abduction that he underwent seven years ago and he was one of probably in the last year maybe a hundred people that told me the same thing that not only did he interface with what he took to be an alien life but there were also human appearing individuals on board that part partook of this and he thought for some reason that they were military I mean if this is true or if any part of it is true it's the most outlandish thing that I've ever heard of and I know that
